Under Special Charter from the State of New York.
At a meeting of Gentlemen for the establishment of "THE SAFE DEPOSIT COMPANY OF NEW YORK," David Ogden having been called to the chair, and Francis H. Jones appointed Secretary, the following resolution was unanimously adopted:
Resolved, That the purpose of "The Safe Deposit Company of New York," as the safe keeping of valuables, for which a special charter has been obtained by Francis H. Jones and his associates, meets a great public want, and will receive the hearty sanction of the community.
The Company, well managed, will pay a remunerative dividend upon a capital much too indirect to command the confidence of the community.
DAVID OGDEN, Chairman.
FRANCIS H. JONES, Secretary.
The undersigned, being prevented attending the meeting for the establishment of the Safe Deposit Company of New York," cordially approve the above resolution passed thereat.
JOHN CRYDER, GEO. D. LYMAN,
C. BARSTOW, DANIEL BURNETT,
WM. HURRY, JOSEPH DATTELL,
COURTLANDT PALMER.
The undersigned cordially add their names to the above approval
BELMONT & CO., JNO. J. CISCO,
SHEPHERD KNAPP, T. TILESTON,
WM. WOOD, B. WITHERS,
JOSEPH WALKER, WILSON G. HUNT,
W. A. DUNCAN, W. A. BOOREAD & CO.,
DAVID BOADLEY, THOS. JEREMIAH,
JAS. F. DE PEYSTER, J. J. CRANE,
W. F. HAVEMEYER, BENJ. H. FIELD,
W. H. MACY, M. M. FREEMAN,
P. S. WINTON, ANO. ELLIOTT.
The Books for Subscription to the Capital Stock of the above company, under special charter from the State of New York, will be opened at the Bank of America, on Monday, the first day of February next.
The purpose is to receive for safe keeping, in Burglar-proof Safes, loan absolutely Fire-proof Building, valuables of every suitable description.
All deposits of Cash Bonds and Stocks, contents unknown to the Company, will be received under Depositor's "Combination" Lock and Seal, and as well as Jewelry, Plate, &c., will be delivered to no depositor of the package, seal and lock.
When desired by the depositor, the company will schedule the contents, and assume the risk of each item, such at a separate valuation, charging a per centage upon amount.
The company will also rent to others small Burglar-proof Safes, say to contain a single Trunk or Carpet-bag, for their exclusive use, the key to be locked by the Renter; the "Combination" being thus known only to himself. These safes will be in the Company's Building, and for their safety the Company will be responsible.
Applications for Shares or Business are the "Combination" or Trunks of Retired Capitalists, Merchants Bankers, Brokers, Merchants, and other business and professional men, and of Families, widows, and single women, and of a large class of thrifty men among the masses, whose surroundings are unfavorable to the safe keeping of valuables. A place for reference to the contents of trunks will be provided. Family Plate will also be received for safe keeping during the absence of the owner from the city in any quarter, or when abroad.
The Company offers a place of absolute security for the deposit of Valuable Papers, all evidences of Property, and any valuables, to Lawyers and their clients, Officers of the Army and Navy, Merchants Bankers, and others much from home; Holders of Government Securities, or other evidences of Government Indebtedness, or of Municipal Municipal Corporations, or of respectable holders of the Coupon Bonds, and Interest-bearing Securities; Importers and holders of Sullen and Specie; Jewelry about Bullion; Deeds and Documents of title city or other places going abroad; or to Guardians, or Executors from home; Clergymen or others transiently in the city; Trustees of Deceased, Guardian or Insolvent Estates; Holders of Important Manuscripts, Powers of Attorney, Articles of Partnership, Dissolution, or Assignment, Releases of Indebtedness, Deeds of Property, Abstracts of Title, Policies of Life and other Insurance; Evidences of Marriage, Birth or Death; Misses of Wills, during the life of the Testator; Private Business of Members of Firms, etc., etc.
Besides the ample business that will press at once upon the Company, it is believed the supply will create a new and continually increasing demand for such a security, as the public becomes educated to its appreciation.
For further particulars apply to or address

The best business men's houses in the city, being in the immediate vicinity of the principal Banks, Brokers, Public Institutions, Post Office, Hall, and Jobbing business.
HENRY NEIL.

TAYLOR'S SALOON.
This elegant establishment, at the corner of Broadway and Franklin streets, is one of the curiosities of New York; and visitors to the city, who leave without witnessing its internal magnificence, and experiencing the sumptuousness of its cuisine, have deprived themselves of a rare treat. It has very appropriately been called an "Epicurean Temple," and we presume, there is scarcely a delicacy that the season affords, or epicure desires, which is not to be found there, if it be possible to obtain it.

1864. FURLOUGHS. 1864.
Officers and soldiers, visiting the city on furlough, needing
SWORDS
and other MILITARY EQUIPMENTS are invited to the well known Military Manufacturing Establishment of

PROPOSALS FOR RAISING
WRECKS AT NORFOLK, VA., AND IN
THE VICINITY.

NAVY DEPARTMENT, February 4, 1864.

PROPOSALS will be received at the Navy Department until noon of the 15th of March next, for raising or wrecking and removing the materials, and delivering to the United States, at the Navy Yard, Norfolk, the wrecks of the following ships, viz:

Frigates *Roanoke, Merrimac, Congress, at Newport News; and Raritan*, near Craney Island.

Sloop-of-war *Germantown*, at Old Point.

Frigates *Boston and Columbia*, and Sloop-of-battle *Pennsylvania*, at Gosport navy yard, Portsmouth, Nearby of the Navy Yard.

Bidders for the contract will take into consideration that the Government requires the Frigate Cumberland, and whatever may be found of her, to be left as a private property, to be delivered at the Navy Yard, Gosport, Va., at the most convenient point to which the Government may designate, without any further charge than the ordinary expenses of towing and docking.

It will be required by the Government that the contract be completed within the time specified in the bid ordered, and no to engage or commence on any other work, without permission from the Government, until the is disposed of.

The Government will not be responsible for anything the under in which, after the Cumberland, the wrecks are to be delivered, may be found, and the wreck shall be floated or raised whole.

No sale of property will be allowed by the contractors on any wreck until all the vessels named shall have been removed, except the *Merrimac*, the Commandant, unless by authority of the Navy Department.

No wreck will be considered removed while any portion of it can be seen above water.

All the wrecks, as well as remnants of timber and other materials, which may be the result of dredging, must be deposited at the Navy Yard, at such place or places as the commandant may designate, and in such property, after having been received by the commandant, shall be considered the property of the United States Government, until disposed of agreeably to the specifications of the terms herein stated.

All the appliances used in raising the wrecks must be furnished by the party or the contractors.

The offer must state the rate per centum, or enlarge for raising each vessel named, and the time of completing the value to be ascertained and determined by two persons to be appointed by the Department, and a third person to be appointed by the contractors, or on the failure of the contractors to appoint a person within a reasonable time, by the Department, and the decision of other must be accompanied by the guarantee of responsible parties that the bond of the bid be executed to Government, until disposed of agreeably to the specifications of the terms herein stated.

All the appliances used in raising the wrecks must be furnished by the party or the contractors.

The offer must state the rate per centum, or enlarge for raising each vessel named, and the time of completing,

BOOKS FOR CAMP AND HOME.

D. James Kenrick, Boston, announces a series of 16mo. and 18mo. books for the camp and fireside, of which the three publications now in the market. They are neatly printed, and sold for 25 cents a copy, or $2 per dozen. They may be had of booksellers generally, or of Peter Parley Goodrich, Esq., or Miss L. A. Alcott, who, we should think, would be one of the most popular books of the season. No. 2 is "Dr. Hale's New Man in the Field;" No. 3 is "Whittier's Yankee Girl;" No. 1 is "The Verdicts," one of Balzac's best tales, translated by Miss Alcott. No. 4 is "Dickens' Child's Travels in Lullipat." No. 5 is "Victor Hugo's eloquent description of the Battle of Waterloo." Each number is complete in itself and unabridged. Ten cents sent to the publisher will secure a copy of either number, postpaid, to any home or camp address—or duly care for the list of numbers as they issue. No. 6 and No. 7 will be published before the close of February.—*Boston Journal.*

Nos. 1 and 2 are out. For sale by all newsdealers.

JAMES KENRICK, Publisher, Boston.

A full variety of Field Glasses. Horse equipments of every description.

CAUTION FROM THE AMERICAN WATCH COMPANY.

It having come to our knowledge that imitations of the American Watch have been put upon the market of late years, and with a view to the public protection, we hereby request the registration of our genuine trade-mark, which is stamped upon the inside plate. Imitations in question, we again publish the trade marks by which they may be known and avoided by buyers.

We manufacture four styles of Watches—

"The Home Watch,"

"American Watch Co., Waltham, Mass."

The second has the name

"Appleton, Tracy & Co., Waltham, Mass."

engraved on the inside plate.

The third has the name

"Samuel Curtis, Waltham, Mass."

engraved on the inside plate.

The fourth does not have the name "American Watch Co." printed on the dial, and are warranted in every instance.

The reform has the name

"P. S. Bartlett, Metropolitan Watch Co."

engraved on the inside plate, and is not named on the dial.

All the above are inscribed "Fine Gold" on inside of various sizes, and are sold in gold or silver cases, as may be ordered.

It is hardly possible for us to accurately describe the counterfeits, as they change from time to time. But they are usually inscribed with names as nearly approaching our own as possible, and stamped with the fictitious inscribed buyer. Sometimes represented as made in "Boston, Mass.," "Roxbury, Mass.," or "Any such company existing. Some are named the "Boston Watch Co.," "Roxbury Watch Co.," &c., &c. In every style, usually known as the "soldier's Watch" others are named "Watch" with the "Co." omitted, the "P. S. Bartlett," instead of our P. S. Bartlett, Jr., & Co., and in every instance are calculated to convey the idea that they are the veritable productions of the American Watch Company.

A full statement of the part of buyers will protect them from imposition.

THE MILITARY SITUATION.

THE grand military movements by which General GRANT has opened the Spring campaign in the Southwest, are progressing in the most satisfactory manner. General SHERMAN, at the head of the Sixteenth and Seventeenth Army Corps, on the 5th instant, took possession of Jackson, Miss. It is hardly necessary to say that Jackson is an important military point, not only as the capital of the State, but as the point of intersection of the Mississippi and Memphis and New-Orleans Railroads. The rebels, after a slight resistance, retreated across the Pearl River. Yazoo City has also been successfully occupied. The force sent to accomplish this object was under the command of Colonel COATES, and consisted of the Eleventh Illinois infantry, the Fourth Illinois cavalry and Eighth Louisiana infantry, Corps d'Afrique. No resistance was offered to oppose the advance of this small column until it reached Satartia. Here a brisk fight occurred on the morning of the 6th, in which we lost nine men killed of the Eleventh Illinois and Eighth Louisiana. Both regiments acted with the greatest gallantry, and the rebels were soon compelled to retire, with what loss is unknown. After this repulse of the enemy, in which Colonel OSBAND's Fourth Wisconsin cavalry took an active part, the force moved forward to the occupation of YAZOO CITY, which was effected without opposition on the 5th. The region about Yazoo City will probably be permanently occupied, as it abounds in corn and forage, which can be readily collected and shipped to Memphis for the use of General SHERMAN's army.

A cooperative force under General LOGAN advanced from Vicksburg, Ala., about the 9th instant, and crossed the Tennessee River at Larkin's Ferry. We leave it for events to reveal to the public the purpose of this important movement.

A cavalry expedition under General W. S. SMITH, left Memphis on the 11th instant, in the direction of Collierville, and on the 12th the entire line of the Memphis and Charleston Railroad was abandoned by our troops. It has been held for several months merely for the purpose of enabling General SMITH to arrange his plans for the present expedition.

Communication between Knoxville and Cumberland Gap is at present interrupted; but the situation in that quarter is not to be considered as precarious. Generals SCHOFIELD and STONEMAN arrived at Knoxville on the 9th. There is said to exist much disaffection in LONGSTREET's army, especially among the Tennessee regiments. Advices from Cumberland Gap say that the average number of deserters who report at that post, is five per day. Whole lines of Rebel pickets sometimes desert at night, and scatter themselves over the country. The main force of General LONGSTREET is at Strawberry Plains, to which place, it is said, the Tennessee Railroad is now in running order.

ADVICES from North Carolina to the 13th instant, say that Major-General PECK had arrived at Newbern, and had resumed the command so efficiently held during his absence by Brigadier-General INNIS N. PALMER. He immediately took measures for strengthening the defences of the city, and making other preparations to receive the Rebels should they renew their attack. He has issued an order forbidding officers to take their wives or any member of their families to any of the outposts in the State. Officers and soldiers who are living away from their commands without special authority, are ordered to return without delay. The report of the Rebel Major-General PICKETT, who commanded in the late attack upon Newbern, calls the movement a reconnoissance. It gave our loss as one hundred killed and wounded, and states that the Rebels captured thirteen officers and two hundred and eighty prisoners, fourteen negroes, two rifled pieces and caissons, three hundred stand of small arms, four ambulances, three wagons, fifty-five animals, a quantity of clothing, camp and garrison equipage and two flags. The Rebel loss is put at thirty-five killed and wounded.

On the 7th the Rebels made a second demonstration on Newport Barracks, at Shepherdsville, their object being to obtain possession of the railroad. There is apprehension in some quarters of an attack from a formidable iron-clad which is lying at Kinston, on the Neuse, about thirty-five miles above Newbern; but our forces are in perfect readiness to receive and repulse the monster. The Rebels will undoubtedly make a vigorous effort to dislodge our forces from North Carolina, and the Wilmington *Journal* admits that if they fail in this attempt they will lose the State.

THE intelligence from Charleston Harbor is still unimportant. The bombardment is continued as usual, and by the confession of the enemy is productive of no small amount of damage to the city. The Wilmington (N. C.) *Journal* says that "gradually the "constant dropping of the enemy's shot and shell is "beginning to tell upon the lower portion of the city "of Charleston. Their chief spite, from what we can "learn, appears to have been turned against Bread "street; at least, its effects are most apparent in that "vicinity. The street is considerably encumbered "with bricks and other debris knocked out by the "enemy's projectiles. It will take much time and "money to repair the damage."

Several times the Rebels have endeavored to reinforce the worn-out garrison in Fort Sumter; but have been prevented by the calcium lights with which our guns nightly illuminate the harbor, with such brilliancy, that no steamer can venture toward the ruins even after dark. An attempt was made on the night of the 1st inst., by a Rebel ram, in company with a cigar-shaped torpedo-boat to destroy the gunboats *Housatonic* and *Nipsic*, which were doing guard duty in the south channel, near Beach Inlet. The design was frustrated by the sinking of the torpedo. This is the third infernal machine which the Rebels have lost in Charleston Harbor.

A blockade runner attempted to pass our fleet on the night of the 1st, but ran ashore under the guns of Sullivan's Island, where she was discovered at sunrise. The *Nahant*, *Patapsco*, and *Lehigh* immediately opened on her with their rifled guns, at a range of from 2,500 to 2,700 yards. Several shells were seen to explode in her, and she was soon entirely disabled. During the firing the *Nahant* was obliged to drop astern and take on board a howitzer; it being impossible for her to obtain the elevation with her rifled gun, on account of the size of her port-hole.

The expedition, consisting of three brigades, and one light battery, which left Port Royal on the 5th inst., under command of General SEYMOUR, for Jacksonville, Fla., arrived at its destination on the 8th. The forces effected a landing without opposition from the enemy, and will immediately enter upon the work to which they have been assigned. Although there is no strong Rebel force in the State, it is of importance to the Confederacy on account of its fertility and its supplies of cattle.

A refugee, who recently entered our lines at Hilton Head, brought the important information that General BEAUREGARD had removed his headquarters from Charleston to Savannah, in anticipation of an attack upon the latter city. The rebels had one hundred and fifty torpedoes ready to float down the river in case our fleet should attempt to approach the city. The number of troops in garrison there was reported to be eight thousand. The Savannah *Republican*, of the 1st inst., admits that these troops are reduced to one month's rations, and urges the farmers in the vicinity to send all the provisions which they do not absolutely require to keep themselves from starvation.

AN express passenger train was captured Thursday night, the 11th inst., on the Baltimore and Ohio railroad, about eight miles west of Harper's Ferry, by a band of guerrillas. A switch was turned, and one of the raiders made the usual night signal with a lantern for the train to stop. The train was then surrounded, and a number of armed men entered the cars. The passengers, among whom the appearance of the guerrillas created no small consternation, were more or less mulcted in the shape of ransoms, in money, watches, and other valuables. They were robbed, it is estimated, of not less than 30,000 dollars. Ten of this gang were arrested the following day, and General SCILLIVAN hopes to take them all.

A BRAINSWORTH dispatch says that advices from New Mexico to January 31 state that Colonel KIT CARSON has pursued the Navajo Indians through Cañon de Chelle, killing 23, and taking 150 prisoners. The expedition was very successful.

WE commence this week the publication, in a supplement to the JOURNAL, of General MCCLELLAN's Report, and shall complete it in a similar supplementary sheet next week. Though it is a document of great length, it was necessary that we should publish it to render the files of the paper complete, and to satisfy the requirements of a comprehensive military gazette. Though the events to which the Report relates are somewhat remote from the present, there are, happily, still living and serving their country in the field, thousands of the actors in the campaigns to which it relates, who will have an interest in the Report, and will be glad to have it in a form convenient for preservation and reference.

CAPT. Alan Ramsay, U. S. Marine corps, son of Captain Wm. Ramsay, U. S. N., died at headquarters Marine corps, on the 15th inst. Capt. Ramsay entered the Marine corps as lieutenant in 1857, was on the U. S. steamer *Richmond* during all her fights on the Mississippi, and was recommended for three brevets. He was buried with military honors, and his funeral was attended by a large concourse both civil and military. His brother, Lt. Douglas Ramsay, was killed at the first battle of Bull Run.

THE millions of dollars, in one and two year five per cent. legal tenders, have been sent to pay the Army of the Cumberland.

OUR CAVALRY.

THIS important arm of the service, increasing in importance as our campaigns lengthen and our armies penetrate further into the vitals of the Confederacy, peremptorily demands a large share of the attention of the War Office. Our Cavalry, though much improved since the beginning of the war, are far from being what they ought to be, and, with proper management, could be.

In the first place, the *personnel* of our Cavalry needs improving: while the nominal standard by regulation governing the enlisting of mounted troops is proper and sensible, yet in how few instances do our Cavalry Colonels behave " authority to raise a Regiment of Cavalry," in their anxiety to fill their ranks, regard these regulations. Our Cavalry needs *reorganizing*, it should be composed of the *élite* of our Army, and Government should in a rehiring reserve the power of transferring them unqualified for the mounted service to the infantry, and drawing from the latter to fill these vacancies. No arm of the service requires so much individual power of endurance, intelligence and judgment; or, in other words, the cavalry soldier must be adapted in mind and body to the service to which he belongs. How many new regiments do we see with a large proportion of boys, some of them pale, sickly, narrow-chested and scrofulous, scarcely able to stride their horses, and how many stout-shouldered, gray-headed men are there discriminately from any occupation, both soon destined to crowd our hospitals and fill not a soldier's but an invalid's grave. Then these men with but a few weeks' drilling or preparation under inexperienced, and in many cases incapable, officers are sent into the field. Of what value can such men be to the service?

For variety of equipment and uniform our cavalry are noted; and yet though the writer has seen and served with our cavalry since the organization of the first regiment, he does not remember ever having seen a single squad or a set of fours who were uniform in uniform, equipment or arrangement of accoutements.

While the Government is liberal and generous in her equipment of our troops, individual fancies and peculiarities more than their much abused regulations govern our equipment. In the way of hats—we see them in every known and conceivable variety—the regulation hat, the same minus feather and cord, then the burlesque on the inverted coffee pot, fatigue cap, then the kepi, then comes the Rosecrans, Meagher, Straw, Wide Awake and in variety *ad infinitum*, all represented in one regiment. The jacket and trousers approach somewhat nearer to regulation; the the former with the abused collar raised to suit the fancy of the wearer, and many, having an aversion to yellow, carefully strip it of all the trimming and ornament. The skyblue vest, unknown to the regulations, is in general favor, and seems to afford great pleasure to the wearer, to gratify his taste for leaving his jacket open—a taste by the way as unmilitary as popular; and occasionally a citizen's coat and trousers are considered great ornaments by the wearer, as they at once show that in becoming a soldier he has not forgotten that he was once a citizen.

And as for boots, we have often shoes (to use a Celticism), then JEFFERSONS, NAPOLEONS, WELLINGTONS all contribute to assist the variety: plain legs, shiny legs, and black legs, each have their advocates. All this may be supposed a trifling, and, comparatively speaking, we grant it. Would this were our only source of complaint.

The MCCLELLAN saddle seems to be the general favorite, and immediately as it is purchased by the regulations and as nearly adapted to our cavalry as any can be, it is a correct and proper taste, though many of our troopers freely exchange for an English or jockey saddle found in a Virginia stable. The manner of adjusting and packing the saddle is left to the individual pleasure of each, and the consequence is that our cavalry can have horses with backs more galled in the same length of time than any cavalry in existence, and we would earnestly pray on behalf of these much abused animals that General THOMAS or LEBARGENTON issue and enforce a General Order on this subject.

The saddles are not properly fitted to the horses' backs: many use no blankets, some a piece of carpet, a sheepskin, in fact anything that comes handy, and many, thinking that the friction and heat would be less on the back, or perhaps not having a blanket convenient, go without, and allow the hard saddle bars to rest on the bare back. The mode of packing and the different articles carried on the saddle generally depend upon the taste and pleasure of the rider: while in an exceptional case we see one content with the great coat and blanket, many practically advocate the carrying of different household articles of comfort and convenience. Hence a cavalry regiment on the march resembles more the migration of a tribe of nomads than anything else; the pommel and cantle covered with blankets, shelter tents, and other articles of comfort, and pendent on the numerous rings are the frying pan, gridiron, coffee pot, tin cup, canteen, occasionally a pair of boots and many articles gathered in the course of a campaign, while hung around the horse's neck and oscillating as he goes is the "nose bag."

Now, imagine the regiment on a "trot" (and inasmuch as the "trot" is unpleasant to the riders generally, their horses seem learn to have but three gaits—the walk, canter or "lope" and the gallop, and we shall have to imagine the trot, as we never see it), and imagine the noise and jingling of such a body, like a flock of "bell wethers." Ah, my gay cavalier, how long would it take you to pack after you had heard "boots and saddles" or "to horse?" Do you not sometimes find the frying pan between the saddle and the horse when you pack in a hurry, or do you not catch your leg in some of your tin ware when you mount in haste? or does not the nose bag or your object to your gridiron being pressed into his leg when you draw to the right or guide right on the march?

Many slack officers permit their men to strap their sabres to their saddles—a habit much to be reprobated. To say nothing of its being unmilitary, it is a great risk of the sabre being bent and the scabbard broken by the horse lying down and in many other ways, as many officers can testify.

The regulations allow two buglers or trumpeters to a company, or twenty four to a regiment, exclusive of the principal musicians or chief buglers. Now, how many regiments can muster six buglers who can sound the "re-" veille" or know it from the assembly?

And now a word to you, officers—not all, but most of you. Are you not to blame for the fault with you? You have good men, good horses, good equipments, in fact, everything is good. Now, are you not indolent and indifferent? Is your own uniform according to regulation? Is your coat always buttoned on parade? Do you always set a good example? Do you always set the best? Do your men get their proper rations? Do you insist on cleanliness and hair cutting, and beard trimming? Do you have and attend every roll call ordered? Are you present during "stable duty?" Do you see that all the horses are blanketed this cold weather? If so, why are your coats so open and staring? I might ask you a thousand such questions, but you know your delinquencies.

We want active, intelligent, zealous, enterprising young men for our cavalry officers; it is no place for a stick who has succeeded in getting a commission through political influence with the men or through political influence. We want officers, loyal men, who love the service, who study, who are proud of their uniform and have some *esprit du corps*; men who are temperate, respected, and obedient to orders; men who look to the interests of the Government above all their own; and until we have them our cavalry service will be inefficient, greatly wanting in *morale* and terribly expensive.

What is the remedy? We see the evil, and there must be some remedy, and while our cavalry is comparatively inactive, it is the time to apply it. Let commanders of corps, divisions, brigades and regiments attend to the purging of the service of the inefficient, ignorant, intemperate, careless and incompetent officers, and in reading them before the examining board or court martial to discharge or dismiss them if found wanting. Do not allow the noble, dashing, and, in fact, choicest arm of the service to be hampered, tethered and degraded by these incompetents. Our foes are equal to us in nothing but bravery, zeal and dash; in everything else they are inferior. Give us good officers and a well-organized cavalry, and before the summer solstice we can scatter or annihilate their cavalry. For the good of the country and of the service let us hope it may be so.

SABREUR.

HARBOR DEFENCE.

IN an interesting lecture upon "Sythead and Harbor Defence," recently read at the Royal United Service Institution, Captain TYLER, R.N., described the waters of Spithead and the harbor of Portsmouth were still without sufficient means of protection against either direct attack or distant bombardment, and that it was still a problem to be solved how an enemy might be prevented from entering the channel between the Isle of Wight and the south coast of England, without obstruction to friendly navigation. Entering into details, he discussed at some length the various kinds of defences available at Portsmouth. There are three passages by which an enemy might attempt to force an entrance—1. By the Needles, at which the entrance is 1,600 yards wide near Hurst Castle; 2. By the main channel into Spithead, which is about 1,200 yards wide near the Warner Light; 3. By floating over the Horse Sands at high water, where the passage is 3,600 yards wide. No mode of defence could be considered perfect which did not provide for all the modes of attack. In connection with this part of his subject, Captain TYLER exhibited a chart of the harbor of Charleston, and referred at considerable length to the siege of that city. Though not a place of first-rate importance, Charleston, he thought, had been defended with extraordinary skill and gallantry. But Charleston harbor was a small port compared with Portsmouth and Spithead. The Confederates were therefore able to obstruct their channels without inconvenience. They were narrow and shallow and were not required for their own use, except for the passage of a peculiar class of vessels, and afforded facilities for defence by a succession of forts and batteries, which left an haven in the interior for any vessel which might succeed in passing the entrance. The distance between the Isle of Wight and the main land was, on the other hand, much too great to admit of a similar system of defence. The succession of forts and batteries which protected the Needles passage was analogous to those of Charleston; but this passage was not suitable for obstructions, in consequence of the strong tide running through it, even if it were desirable to employ them, and the entrance to Spithead could not be defended in the same manner, because the distance from Southsea Castle and Gilkicker Point on the north, to Hampton Point and Southsea Castle on the south, were respectively 7,000 and 5,000 yards.

The question of harbor defence was pronounced to be inefficient. It had been proposed by that officer, as a substitute for fortifications, to defend all the dockyards and roadsteads, and all the available coast of Great Britain, by one fleet, consisting of 20 iron-clad ships and 10 small cruisers, and these were to be ordered from point to point by telegraph. This plan was open to several objections. If on the one hand, these were scattered round the coast, and had no harbors to resort to, they would inevitably be cut off, and beaten in detail. If, on the other hand, they were kept together, they would have to be in the wrong place when they were wanted. If two admirals telegraphed "approach" "no battle vessels" from Plymouth and Sheerness at the same moment, it would be difficult to decide upon the proper destination of the fleet. Sir JOHN DALRYMPLE HAY proposed to defend the Channel to each other behind a boom, as an obstruction to the harbor, with 18 manœuvre ships behind them. But the ships chained together would possess all the disadvantages of forts and floating batteries, without the advantages of either. They could not use their broadside guns, and would be ready situated for an attack upon the enemy at the proper moment. The chain would be for miles long and enormously costly; and, even if adopted, it would be better supported by a fort at each end than by vessels, which, if the boom were once broken, would be thrown into restriction and confusion.

Captain TYLER's plan included a combination of forts and vessels. Three forts situated on the Warner Shoal, Noman's-land and the Horse-Sand, would form an equilateral triangle with sides of 2,000 yards. The forts must be backed by six powerful and heavily armed steam-rams of great speed, with beaks at each end, and of great speed and agility to enable them to manœuvre rapidly. Stationed behind the forts, they would dash, one after another, at the hostile vessels as they came through. By checking the forward vessels, they would obstruct the passage for the remainder, and, retaining them all in the immediate vicinity of the fort, they would lead in this manner to the repulse of the enemy.

In the discussion that followed the reading of Captain TYLER's paper, Rear-Admiral Sir EDWARD BELCHER opposed the construction of forts on the ground that the forts would act as decoys, and that the enemy, if he found that they would serve to deepen the channel between them, and so actually increase the facilities for the passage of the enemy's fleet. Colonel COLLISON, on the other hand, contended that they would serve to accumulate sand, and so impede the passage still more. The effect of the forts on the shoals of the coast in the harbor of Charleston would seem to favor Sir EDWARD's theory. Subsequently, Sir EDWARD wrote to the Institution in defence of his objections to forts, and to assert the skill and ability on the part of the navy not only to protect Portsmouth and Spithead, but to drive the enemy from the enemy outside, defeat him there, and chase and confine him to his own ports.

ADMISSIONS TO THE MILITARY ACADEMY.

IN a recent lecture before the Washington Lecture Association, Dr. HENRY BARNARD advocated the following changes in the law and regulations relating to admission to the Military Academy, which he stated were recommended by the last Board of Visitors, of which he was a member:—

1. The cadet corps of the Army of the United States shall consist of four hundred members, to which each State and Territory shall be entitled to a number equal to its representation in the United States Senate and in the House; the number shall be designated by the PRESIDENT from the country at large, including the District of Columbia and Territories also till, in the same way, any one of which for any cause may remain unfilled, for three months after the annual examination in each year.

II. No person shall be appointed to the cadet corps until he has been found qualified in the particulars designated by law, after a public examination, conducted in each place, at such times, and in such manner as Congress shall prescribe; from which examination no person resident of that portion of the country for which the same is held shall be excluded who shall present credentials from the teacher or teachers of whom he has been a pupil for the last preceding year, and under twenty-one years of age, of unblemished moral character and personal habits, of good physical strength and constitution, and has given evidence of aptitude and vigor of

mind for the studies and duties of a military career. The student shall make return under oath to the Secretary of War of the persons so presenting themselves, examined, and found qualified, arranged in the order of merit, specifying the residence and school or schools which they have attended in the two years previous, and the degree of merit exhibited in each subject of the examination. And all appointments to fill vacancies for any State or Territory, or for the country at large, shall be made from those returns, and in the order of merit in which they are therein reported, until there shall be revised by new regulations of the Department.

III. No person shall be admitted as the Secretary of War or a military candidate for admission to the cadet corps unless he—

1. Shall be over seventeen and under twenty-one years of age;

2. Shall possess an unblemished moral character and correct personal habits;

3. Shall be in good health, and in no way incapacitated by want of vigor and elasticity of physical constitution for military service;

4. Shall possess vigor and aptitude of mind for the studies of the Military Academy, and shall give evidence, oral and written, of a good English education.

5. Shall make a written declaration of his desire to obtain admission to the cadet corps for the purpose of qualifying himself for the military service of the United States, which service he assumes from the date of his appointment as cadet, to continue for the same time as officers of the army—bearing true faith and allegiance to the Constitution and Government of the United States, and will support them against all domestic, and paramount to all obligations to any State government, authority, or constitution.

CORRESPONDENCE.

CONGRESS AND GENERAL HOWARD.

To the Editor of the Army and Navy Journal:

SIR:—The passage of the resolution of Congress thanking Major-Generals MEADE, HOOKER and HOWARD, for their services with the Army of the Potomac, has occasioned a matter of great surprise to persons familiar with the history of that Army. As far as Generals MEADE and HOOKER are concerned, there will not be much difference of opinion. The former commanded the Army and was successful, in the most momentous battle of the war; the latter commanded the Army during most of the manœuvering preceding the battle. But by what strange process of reasoning or distortion of facts can the name of General HOWARD be placed in the resolution? On what ground is he alone of all the corps commanders selected for this high honor? General HOWARD'S corps, the XI., was one of the two (XI. and XII.) corps but a short time previous to the battle of Chancellorsville. The services of his corps in that battle are too well known to be dwelt upon now.

The next action in which they were engaged was that of Gettysburgh; and the conduct of General HOWARD and those placed by Congress to have been greater than those of any other corps commander, and but little, if any, inferior to those of the General Commanding.

I now propose to compare the services of General HOWARD with those rendered by another general on this occasion.

General HOWARD'S corps arrived at Gettysburgh, in anticipation of the corps, about one o'clock on the 1st of July. General REYNOLDS, commanding the First Corps, had already fallen, and his corps, after some desperate fighting, was nearly overwhelmed by numbers. General HOWARD, as the senior, was placed in position on Cemetery Hill, while the other two divisions were sent forward towards the Mummasburgh road. General HOWARD, with his usual modesty, waived the command of his own corps and what was left of the 1st, by reason of his superior rank. The fighting that took place after the arrival of the 11th corps was the most severe which preceded, as the report of the casualties in the two corps will show.

While these dispositions were being made, the news of General REYNOLDS'S death had been communicated to General MEADE, who, without waiting for the arrival of any of the 2d corps, to proceed to the front, and *by virtue of General* MEADE'S *order* to assume command of the 1st, 11th and 2d corps, the 1st and 11th corps commanded by HOWARD, he knew that General HOWARD is senior in rank to General HANCOCK, and hence the necessity of this order. The written instructions given by General MEADE to HOWARD him to relieve General MEADE whether he considered the ground at Gettysburgh a better for delivering battle than that previously selected near Pipe Clay Creek, and to inform that the general would order up the rest of the troops if General HOWARD should think it necessary. Whereupon General HANCOCK had full power to fall back to any position beyond Gettysburgh—or even as far as Pipe Clay Creek.

General HOWARD'S report of the battle of the 1st of July, the following was the condition of affairs:—The cavalry, under the late General BUFORD, was in position to the left of Cemetery Hill, protecting the left flank, and on the right of that was a scene of confusion. The 11th corps was falling back through the town of Gettysburgh in great disorder. The broad turnpike was filled with fugitives. Officers of whom were arrested by the Provost Guards of the 11th corps, miles in the rear. Feeble and often unsuccessful efforts were being made to form the 11th corps behind the three walls and along the ridge near the gate of the Cemetery. The 1st corps, which had been engaged with the enemy for hours hours, were still the most reliable troops on the field. In this position resembled in an unmanageable degree, the state of affairs at the commencement of the battle on Saturday night.

No man who witnessed the advent of General HANCOCK on the field will forget the almost magic change his arrival created. Visiting every part of the field, his practised eye caught at a glance the necessary dispositions to be made. His energy communicated itself to subordinate commanders. He easily inspired the troops with new courage.

A division of the 1st corps was ordered to the right. Wadsworth's was placed with a battery at the point of danger, and Doubleday's division, with Cutler's brigade remained during all the succeeding fight. The line was continued to the left towards Round Top, and on the identical lines selected by General HANCOCK, then, was fought the battle of Gettysburgh, and established almost until the arrival of General SEDGWICK at about six o'clock.

Before General SEDGWICK'S arrival, General HANCOCK had communicated by letter and by a staff officer with the Commanding General, and on his representations, General MEADE immediately ordered up the remaining corps.

On the 2d July, after the accident to General SICKLES, General HANCOCK was sent to command the corps, and his services that day were of greater value, perhaps, than on the next.

On the night of the 2d, General HOWARD was attacked by a part of EWELL'S corps, and the former demands his plan statements, that except for Major-General HANCOCK, the attack would have been successful, all probability, and the 11th corps driven from the key point to the position held—well.

Hearing the heavy firing, General HANCOCK sent seven regiments, including the fine brigade of Colonel CARROLL, to support to General HOWARD.

The enemy were driving in STEWART'S and RICKETT'S batteries, where the brave canoneers were fighting over their guns. The 11th corps was now equal on that occasion to the task of driving back the enemy. The regiments from the 2d corps went forward with a run, and retook the guns and positions. General HANCOCK has privately stated his opinion of the extreme value of this unexpected reinforcement.

General HOWARD'S services at Gettysburgh may be said to have closed here. Not so with General HANCOCK. On the following day the grand attack was made by LONGSTREET'S corps, and, as we know, was met by two divisions of the 3d corps, and a few regiments from the 1st and 12th. Under its leadership, the battle was fought, and gained, mainly its high reputation, and was gloriously victorious, capturing over thirty stand of colors and five thousand prisoners. General HANCOCK was badly wounded, and has not yet entirely recovered.

He was, next to the Commanding General, the prominent man at Gettysburgh. Is it not strange that the credit which Congress has given to Major-General HOWARD.

The passage of the resolution may be the means by exciting discussion, finally of eliciting the truth; but erroneous opinion; but the injustice done to General HANCOCK can hardly be atoned for. General HANCOCK's name is fixed on too substantial a basis to be dependent on any action of Congress. The injustice lies in the fact that Congress has appropriated what is due to the reputation of an impartial history of Gettysburgh; the statement that Major-General HOWARD was in any sense entitled to become not shared by other corps commanders. TRUTH.

CONSTRUCTION OF WINTER QUARTERS.

To the Editor of the Army and Navy Journal:

SIR:—Having had considerable and varied experience in the construction of winter quarters for infantry regiments in the field, I offer my sufficient space to present a few practical, and, I trust, valuable suggestions in regard to the very important matter of securing suitable shelter from the inclemencies of the season.

I will start upon the supposition of a regiment of four or five hundred men (10 companies), with two officers to a company, which is a fair average for most of the regiments in the field can present. In the plan of a camp as laid down in "Regulations," I would make a few modifications. The streets should be considerably wider should be in one line instead of two, and all face toward the centre of the camp. I would have the houses three feet apart. The hospital should be on the flank, and that for another's rest on the left, provided there be sufficient room. The main avenue should be 100 feet wide, and in the rear of the front. By this plan we should have a wide street (60 paces) from the colonel's tent to the parade ground.

So much for the general plan. Now, let us see what each house is to be. To begin with, all the men's houses must be after one established model. The moment that individual taste or individual ideas be indulged, the harmony of any camp is at once destroyed.

Let every officer be supposed to own half a shelter tent. Then pat four men into a nice stockade four feet high, and 8 by 10 on the base, and they are comfortably housed for the winter. The "logs, poles," or if "shelter" tents are abundant, they can be used. I would have all the chimneys upon the same side (by the point of the compass) and except upon the end of the building, where no chimney should be in sight, but built upon the other side of the huts. A good sang chimney, a foot and a half from the end to rest upon, will keep the men in a glowing heat's warmth to the inmates of a tent. The ground should be spread with old clothing of some kind, failing that, some common corduroy. This quickest, but perhaps on the whole not the most elegant, or best way to stockade, is to cut large pine or other trees, of the proper length, and split in into planks of two or three inches thickness, and then "stick" them, as the soldiers say, just as you would make a palisade. A still better way is to cut the logs "saddle" or log-house fashion, and apply to the cracks and crevices a bountiful supply of Virginia mud.

The house when completed will be warm and tight, and have no small pretentions to Army "architecture." The same plan may be used for the officers, as it cannot well be improved, with shelter tents and a lot of woodland for a capital. Small round logs may be used as well as "split logs," but of course the latter are the most suitable, as all the measurements must be taken from the inside.

I have seen this plan carried into execution with complete satisfaction to the occupants. The excavation of earth beyond what is necessary to level the ground should be allowed for winter sanitary purposes. Such cook house should be supplied with a barrel for the reception of "waste," which should be carried away and deposited in the regimental sinks daily.

With a camp constructed upon this plan, there need be but little sickness among troops that have seen service enough to be inured to exposure. It is but a small trouble to make all the men of a regiment conform to one accepted plan. The best of soldiers love to act upon such models, just as their own fancy leads them, and destroys all harmony, and must cause more or less sickness, as some will not exert themselves sufficiently to erect a suitable shelter against a weather. Greater exertion upon this plan are cool in summer and warm in winter; and there is no reason why any troops should not construct them where there is abundance of material to fit with.

Let those regiments who have had no general system in the matter try my plan once, and I think they will never depart from it. A very good way is to let a company fell the stockade together, and then let the squads throw lots for them. A greater uniformity is thus obtained, and all the houses will go up in less time.

I trust that you and your numerous readers may see some good points in my suggestions.

ENGINEER.

CAMP NEAR BRANDY STATION, VA., January 18th, 1864.

A LEGION OF LOYALTY.

To the Editor of the Army and Navy Journal:

SIR:—In all the wars of modern times, among military nations, orders of merit have been considered as necessary to the establishment of a proper morale, and, for the encouragement of the soldier, have been deemed eminently proper. Even amongst the warlike Romans also, decorations were conferred for military merit, as the curious may see in the museum of the Louvre and elsewhere.

Such decorations stimulate the pride of the soldier, and incite his comrades to emulate his deeds, and these decorations have always been eagerly sought after as memorials of valor, by the Roman emperor, and proudly worn by those who have attained them. Even in the worst days of the Roman Terror the Great, was the establishment of the Legion of Honor, and it is a well-established many of the decorations of the French army, while the Emperor himself viewed it as one of the greatest institutions of his reign.

This, indeed, is the highest order of the kind of the present day, for while its organization and administration are wholly military, the class of civilians is still eligible to its honors and its badge.

All classes are thus united in the support of the Government, and while it is in the principles of war to have created, since its foundation by the first Emperor, by all the succeeding governments which have, in turn, been established in France, a military people, and a military spirit stands as the permanent example to the army and to the people, of its wisdom and knowledge of mankind.

These orders have been assimilated to the last of ridicule, which is about the hardest one after all—by the philosophers; these who have read ADAM SMITH will remember one of the inimitable stories founded upon the absurdity of the gift of a little cross as a reward of a great feat of arms.

GARIBALDI, as we have remarked the order of the Annunziata, when presented by King VICTOR EMANUEL, styling it a piece of "*quincaillerie*," with what truth we leave.

These institutions of knighthood, however, have stood all these tests, and now remain as proofs of the cargeness of mankind to be distinguished from the common herd, or of their folly—the reader may choose which he pleases.

The Legion of Honor is the most ancient and most prominent, and even venerated, institutions of the present day.

To enumerate the instances of men who have devoted their lives to the service of their country, at the court of Saint Ja France, would be to write the history of the French army, while we remember that since the establishment of the 5th Victorian Cross, but nine civilians have been conferred the army as volunteers in India, to obtain the cross of valor, and of these, but one, a boy of about 17 years, captured the King of Delhi, which would have ensured it to him, although everybody no had performed deeds which have scarcely been equalled since the days of chivalry.

The longing after some sort of decorations is seen since the war began here, in the demand for corps badges of all kinds, and the efforts of officers to commend to the consideration of the wearer with some particular gallant deed or action in which he has distinguished himself, some service and honor to be worn by the soldiers as a distinction to be prized. These models, however, have not the legal value which the institution of a regular order of knighthood or order of merit, being open to the charge of being a sort of "mutual admiration, vote yourself a medal," concern, and not at all comparable to the high standard of an institution known to be of Government origin, established for the reward of military merit, and a very effective and also cheap one.

It is for this and other reasons, too obvious to be here particularized, that we would propose the immediate creation by Congress of a regular order of military and civil merit, on the plan of the French Legion of Honor somewhat, but with many changes, which we will call the Legion of Loyalty of the United States of America.

Such an institution, under proper government and with a proper organization, would be a useful adjunct and a powerful aid to the Government, by encouraging a feeling of loyalty and devotion to it among the people, and, above all, the army, which would be widely disseminated; it would commemorate the deeds done in the quelling of this great rebellion, and especially aid the service after its broad truth; it would guard the traditions of the army with jealous care, and would introduce a healthful sentiment of honor and generosity into the army, and would improve the manners of the army in courtesy and good breeding, which is now much wanting, while it would stimulate the pride of the soldier to emulate the most deeds during fete of arms.

After all, it cannot be denied that there is much to elevate the soul in the feudal institutions of ancient chivalry, although we admit their unsuitability to the business-like and commercial habits of the present day, in points of governmental policy; still there is much that is ennobling in the devotion to "God and the ladies," of the true knight of old.

We can do no more than sketch an outline of such an institution, and suggest that the badges or insignia of distinctions into its full proportions as a model order of merit, and first, we would recommend that this order be legalized, and

its headquarters established at the seat of Government; that it should be presided over by a grand master chosen from among the generals of the Army for his fitness, and *not for other reasons*, political or otherwise.

The grand master should be assisted by a council composed of eight grand officers of the order, including a chancellor, almoner, treasurer, and a recorder, and this council should regulate all the officers of the order, prescribe its order, and preserve its archives.

The President of the United States should be, *ex officio*, commander-in-chief of the order, as he is already, constitutionally, of the armies and navy of the United States, and his supreme authority thus properly acknowledged.

The grand master and council should be referred to the President each person who should prove their merit to be admitted into the order, for his nomination and appointment, and should be in correspondence with the different commanderies in the United States for that purpose.

The Legion of Loyalty should consist of one hundred thousand members, all of whom should be entitled for their meritorious services to the republic, either in the field or in the civil walks of life, combining the two, to membership in the Legislative Assembly, and those who have aided the good cause in any way, by philanthropic and other meritorious actions rather than wards being taken as the scale of merit in this particular.

There should be a comandery of the order in every State in the Union, all subservient to the grand commandery at the seat of Government.

The grand master should wear a cross of gold, and an additional star or *pinque* on the breast; the grand officers in the same manner, with part of the cross gilt only, and the grand cross by a large cross suspended across the shoulder by a wide ribbon. The commanders a small cross around the neck and all others on the breast.

The grand council should have jurisdiction over all military decorations and the mode and manner of conferring and wearing them. Thus, a medal of honor, or the like, all engaged in the war who had served three months in the Army or Navy, of brass, with suitable devices, and this would include a large number who might be recognized as acolytes of the order, aspiring to be soldiers of the order, who might attend the meetings of commanderies, and be their inspectors States, and be allowed to have a voice in the proceedings, but not a vote.

The soldiers should be selected from the meritorious of the Army, the Navy, and from civilians, as above recommended, for some very especial act of gallantry only, and the officers in the same manner from among the grand officers of the order.

The highest decoration to which an old should aspire might be one to be called the Washington Cross, to be conferred only for some very distinguished act of service in the field of battle or deed of gallant conduct on the ocean. But when the Victoria Cross is conferred in England. But above all, it would be necessary not to make these distinctions too common among the people, for then all the judicious course should be pursued in the selection of the grand council.

Having made the institution a national one, the cross might be conferred upon regiments who have distinguished themselves in the field, by action and by a reverse flag with the same with batteries, &c. The institution might also be made a self-sustaining one by a proper system of fees and taxation of the members, and even to have a revenue from such sources as our legislators might advise, and then it would be most advisable to pension off indigent members and their families, the wounded and disabled. This can be practiced in Europe, and would be eminently proper.

In establishing a constitution, rules, and by-laws for the government of the order, the wearing of badges, signs, or affectation of secrecy should be rejected as unworthy of true loyalty, and, in open, frank, and generous spirit, the same spirit should be observed in the forms of its proceedings.

A disbelief in God, disloyalty to the United States, or unworthy conduct offending against good morals or military discipline in any respect, should be grounds of exclusion from membership of the order, and the rules should be constructed to the end.

That such an institution has become necessary, we think, has become self-evident, and we, therefore, invite those interested to come forward and use their influence for its immediate establishment, in the conviction that it will prove a bulwark and an additional support to the present and future stability of our republican form of government.

H.

MILITARY MATTERS IN CONGRESS.

SENATE.

A MEMORIAL from the bootmakers, carpenters and sailmakers of the Navy was presented by Mr. ANTHONY on the 11th, asking assimilated rank with the line officers. It was referred to the Committee on Naval Affairs. A bill was introduced, and referred to the Committee on Claims, to ascertain the amount of the claims contained in the loyal States during the war, and especially those sustained by the citizens of Kentucky. Mr. WILSON called up the House bill reviving the grade of Lieutenant-General, and the bill with the amendments adopted by the Military Committee. These amendments strike out the clause of the House bill authorizing the Lieutenant-General appointed under the Act to command the Armies of the United States, and the clause recommending the appointment by the President of Maj.-Gen. U. S. GRANT for the position. A long debate ensued upon these amendments. Messrs. TRUMBULL, DOOLITTLE, HOWE, SAULSBURY, and others were opposed to the original House bill, as an act of justice to General GRANT. They characterized the bestowal of the title without the command incident to it as an empty honor conferred upon one who received the homage of the people. The amendments were supported by Messrs. JOHNSON, ANTHONY, NESMITH, WILSON, FESSENDEN, and others. CAMERON moved to amend the bill by adding: "who shall be General-in-Chief of the United States, under the direction of the President, and who shall remain in chief command at the pleasure of the President."

Mr. HOWE (Del.) on the 12th, moved that 1,600 additional copies of Gen. MCCLELLAN'S Report without the accompanying maps and documents be printed for the use of the Senate. Referred to the Printing Committee. Mr. FESSENDEN the House Deficiency bill was taken up, as reported with amendments by the Senate Committee on Finance. All the Senate amendments were agreed to. These amendments strike out all the House provisions for an increase of clerical force at the Departments, and authorize the appointment in the various bureaus, for a term not exceeding one year after the close of the Rebellion, of such clerks as may be necessary to perform additional duties.

The Senate's amendment appropriates the amount necessary to pay the salaries of these additional employees to June 30, 1865. Increases the employment of females instead of males at a salary not exceeding $600 per year. It also repeals the act limiting the office of Assistant Engineer of the Navy to four years. The amendments from the Naval Committee were also concurred in. They appropriate $150,000 for repairs at the Norfolk Navy Yard, $50,000 for work at Port Royal, and $87,000 for repairs at Brooklyn Navy Yards. Mr. FESSENDEN also presented amendments which were adopted, appropriating $80,000 for deficiencies in the Quartermaster's, Ordnance and Commissary Departments. These amendments were based upon estimates received from the several bureaus, as transmitted, with an explanatory letter, from the Secretary of War. Several additional amendments were adopted on the motion of Mr. FESSENDEN, and the bill was then agreed to.

A communication was received, on the 13th, from the Secretary of War, showing that there are three hundred and eighty-seven officers, of all grades, drawing commutation for quarters and fuel, in the Department, the bill increasing the pay of colored soldiers being resumed, Mr. WILSON moved to strike out the clause in the bill of the committee giving colored troops the pay of white troops, except bounty during the whole time they have been in the service, and insert, "after the 1st day of January, 1864." This amendment was agreed to. Mr. WILSON also introduced provided that from the monthly pay of colored troops, mustered into the service in January and February, 1864, the sum of three dollars per month shall be reserved to reimburse the expenses incurred by the United States in feeding and clothing the persons from whom they were taken. A substitute for the bill as amended was offered by Mr. COWAN, "that from and after the passage of this Act no person shall be held by the United States of the same arm of the service shall receive like compensation." This bill was further considered on the 15th, but the Senate adjourned without coming to a vote upon it.

Mr. FOSTER (Conn.) on the 15th, presented a bill to define the rank, pay and emoluments of Chaplains in the United States Army. The bill gives them the pay of a Major of infantry. It allows them acceptance and retention of quarters and fuel, or commutation. Divine once a week, hold religious meetings twice a week, and keep the libraries for the soldiers' use. The bill appoints a Chaplain Inspector to be selected from the Army. It was introduced by Mr. RAMSAY (Minn.), to promote the efficiency of Army Chaplains. Both were referred to the Military Committee.

On motion of Mr. HOWE (Wis.), the bill granting a pension to JOAN L. BURNS, for patriotic services at Gettysburgh, was taken up. Mr. HOWE spoke in favor of calling out the national forces came up for consideration, and as the Senate refused, by a decided vote, to recede from its proposition to strike out the clause in question.

On the 16th, on motion of Mr. HARDING (Oregon), several bills granting land to aid in the construction of military roads from the navigable waters of the Upper to a point at or near the mouth of the Owyhee River, and from Eugene City to the eastern boundary of the State, were severally passed. On motion of Mr. HARRIS (N. Y.), the Senate proceeded to consider the bill repealing the Statute of Limitations in certain cases. Mr. HARRIS, in explaining the bill, provides that whenever, during the existence of the present rebellion, any action, civil or criminal, shall accrue against any person who, by the fact of resistance to the execution of the laws of the United States, or the interruption of the ordinary course of judicial proceedings cannot be served with process for the commencement thereof, or the arrest thereof at such person, or whenever after such action, civil or criminal, shall have been commenced, the person, by reason of such resistance of the laws, or such interruption of judicial proceedings, be arrested or served with process for the commencement of such action, at the time the party would otherwise be liable to such service, the time during which such person shall so be beyond the reach of legal process, shall not be deemed or taken as any part of the time limited by law for the commencement of the same. Mr. POMEROY (Kansas) introduced on the 17th, a bill giving public lands to the several States for the support and education of public school children of soldiers who die in the military and naval service of the United States. The bill appropriates to each State that may have given for colleges, namely: 30,000 acres for each representative and senator; one-fourth of the land scrip may be applied for homesteads to the widows and children of soldiers entitled within two years secures the benefits of the proposed act.

On Thursday, the 18th, Mr. WILSON, from the Committee of Conference on the Enrollment Bill, reported, and the report was ordered to be printed and made the order for Monday next. The report accepts the amendment fixing the $300 commutation, with the proviso that it shall exempt for no longer period than one year, and that, at the expiration of that time, persons so exempted shall be liable to the draft. Colored persons who may be drafted are freed, and it is provided that such persons shall not be assigned as State troops, but shall be mustered into the service as United States colored volunteers.

HOUSE.

On the 11th Mr. STEVENS' amendment to the Enrollment Bill providing that all able-bodied persons of African descent between the years of twenty and forty-five, whether citizens or non-residents in the United States, shall be enrolled together with the white citizens, and the mode in which this bill is a supplement, and form part of the national forces, and when a slave is drafted and mustered into the service, his master shall receive a certificate therefor for $300, and the drafted man shall be free; *provided* the slaves of loyal men only shall be paid for. Mr. DAVIS (Md.) moved to amend as follows: The Secretary of War shall appoint a commission in each of the slave States represented in Congress, charged with the duty of ascertaining the names of three hundred dollars, to each loyal owner of any slave who may volunteer into the service of the United States, payable on the commutation money when the owner shall free the slave. Mr. WINSLOW (Md.) offered the following amendment: That the Secretary of War shall have no power to draft any person who has been drafted and paid to the person to whom such drafted person owes service or labor at the time of his master into the service of the United States. Pending the pence. These amendments were both agreed to. Mr. FESSENDEN WOOD called attention to the peace propositions contained in the late Message of the President.

On the 12th, the Senate's Enrollment bill as amended by the Committee of Conference of the two Houses of the Union, was considered, further amended, and passed. The House then adjourned till Monday.

Mr. WINSLOW (Minn.), on the 15th, introduced a joint resolution, proposing an amendment to the Constitution of the United States, with a view to prohibiting slavery throughout the United States and Territories. Mr. ALLEN (Md.) from the select Committee on Incumbrances, States, reported a bill, which was ordered to be printed, giving to the United States whose Governments have been or may be overthrown, a Republican form of Government. Among other things it provides that the Governments of the Provisional Governors, charged with the civil administration of such States until the State Governments can, by means of elections, be re-established in accordance with the Constitution, are declared free, and any person hereafter in the rebel public service is declared not to be a citizen of the United States.

The 16th was occupied with a debate on the credentials of Mr. Johnson, appointed by the Governor to fill a vacant representative from Arkansas, by four or five thousand votes. The credentials were finally referred to the Committee on Elections, and, after the discussion of the Internal Revenue Bill, the House adjourned.

On the 17th, the following joint resolutions were unanimously passed: Whereas, The Hon. ALEXANDER H. STEPHENS, thanks of Congress are hereby given to these noble and brave men, who, having already so gallantly endured the hardships and perils of the field, have left their homes in that part of the country and flag, present the sublime spectacle of equals voluntarily enrolled as soldiers in the army of the Union for another three years' campaign, or as long as the war shall continue.

Second, That the Secretary of War cause these resolutions to be read to each of the veteran regiments which have re-enlisted or shall re-enlist in both the volunteer and regular forces of the United States, and that the publication of thanks to Major-General G. H. THOMAS, and the officers and men under his command at the battle of Chickamauga, being under consideration, Mr. GARFIELD moved to add the name of General ROSECRANS, and supported the motion in a lengthy speech. The motion was referred to the Military Committee.

On Thursday, the 18th, a bill was passed, providing for obtaining possession of the Government property in the vicinity of Rock Island, Illinois, of land on which to erect the arsenal, before provided for by law. On the earnest appeal of Mr. FERNANDO WOOD, the House took up the resolution of the Secretary of the Treasury to sell the surplus gold, was discussed.

INSPECTION OF CAVALRY HORSES.

BRIGADIER-General WILSON, in charge of the Cavalry Bureau, Adjutant-General's office, has issued inspection of horses, a register shall be kept, in which contractors shall register their names, the number of horses delivered, and credited to duties, the number and sex of each contract, and the number presented for inspection each day. Inspections shall be held at the regular depots of cavalry. Horses shall be placed in the inspection-yard at least twenty-four hours before they are inspected, and until the inspection is completed and the horses delivered to the Government, the senior-inspector and his assistants will be permitted to enter the yard or handle the horses. With a view to make it impossible for any one to impose upon the Government unsound, serviceable horses, all horses presented with the mention attached at hand upon the inspection of horses of disorder, or purposely concealed defect, will be branded with the letter "R" on the left shoulder. Horses rejected for by age under six or over eight years, whether delivered by transportation or otherwise, will be branded with the letter "R," not to exceed in length three-fourths of an inch in the left shoulder of the horse. The contractor will not a horse becomes fit for service before the expiration of six months, he may be again presented for inspection, at the regular depot where he was rejected, free of charge. Inspectors will be particularly careful in making these examinations, as presented by contractors, and no horse which will be considered as evidence of fraud, and he will be branded on the left shoulder with the letter "R." Rejected horses will be removed from the inspection-yard, from the decision of the inspector, from the immediate vicinity of the camp at which the accepted ones are kept. When horses are rejected, the inspector will report the fact to the officer under guard at the expense of the contractor, he again rejected he examined, and then finally disposed of in accordance with the decision of the inspection of horses, the proceeding to be as follows:

The horses will be led one by one as fast as needed from the receiving yard by a halter or snaffle bridle, without blinds or saddles, then ascertain his height by actual measurement. He should be between fifteen (15) and sixteen (16) hands high. Examine his mouth to ascertain his age and that he teeth are sound. When the teeth indicate that he is over nine years of age, he cannot be accepted, but will be treated as an attempt at fraud. No horse under six or more than five years of age or over nine should be received, ex-

ought when he is in every other way suitable for cavalry purposes. In no case will horses over 10 years of age be received. Look at his eyes and see that they are sound. Examine his ears and see that they are clear of disease, particularly in the inside. Examine his head carefully in other respects, and see that there are no diseases or material deformities. Inspect his legs closely for sprains, splints, spavins, curbs, and other unsoundnesses. Each foot should be carefully examined to see that there are no cracked, split, or ganched hoofs, corns, or evidence of acute founder. The feet should be of good size. Examine his back and see that the general appearance of the horse that his coat is sound and good withers not too high nor too straight and heavy; that the length of the back is proportionate to the rest of the body; the back sound and free from knots and old sores temporarily healed; the kidneys and rump perfect and free. After having gone through with the foregoing the horse should be led off at a walk, then at a trot; observe how he moves, and if he stands well on his legs and moves as he should then be turned short around to the right and left to ascertain any injury to the chest or shoulders. He should then be mounted and ridden at different gaits for several minutes, to see that his wind is good; that he has strength to carry his rider; does not stumble, and has been broken.

These means having been resorted to and no serious defect discovered, the horse should be examined for his age and his inspector will under his observation branded on the left shoulder with U. S. in the usual manner. The initials of the name of the regiment for which the horse is bought, the letter, shall also be branded on the neck under the mane, in such a manner that each horse can be traced to the inspector and contractor who passed him. The number of the horse. The brand should not be too large; should be placed upon the flat of the neck; the inspector's name first; then that of the contractor.

All branding-irons when not in use must be kept under lock and key in the office of some commissary or acting quartermaster by the inspector on duty at that post. A copy of the mark with which each horse is to be shod is to be entered, and give detailed information concerning the exact range of duties involved in the purchase, care, and inspection of horses for the cavalry service. Each officer making this report must contain a sworn certificate that the horses have been inspected in accordance with these instructions.

THE DIARY OF COUNT GUROWSKI.*

Is this second volume of his "Diary" Count GUROWSKI appears again in the character of a public scold. His book from the beginning to the end is written in a style of virulent fault-finding, the tone of which unavoidably suggests personal ill-will as the cause of his censure and vituperation. If it were a matter of little consequence, we would not be induced to regret this unfortunate tendency of the Count's mind; but there is nothing in his military knowledge or in his political judgment to warrant his assumption of superiority over our generals and our public men. This Diary is a succession of attacks upon every one who does not acquire a prominent position in the Army or in civil life. Almost the only men who have the ill-fortune to be praised unreservedly throughout the book are Mr. STANTON and Generals WADSWORTH and BUTLER. Secretary CHASE is characterized as a good financier, but as a man who knows little of military character, and President LINCOLN as an imbecile. He is always in extremes. With him a man is either god or devil; and occasionally, as in the case of General HOOKER, he plunges a man down from the highest extreme to the lower, without the least compunction or shrink the fall.

He thus comments on the failure of General BURNSIDE at Fredericksburgh:

Dec. 7.—BURNSIDE complains of the manner in which he is victimized, and ingrates the whole country by the War Department. Requisitions are not honored by him with the necessary promptness. How, in fact, were STANTON to know of a requisition, unless it passed through the hands of HALLECK, and his lazy, or incompetent, or traitorous staff, to have seen to the satisfying of it? Besides, BURNSIDE is not a man of character enough to be said to have so much as an average twelve-year-old school-boy. He may occupy the place of a general, but he has neither the force, the firmness, or professional acumen in a variety of mechanical trades, who would have exercised on the spot, and at the shortest notice, any number of brakes, postmen, &c. Oh, how little are those unversed in military matters, and especially those who have never seen an army in the field, are they aware of the inexhaustible ingenuity and resources, which, in a moment, will overcome difficulties which a shallow brain believes fatal! BARCLAY of TOLLY saved about 500,000 men, when, in the year 1812, he marched from the Niemen to Moscow. Napoleon had not so ruthlessly, on land as steady, that practical annihilator of destruction, with which he was credited by the Russian commander-in-chief, as the Russian generals; and his similar manœuvres.

Dec. 15.—Slaughter and misery! Slaughter of the brave and misery in the hearts of the people, as reflected nothing but misery upon the country. When the rebel armies had become impregnable—but not until then—the enemy were buried against them! The power of the Army has been wasted in the most wanton slaughter of its commanders. The details of that slaughter, and of the imbecility employed by our officers in the campaign, constitute details, when published, will be horrible. The Lincoln Board-Bullock influence gave BURNSIDE the command, because he was to take care of the Army. And how BURNSIDE has fulfilled their expectations! It seems that the best way to take care of an army is to sacrifice it to the enemy.

My brave and patriotic Wadsworth has gone to the fields—also his two sons! one of them (Craig) was dangerously wounded, but bravery was remarkable, even among all the heroism of that most glorious and most conserved day. Craig was brought home to Washington, so we heard of it, but the miserable HALLECK had the impudence to say—"WADSWORTH'S son is not dangerously wounded, for I have seen him in his office."

Hall itself would be too good a place for HALLECK's imbecilities are not adapted to it.

Dec. 17.—The details are coming in. The disaster of our Army is terrible—unmitigated by any compensating glory. Just all this calamity, and all this suffering and humiliation, are brought on by the stupidity of Burnside, and the treachery of the rebels. The curse of the people ought to rest for centuries upon one very names of the authors of this frightful disaster. But here—so, here, it just reminds Mr. LINCOLN of his inconsistency.

Of Mr. Secretary STANTON he has much to say in praise. We select a few passages:

Dec. 27.—I wish I could succeed in bringing about the organization of a good Army. But, alas! the Army is ruined—ruined by the General Staff system so understood at, but the HALLECKS and other West Pointers have not the power to do all the mischief they desire.

Patriot STANTON is exceedingly at work concerning the organization of Army Corps—one in a region, and the Army of the Potomac, likewise, and the mitrigues, the traitors, the carriers, the Sewardites and the Mc-Clellanites, and the Democrats, are all combining to defeat Mr. STANTON'S laws. But STANTON will overrule the muddy storm. It is one of his able days. The congress of nations will not be worse, a patriot witness it may.

STANTON surrounds himself and selects young men—as far as one, at the present moment, can judge from a cursory glance at them. Of course, I could be only here sweet out the rest of the old Pierce! Undoubtedly he has been sent to the Army of the Potomac to look after Mr. HALLECK.

All kinds of fine against STANTON have been elaborated by McCLELLAN and his friends, and published in the New York Herald. The fact is that STANTON became McCLELLAN'S superior, STANTON relied in every friendly and honest way on McCLELLAN, and the latter, in his abuse and deceit, is made him fight the enemy, and not dodge the fight under false pretences. STANTON was deceived by McCLELLAN, but not for long. Even from day to day; and only when utterly disappointed by McCLELLAN'S duplicity and treachery, STANTON removed him. The impudent, fawning McCLELLAN to action. STANTON was a friend to McCLELLAN, but rectified his mistake in time.

June 7.—How I sympathize with STANTON, and admire his rule—others call it a despotism—in these days of the Army of the Potomac. Perhaps, using McCLELLAN-copperhead military cries, sooner STANTON of all the Administration evinces the most energy, the most determination, and the greatest ken. STANTON never interferes with Mr. LINCOLN nor with the Cabinet, but he is always ready to assist them with his advice, and how to march the respective armies, how and what way to attack the enemy.

Reliable patriotic counsels with me that STANTON as clearly sees every thing to-day, as he saw at when entering on his literary duty. I need wonder that he holds out as such an atmosphere. STANTON'S energy is unquenchable. Even his enemies, the Democrats, admit that. Of course, he is not true; but even if true, better to go off at half cock than not at all. Many say that he possesses more than his colleagues, and more by the exercise of his duties. But if he were to retire, he could not at the moment reveal what he has done, and what he has left to do. In finishing at his post, STANTON prevents still greater disasters and disgrace. He never sleeps, and he is at his post day and night as well as he refuses, or rather to dispel the ills with which McCLELLANISM and copperhead-ism have afflicted the country.

American Generals are accused of a want of spontaneity on the field of battle:

Dec. 20.—The American generals, at least those in the Army of the Potomac, are the most timid of men. Napoleon declared that when once in line of battle, they must rightly abide by the orders given to them. Of course, there are exceptions to every rule, and there are many exceptions. The generals of the Potomac shun the exceptions, and this immediately from the highest to the lowest. They have not been in the habit of action in not doing their military duty. Hence, the want of spontaneity, and the want of the beginning of the campaigns in the Shenandoah valley, of the Peninsula, and of Fredericksburgh. Generals may have mostly been, so to speak, the children of inspiration, seeing that for a few minutes, and then a doubtful struggle terminates in a brilliant victory, or a disastrous defeat, the commander-in-chief of a wing, or a corps, may, even a division, ought to have the courage, and the self-reliance to assume the responsibility in the hour of good living, and still more in the enduring phase of his men, and boldly strike for the accomplishment of the object in view. But this is not the case in America or Germany. Such a general sets up his own inspirations, and at the same time proves himself a commander who has the due determination upon. If instead of acting thus promptly, he waits and waits for further orders, he is generally overwhelmed by the enemy; the delay of those moments is a battle are very rapid, and a single hour lost, loses the day, or reduces the victory to a defeat.

The Count's remarks on the absolute necessity of a competent staff are more just; but he is always ungentlemanly and outrageous. He says:

Dec. 23.—Utterly incapacitated is McCLELLAN, and absolutely unfitted by his character for the command of an army. I think it quite clear that neither of them would have blundered quite so badly if he had had a staff of his own. Every thing depends on the staff itself, as the generals of continental Europe invariably are. Napoleon's staff was composed of the most distinguished men in every arm of the chief of staff, duties, duty, and value of the staff as an army, or of the chief of staff of a corps, are not known in the United States. In fact, one or at most two officers in the whole Army of the Potomac would know how to properly expect from HALLECK. Are there any two men in military science; and in the whole Army of the Potomac, who are more ignorant of a staff for as yet he has not learned either? Of course, he would have organized a staff for himself, and one for each of the corps under his orders. But, as it was, he left it to McCLELLAN to organize the school of staffs, and West Pointers are generally so ignorant of the duties of a staff officer, that they do not, and can't, understand or even appreciate how to find intelligent officers of all grades fit for staff duty. Hence, the miserable organization of the staffs, the ignorance, the personal will and good judgment are wanting in the head of the military organization, and HALLECK, the HALLECK, the HALLECK, is a failure. Consequently, a failure pretended to military science. He may have the capacity to manage the office of a clerk, but he is totally incapable to organize the cavalry on a body. When you do this, or even a commissary, or any other, you must have a head, or your chance is lost. Considered a military authority will be established. Oh, science! oh, science! how many blunders are committed in thy name! Napoleon's staff was composed of the right and left of the White House. And still you laugh you and laughing Americans generally, how ignominiously you are cheated of your blood, your time, your money, and most of all, of your so eminently magnificent national reputation!

What your military ministers chose you see in an organized army, would be laughed at in Europe, and even in any European military academy or school.

Dec. 24.—Your HOOKER! He is now the laughing-stock of Europe. I wish he may recover with honor from the disgrace of Chancellorsville. I wish he may recover with honor from the disgrace of Chancellorsville. I wish he may recover with honor from the disgrace of Chancellorsville

THE STORY OF THE GUNS.*

THE object which Sir EDMUND TENNENT had in view in the preparation of "The Story of the Guns," was not to inculcate between the rival manufacturers as a military commentator or an amateur theorist, but as one of the nation at large, who look to obtain an effective armament in return for the expenditure incurred. He has scrupulously shunned, as he says, the never-ending claims of inventors to priority of discovery, having found during the course of his inquiry, that every feature in every one of the recently patented improvements in guns, from the metal employed to the form of the bore and the projectile, was not of modern title, has been the object of contested claims and the source of vituperative animosity. He has drawn his information from the Parliamentary reports of the inquiry, the proceedings of scientific societies, and from the daily journals. From these sources he has made up a very available and valuable book.

Into the merits of the ARMSTRONG and WHITWORTH controversy, now raging in England, and recently revived in this book, we do not now propose to enter. We shall only call here and there such information as may interest our readers by its novelty or its importance.

Up to the year 1852, "Brown Bess" was the principal weapon of the British Army. It was little, if any, more effective than the old clumsy arquebus of the time of good Queen Bess, and the weapon with which the men of MARLBOROUGH'S army had achieved their victories. Its long range was entirely worthless. During the wars with NAPOLEON, the British soldier was taught to reserve his fire until he could see the whites of the Frenchman's eyes. It was calculated no more than one shot in 457 took effect. To bring down one man, the weight of lead thrown into the air was nearly of the rifle, to drive this clumsy weapon from the British service. In 1851 the Duke of WELLINGTON pronounced it a flimsy rifle; but the British Army was not wholly provided with rifles even in the Crimean war, one entire division being armed with Brown Bess. Even in the Indian mutiny the whole army with the Enfield rifle was not issued till 1858.

The liability of the Enfield rifle to become unserviceable from fouling proved a serious objection to its great precision. A good impression on this weapon was produced by Mr. WHITWORTH, who adopted the hexagonal rifling, with its corresponding bullet, a system which he afterwards applied on a large scale to artillery, without any material change in the essential principles. The fire of the WHITWORTH rifle is as accurate at 1,600 yards as that of the Enfield at 800, and its penetrative power is as 3 to 1. Its bullet is of 10, and above a round bag and a ball, while the Enfield will pierce only one. It will send a bullet through a three-feet plank; the Enfield only half-way through. But notwithstanding all these things in its favor, the WHITWORTH rifle will probably have at last to fight to banish the Enfield as the latter had to supersede "Brown Bess."

Such was the enormous range and precision of the rifle that field artillery was considered almost becoming obsolete. Formerly an enemy might be approached to within from 250 to 300 yards without much danger of loss from infantry fire. Under such circumstances field artillery took up its position at pleasure in front of infantry, within easy range. But when the rifle in the hands of infantry became as long as that of artillery, the occupation of the latter seemed to be gone. The application of the rifle system to cannon restored in part only the comparative superiority of artillery.

The idea of rifling artillery is not of recent origin. long ago as 1635 the Englishman, DUDLEY, had some experimented with rifled cannon. M. PONCHARA, at Paris in 1819, and others at subsequent periods carried on experiments in rifling artillery. But the difficulties in breech-loading, but their plans did not obtain practical adoption. Mr. LANCASTER, of Manchester, England, since 1846, has been slightly elliptical with an increasing twist, was used practically in the Crimea, but failed of success as applied to artillery, though answering well in small arms.

Among the many men of mechanical ability who in the course of the past few years directed their attention to rifled ordnance, Mr. SOUTH, Mr. WHITWORTH, ARMSTRONG, Mr. WHITWORTH and Capt. BLAKELY have become prominently known. Blakely's rifled cannon, on account of the enormous stock of cast-iron guns, amounting to about 17,000, Lord HERBERT directed an inquiry to be instituted into the various systems of rifling proposed, with the intention to ascertain which was best adapted for rifling cast-iron guns. The systems compared were those of Sir WILLIAM ARMSTRONG'S shunt, the French *canon à tonnerre*, Mr. LAIRD'S, THOMAS, Mr. A. JEFFERY, Mr. J. C. HADDAN, Mr. C. W. LANGSTON, Commander R. A. D. SCOTT, R. N., and Mr. BARNETT BRUTTEN. The committee state in their report that "they have no hesitation in awarding the first place to Mr. BARNETT BRUTTEN, on the ground of its comparatively little strain on the gun caused by projectiles on his "system with the moderate charge he advocates, as shown by the great endurance of a gun thus treated, as proved by him and by the high initial velocity attained viz; with charges one-tenth of the weight of the projectile. BARRETT, 1,015.5; ARMSTRONG, 1,016.2; the 32-pounder, 968.7; 9-pounder, 1081.4; service 32-pounder, 982.7. Such guns "would be capable of firing an elongated common shell "containing three times the bursting charge of the round "shell, and weighing twice as much, with half the service "charge or perhaps less, but attaining ranges exceeding "those of the service round shot, and possessing much "greater precision."

As to their adaptation for firing round shot, the committee arrived at the conclusion that the result of comparative practice with smooth-bored 32-pounder and shelled grooved rifled gun (BARRETT), both firing round shot with the service charge of 10lb. is decidedly in favor of the rifled gun. This is more than could be generally expected, but it makes it probable that little or no disadvantage would accrue from the grooving. With regard to safety and durability of the projectile the committee, because of the projectiles to join the bore, the committee ranked BARRETT'S first and ARMSTRONG'S fourth.

Mr. BRUTTEN claims that on his system—shallow grooves making one turn in 60 calibres, with lead to take the channels of the rifling—any gun may be rifled without materially weakening it, and may be used either as a smooth-bore. In support of his position he adduces the fact that 68-pounder guns converted on his system by the government, some of which fired upward of 1000 rounds, not one burst or suffered any material injury. A BRUTTEN rifled service gun, firing a 68-pound shell and 10lbs. charge gave an average deviation of 1 yard 7 inches; in 19 rounds at 2,925 yards, 2 yards 2 feet; and in 25 rounds at 5,100 yards, 4 yards 2 feet. At extreme range, 6,200 yards, a 9-cwnly 5,000 yards range the rifled service guns have considerably more precision than the smooth-bored guns at less than 1,000 yards range, and consequently they have a serviceable degree of efficiency at more than twice the distance that smooth-bored guns cannot be used for. Fully equal to Mr. ARMSTRONG in all the essential requisites of a rifled gun they surpassed the advantages of being capable of being used as smooth-bore guns. Multiplying the weight of the projectile in lbs. by the square of the velocity, as a comparison of the work done by equal charges of powder fired from a 68-pounder 95-cwt. gun and a rifled 32-pounder 56-cwt. service guns, we obtain work done by 5lb. of powder in the former gun, 34,220 lbs.; in the latter, 34,225 lbs. The cost of rifling those guns at Woolwich is under 20s. each. The guns are loaded by means of the ordinary cannon rammer, and the projectile is forced into the round shot, as they have a windage of nearly 1 of an inch. They do not require to be fitted into the bore in any particular way, as the projectile is not required to be adapted in the rifling. The action of the powder causes them to expand so as to cut the escape of gas, and fill the grooves. They are not expensive, and no objection is raised to their employment by any practical artillerist.

One of the most effective iron cannon which has been produced is that of Mr. WHITWORTH. It has been treated with neglect and injustice by his countrymen. When the committee of the Royal Commission made the report of Nov. 16, 1863, upon which the War Department under General PEEL, accepted the ARMSTRONG gun as the "best rifled cannon for general purposes," "gun on record," it had already been on record for several weeks in that very War Department, that 8-inch plates of iron, of the quality of those generally employed in the sides of the ship's side, by a gun rifled by Mr. WHITWORTH for this express purpose—a test which to this day has never been done by a gun of any other kind—had been shot and shot times the charge. The ARMSTRONG gun was adopted by the Government on the recommendation of the committee, who had already pronounced in favor of the ARMSTRONG cannon, refused Mr. WHITWORTH'S request to have the impressions of the bore of his gun taken, and submitted to new to both sides, in the presence of the scientific and military public, and the trials to be continued without any interference on the part of either party, either party to reconsider, alter, or adapt, according to the results then obtained. In the course of action left Mr. ARMSTRONG master of the situation. Mr. WHITWORTH confidence in the correctness of his principle was not for a moment shaken. The Government of the United States, the Southern Lords with astonishing success as to range, and subsequently with still more surprising effect as to penetration of iron plates, in comparison with the ARMSTRONG guns, while the *Trusty* at the Nore would have been sunk had she not been shielded by the Lords of the Admiralty present. As it was impossible to fire the ARMSTRONG and effective 9-inch gun, it was determined to damage it as much as possible. It was fired in the gunnery ships at Portsmouth, where it was fired with an occasional charge and the charge. The result was, it was cracked; but the same gun was next fired at Shoeburyness, and fired 100 rounds, when it remains to this day unburst; the crack in the inner tube was increased, but the main structure of the gun is sound.

The end of this experiment was that the 9-inch ARMSTRONG gun has been at last cast aside as untrustworthy, and the authorities at Woolwich casual have accepted orders to manufacture the WHITWORTH projectile at fifty guns, on an entirely different principle. Even the WHITWORTH gun, it has been tried at Shoeburyness, is considered a doubtful experiment for military purposes. So far from being a 600-pounder, it is only a 13.3-inch bore, carrying a 600-lb. shot. The guns are to be loaded with elongated projectiles of double the weight of the sphere cal shot, for which they are calculated; but this fact does not alter the case, as the 600-lb. shot will weaken his bore less than the elongated shot to the shunt rifle. A single shot becoming detached in the rapid rotation of the projectile will be sufficient to destroy the whole charge the rifling. In fact, at the recent trial at Shoeburyness, the ARMSTRONG gun *put fire to itself*, by the bursting of a shell. Guns of such large calibre as the ARMSTRONG and WHITWORTH are unsuited for military service. Delicate mechanism is unsuited for military purposes. Experience has to be relied on, in weapons which are necessarily subjected to the most violent strain.

We have given this somewhat extended notice to a class by briefly summarising the principal facts in relation to the adoption of rifled ordnance on the European continent—*canons à tonnerre*, *canons rayés*, *canons à bombes*, *canons obusiers*, and *ailettes*, or studs, to correspond, are cast on the circumference of the projectile. These guns are capable of firing ordinary spherical as well as elongated projectiles. Austria, profiting by her dearly bought experience during the Italian war, immediately on its close diligently applied herself to the study of the subject, after numerous comparative trials of lead-coated projectiles against the French system, selected that of Major WAHRENDORF, experimenting with a new alloy to supersede gun metal, and also with great success on gun cotton, having succeeded in rendering it perfectly manageable for artillery, the cotton for the cartridges being spun into a circular form, like ordinary twine. The Russians have followed the Austrian example, and procured their artillery on a plan very much resembling that of the French. Sweden, Holland, Spain, Sardinia, Portugal and Switzerland have done the same, while Prussia adheres to breech-loading and leaden-coated projectiles, making her guns of the steel manufactured by celebrated KRUPP at Essen. Belgium also uses breech-loaders, employing Bessemer steel for the barrels and adopting a slight modification of the WAHRENDORF plan for closing the breech.

CASTING OF A MONSTER GUN.

A TWENTY-INCH RODMAN gun, the largest piece of ordnance in the world, was successfully cast at this place, at the Fort Pitt works, Pittsburgh. The arrangements for this extraordinary casting were on the most ample scale. The furnaces were twelve in number, of the form usually calculated to reduce twenty-five tons of metal each, and the third, forty tons at a single heat. They are so arranged as to pour the metal into a reservoir with the desired length of "runners" possible. The flask in which the gun was cast is a massive piece of cast-iron. It is of octagonal shape, formed in two parts, one inside-and-a-half in thickness, and thickly studded with supporting ribs of six by four inches. The flask was cast in several sections, and these, when halves, the opposite sides being left open for the filling of the mould. The entire casting weighs about twenty tons, and the strength and solidity of the flask is extraordinary. The construction of the patterns alone, of the flask and gun occupied many weeks.

The core barrel used in the manufacture of all guns of RODMAN'S patent, is a long fluted cylinder of iron, smaller at one end and closed at the other by a cap, through which a pipe enters and passes nearly to the bottom of the cylinder. Through this pipe a stream of water is constantly fed to the core barrel, which, during the process of casting, and rising around it to within a few inches of the top, is carried off by a waste-pipe. This barrel is rather smaller in diameter than the bore of the gun, and is prepared for the casting by wrapping it with a layer of hard cord, which is then coated with a peculiar refractory composition. This composition, RODMAN says, is marked—that is, affords an exit to the gases generated during the casting, which pass through the windings of the hempen cord between the flask and the barrel when coated is also subjected to long drying oven, before being fitted into the mould. The covering of the core barrel is built up in a bank of sand-and-loam, but with constant practice, the employés in the works have become so expert as to insure almost perfect accuracy. The barrel is supported in the upper end of the mould, and adjusting its head some two feet above the upper edge of the flask, and snubbing the workmen to observe the rise of metal in the mould. The gun is cast vertically, the continuous stream of water pours through the barrel, keeping down its temperature, and causing it to set from the bottom.

The arrangements for the casting were all completed on Wednesday. The three furnaces were charged, one with charcoal iron, and the other two with charcoal and coke iron a half tons of metal. One of the smaller furnaces in the old foundry was also charged with twelve tons of metal as a reserve. At 10 o'clock on Thursday morning the four furnaces lines of open troughs of cast-iron, known as "runners," led to the "pool" or reservoir beside the pit, from which the mould, leading to the bottom, and connected with the mould by openings all the way to the top, was formed in the pit. The pool was heavily lined before reaching the gun bottom. With each of these openings or "gates" is connected one of the runners from the pool. The furnaces were tapped in an early hour on Thursday morning, and everything working most admirably, the charges were reduced before twelve o'clock.

At twelve o'clock the twelve tons furnaces were tapped, and three fiery streams of metal poured into the pool, and thence into the mould. The operation of filling the mould is seen so successfully performed that no difference was perceptible in the character of the iron flowing from the several furnaces. The metal rose in the mould uniformly with the same success, and at a quarter to one, twenty-five minutes after the furnaces were tapped the mould was filled, and they were closed. The head of metal in the mould remained in the meantime passed through the pool,—nearly 7,000 pounds per minute. The operation passed off very successfully, no difficulty arising in any quarter, notwithstanding the immense weight of iron used.

The gun was then replaced in the iron lathe from a rough weight of 170,000 pounds to a finished weight, calculated, of 115,000. The whole length from breech to muzzle will be 234.35 inches, and the length of bore 216 inches. The maximum diameter will be 64 inches, minimum, 34 inches. The solid round twenty-inch shot will weigh one thousand pounds, and the shell, filled for three feet in depth by powder will vary according to circumstances from sixty-five to eighty pounds. Some two weeks must elapse before the gun will be fitted for service, and many more before it will leave the lathe in a partially finished condition, to be finished after it reaches the mounting.

The lathe, in which the gun is to be turned, is one of the most massive ever constructed. For its foundation, an excavation about 30 feet deep, 40 feet long and 20 feet wide, and the bases of thirty cast-iron columns, arranged in pairs, and supporting in turn the cap upon which the "bearers" of the lathe rest. These columns are eight feet high and ten inches in diameter, and the "shears," cast in two pieces, are eighteen inches high, about twelve inches face, and sixty-five feet long. They were placed about five feet apart, coupled by caps, and strongly bolted to the columns. As soon as the columns castings were fitted and securely bolted to their places, the interior of the pit was solidly built up with brick and stone, forming a solid mass from top to bottom, with a longitudinal pit extending from end to end. Nothing less than

* The Story of the Guns. By Sir J. EMERSON TENNENT, K. C. S., D. With Illustrations. *London:* LONGMAN & CO.

this rigid foundation could be used in the heavy work for which the latter is designed. Upon the sheave were the necessary tool slides, massive pieces of cast-iron. The lathe will be driven by a pair of six inch cylinders, twelve feet stroke, and working at right angles. The driving wheel and face-plate is nine feet in diameter, and so geared as to exert an enormous power. The weight of metal in the principal pieces composing the lathe is 200,000 pounds.

ESCAPE OF UNION OFFICERS FROM RICHMOND.

The regret which loyal citizens felt at the failure of General Berdan's attempt to release the Union officers in prison at Richmond, is alleviated by the escape, on the 10th instant, from the Libby prison of one hundred and nine Union officers, for whom only about twenty-five were required, as far as heard from. The account of their escape is full of thrilling interest, and will be undoubtedly soon many particulars are withheld from publication at present. They were fifty-one days making a tunnel. Having managed to find access to the floor of the cellar they went to work, digging one another as opportunity offered. Their instruments were case-knives, pocket-knives, chisels and files. Twice they had to abandon their work and commence anew on account of impassable obstructions. After getting through the wall they disposed of the excavated soil by drawing it out in pieces, which they attached to a cord. This would be filled by the party at work in the tunnel, and pulled out on the cellar by their companions, who disposed of it by spreading it in shallow layers over the floor, concealing it beneath the straw. So close was the atmosphere in the tunnel that they could work in it but a few minutes at a time, and their candles would go out. At one time they got so near the street that a man, who, about the out of a window pipe, broke through, but fortunately this was not discovered by the guard, and was a great service, admitting air, enabling them to work more rapidly and more rapidly. The tunnel, when completed, was about sixty feet long, and passed into an old tobacco shed beyond the line of guards. As soon as they left the shed they proceeded very slowly in small squads of two or three, and sauntered off until they got clear of the guards, making their way towards the Williamsburg road. In the meantime the alarm had been given them, and the fact that all the rebel soldiers whom they met were ready to fire on them, and the Rebel Army which they had stolen from the supplies sent to our prisoners by our Government, was of great help to them. In order to elude pursuit they left the road as soon as on their track, they scattered as much as possible. Many were their hardships and sufferings, and frequent were their narrow escapes, but the whole party, with the exception mentioned, were bunch-wing in every direction for them.

The following is a list of escaped officers known to have reached our lines. It is supposed that all or nearly all that many more will yet arrive in safety:

Col. Streight, 51st Indiana; Capt. 21st Michigan; Lieut.-Col. Hobart, 21st Wisconsin; Capt. Wallack, 51st Indiana; Lieut. Harris, 9th Ohio; Col. W. P. Kendrick, 3d Tennessee cavalry; Lieut.-Col. Wm. Wilson, 3d Tennessee; Lieut.-Col. Alex. Von Wittel, 14th Pennsylvania; Lieut.-Col. J. C. Boyd, Major J. G. Collins, 29th Indiana; Major J. W. Rhinemann, 74th Indiana; Major Thomas Reynolds, 73d Indiana; Lieut. T. P. Williams, 73d Indiana; Capt. Mather Boyd, 73d Indiana; Capt. Morton Fewer, 15th Massachusetts; Capt. Michael Cullaha, 2d New York cavalry; Capt. A. G. Hamilton, 13th Kentucky cavalry; Lieut. J. C. Fehr, 7th Kansas; Capt. Wm. Hoffman, 39th Ohio; Lieut.-Col. Hunt N. S. McKeen, 21st Illinois; Capt. Isaac N. Johnson, 9th Kentucky cavalry; Capt. W. S. B. Randell, 2d Ohio; Lieut. Jos. Hall, 3d Tennessee cavalry; Capt. D. J. Jones, 1st Kentucky infantry.

The following officers, reported in the thousand *Zouave* sauce as having escaped, have not yet been heard from:

Col. W. G. Ely, 18th Connecticut; Col. Thomas E. Ross, 17th Pennsylvania; Col. C. Wheaton, 62d New York; Col. T. S. Wood, 24th Wisconsin; Col. D. Miles, 16th Pennsylvania; Maj. J. H. Hoopp, 15th Massachusetts; Maj. B. B. McDonald, 40th Illinois; Maj. J. N. Walker, 73d Indiana; Maj. J. Henry, 9th Ohio.

The following are known to have been retaken:

Col. J. P. Sanford, 124th New York; Lieut. J. Yates, 3d Ohio; Capt. J. Stair, 104th New-York; Capt. F. Irsh, 45th New-York; Lieut. H. Hinks, 67th Pennsylvania; Lieut. W. N. Allen, 7th Pennsylvania; Lieut. Wm. Lieut. A. White, 4th Pennsylvania cavalry; Lieut. E. Schroeder, 16th Pennsylvania; Lieut. L. Wetzel, 24th Wisconsin; Lieut. F. Moran, 73d New-York; Lieut. C. H. Morgan, Lieut. H. S. Chivester, 82d Illinois; Lieut. W. B. Pierce, 10th Kentucky; Lieut. Wm. Lyons, 2d Ohio cavalry; Lieut. P. S. Edmonds, 67th Pennsylvania; Second-Lieut. T. B. White, 83d Pennsylvania; Second-Lieut. J. M. Wilson, 39th Ohio; Second-Lieut. S. P. Gamble, 13th Pennsylvania; Second-Lieut. G. S. Gord, 84th Pennsylvania; Second-Lieut. S. P. Brown, 16th U. S. cavalry; Adj. M. S. Small, 6th Maryland; Isaac Johnson, Engineer steamer *Satellite*.

ARMY AND NAVY PERSONAL.

MAJOR-Generals Schofield and Stoneman arrived at Knoxville on the 9th.

MAJOR-General Burnside arrived in Providence, R. I., on the 16th, for a few days' stay at home.

MAJOR-General Foster and staff left Knoxville on the 9th, en route for Baltimore.

COLONEL E. McGilvery, of the Artillery Reserve, has been authorized to raise a new regiment of artillery.

MAJOR-General Meade returned to the headquarters of the Army of the Potomac on the 16th.

MAJOR-General Grant is to have a fine set of horse equipments sent him from Newark, N. J.

MAJOR-General McDowell arrived in New York on the 9th.

LIEUTENANT-Colonel Richard B. Irwin, A. A. G., has resumed his duties in the Department of the Gulf.

GENERAL Andrew of the 3d Minnesota regiment, at Little Rock, has been appointed a Brigadier-General. His regiment has re-enlisted.

BRIGADIER-General Quimby has resigned from the service, and resumed his position as Professor of Mathematics in Rochester, N. Y., University.

CAPTAIN Wilson, Chief-Quartermaster of the Army of the Potomac, has been promoted to a Lieutenant-Colonel in the Regular Army.

MAJOR-General Butler made a flying visit to New York to attend the funeral of his brother, returning immediately to his command.

MAJOR-General Q. A. Gillmore and staff sailed from Port Royal on Sunday morning, 7th inst., in the transport *Cosmopolite* for New York, arriving on the 12th.

LIEUTENANT George C. Russell, 6th Ohio Cavalry, was shot while on picket near Warrenton, Va., on the 9th, by a guerrilla.

BRIGADIER-General Hatch has been relieved from the command of the cavalry depot at St. Louis, and ordered to report to Major-General Hammon.

LIEUTENANT Charles C. Keeney, Medical Inspector U. S. A., has been assigned to duty on the staff of Major-General Wright, as Medical Inspector of the Department of the Pacific.

COLONEL Bowman, of Major-General Casey's Examining Board, has been ordered to the command of colored troops in Maryland, vice General W. Birney, who takes the field at the head of a colored brigade.

LIEUTENANT-Colonel Hammon has been appointed by Major-General Grant, to take command of all the drafted men and conscripts in the Division of the Mississippi. Colonel Hammon's headquarters will be at Memphis.

BY order of Major-General Butler, Brigadier-General Charles Graham has been placed in command of the garrison of fleet in the Department of Virginia and North Carolina.

MAJOR-General Banks has issued an order to Captain Miller, U. S. A., acting mayor of New Orleans, under appointment from General Banks, to remove him from duty as mayor, and ordering him to join his regiment.

THE officers of the Ninth New Jersey regiment have subscribed for a fine marble statue, which is to have a handsome monument erected over the grave of their late commander, Colonel Allen.

CAPTAIN Theodore P. Bacon, formerly Assistant Adjutant-General to Brigadier-General Morritt, has resigned, and Captain George B. Sanford, 1st United States cavalry, has been appointed his successor.

COLONEL Lowell, of the 24 Massachusetts cavalry, recently commanding a brigade in front of Washington, has been placed in command at Camp Stoneman, Point Gisborn.

COLONEL T. Ingraham, 38th Massachusetts volunteers, has been detailed as President of the Military Board, District of Washington, in place of Captain Todd, who has been placed under arrest on charges not yet made public.

BY statements from the War Department, furnished the Senate, it appears that there are 70 major-generals, the number allowed by law, in service and drawing pay, and 34 brigadier-generals, one less than the number provided for by law.

BY order of the War Department, First Lieutenant John A. David, Company B, 1st Pennsylvania Reserve regiment, has been honorably dismissed the service of the United States, for "cruelty to the men of his command.

MAJOR Latimer, of the 20th Pennsylvania Reserve regiment, detailed as Major-General on General Crawford's staff, was shot dead on the 14th, in a skirmish with guerrillas, about 15 miles out of Bunnell on the 14th.

CAPTAIN John R. Howard, formerly of Major-General Fremont's staff, has been relieved of court-martial duty in Washington, transferred to the Judge Advocate's Department, and ordered to Arlington as Judge-Advocate upon the staff of Brigadier-General De Russy.

THE death of Acting Assistant-Surgeon H. T. Kimball, of the 17th Massachusetts regiment, on the 6th inst., quite suddenly, on the voyage from this port to Fortress Monroe, without the opportunity to receive a parting message for his friends, was reside in Enfield, N. H.

BRIGADIER-General G. A. Custer, commander of the Michigan Cavalry Brigade in the Army of the Potomac, visited his parents at Monroe, Michigan, to Mrs. Libbie C. Bacon. Among the bridal presents were two handsome sabres presented by officers of the 5th and 6th Michigan Cavalry, and the other by the officers of the 7th Michigan Cavalry.

FIFTY-three applicants were examined last week by the Board for the examination of officers for negro regiments, of which number thirty were recommended for commissions, as follows: One Captain, 10 Captains, 9 Infantry Lieutenant Lewis Smith, 3d U. S. Artillery, and Lieutenant O. T. Hatch, 7th C. V., Judge Advocate.

CAPTAIN Benson, Provost Marshal of the Third District of Vermont, and Dr. J. L. Chandler, Surgeon of the Board of Enrollment of the same district, have been dismissed the service duly awaiting an investigation, for soliciting into the United States service men physically disqualified for military duty. Captain Isaac Platt, Provost Marshal of the Twelfth District of New York, and Dr. Wm. H. Pitcher, Surgeon of the Board of Enrollment of the same district, have been suspended in like manner and for the same reason.

MAJOR-General Rosecrans visited Jefferson City, Mo., on the 15th, and reviewed troops in the Governor Hall, General Brown, and a committee of both Houses of the Legislature, and escorted to the Hall of Representatives, where he made a speech to the joint session of the Assembly upon the condition of affairs in Missouri. He said the great object to be obtained in the State now was the restoration of law and order; and he invited the members to give him information of the condition of affairs in their respective sections, and their judgment as to the best means for the accomplishment of that end.

IN accordance with General Orders No. 3, dated Headquarters, Army of the Potomac, February 10, 1864, the following officers have been dismissed the service of the United States:—Captain Charles W. John Hurlbut, 90th Illinois, carelessness on duty, and conduct prejudicial to good order and military discipline, to be cashiered. First Lieutenant Albert E. Bowen, 1st New York cavalry, absence without leave, and conduct unbecoming an officer and a gentleman, dismissed. Captain P. W. Cheek, 11th Pennsylvania cavalry, absence without leave, and conduct prejudicial to good order and military discipline, dismissed. Lieutenant B. F. Campbell, 183d Pennsylvania, absence without leave, and conduct prejudicial to good order and military discipline, dismissed. Second Lieutenant Andrew J. Goodrich, 126th New York, drunkenness and conduct prejudicial to good order and military discipline, dismissed.

THE bill reported to the Senate establishes the annual pay of clerks to paymasters in the navy as follows: Clerks to paymasters at each navy yard, excepting Mare island, one thousand two hundred dollars. At Mare island, one thousand five hundred dollars. Clerks to inspectors of provisions and clothing at Boston, New York, Philadelphia and Cairo, one thousand two hundred dollars. At other inspections, one thousand dollars. Clerks to paymasters or assistant paymasters of receiving ships at Boston, New York, Philadelphia and Cairo, one thousand two hundred dollars. Of other receiving ships and in store vessels, one thousand dollars. Clerks to paymasters of squadrons, paymasters in vessels having complements of five hundred and over, one thousand dollars. In vessels having complements of three hundred and less than five hundred, eight hundred dollars. In other vessels, seven hundred dollars. *Provided*, That no paymaster or assistant paymaster shall be allowed a clerk in vessels having complements of less than one hundred persons, excepting in supply steamers and storeships.

BY order of Major-General Peck, commanding Army and Department of the North, officers and soldiers are forbidden to take their wives or any member of their families to any of the outposts in North Carolina. Officers commanding are not to bring any member of their family into the field without express permission from Headquarters, District of North Carolina. All officers and soldiers who are living away from their proper commands without special authority are ordered at once to join such commands. All surplus horses must be turned over to the Quartermaster's Department in compliance with orders from Army Headquarters. The troops are ordered to be kept in readiness to act effectively or defensively at a moment's notice, by night or by day.

BY command of Brigadier-General Palmer, a General Court-Martial, met at Washington, N. C., on Tuesday, the 2d day of February, for the trial of Major Henry Mc-Kinstry, Quartermaster of Volunteers, on the following charges, which he brought before it. Detail for the Court.—Colonel Thomas I. C. Amory, 17th Mass. Vols.; Colonel Charles Dodge, 3d N. Y. Cavalry; Lieutenant-Colonel W. Savage, 12th N. Y. Cavalry; Lieutenant-Colonel J. F. Fellows, 13th Mass. Vols.; Lieutenant-Colonel G. W. Bowles, 9th Mass. Vols.; Lieutenant-Colonel O. Tower, 5th U. S. Artillery; Major Thorndike C. Jameson, 5th R. I. Artillery; Major J. B. Honstain, 132d N. Y. Vols.; Major Edwin S. Jeaney, Judge Advocate.

MAJOR-General Peck returns his thanks to General Palmer, and Colonels Jourdin, Amory and Chasseau, and to all the officers and men of their commands, for the gallantry displayed at Major-General Pickett with more than twice their numbers. The moment was ardent and the conduct of the troops was of the highest order, when many of the troops were on furlough as veterans. On this occasion the enemy found, by bitter experience, that all our men were veterans.

PARAGRAPH 1422, Revised Army Regulations, is amended by General Orders, No. 49, February 1, 1864, to read as follows: Officers will be allowed one of the pistols or revolver pistols entrusted to their care, will hereafter be charged twenty dollars in each case, that being the amount of pecuniary responsibility which the United States as estimated by the Ordnance Department.

THE following named staff officers, etc., were discharged the service during the past week, from the Naval Academy Hospital at Annapolis, Md.:—Captain G. B. Hammon, 12th Ill. Cavalry; Lieut.-Col. 12th Pa. Reserve Corps; Louis Voltaire, 9th Pa.; Assistant Surgeon H. C. Steadman, 81st Pa., and Lieutenant G. Williams, 11th Maine.

MAJOR-General Butler has ordered commanding officers of forts and permanent batteries in his department, to report to his headquarters the exact number, kind and calibre of the guns with which they are armed; the number of rounds of ammunition for each gun, and also the capacity of the magazines in number of rounds of ammunition.

WITH a view to an equitable and just draft for the military service, Major-General Gillmore has ordered to be made at once in his Department a complete census of all males between the ages of 18 and 45 not now in the military or naval service.

BY order of the Quartermaster-General, officers of the Quartermaster General's Department are informed that they are authorized to purchase, for the vacant and unoccupied lots which have been or may be taken and used for military purposes during the exigencies of this war.

NOTICES TO CORRESPONDENTS.

The Editor of the JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of casualties among fellows; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to inquiries on professional subjects and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other drafts which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give the earliest notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the Journal.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

ANSWERS TO CORRESPONDENTS.

AN ARMY CADET.—The practice of the conducting sergeant in a "company of skirmishers marching in the front rank," is given in CASEY'S "Tactics," I. 1862, page 653. Vol. II. of the "Tactics," is also correct. A line of skirmishers "facing in rear" is described in CASEY'S "Tactics," II. 1862, page 18. It is not usual or proper to wear a belt or sash outside the overcoat. "When a battalion in line, 'faces by the rear rank,' the file closers of the color guard pass around the right of the company, the same as the other file closers of the rear rank company. It is not proper "for a company without arms to face to the right to break "ranks." "When a company faces to the right or left without arms," the sergeants occupy the same position as when facing to the front. CASEY'S formation of rifle companies is the correct one, as given in Volume I of the Tactics. "When a company marches at support arms," it has been the custom for the officer to remain at a carry; but, inasmuch as they require relief, as well as the men, we can see no good reason why they should not. A soldier should not "present arms to a field officer when he passes in the rear of him." "At the funeral of a captain, the staffs should be draped in the manner of the colonels. There is no authority for colors on a dress parade. "An officer commanding an armed guard should accompany the prisoners at and a sergeant with his arms." When a battalion of ten companies is closed in mass, by "distance, left in front," the advanced division is the 6th. The Color Guard on drill should carry their bayonets at support arms, as in the U. S. Colonel of a regiment has no authority to assign a lst Lieutenant "to the command of a company without the rank of a lieutenant existing under him." "Instructor" was not current in his institution for promoting arms as a march.

"YOUNGEST OFFICER."—When the Colonel of a regiment at review, or on dress parade, commands, "To the rear, close in mass," and the 1st Lieutenant Colonel should, on this, pass around, at the command, from the right, and the Major around from the left, they would assume the proper areas of command officers. In consolidation of files from the right, as many files of fours should be completed as possible. After this you may have remaining a broken file of either rank, one or three men. When the whole company is marched to the front, and has an odd man, he should be in the rear rank, and near to the left file. When a company is marched to the left, and has a broken file of four, that broken file should lead; should the broken file have but one man, in case the company faces to the left in front of the column, the single man will move back to his own file. Should the broken file have two men, when the company faces to the left, they will face and remain on their ground. Should the broken file have three men, when the company faces to the left, the rear rank man of the left file will face to the left, and make a side step to the left. Para. graph 1,401, CASEY'S Tactics, applies to forces, regular or volunteer, in a single column; and so far as the rear division of the front is concerned, modifies par. 1,313.

O. G. H., Salem, Mass.—An acting Third Assistant Engineer is appointed, after passing an examination, by a Chief Engineer of a navy yard, upon purely professional matters, conducted in the same manner as a regular examination.

FIRST.—A more careful study of your tactics would have saved us the trouble of your question. Though, by paragraph 112, page 235, of CASEY'S Tactics, officers are instructed to take their proper places at commands, paragraphs 115, 114, and 116 direct that, under some circumstances, they load while marching. It is with reference to this last paragraph 120 directs that skirmishers be habituated to load while marching.

Answers to several other questions are necessarily held over.

The Editor would respectfully inform correspondents that he cannot furnish lists of persons who give their names for publication.

In answer to many correspondents, the Publisher would explain that the grant of work upon the printing office has delayed the reprinting of Plumber & Steam Fitter, for which a large number of subscribers are waiting, to complete their files. It will, however, be ready by the 4th of March, and will be mailed to all who may desire it.

U. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, FEBRUARY 20, 1864.

THE SPRING CAMPAIGN IN THE SOUTH-WEST.

THE concentration of the several armies occupying the vast theatre of war from the Alleghanies to the Mississipi, under the supreme control of General GRANT, gave that commander the opportunity, which no other of our generals has yet had—the opportunity, namely, of effecting a combination to what the French call *la haute strategie*. We can well believe that the military movements reported as under progress at several points in the Southwest, form the preliminaries of a gigantic system of operations, looking to the occupation of important strategic positions, the division of the enemy's force and his consequent destruction in detail. We can say this without formally committing ourselves to any of the speculations which newspaper critics, *docti indocteque*, have been pleasing themselves with musing.

It may, perhaps, afford a clew to the nature of General GRANT's designs to consider for a moment the kind of agencies which promise the most powerful effect in crushing the remaining strength of the Rebellion. Now, we believe these to be two-fold—first, the dealing of severe blows at the hostile forces in the field, and secondly the occupation of lines that cover and cut off from the Rebels extensive areas of productive territory. It is not easy to decide in what the present juncture of the war the more important. If, beyond a doubt, the supreme duty, in its earlier steps, when the Rebellion swelled out in the pride of its strength, was the destruction of the Rebel armies, it is a question whether their cause has not now reached a crisis, when depriving them of the resources of supply must tell quite as powerfully against them. "*You* "*take my life*," they may well say with SHYLOCK, "*when you do take the means whereby I live.*" And certainly we have already had blood enough to make us willing to welcome any plans that look to accomplishing the work with as little more of it as possible. If we may assume that General GRANT has kindred views, and means to operate against their sources of supply as well as against their armed forces, we will have a key to the explanation of some late movements that are not so clear on the simple theory of *strategic* combinations.

If we suppose JOHNSTON induced either by direct pressure on the part of GRANT on his front, or by diversions elsewhere, or by both combined, to fall back from the line he has taken up to hold the key to the States bordering on the Gulf, there are but two lines by which he can retire. He can retire northward and *eastward* for the purpose of covering Atlanta, &c. Or he can and *westward* for the purpose of covering Montgomery, &c. Now let us see what is involved in each of these courses respectively. By falling back to Atlanta he is able to keep open his communications with the zone east of the Alleghanies, in which the main force of the Confederates is concentrated. By concentrating with BEAUREGARD and with LEE. This he does by holding the double lines of railroad—the upper one by Atlanta, Augusta, Charleston, Richmond, the lower one by Montgomery, Savannah, Charleston, Richmond. By the other course, that is by falling back to Montgomery, he loses his possession of that rich and productive region—the great region reached towards the Gulf, comprising the corn-growing districts of Western and Middle Georgia, Northern Alabama, and Eastern Mississipi, the beef-producing tracts of Northern and Western Florida (on which the Rebels now mainly depend for that supply), and the rich cotton bottoms of the country along the Gulf coast.

Now it is equally important to the Rebels to hold *each* of these districts—the former deriving its importance from military, the latter from material considerations. The dilemma in which General GRANT's combinations will place them is that they will be imperatively compelled in the outset to choose which side of this puzzlingly important alternative they will take. All-important though the material considerations be, however, we presume that there is little doubt that the military motives will be found supreme. The Rebels *must*, at all hazards, keep up their now single remaining line of communications with the Atlantic States—they must not allow themselves to be separated from the forces in South Carolina, North Carolina and Virginia. There is every likelihood, therefore, that JOHNSTON, when forced back, will take the line to cover Atlanta. What will be the effect of this move, and what seem to be General GRANT's designs in the matter?

It is no longer a secret that a strong column composed of the 16th and 17th Army Corps, under command of General SHERMAN, has taken up an easterly line of march from Vicksburgh, following the line of the Southern Mississippi Railroad. By following the prolongation of this line, they will strike Meridian (140 miles), Selma (250 miles), Montgomery (300 miles)—and double railroad and double river communications will be opened up with the Gulf. The Pearl, the Tombigbee and the Alabama—rivers leading into the heart of Mississipi and Alabama—will be thrown open to our gunboats. In a word, the great centre of productive forces will be seized, and with it all that it involves of fatality to the Rebel cause. At the same time that SHERMAN's force is pursuing the line indicated, another very powerful cavalry column, twelve thousand strong, under Generals SMITH and GRIERSON, has set out from Corinth and Holly Springs with the manifest intent of following the Mobile and Ohio railroad southward. This force will be available presently for the double purpose of covering SHERMAN's front and flanks, and of making a series of raids on the most extended scale.

We would not be understood, in the indication of this programme as going beyond simple speculation; but we do say that it suggests an ample theory for the operations of the forces employed, and if successfully executed must produce consequences of the very highest moment. The development of this plan, however, must necessarily be much more tardy than is conceived by our contemporary critics, who whisk columns about with the ease and rapidity of presidigitation. General SHERMAN will be compelled to restore the railroad as he advances, and if he reaches Meridian within a month it will be good work. Neither is there any indication that the forces at Chattanooga are to take part as promptly as has been supposed. General GRANT, we imagine, has still much to do in the way of accumulating supplies before he can decide the kind of advance he would like. We conceive, too, that he will await the further development of SHERMAN's operations before he lets slip the dogs of war from Chattanooga. It is a summer's job he has undertaken; but it is in his highest degree encouraging that the opening movements of the new campaign show that General GRANT has no intention of lying by to let the rebels work their will, but is boldly taking the initiative into his own hands.

THE ENROLLMENT ACT.

BOTH Houses of Congress have at length finished their consideration of the Enrollment Act, and the result of their labors is before us, to the two bills they have respectively matured. It only remains for a Committee of Conference to reconcile the difference between these bills, and the Act will be ready for the signature of the PRESIDENT. As the discrepancy between the action of the two Houses relates only to subordinate provisions, we may regard the essential features of the law as settled. Considering it as it stands it is still lacking that important feature of compulsory service which we have pointed out as so vital to its efficiency. After spending three precious months of the country in waiting for recruiting our armies, in considering how it should be done, we did hope that Congress might give us a bill which would be immediately effective for this purpose. But perhaps it was too much to expect that a body so directly dependent upon popular favor would venture upon a measure so repugnant to popular selfishness as a thoroughly impartial enforcement of the obligation of personal service would be. Though they have passed by the most essential amendment to the bill, we must be thankful that they have given us so much as they really have, and that they have after much tinkering succeeded in stopping some of the enormous leaks exhibited in it as originally passed. If the Committee of Conference are resolute to prompt in their action we may hope that we shall soon have a law which will furnish the men needed for our armies by the time we have fairly entered upon the coming campaign. We ought, in prudence, to have them now in process of drill and preparation, but may be hawful if they are forthcoming in season to follow up some of our prospective victories or to retrieve our possible disasters.

The most important point upon which the two Houses differ is as to the amount of commutation which shall be exacted, the Senate fixing it at four hundred dollars, and the House reducing it to the sum of three hundred dollars, at which it originally stood. The difference is hardly worth disputing over. If the commutation clause must be retained, it matters but little whether the sum required be three or four hundred dollars. In either case it amounts to the virtual exemption of a very large class, in a country where the distribution of wealth is so very general as it is here. If we must barter with our citizens for the service which it is their imperative duty to render, it is hardly worth while to spend much time in debate as to the amount to be demanded. Be it little or much, the cost of replenishing our armies must come out of the wealth of the country, and it is better perhaps, that as much as possible of it should be obtained by a general tax instead of by a special and discriminating one.

In regard to other features of the bill, both Houses agree in declaring that the quotas of each township

or district shall be proportionate to the number of residents; that so far as practicable, the number previously furnished shall be taken into account in determining the quotas. Both measures agree, of course, in ordering a draft for any deficiency which may exist when the time for volunteering shall have expired, and both provide for repealing the draft until the quotas shall be filled—the Senate bill directing explicitly that the War Department shall first apply the commutation money which may be received in endeavoring to accomplish this object. Individuals who have been enrolled may at any time previous to the draft furnish an acceptable substitute not liable to the draft, and they shall be exempt; and the time within which such substitute shall be exempt—not of course, exceeding three years. The Senate bill prohibits any individual in the service of the United States from becoming a substitute to serve in any regiment or company except among the troops of the State whence he originally entered the service, and the House bill declares that no private soldier, musician, or non-commissioned officer already in the service can be accepted as a substitute. With reference to furnishing substitutes subsequent to the draft, the two bills vary in some particulars, as will be seen by a comparison of the sections which relate to this important point.

SEC. 3. *And be it further enacted*, That the persons composing the militia forces of the several States of the United States shall, from the time fixed for his appearance for enrollment, be subject to draft for service, and be acceptable substitutes, subject to such regulations as may be prescribed by the Secretary of War. That all such persons enrolled and liable to draft, and all persons who are by law exempt from draft during the time for which such substitute is to render service, shall be liable to draft, and may be drafted for the term for which he was enrolled; and if such substitute is liable to draft, the name of the person for whom he is substituted shall be entered in the same list, and he shall be liable to draft as if no substitute had been furnished; and the exemption shall not extend beyond the time for which he was enrolled, nor the time for which such substitute was to render service. That no person in the military or naval service of the United States shall be accepted as a substitute, who has not served three days service, and who has not been duly enlisted service shall rest on the name of the person for whom he is substituted, and he shall be liable to draft as if no substitute had been furnished; and if any person liable to draft, and who has furnished a substitute, shall hereafter pay money for the procurement of a substitute, or for any other purpose connected with his enrollment, such payment of money shall entitle such person to exemption from draft on that call, and his name shall be stricken from the list; but he shall be subject to draft on future calls, as if he had not furnished a substitute under this call. That the provisions of the four hundred dollars, instead of three hundred dollars.

SEC. 4. *And be it further enacted*, That the provision regarding the punishment of those who may resist the enforcement of the draft is so explicit that no judge can hereafter allow his sympathies to betray him into conniving at the escape of a culprit, however strong his sympathies with the Confederates may be, but the House bill is much more thorough than is that matured by the Senate in all that relates to the duties of examining surgeons, as well to those of provost marshals and their assistants. It also guards more carefully against the perpetration of those numberless frauds which experience has taught us unprincipled vagabonds will not hesitate to practice, if opportunity and "volunteer committees" offer a convenient opportunity. There are other minor points of difference between the two measures to which we have not space to refer here.

Now that our National Legislature has made such progress toward the settlement of this vital question of conscription, we trust they will promptly dispose of the minor differences between the two houses, and hasten the Enrollment Act to its final passage. The provost marshals throughout the country should know speedily the precise basis upon which the draft is to be enforced. To accommodate Congress, President LINCOLN has already postponed action, January 5th to March 10th, and further delay in enforcing it is utterly impossible. In a speech recently delivered before the Produce Exchange in this city, General HANCOCK expressed his apprehensions lest the recruits whom this draft was expected to bring into the field might be added to the armies too late to take part in the approaching momentous spring campaign, and unless our representatives can be aroused to an appreciation of the necessity, we may have to sustain the responsibility of disastrous defeats to our Army. It has already taken them nearly three months to bring into form the amendments to the enrollment act, which we have sketched above, and the bill apart from the radical omission we have noted, is now probably as near perfection as any similar measure which has ever been enforced. It combines the best features of the law which other Governments have matured, and has been modified so as to obviate the objections which actual experience has demonstrated existed in the old bill. While we would acknowledge the conscientious and careful labors of the respective military committees, as well as the skillful manner with which the friends of the measure have carried it through both branches of Congress, we would earnestly urge upon our legislators the fact that the law is not only to govern the nation in the future, but it must meet the emergency now before us. We trust then we shall be able to publish in our next issue the Enrollment Act matured into a law, bearing the signature of President LINCOLN.

THE English still persist in testing the plates designed for armored ships, with projectiles thrown by the 68 and 100-pounder smooth-bore guns. On August 27, we notice, two plates 15 feet 6 inches in length, 3 feet 3 inches in width, and 5½ inches in thickness, designed for the frigates *Agincourt* and *Northumberland*, were tested in this manner at Portsmouth. In one plate the maximum indent was 2 inches, and the minimum 1 1-16th inch, and to the other, although both received a full semi-circular line that measured but 32 inch through the greatest extent of the curve, but one small surface crack was produced. This closed the official test, and then additional experiments were made. An improved cast-iron spherical (crucible) shot from the ESQUIMIX 100-pounder smooth-bore with a charge of 25 lbs. of powder was produced an indent 2 inches, with a diameter of 9½ inches, with only a surface crack around the indent. Another shot from the same gun made an indent 3 8-10 inches deep and 10 inches in diameter. Both balls were shattered by the concussion. Steel shot from the same gun, with an equal charge of powder, were next tried upon one of the plates. The first one struck some distance from any damaged part, broke through and buried itself and the broken parts of the plate in the ship's side 12 inches beyond the inner surface of the plate. The second passed through the plate and 3 inches into the ship's side; the third cut its way in with 9½ inches diameter for about one-third of the plate's thickness, and then took everything before it, increasing the diameter of the hole to 3 feet at the inside of the plate and demolishing the wood backing next it, strewing the lower deck of the targetship with pieces of wood and iron. The fact that these steel shot were but little changed in form after doing such damage, is the only additional proof of their vast superiority which is needed. There is one test to which these plates have not yet been put. How would the sides of the frigates which they cover resist the fearful impact of a 1000 lb. ball thrown from the 20-inch gun just cast at Pittsburgh?

THE Bill submitting to the people of the State of New York, an amendment to the Constitution, extending to soldiers the right of suffrage, has passed the Legislature of the State, and, we are happy to say, has received the signature of the Governor. The second Tuesday in March next is appointed as the day for the special election, and the ballot to be voted is to be endorsed, "Proposed amendment in relation to "absent electors," with the words thereon, "For the "proposed amendment allowing absent electors in the "military service of the United States to vote," or, "Against the proposed amendment allowing absent "electors in the military service of the United States "to vote." Inasmuch as no provision is made in the Act for the furnishing of ballots by State or County authorities, the printing and distribution of the ballots will fall upon citizens in the several counties. We trust every patriotic man will interest himself to see that the affirmative ballots are properly distributed and voted. The passage of the amendment is a duty the people owe to their soldiers in the field, who eminently deserve the right to a voice in the election of the rulers of the country they are hazarding life to defend.

THE managers of the Metropolitan Fair, to be held in this city for the benefit of the Sanitary Commission, have issued a circular, requesting officers in the Army and Navy to contribute to their collection any trophies, autographs, autograph manuscripts, and other valuable relics they may have in their possession. The autographs of the General officers of the Army seem to be in especial request, so that at a very small expense of trouble to themselves they may make glad the hearts of thousands of patriots who desire to contribute to the funds of a most worthy society, by donating them to the Fair. We shall take great pleasure in transmitting to the proper committee anything that may be sent to us for the Fair. There are a thousand of valuable mementoes of this war, scattered throughout the Army, which the owners, we are sure, would take great pleasure in transferring to the managers of the Fair, did they but understand the appreciation in which they would be held by them.

An important decision has been rendered in the Supreme Court, in answer to the petition of VALLAN-DIGHAM asking that the writ of *Certiorari* be directed to the Judge-Advocate-General for a revision of the proceedings of the Military Commission which tried him, the jurisdiction of which was denied, as extending to the case of a civilian, the object being to have the sentence annulled on the ground of illegality. Justice WAYNE delivered the opinion of the Court, refusing the writ on the ground that, even if the arrest, trial and punishment of VALLANDIGHAM were illegal, there was still no authority in court to grant relief in this mode, and that there is no law by which any appeal, or proceedings in the nature of an appeal, from a Military Commission to the Supreme Court can be taken.

SINCE the repairs upon her engines, the *Ex d'Italie*, the Italian iron-clad has had two excursions around the bay, passing in and out among the shipping. On the first trip, she ran five hours, attaining a speed of about eleven knots On Monday, the 15th, she was again under way for six hours, with engines running from 36 to 52 revolutions. At 51 and 52 revolutions, she attained a speed of twelve knots. Her performance was, in all respects, highly satisfactory, she proving herself as manageable as a wooden vessel, and obeying her helm so promptly that she was turned completely around within one-quarter of a mile. She was to have started on a trial-trip of several days on Tuesday, but was detained by a storm, and had not left the harbor up to Thursday.

THE Minister of War of Spain has ordered the organization of four battalions to be dispatched to St. Domingo in March. The Turkish government is said to be strengthening all the defences of the Danube. Great agitation is said to prevail in the Moldo-Wallachian provinces.

MAJOR J. C. Willard, A. D. C., has resigned—the resignation to take effect from March 1st.

FOREIGN MILITARY AND NAVAL MATTERS.

RUSSIAN official reports state that the total number of Poles killed in battle during the year 1863 amounts to 40,000 men, and of those taken prisoners to 20,000, while the Russians only lost 20k.

THREE of the old cast-iron guns, strengthened on the principle of steel and iron tubes, have been tested at the proof butt in the Royal Arsenal, Woolwich, with much success. The bore of each gun was enlarged so as to admit an inner tube 2¼ inches thick throughout, consisting of the increased exercise.

LIEUTENANT-Colonel GALLWEY, of the Royal Engineers, and a member of the Ordnance Select Committee, and Captain ALDERSON, of the Royal Artillery, and assistant to Superintendent of Experiments at Shoeburyness, have been dispatched across the Atlantic by the British War Office, for the purpose of gleaning such information as they can.

MR. WILLIAM RUMBLE, Chief Engineer and Inspector of Machinery afloat at Sheerness, England, has been put on trial, at the instance of the opposition, upon a charge of misfeasance in the equipment and manning of the Confederate steamer *Rappahannock*, which was some time ago sold out of her Majesty's service.

A NEW description of iron-clad is being constructed with prodigious activity at Toulon. Her keel was only laid on the 1st of January, and it is hoped to launch her towards the end of April at least. This hurry is explained by the great curiosity evinced to know whether she will realize the sanguine expectations of the inventor, who has promised to produce an armor-plated vessel capable of destroying an entire fleet.

A SON of MOURAVIEFF lately took upon himself to protect a Polish lady who had been sentenced to Siberia, and only sent her there on paper. When his father heard of this act, he said he had but the son to Wise, and in the presence of several persons inflicted upon him certain paternal chastisement such as is not usual between man and man, except in the Czar's Empire le "Grand" was somebody's remark on this subject.

THE official military journal of Russia up to the 13th of January states that there are now no organized bands in the government of Pskoff and Livonia. The number of the marauders who take advantage of the almost-impenetrable forests of the latter province to escape from justice has considerably diminished, and whenever the peasants meet them they immediately apprehend and deliver them up to the authorities.

IT is rumored in Paris that Archduke MAXIMILIAN still hesitates to accept the Mexican throne, and that in order to "hasten a solution" the EMPEROR will mount a Throne and abdicate the government into his hand. The Viceroy, *dit-on*, is to be Captain BONAPARTE (the grandson of the late Prince JEROME by his first marriage with Miss PATTERSON), the nephew of Marshal PELISSIER General BAZAINE, and other military dignitaries have also been put forward.

EGYPTIAN ophthalmia has broken out to a serious extent among the natives in the Mauritius population. There are already more than fifty sufferers in the hospital just established in the neighboring village of Grandsaline. Other sanitary measures, on the first arrival of the Austrian troops, at seeing them so often assembled on muster. This precaution appears to have been adopted by the Czar also, for Russian soldiers might profit by their stay in Hamburg to desert.

THE Minister of the Interior at Turin has addressed to all the prefects of the kingdom a circular in which he calls upon them to promote rifle societies as much as possible, keeping in view the decree of October 11, 1863. The object of rifle practice is not to be a privilege of the few, not to be limited to the national guard only, but to be open to all on certain days, because it is the government does not fear the military insurrection of the masses, but, on the contrary, relies most "particularly thereon, when directed by intelligent prudence."

AT a recent court ball in Vienna a young officer of artillery, of plebeian birth, asked a lady of high rank to dance with him. All the lady's blood flushed into her face as she refused with great signs of disdain. The EMPEROR, who had seen the insult offered to his guest and his uniform, came up and said, "Captain, my aide-de-camp, to dance with you." In a few minute after the gunner was clasping the hand, and perhaps the waist, of her Imperial Highness the Archduchess FREDERICA, Sophia, Dowager Queen of Wurtemberg. MARIA, mother of his Imperial Majesty FRANCIS JOSEPH, EMPEROR of Austria.

TRAVELLING as quietly as present is not unattended with danger from brigands. A letter received recently in Malta mentions that an English gentleman, travelling in the land-coach, and with an escort, was fired on by brigands, on the road between Catania and Catabellotta. One of the armed escort was severely wounded. The same gentleman was attacked in October last, near Licata, robbed of everything he had about him, and much maltreated. The heavy rains have done much damage to the roads, and destroyed many bridges, rendering communication between the different towns and villages very difficult.

THE cultivation of vegetable gardens attempted by several Russian regiments in Poland has proved with success, the French Minister of War has given orders to have the system tried on a more extensive scale. In fortified towns, where there is military ground fit for cultivation, any regiment making an application will be allowed a space sufficient for the formation of a kitchen garden. In garrison towns, where no such ground exists, the engineers are to rent a sufficient space in the name of the State, the charge, however, as well as all the attendant expenses, to be placed to the account of the food of the regiment. The care of the garden is to be confided to soldiers, placed under the superintendence of a sub-officer or corporal. These military gardens will receive a fixed daily allowance of 25 cents for sub-officers, 18 cents for corporals, and 13 cents for privates.

THE Ford, or arm of the Baltic, that penetrates the country up to the city of Schleswig, and known as the Schlei, presents a very animated scene. The correspondent, a most animated appearance, as in several places thousands of persons are busily occupied in sawing through the ice the blocks that have been filled out of the water, by which an open channel of some thirty feet wide is obtained. The sawing is chiefly done by the soldiers, and the ice is thrown by civilians. Mechanical fishermen, who receive for their day's labor two Rigsdalers and four marks (about 5s. 6d. sterling) each, which is not only looked upon by the Holsteinians them for not being able to pursue their usual avocation of fishing.

A LONDON military gazette, in an article on the British Army, says:—"In no country in the world is the soldier so little thought of socially as in this. There is a sense of shame or reproach in the aristocracy by any connection with it, to another than a son who enlisted for a soldier. The Crimean war broke down much absurd prejudice and ignorant antipathy, but much of both remains. Much like the same kind of feeling existed in the country towards the army, previous to the breaking out of the rebellion. But the war in India has made, and will make the position of a private soldier honorable in the sight of every patriotic person. The probable reason why the British Army is not more highly estimated is that it has had so little to do which could possibly excite respect or enthusiasm among the people. Blowing Sepoys from guns to the winds, and hunting naked savages in New Zealand, is hardly the work to make an army respected.

THE Bordeaux journals publish the following story: "The garrison here has lost its adoptive child, in the person of a boy named PETER, aged eight or nine years. About two years ago the soldiers had remarked a child, who was constantly wandering about near the barracks, now getting a morsel of bread from a soldier or a meal from a charitable inhabitant of the neighborhood, and sleeping where he was hungry and cold—which occurred frequently enough. The hearts of the soldiers were moved at this abandoned, neglected child, and they adopted it—with his their frugal repast, but at length in May, 1862, at a meeting of the musicians of the regiment, a proposal was made to take the boy, which was cordially agreed to. A bed was made up for him in one of the rooms of the barracks, and every five days each musician paid a trifling sum into a certain sum from his pay, and the soldiers a sou each, to clothe him and pay his board at the canteen. One of the band was appointed to teach him reading, and it is remarked that, however licentious the language of soldiers in camps and barracks may be, all are most circumspect in their conversation when he "is present."

NEW IRON-CLADS FOR THE BRITISH NAVY.

THE new iron-clads ordered recently for the British Navy show a great tendency for size. The smallest is to be armed at vessels of from 5,000 tons and upwards, there are constructed vessels of 6,000 tons and 7,000 tons. Iron, not wood, yet carrying their batteries encased in 44 inches of solid iron. The *Research*, recently launched at Pembroke, is a steep of 3,750 tons, and draws no more than 14 feet of water, yet is more completely plated than even the *Warrior*, and will throw a broad side equal in weight with that of the renowned Indian frigate. The *Research*, on the plan of Mr. Reed, chief constructor to the Navy, who was the earliest to lay the necessity for monster ships of war, are now building, and will be launched. These new ships are the *Enterprise*, steep, four guns, 900 tons, builders' measurement, 3,750 tons, 1,250 horse power; the *Research*, the *Favourite*, corvette, 3,272 tons, eight guns; the *Pallas*, 2,372 tons, five guns; the *Zealous*, 3,715 tons, 16 guns; the *Iron Duke*, 6,000 tons, 14 guns; the *Hercules*, 6,246 tons, 12 guns, and the *Ballerophon*, 4,246 tons, 12 guns, and 1,000-horse power. Of these eight ships, the *Enterprise* was originally designed as a gunboat, and the *Favourite* corvette, and as also were the *Research*, *Favourite*, and *Zealous* respectively a wood and iron frigate now actually in frame, which Mr. Reed had to adapt as he best could; and the forms of these, therefore, he contends are not such as he entirely approves. The *Enterprise* resembles exactly in shape of the bows, which are much too fine beneath not to render them liable to pitch. The *Lord Warden* and the *Lord Clyde*, which are building entirely in accordance with them to steer, of Mr. Reed's design. The two former are improvements on vessels of the *Royal Oak* class; the two latter are quite new, both in principle of construction and in the purpose they are intended to fulfill. The *Ballerophon* is in point of strength intended to be a monster among these monsters, to be in fact as terrible an assailant to iron-clads as an iron-clad would be to wooden ships. The length of this vessel is to be 300 feet, breadth 56 feet, her tonnage will be 4,246 tons, her displacement 7,053 tons; and though possessing the heaviest armor and armament ever sustained, her draught of water will not exceed 26ft. 6in., less than the draught of ordinary two-decksers. The armor of the *Ballerophon* is to be 6in. thick, and this is to rest on 18in. of solid teak beams. The same skin consists of two plates, each of 3in. thickness, with a stout layer of yellow canvas between, to deaden the concussion. Outside this skin come angle-iron stringers of the tough steel we have already spoken of. These angle-iron stringers project from the inner skin 9½in. and 10in. alternately. Thus they form so many longitudinal shelves, which run from stem to stern of the ship, two under each row of plates, and in these the teak beams are laid, the longitudinal layers of the angle-irons forming a key to their ends, and thus preventing their lateral splintering, while they also support the plates with their edges and prevent their bending in contact with the teak. The tremendous armor protects the centre and for 90ft. of her broadside, from 5ft. below the water line to the level of the upper deck. In this way her bow guns, the 300-pounders, with one 600-pounder at each side, and the rest of her length there is only a belt of this massive armor, which is 6ft. deep, and in order to reduce it to as fast above it, so that she cannot be hit in any part where she would not sink. The two ends of this belt are built of tough light plates of steel. The cost of the formidable iron-clad is estimated at £90,000 less than the *Warrior*. The *Pallas* is designed for great speed, both in sailing and steaming, to carry only five guns, all 100-pounders, of the longest range—a bow chaser forward and two of each side. Her length is to be 325ft., her breadth 50ft. and her tonnage 2,372, with a draught of water of 18ft. forward as much as 23ft. aft, in order to enable her to turn very quickly. She is to be of wood, but to be extensively coated from end to end with 4in. armor. Fourteen knots per hour seagoing speed is what is anticipated from this frigate.

JEFF. DAVIS TO HIS SOLDIERS.

MR. JEFF. DAVIS has issued the following address to his soldiers:—

SOLDIERS OF THE ARMIES OF THE CONFEDERATE STATES:—In the long and bloody war in which your country is engaged you have achieved many noble triumphs. You have won glorious victories over much more numerous hosts. You have driven from your territories every foe by which you were unused. You have readily submitted to restraints upon your individual will. But the citizen might better perform his duty to the State as a soldier.

To all these you have lately added another triumph—the defeat of a more formidable enemy over your patriotism, at the time drew near when you who first entered the service might well have been expected to claim relief from your noble labors and the enjoyment of the independence which you have headed only the call of your suffering country. Again you come to tender your service for the public defence—for more than two years you have endured what years could make—a triumph worthy of you and of the cause to which you are devoted.

Soldiers, in this attempt adequately to express the emotions with which I received the testimonials of confidence and regard which you recently presented to me, I say for some of these first received separate acknowledgments were returned: but it is now apparent that a like generous enthusiasm pervades the whole army, and that I can by exception to such magnanimous tender will be of those who, having originally entered for the war, cannot display anew zeal in the hour of danger.

It is therefore deemed appropriate, and it is hoped will be equally acceptable, to make a general acknowledgment. I, therefore, express special congratulations. I would that it were possible to render my thanks to you in person, and in the midst of your encampments, that I might see and thus impressing the hand of each war-worn veteran, to recognize his title to our love, gratitude and admiration.

Soldiers, in the history of your race the people are but one—I have been placed in a position which debars me from sharing your dangers, your sufferings and your privations in the field. With pride and admiration I have so contemplated you in every march; with solicitude it has sought to maintain for every want; with exultation it has watched your every heroic achievement; and never in the toilsome march, nor in the weary watch, nor in the desperate assault upon your enemies in battle, have you been a deserter. In the last display of the highest qualities of devotion and self-sacrifice which can adorn the character of the warrior patriot. Already have your whole people been knit in unison with yours; already they compare your spontaneous and unanimous offer of your lives for the defence of your country with the long and bloody annals of your race. The necessaries who are purchased by the enemy at the price of gold have hastened to fill your ranks, and to share in your war. Animated by this contrast, they exhibit cheerful confidence and more resolute bearing. Even the murmurs of the weak and timid, who, in every hour of trial, are the first to hang and firmer your noble natures, are shamed into silence by the spectacle which you present. Your brave battle-cry will now yield to the inspiring shout of victory, and as well as our own, will silence the vainglorious hostings of their corrupt partizans and their pensioned press, and will be the prelude to the proclamation by the world of a peaceful people that you are ready to purchase dishonorable peace by degrading submission.

Soldiers, the coming spring campaign will open under auspices well calculated to sustain your hopes. Your numbers unbroken by disease, and fully armed and disciplined under the influence of your example, and by the aid of representatives who give earnest of their purpose to add to population largely to your ranks, you will encounter the invader with a confidence justified by the memory of past victories. On the other hand, debt, taxation, and heavy draft, disappointment and discontent fill the ranks of the foe, by the pursuit of the spoils of office, by the thirst for the plunder of the public treasury, and, above all, the consciousness of a bad cause, must toll with fearful force upon the overstrained energies of the enemy. His campaign of 1864 must, from the exhaustion of his resources of men and money, be far less formidable than those of the last two years, when unimpaired means were used with confidence and prodigality, and when what was suggested by the invention of the names of Shiloh, Perryville, Murfreesboro, Lake Chickahominy, Manassas, Fredericksburgh, and Chancellorsville.

Soldiers, assured success awaits us in our holy struggle for liberty and independence, and for the preservation of all that renders life desirable to honorable men. When that success shall be reached, to you your country's hope and pride, under Divine Providence, will it be due. The fruits of that success will not be reaped by you alone, but your children and your children's children, in long generations to come, will enjoy the blessings derived from you that will preserve your memory ever living in their hearts.

Citizen Generals of the homes, the liberties and altars of the Confederacy—that the God whom we all humbly worship may shield you with His fatherly care, and preserve you for still further and greater services in the cause, and the associations of those you most love, is the earnest prayer of your Commander-in-Chief,

JEFFERSON DAVIS.

WASHINGTON AND TRAITORS.

The following "order" of General WASHINGTON, during our Revolutionary struggle, is applicable to all persons either to go beyond the lines or take the oath of allegiance, is of interest at this time:

"And, sir, as it has become necessary to distinguish between the friends of America and those of Great Britain, inhabitants of those States; and that every man who received a protection from, and is a subject of any State, (not being conscientiously scrupulous against bearing arms), should stand ready to defend the same against any hostile attempts:

"I do, therefore, in behalf of the United States, by virtue of the powers committed to me by Congress, hereby strictly command and require every person having subscribed such declaration, taken such oaths, and accepted such protection and passport, to repair to the General Howe, or any other person acting under their authority, forthwith to repair to headquarters, or the quarters of the nearest general officer of the Continental Army or militia (until further provision can be made by the civil authority), and there deliver up such protection and passport, and also sign and take the Oath of Allegiance to the United States of America.

"Nevertheless, hereby granting full liberty to all such to recede from the same to the Royal Britain to the freedom and happiness of their country, forthwith to withdraw themselves and families within the enemies' lines: and I do hereby declare that every person who shall wilfully neglect or refuse to comply with this order within thirty days from the date hereof, shall immediately be taken up as King of Great Britain, and treated as common enemies of these American States.

"Given at headquarters, Morris-Town, January 25, 1777.

G. WASHINGTON.

"By his Excellency's command,

"ROBERT H. HARRISON, Sec'ry."

A SCIENTIFIC VOYAGE.—A letter from Toulon gives some curious details about the scientific voyage of the Prince Napoleon by the Duke de Luynes. Lieutenant Vignes, of the Imperial Navy, has been appointed to the command of a steam gunboat belonging to the Duke, which will accompany the end of the month on this voyage of discovery. After having visited the most interesting places in the Mediterranean, and explored the coast of Syria, the boat is to be carried on the backs of mules across the mountains of Judea to be launched on the Dead Sea, of which the waters are to be analyzed, and then to proceed to the Red Sea. The gunboat is to be again carried to the Mediterranean, where it will descend the Nile to Cairo, ascend the Don, cross the Steppes of Dolgo in a wagon to reach the Volga, which it will descend to the Caspian Sea, that famous conglomeration of water and of oil of enormous, continually agitated with storms. After having carefully studied these phenomena, as well as the various inhabitants of that Italian region, the boat will return to France on one of the deserts of Asia Minor to the town of Mossoul, where they will explore the course of the Tigris and the Euphrates, and examine the ruins of Nineveh, which have been buried on their banks. After having accomplished that prodigious journey across seas, rivers, mountains, and deserts, the gunboat will return to France by the Persian Gulf and the Red Sea. All the difficulties attending such a dangerous journey have been carefully considered and provided for. Even the construction of the boat is a *chef d'œuvre* of naval architecture and of comfort. All the pieces into which the boat is to be divided when taken asunder are accurately numbered so that it may easily be put together in 24 hours. It will be for the first time that a steamboat shall have been carried across the Steppes of Daghestan and the mountainous cards of Mesopotamia. A picked crew have been placed under command of Lieutenant Vignes by the Prince Napoleon for the navigation and transport of the gunboat. The Duke de Luynes is to be accompanied by several friends, as well as by many persons of the greatest merit, who have solicited the honor to share with him the dangers of this hazardous enterprise.

ATTITUDES OF THE SLAIN.—A prominent officer attached to the ambulance corps of the French army in Italy, Dr. Larrazet, has published a work in which he comments on the unerring observations made by himself and others upon the battle-fields of the late Napoleonic war with Austria. The position which the body of a man assumes, under the effect of mortals wounds produced by different missiles of death, and the manner in which he expires, are matters of study upon the expression of the features, as well as upon the general attitude, were the subjects of somewhat novel investigation, and the results are given in copious detail, while in this country for the past two years. In a number of cases the dead soldier was found almost in the speaking attitude of life. A Hungarian hussar, killed at the same moment with his horse, was only slightly moved in his saddle, and sat there dead, holding the point of his sabre in advance, in the position of charging. A parallel case occurred in the death of an Austrian artillery man. Those wounded in the head are usually found lying on the left side, the head and abdomen flat to the ground. Wounds in the chest and throat produced a like posture of the body, though in the latter cases modifications of the head and expression were frequently took place than in the former. A zouave struck full in the chest was "doubled upon his musket, as if taking a position to charge bayonet, his face full of energy, with an attitude more menacing than that of a lion." In wounds of the abdomen the agony seemed to have been prolonged; the face was contracted, the hands crossed and closed upon the stomach, the body doubled upon itself and lying partially on the side.

A PARIS correspondent of an English paper, writes:—"A Confederate naval officer now resides at Paris to direct the operations of Mr. Jefferson Davis's rather limited navy during its stay in European waters. A land admiral may be a title of new invention, but it is certainly not such an appointment may be seen at a glance in these telegraph days. This naval Paris officer, living close to a line of wires connected with nearly every part of Europe, has great facilities for learning the position of the enemy's forces, the harbors they may be found in, and whether they are actively cruising. The different ports furnish him all the information he requires, and this information he immediately dispatches to those who are to profit by it. It is not improbable that in all future wars land admirals will be accredited to neutral powers, and that telegraphic lines will play a prominent or rather a decisive part in naval warfare. By this means, too, great damage may be done to the commerce of any country. The Alabama was fitted out from Jean in Paris that a Northern vessel richly laden,is leaving Havre; he sends off a dispatch to Cherbourg, and the next day the unsuspecting property of the Yankee changes owners, or spreads a grave over the Channel."

THE SANITARY COMMISSION.—The London *Spectator* concludes a long article on our Sanitary Commission as follows:

"In every way we cannot help thinking the existence and activity of the Sanitary Commission a credit to the American people. It shows not only with what a resolution they entered this struggle, but with what a fund of good sense they are endowed. We doubt whether even in England a voluntary society could be entrusted with so much power, and yet so carefully abstain from trenching on the province of action of the State itself. In America they can do these things, and the same Cabinet Minister, who originally gave the Commission the most limited span of life, now admits "that it has been of the greatest service to the country; that it has occasioned none of the evils expected from it, and that it has saved down all the fears and misgivings of the Government."

PARAGRAPH 1068, Revised Army Regulations, is amended by General Order No. 98, dated February 9, 1864, as to authorize the issue of fuel, by the Quartermaster's Department, to all employees of that and the Subsistence Department, upon the certificate of the officers under whose direction the men are employed, when said employees are allowed to hire from the Quartermaster's Department not less than one ration each of subsistence per day, and when the agreement with them stipulates that fuel shall be furnished by the United States in addition to other compensation. The allowance will be the same as in the case of non-commissioned officers and privates in the military service of the United States. The fuel issued shall be considered as public property, and will not be sold or given away by the employees, but, if not consumed, shall be returned to the Quartermaster, and taken up on his property return.

NAVY GAZETTE.

WINES, ALES AND OTHER LIQUORS.

NAVY DEPARTMENT, February 1, 1864.

General Order, No. 29.

"Wines, ales, and other liquors may be taken on board vessels of the Navy, shall be regarded as private stores, belonging to the officers and others by whom they may be so taken on board with the sanction of the commanding officer. In no case shall they form a part of the outfit or stores of any vessel, and the Department shall be required to pay any charge whatever for them.

GIDEON WELLES, Secretary of the Navy.

REGULAR NAVAL SERVICE.

DETACHED.

Lieutenant Neil N. Allen, from the East Gulf Blockading Squadron and waiting orders.

Third Assistant Engineer Henry W. Buckley, from the *Marblehead* and ordered to the *Mendota*.

Gunner J. S. Bowen, from the Naval Magazine, New York, and ordered to the South Atlantic Blockading Squadron.

Lieutenant Commander Samuel Magaw's orders to command the *Mendota* revoked, and waiting orders.

VOLUNTEER NAVAL SERVICE.

DETACHED.

Acting Assistant Surgeon J. E. Barbour, to the *Ben.*

Acting Assistant Paymaster W. H. Whittemore, to the *Chenoke.*

Acting Master's Mate A. J. Bigelow, to the *Ethan Allen.*

Acting Master J. K. Sallmard, to command the *Arthur.*

Acting Assistant Surgeon J. F. McGregor, to the *Seneca.*

Acting Ensign John R. Trott, to the *Mendota.*

Acting Volunteer Lieutenant W. H. Rogers, to command the *Iola.*

Acting Master Newell Grahame, to the *Iola.*

Acting Ensign Henry Hall, to the *Iola.*

Assistant Engineer Thomas T. De Lano and A. F. Parsons, to the *Octorara.*

Acting Master's Mate Thomas Rose, to the *Cornubia.*

Acting Master Henry Churchill, to command the *Cocaenian.*

DETACHED.

Acting Assistant Surgeon Charles Carty, from the *Kensington* and ordered to the *Gonsalves Barney.*

Acting Third Assistant Engineer Charles S. Curry, from the *Marblehead*, and ordered to the *Pursuit.*

Acting First Assistant Engineer J. W. Farrell, from the *Wyandotte* and ordered to the *Tallapoosa.*

Acting Assistant Surgeon James Kinnier, from the *Commodore Barney* and ordered to the *Brandywine.*

Acting Third Assistant Engineer John Doyle, from the *Somerset* and ordered North.

Acting Master Henry L. Sturgis, from the *New London* and ordered to report for duty to Major General Butler.

Acting Volunteer Lieutenant John Mackerrell, from the command of the *Hetzegah* and ordered to command the *Governor Buckingham.*

Acting Master's Mate Edward R. J. Bancroft, from the *Ohio* and ordered to the *Galena.*

Acting Second Assistant Engineer John B. Dinsmore, from the *Gonsalves Barney* and ordered to the *Ben.*

Acting Second Assistant Engineer Robert Pallett, from the *Ben* and ordered to the *Gonsalves Barney.*

Acting Assistant Surgeon George S. Eddy, from the *Ohio* and ordered to the *North Carolina* until the *Iola* is ready for sea and then to that vessel.

Acting Third Assistant Engineer Thomas L. Savery, from the *Colorado* and ordered to the *Cornubia.*

Acting Third Assistant Engineer Henry B. Green and Robert Wallace, from the *Colorado* and ordered to the *Iola.*

Acting Master Thomas T. Wade, from the command of the *Arthur* and ordered North. *

Acting Master's Mate William Farley, from the *Marblehead* and ordered to the *Ben.*

Acting Master's Mate Leon Bryant, from the *Colorado* and ordered to the *Iola.*

Acting Assistant Paymaster Moses W. G. Perry, C. H. Littlefield and A. B. Child, from the *Colorado* and ordered to the *Iola.*

Acting Master's Mate John L. Vennard, from the *Colorado* and ordered to the *Columbia.*

Acting Master's Mate C. A. Neil and Thomas C. Bowen, from the *Henry Brashear* and ordered to the *Gonsalves Perry.*

Acting Assistant Surgeon Thomas Antisell, from the *Augusta* and ordered North.

Acting Ensign John B. Trott, from the *Tennessee* and waiting orders.

Acting Volunteer Lieutenant W. H. Rogers, from the command of the *Iola* and waiting orders.

Acting Master's Mate Thomas B. Bathgate, from the South Atlantic Blockading Squadron and ordered to the *Gonsalves.*

Acting Master J. S. Barbour, from the command of the *Fernent* and waiting orders.

Acting Assistant Surgeon E. T. T. Marsh, from the *North Carolina* and ordered to the *Ohio* until the *Cherokee* is ready for sea, and then to that vessel.

Acting Third Assistant Engineer Lewis, from the *North Carolina* and ordered to the *Ohio.*

Acting Master's Mate Edward Hall and George A. Harriman, from the *Marblehead* and ordered to the *Cornubia.*

Acting Master's Mate Edward S. Sprague, from the *Tuscarora* and waiting orders.

Acting Master Robert G. Lebar, from special duty at New York and ordered to the *Gonsalves Barney.*

Acting Third Assistant Engineer Frank H. Thurber, from the *Gonsalves Barney* and ordered to the *Ben.*

Acting Assistant Surgeon Matthew Enflock, from the *Brandywine* and ordered to the *Ben.*

Acting Ensign John Parry, from the *Ohio* and ordered to the *Cherokee.*

APPOINTED.

James H. Pigeon, Acting Second Assistant Engineer and ordered to the *Iola.*

Charles Smith, Acting Assistant Paymaster and waiting orders.

James Black, Acting Assistant Surgeon and ordered to the *Mendota.*

Charles H. Hall, Acting Master and waiting orders and to the *Fernent.*

Acting Third Assistant Engineer James Curran, Acting Ensign John W. Lewis, of the *National Guard.*

RESIGNED.

The resignations of the following officers have been accepted:—

Acting Third Assistant Engineer Robert H. Studley.

Acting Assistant Paymaster Richard E. Bunce.

Acting Assistant Surgeon Richard Kenny and Charles Ayer.

Acting Ensign Sprague J. Rotier of the *Arizona.*

LEAVE OF ABSENCE.

Leave of absence has been granted the following officer:—

Acting Master W. Wright, commanding the *Mystic*, twenty days.

ARMY GAZETTE.

NOTICE TO DELINQUENTS.

The following officers, having been reported at the headquarters of the Army for the officers hereafter specified, are hereby notified that they will stand dismissed from the service of the United States unless, within eleven (11) days from February 20, 1864, they appear before the Military Commission in session in Washington, of which Brigadier-General Ricketts, United States Volunteers, is President, and make satisfactory defence to the charges against them:—

First Lieutenant William H. Ashford, 12th New York Cavalry, fraudulent procurement to himself credited to the thirtieth recruit issued district of New York certain recruits enlisted by him in the twenty-third regiment New York Cavalry.

Captain R. M. Taylor, 12th New York Cavalry, for being an accessory to fraud in the appointment of certain recruits credited to and enlisted by Lieutenant Ashford, of his regiment, in the twenty-third regiment New York Cavalry.

The following officers, having been reported at the headquarters of the Army for the officers hereafter specified, are hereby notified that they will stand dismissed from the service of the United States, unless, within fifteen (15) days from February 20, 1864, they appear before the Military Commission in session in Washington, of which Brigadier-General Ricketts, United States Volunteers, is President, and make satisfactory defence to the charges against them:—

Drunkenness while on duty.

Second Lieutenant Anderson Dawson, 1st Virginia Cavalry.

TO BE RECOMMENDED FOR DISMISSAL.

Captain Edward Heyward, 1st United States Cavalry, having been reported at the headquarters of the Army for failing to report at Cincinnati, Ohio, according to leave granted him, and having recommended for dismissal from the service of the United States unless within fifteen (15) days from February 20, 1864, he appear before the Military Commission in session in Washington, of which Brigadier-General Ricketts is President, and make satisfactory defence to the charges against him.

DISMISSALS.

During the week ending February 13, 1864.

Colonel James B. Swain, Scott's 900 cavalry, New York Volunteers, to date February 13, 1864, for absence without leave, neglect of duty, and repeated and perverted disobedience of orders.

Captain Andrew Jackson Rudgear, 1st Regiment Invalid Corps, to date February 12, 1864, for absence without leave, leaving camp in citizen's clothes, and neglect of duty, and conduct unbecoming an officer.

Captain John Hopper, 21st Regiment Invalid Corps, to date February 10, 1864, for absence without leave, and conduct unbecoming an officer and a gentleman.

First Lieutenant L. L. Dye, 10th Connecticut Volunteers, to date January 14, 1864, for absence without leave, and neglect of duty while officer of his regiment and otherwise.

Lieutenant Colonel Jacob Kentnoky Volunteers, to date February 8, 1864, for neglect of duty in the care of prisoners under his charge, by which they escaped confinement.

Second Lieutenant J. M. Towler, 16t Regiment Invalid Corps, to date February 8, 1864, for drunkenness on duty, and conduct to the disgust of a general court-martial.

Second Lieutenant Alexander Williams, 38th New Jersey Volunteers, to date February 8, 1864, for neglect of duty, drunkenness, and conduct prejudicial to good order and military discipline.

Second Lieutenant George W. Arndt, Invalid Corps, to date February 12, 1864, for absence without leave, drunkenness, and conduct unbecoming an officer and gentleman.

HONORABLE REVOKED.

The orders of dismissals in the following cases have been revoked:—

Captain Julius H. Southard, 2d New York Cavalry, he having been previously discharged on tender of resignation.

Lieutenant Colonel Jacob Kentnoky, 38th Volunteers, and he is restored to his command, provided the vacancy has not been filled by the Governor of Kentucky.

RESTORED TO COMMISSION.

The following officers have been restored, with pay from the date at which he rejoins his regiment for duty, provided the vacancy has not been filled by the Governor of the State:—

Captain W. W. Mayne, 4th New Hampshire Volunteers.

CASES DISPOSED OF.

First Lieutenant R. B. Gilbert, First Connecticut Artillery, to be dismissed the service, for neglect of duty, conduct to the prejudice of good order and military discipline, and conduct unbecoming an officer and a gentleman.

Captain Henry L. Smith, Company E, Fourth New York Heavy Artillery, to be dismissed the service, for conduct unbecoming an officer and a gentleman, and to the prejudice of good order and military discipline, and absence without leave.

Sentences in both cases approved and confirmed by Major-General Augur, commanding the Department of Washington.

Captain Reuben P. Reynolds, Company F, Ninth Pennsylvania Reserves, to be cashiered, for conduct to the prejudice of good order and military discipline.

Captain John Hall, Company A, Ninety-sixth Pennsylvania Volunteers, to be cashiered, for drunkenness on duty, and conduct prejudicial to good order and military discipline.

First Lieutenant Albert E. Chester, First Ohio Cavalry, to be dismissed the service, for absence without leave, and conduct unbecoming an officer and a gentleman.

Captain D. W. Cummings, Seventh Pennsylvania Cavalry, to be dismissed the service, for absence without leave, and conduct prejudicial to good order and military discipline.

First Lieutenant Edward Dougherty, Company F, Ninth Pennsylvania Reserves, to be cashiered, for absence without leave, and conduct prejudicial to good order and military discipline.

Second Lieutenant Amos J. Goodrich, Company I, One Hundred and Ninety-fifth New York Volunteers, to be dismissed the service, for drunkenness on duty, and conduct prejudicial to good order and military discipline.

Sentences in the above cases have been approved, and confirmed by Major-General Hodgkins, commanding the 8th Corps, Middle Department.

Private George W. Eberlein, Sixty-second Pennsylvania Volunteers, and Benjamin Van Horn, Battery F, First Pennsylvania Artillery, to be shot to death with musketry, for desertion in the face of the enemy in the division to which the accused severally belong, on the Division Commanders may prescribe, on a day to be fixed by them.

Sentences approved, by Major-General Sedgwick.

Private Jeffrey Bartlett, Battery B, First Rhode Island Artillery, to be suspended from command for the period of one month, and during that time to be kept at hard labor, with ball and chain.

Sentence approved, and confirmed by Major-General Peck, commanding the 18th Corps, Army of the James.

First Lieutenant Peter Fox, First Washington Territory Volunteers, to be dismissed the service, for conduct to the prejudice of good order and military discipline, and unbecoming an officer and a gentleman, by associating with and fraternizing with officers of the United States.

Sentence approved by Major-General Wright, commanding the Department of the Pacific.

Col. G. H. Moore, 16th Michigan Vols., to be dismissed the service for neglect of duty, disobeying the lawful commands of his superior officer, and conduct unbecoming an officer and a gentleman. Major-General Foster disapproved the sentence of the Court in this case, and has ordered Col. Moore to be returned to duty.

Captain Jefferson C. Davis, 2d Ind. Cav., to be dismissed the service, with loss of all pay now due or that may become due him, for selling government property and converting the proceeds of the same to his own use and benefit, and refusing to report the same, and for conduct to the prejudice of good order.

First Lieutenant John A. David, 1st U. S. Colored Troops, to be cashiered for conduct unbecoming an officer and a gentleman.

Sentences in both of the above cases approved by the Secretary of War.

MEDICAL DEPARTMENT.

ORDERED.

Surgeon Alexander Hoff, U. S. Vols., now in charge of hospital steamer *Charles McDougall*, at Louisville, Ky., has been ordered to proceed to the commanding general of the Department of the East for assignment to duty.

Surgeon Leo Gerlach, U. S. A., has been ordered to resume his duties in the Department of the Monongahela.

The board ordered to convene by direction of paragraph 11, of special order of the War Department, date of October 27, 1863, consisting of Surgeon Wm. A. Hammond, U. S. A.; Captain R. C. Morgan, Assistant Quartermaster of Vols., and Assistant Surgeon J. W. S. Dudley, U. S. A., has convened at Washington City, D. C. The City as soon as practicable, for the purpose of examining and deciding upon what articles of guide property shall be furnished to the Medical Purchaser, shall be transferred to the De Camp General Hospital, David's Island, N. Y.

Surgeon D. L. Magruder, U. S. A., Medical Purveyor of Louisville, Ky., has been ordered to report to Surgeon Wm. A. Hammond, U. S. A., for assignment to duty.

The board ordered to convene by direction of paragraph 11, of special order of the War Department, date of October 27, 1863, consisting of Surgeon Wm. A. Hammond, U. S. A.; Captain R. C. Morgan, Assistant Quartermaster of Vols., and Assistant Surgeon J. W. S. Dudley, U. S. A., has convened at Washington City, D. C. The City as soon as practicable, for the purpose of examining and deciding upon what articles of guide property shall be furnished to the Medical Purchaser, shall be transferred to the De Camp General Hospital, David's Island, N. Y.

Surgeon D. L. Magruder, U. S. A., Medical Purveyor of Louisville, Ky., has been ordered to report to Surgeon Wm. A. Hammond, U. S. A., for assignment to duty.

Assistant Surgeon Wm. Mills, U. S. A., has been ordered to report to Surgeon Wm. A. Hammond, U. S. A., for assignment to duty.

Surgeon F. H. Gross, U. S. A., has been ordered to report to Surgeon Wm. A. Hammond, U. S. A., for assignment to duty.

THE San Francisco papers state that the Government has directed the military occupation of the island of Santa Catalina, 24 miles from the bay of Santa Pedro, on the southern coast of California. The island has of late become important from the fact that numerous rich mines have been discovered there. It possesses a fine harbor, which will no doubt be made available as a naval as well as a military depot. It has been rumored for some time past that Catalina was to be made the rendezvous of rebel pirates, who were to make an attempt at capturing some of the steamers in those waters. Government has also come to the conclusion that this expedient may have led to the occupation of the island.

THE fourth of the monster BLAKELY guns manufactured for the Russian Government, is a muzzle-loading rifled gun, weighing 12 tons 5cwt., and having a 9-inch bore. It has undergone a series of very description of proof at the government proving range with complete success. A cartridge, sealed during the experiments, gave way in consequence of a slight flaw in the metal; but on examination it was found that the defect only extended to the rear coil, and the gun is therefore to be removed to the foundry for that purpose.

FOUR experimental rifled guns of various pattern have been manufactured at the Royal Arsenal, Woolwich, during the past year, in the presence of the Ordnance Select Committee, the object being to obtain more information as to the best system of rifling.

BRIGADIER-GENERAL ROBERT ALLEN, has offered a reward of five thousand dollars for such information as will lead to the arrest of the person who fired and destroyed the *Denial Packet*, while lying at the wharf in the Louisville. General ALLEN states his belief that the boat was burned by some incendiary, who was employed on board as a deck hand, or the rebel authorities. He has authority from the War Department at Washington to offer rewards for the detection of those guilty of such crimes.

AFTER eight years' delay, the prize-money of the *Kertch*, a Russian vessel, captured by the British Navy during the Crimean war, is to be distributed. The amount to be distributed is something less than $15,000; and will be divided between Lord LYONS—the British Minister at Washington, during the war, and representative of Admiral LYONS, the commander of the naval forces—Admirals STEWART, BOSANQUET, GRAY, and DUNDAS, and the crew, numbering about $1,200, and each commander $620.

UPON the recommendation of the Acting Surgeon-General, permanently disabled soldiers, who are furloughed from various sections of the country, are permitted to report at the nearest Medical Director, who are hereby authorized to place them in United States Hospitals until further action in their cases can be taken.

PERSIA is putting her fortresses on the French frontier—Nimden and Saarlouis—into complete state of defence for active warfare. The works are being hurried on.

A LETTER from Natchez, Mississippi, dated the 27th ultimo, says :—"General CORBIN, of 'the Confederate army, has arrived at this place, and voluntarily surrendered himself a prisoner of war. The cause, I understand, assigned by him for the act was that he thought 'the Confederacy was about played out."

GENERAL is a subject which now receives deserved attention. Dr. GRIFFIN, in the *Confederate States Medical and Surgical Journal* is publishing monthly a special treatise on bandages, aether and chloroform, and the Surgeon-General has issued a "Manual of Military Surgery."

THE Commission who have been investigating into the management of the Freedmen's Camp, near Washington, have finally concluded their report, which has been sent to the Secretary of War Department to the Committee on Freedmen's affairs. The report approves the arrangements and management of the camp in general, but recommend the removal of two overseers, which has been carried into effect.

IN reply to a resolution of the Senate, the Secretary of War has furnished a list showing the number of officers of each grade belonging to the regular and volunteer service in the Army of the United States, now stationed in and around Washington, and drawing commutation for forage, and the number entitled to, but for either quarters or fuel, furnished in accordance to the resolution of the Senate of the United States of the 7th of January, 1864.

The following is a recapitulation: Major-Generals, 8; Brigadier-Generals, 16; Colonels, 34; Lieutenant-Colonels, 18; Majors, 24; Captains, 128; Lieutenants, 43; Surgeons, 24; Assistant-Surgeons, 12; Paymasters, 79; Total, 387. Of these 21 belong to the Regular Army, including one Major-General, four Brigadier-Generals, thirteen Colonels, &c.

THE National Academy of Sciences has advised the Navy Department to build several "Sailing Directions" and "Wind and Current charts" ought no longer to be issued in the form now given to the public, on account of the existence of "much which is unsound in philosophy and little that is practically useful," in the so-called scientific works of Maury.

BY order of the Provost-Marshal-General, Provost-Marshals are forbidden to grant furloughs to recruits enlisted by them, unless by the authority of the Chief, or the Acting Assistant Provost-Marshal-General of the State or Division.

COLONEL Durbin Ward, of the Seventeenth Ohio, mustered out of service for physical disability, has been restored to active service.

MAJ.-GEN. Meade, in Philadelphia, speaking of the Wilderness Army, says with a statistical fact that, since March, 1861, when that Army left its lines in front of Washington, to the present time, one hundred thousand men have been killed and wounded.

BY order of the War Department no volunteer recruit shall be rejected on account of height, who is at least five feet.

THE crew of screw-steamer *Colorado*, 62, were paid off and discharged at the Portsmouth Yard on the 17th.

SLOOP-of-war *St. Mary's*, 23, arrived at Talcahuano, Chili, forty-five days from Callao, Panama, and sailed Jan. 11, for Valparaiso.

THE prize steamer *Minna* and cargo have been sold in Boston. The steamer was sold for $71,000.

THE famous *Kin Kiang* has left for China with a cargo, going down the harbor at a handsome speed.

THE steam-frigate *Ickes* now in course of construction at Mr. John Stoney's yard at Greenpoint, for the Navy, is progressing rapidly.

THE Department has given Mr. John Ericsson a contract to furnish the machinery for a screw-sloop-of-war, which is being built at the Brooklyn Yard. The Delmster Iron Works have already begun the construction of engines.

THE Ericsson battery *Mahopac*, now in course of construction in the yard of Messrs. Secor & Co., Jersey City, will be launched in a few weeks. The *Mahopac* is a sister-ship to the *Manhatan* and *Tecumseh*.

ADMIRAL DAHLGREN has changed his flag-ship from the *Philadelphia* to the *Harvest Moon*, and sailed for St. Johns, Florida. Three vessels-of-war have left Port Royal, viz: flagship *Paul Jones*, *Water Witch* and *Wachusett*.

WE have intelligence of the capture essentially by the gunboat *De Soto* of the steamer *Cuyahoga*, while on her way from Havana to Mobile Bay, with a valuable and contraband cargo, consisting principally of arms and ammunition. She was taken to Key West.

THE Court of Inquiry of the Army of the rebels at Charleston sent an iron infernal machine out from Charleston, accompanied by a summons to surrender, to the fleet of Admiral DAHLGREN'S island, to destroy the United States gun-boats *Mauvenee* and *Nipsic*. The machine sprung ashore before getting into action, and turning back, sank.

BRITISH ship-of-war *Petrel* arrived off Charleston bar on the evening of the 8th inst., wishing to communicate with the British Consul. The Commander of the *Petrel* had extensive dispatches to J. F. Benjamin, rebel Secretary of War. Shells managed to reach Admiral Dahlgren, who was then at Port Royal, to get permission to enter the harbor. This permission not granted, and the vessel put to sea at once.

FROM Fair Haven, Ct., we have intelligence of the launch, on Tuesday of last week, of the *Admiral Foote*, at the yard of S. H. Pook. She was to be towed to New York to receive her engines at Delmster's. She has a capacity for 1,000 barrels, and has two upright engines, 26 by 30, the screw is 13 feet in diameter, with a pitch of 14 feet. She has sufficient boiler power to drive her 10 knots an hour.

PROPOSALS FOR RAISING WRECKS IN NORFOLK, VA., AND IN THE VICINITY.

NAVY DEPARTMENT, February 4, 1864.

PROPOSALS will be received at the Navy Department until the 3d day of March, 1864, for raising or recovering and towing to the arsenals, and delivering at the United States Navy Yard, Gosport, Va., all of the following ships, viz:

Frigates *Cumberland* and *Congress*,

Steamer *Merrimack*, near Craney Island,

Steam sloop-of-war *Dolphin*, at Craney Island,

Frigates *Boston* and *Columbia*, and Line-of-battle ship *Pennsylvania*, sunken in the Gosport Navy Yard, in the vicinity of the Navy Yard.

The Department also reserves the right of designating the vessel to which, after the *Cumberland*, the wrecks are to be placed, also to determine when the wreck shall be blasted or raised wholly.

No sale or appropriation will be allowed by the contractors on any wreck until all the vessels named shall have been delivered at the Navy Yard, Gosport, Va., unless by authority of the Navy Department.

No wreck will be considered removed while any portion of it shall obstruct navigation.

All the wrecks, as well as fragments of the hull and other materials (which may be the property of the Government) shall be the property of the contractors, except such as the Government may think proper to retain, and the contractors shall receive no compensation for such property, all bonding beconsidered by the commandant of the Navy Yard, Gosport, Va., as the property of the Government, until disposed of agreeably to the specifications and directions of the Department.

All the appliances used in raising the wrecks must be approved by the Navy Yard commandant.

The offer must state the rate per centum, or amount for raising each of the vessels named in the specification, the value to be ascertained by the Navy Yard commandant, and verified by the Department, and one moiety is to be appraised by the contractor, to be the annual proceeds of a sale at public auction, for the whole or any part, to the Department having title. The offer must be accompanied by the guarantee of responsible parties that the contract will be executed if awarded. The Department reserves the right to reject all bids or parts of bids which in its proper opinion provided for executing the work, and cancelling the contract if it work is not prosecuted in due proportion to the time fixed for completion. The proposition must also state the time required to do the work.

Proposals will be marked, "Proposals for raising wrecks at Norfolk, Va.," so as to prevent them being opened with other letters.

SAMUEL V. NILES,
Assistant Solicitor.

MILITARY, NAVAL, AND GENERAL AGENCY.

(Established during 1861.)

OFFICE AND RESIDENCE, 202 T st., bet. 20th & 21st sts., Washington, D. C.

Having had the experience of the "*Revolutionary, and War of 1812, Bounty Land Bureau, General Land Office*," for several years, and thoroughly studied the business of the various branches o this Department and of the "*Office of Indian Affairs and Pensions*," offers his services to the public as an Attorney and Solicitor in the substantiation of claims for

DEMANDS AND CLAIMS AGAINST THE GOVERNMENT

in all departments, especially claims growing out o the present war.

Particular attention given to Pensions due to Officers, Soldiers, Sailors, Marines and the heirs of same, Mary of the Officers' Dates, and the widows, children, mothers and sisters of those who have been killed, or who have died from causes contracted in the service of the country.

Claims for indemnity for property destroyed, and claims of Loyal Citizens against the U. S. for quartering and subsistence, &c., and for horses (lost, killed, captured or strayed) for the Quarter Master's Department of Pay, and Prize Money due Officers, Soldiers, Sailors and Marines, and their heirs, under the Prize law.

Any business before the *General Land Office, Indian Office*, or other Departments, *Congress*, or the *Court of Claims*, including the Supreme Court of the District, will meet with prompt attention.

REFERS TO:

Hon. Thomas A. Hendricks, U. S. Senate, *late Com. D. C. G. Shellenbarger, Ind.*; Hon. John Wilson, late Com. of Pensions, Ohio; Hon. Joseph Holt, Judge Advocate Gen. *C. L. G., Washington City*; Hon. George C. Dodge, late Solicitor Court of Claims, Iowa; Hon. *Jos. Sanders, Washington, D. C.*; Hon. Jas. Hall, late Com. of Pensions, Ohio.

Correspondence solicited from Attorneys at Law, Claim Agents, Officers of Military and Naval Academy, for the purpose of establishing branch agencies for the prosecution of Military and other claims.

Detailed information will at all times be furnished, and communications of Military nature, together with the necessary forms, and such instructions as may be required to conform to the requirements of the laws or the requirements of the Departments in relation thereto.

References required.

Business to receive prompt attention, should enclose postage stamps.

PROPOSALS FOR TIMBER AND MATERIALS FOR THE NAVY.

NAVY DEPARTMENT,
Bureau of Construction and Repair,
February 10, 1864.

SEALED PROPOSALS for Spanish timber and materials for the Navy for the fiscal year ending June 30, 1865, will be received at the Navy Yards, Washington and Boston, until 10 o'clock of the 22d day of February next, at which time they will be opened in the presence of bidders.

Proposals must be indorsed "Proposals for Timber and Materials for the Navy," and must be addressed to the Chief of the Bureau of Construction and Repair.

The materials and articles embraced in the classes named may be delivered promptly at the points mentioned; and any or which will be furnished to such as may desire to contract for the delivery thereof at their respective yards, or at the navy agent nearest them, as may be most convenient to the contractor, at the prices stated. This division has chosen being for the convenience of bidders, and the greater comfort to the Department in actually required for him. The commandant and navy agent at each station will receive, in the usual manner, the issues of their own yards, issue a copy of the schedule of the value of articles issued to vessels, and no navy be judged whether it will be desirable to make application for any of the articles named in the schedule. Guides being equal, preference will be given to articles of home manufacture.

Offers must be made for the whole of the class at any one yard, or for any navy agent's district, but not for a part only of either.

Proposals must be made separately for the delivery at each yard, or to any Navy Agent, the form of class of articles, and the rate per centum required thereon.

The proposals will be based upon the lowest bidder offering the best quality of timber, and the lots of 500 and over 1840, the Navy Department reserves the right to reject the bid of any party who has failed to comply with the contracts with him.

The contracts will bear date the day the notice is received, and must be completed by the 30th June.

Sureties in the full amount will be required to sign the contract, and the Department reserves the right to declare district judge, United States District attorney, collector, or navy agent, as sureties, and the amount of per centum will be withheld from the amount of bills of the contractor until the Department is satisfied that the per centum of each bill, approved in triplicate by the commandant and navy agent respective yards, will be paid to the navy agents at the points of delivery, in funds or certificates, at the option of the Department, within 30 days after the warrant for the same shall have been issued by the Secretary of the Treasury.

The following are the classes required at the respective navy yards:

KITTERY, ME.

Class No. 1, white oak timber; No. 2, white oak promise lumber; No. 6, yellow pine plank stock 8pc; No. 11, white pine; No. 12, spruce.

The most perfect, durable and reliable substitute for lost limbs the world of science has ever invented.

SELPHO, SECRETAN, Agents and Inventor,
616 Broadway, opposite St. Nicholas Hotel, N. Y.

THE NATIONAL MILITARY JOURNAL.

THE UNITED STATES

ARMY AND NAVY JOURNAL,

AND

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

Officers of the Army and Navy will find in the JOURNAL the only paper in the United States exclusively devoted to Military and Naval affairs, and the only one in their interest which has ever secured sufficient circulation and influence in the discharge of its duties to be sent for one year as long felt, or on a gas which should adequately represent them in the Press. Starting under the most favorable auspices, and with the encouragement and support of the best professional talent in the country, avoiding politics and partisanship of all kinds, and devoting itself with earnestness and energy to the professional interests of military questions, and to the discussions of current matters of the day, in less than six months, extended its circulation to the subscription region of military discussion and criticism in the United States. The rapidity with which it has secured a subscription, taking rank at once by that of any paper of its class in the world, and the expenses with which it has been greeted in the Army and Navy, and by the more thinking classes of citizens, will ever be its security for such a Journal, and afford gratifying evidence that the effort to establish a paper which should stand side by side with the best military journals with the best of the military Journals of England and France, but one which, as a Gazette of the Military and Naval matters, at a growing local indispensable to every soldier and sailor; while to every intelligent observer of the war it will be found a source of the most accurate summary of military operations, and for its judicious suggestions and discussions. Its articles are from the pens of the ablest military writers, and in its full and impartial information in foreign, naval, accurate, and accessible than that of any periodical ever issued in this country.

Of the commendations which the newspaper press we have room only for the following:

From Major-General GEORGE G. MEADE.

"I have received several numbers of your new paper, the ARMY AND NAVY JOURNAL, and have noted with satisfaction the ability with which it is conducted, and the interest it will excite in officers of the service. I shall be glad to make contributions from time to time."

From Major-General W. H. FRANKLIN.

"To me the ARMY AND NAVY JOURNAL is commencement will make a valuable and much needed and much appreciated military establishment, it would be my pleasure."

From Major-General GUSTAVUS SWIFT.

"Your JOURNAL meets with great favor in this army. I cannot overestimate the value of the discussions of this corps. I hope it may receive the support which its merits deserve, as the best public compliment."

From Commodore J. C. LONG, U.S.N.

"Your JOURNAL is a valuable one, and the only paper of the kind that has ever been published that remains in close adherence."

From Major-General G. H. THOMAS.

"I will offer no apology for not having answered the ARMY AND NAVY JOURNAL in officers in my position of the Army, and under the circumstances by publishing my name in this way to-day has such merit."

From Prof. H. Coppee, University of Pennsylvania.

"A good paper of this kind has long been needed. Every officer of our rebellion my time would be a valuable one. Its publication promises to be a brilliant success. Its very varied and intelligent contributors, its wide and comprehensive plan, its fine mechanical execution, and its remarkably cheap terms, all augur well for its success. I shall be glad to see it in every regiment and in every garrison and in every naval vessel, and in every private library in which any book will be found."

From the New York Times.

The ARMY AND NAVY JOURNAL is now in itself and in its contributors a very regular and valuable. It received in addition the support of the best talent in the country in military and naval affairs, who spoke from the standpoint of practical experience and of thorough knowledge of the subject. Its character and standing of those who had the matter in hand. It should be in every army and navy officer's hand, and by every officer in the Navy, as well as by our Militia officers. It is a publication which we can heartily recommend to the general public, who will there take such a deep interest in all military matters, and will find the JOURNAL a safe and reliable source of information.

From the Boston Post.

The New ARMY AND NAVY JOURNAL has proved a success from the start. Handsomely printed, full of variety, well edited, and thoroughly conducted, it has already established itself as a special line of journalism. Its subscription list is large and rapidly increasing, and its circulation is very extensive, and its influence is very great. Its circulation is large and rapidly increasing, and its influence is very great. Its circulation is large and rapidly increasing, and its influence is very great. Its circulation is large and rapidly increasing

A BOOK FOR EVERY SOLDIER AND MARINE.

WELLS' ARTD NAVY HANDY BOOK;

Or, Every Soldier and Marine His Own Counselor.

Read what the New York Dispatch says of the Handy Book:

"This work is precisely what it purports to be—a 'handy book' for the soldier, the marine and the sailor. It contains, from the most reliable sources, and is therefore reliable. There is no possible exigency that may arise in the service that is not here addressed, by referring to its pages, cannot obtain the information desired. It gives 'rules of health and comfort, prepared with great care from the large experience of the Army Medical Department,' and instructions for the guidance of the soldier when on the way to, and on the field, he should be wounded, the traps and toils of the land sharks who would plunder him, the amount of pay he receives, and the amount to which he is entitled, full instructions, explanations and forms by which he may obtain his bounties (wife, children, parents or sisters) in case of his decease, to the proper persons, the amount of each to which he is entitled, whether in the army or navy, and instructions how to proceed in the case of unscrupulous masters, commissioners and company clerks." In addition to these, the services, duties and privileges of war, officers of the Army and Navy Departments, tables of rations, marches, &c., allowed to officers and enlisted forces, of monthly pay of noncommissioned officers, privates, &c., &c., are all explained in a manner that renders it impossible for one to misunderstand the meaning of the writer. The various grades of pay of officers, from the lowest to the highest, a distinction of military and technical terms, a chronological record of events since the creation of the Army and Navy to the present time, and a thousand other items of information, which it is not possible to mention in this place. This very excellent compilation should be placed, gratuitously, in the hands of every soldier and marine in the service of the government by the agents of the benevolent and patriotic Christian commissions, and in favor of the people, save the present and future welfare of the brave defenders.

A copy of the HANDY BOOK will be sent, post paid, on any address on receipt of 25 cents.

Address,

SOLDIERS! FOR YOUR INSTRUC-

TION READ THESE NEW RELIGIOUS BOOKS.

HEAVEN OUR HOME.

We have no Saviour but Jesus, and no Home but Heaven.

MEET FOR HEAVEN.

A State of Grace upon Earth the only preparation for a State of Glory in Heaven.

Let the soldier in Heaven our Home! prepares a Soldier's Heaven, where scattered families meet at last in loving intercourse, and in possession of perfect recognition, to form a never-ending assembly of peace and love. Let Meet for Heaven! the individual state of the children of God is attempted to be unfolded, and more especially the state of preparation which is set apart for them on earth to fit and prepare erring mortals for the society of the saints.

These very popular books, although recently published, are attracting universal attention by the originality of conception they display, and they meet a want especially at this time, when there is so much mourning and affliction in our land.

Price of each book, handsomely bound in cloth, $1 00, by mail, post-paid.

THE MILITARY SITUATION

IT is a gratifying circumstance that the destination of General SHERMAN's expedition is even a greater puzzle to the Rebels than it is to the people of the loyal States. It has been their boast that so extensive and perfect was their system of spies all through the Union lines, that every movement was known at Rebel headquarters almost as soon as it was phased; and it is saying no more than truth to confess that in too many instances they have made good their boast. The plan of Rebel papers now before us, declare the fact that his "mysterious movement," as they call it, is creating the utmost apprehension and alarm throughout the Rebel States. They are entirely in the dark in respect even to his whereabouts. He is reported now here, now there. At one time he is supposed to be moving rapidly upon Mobile; at another it is thought to be his intention to execute a grand flank movement on JOHNSTON's army. It is known that General SHERMAN's army passed through Jackson on the 5th inst., in two columns, the enemy retreating across Pearl River so precipitately, that his pontoons, two pieces of artillery and a number of prisoners fell into our hands. Our forces seized provisions of all kinds, and swept on, reaching the vicinity of Meridian in eleven days after leaving Vicksburgh. From this point, we are unable, were it admissible to do so, to lay before our readers at present, any accurate account of his progress through the enemy's territory, and of the vast and scanty information as may be gathered from Rebel newspapers.

The Mobile *Tribune*, of the 11th inst., says that General SHERMAN's forces were at Morton on the 9th; whether they were to proceed from that point towards Meridian or Enterprise, or some point further down on the railroad, was not known. It was conjectured that one of the main objects of the expedition was the capture of Mobile; and the *Tribune* urged upon the citizens the duty of preparing for the worst. It was admitted that the city was not in a defensible state. Unlike Charleston and Vicksburgh, its natural position is not one of security against a regular seige with heavy artillery, and Major-General MAURY, who holds command there, on the 10th inst., issued an order based on information derived from General POLK, requesting all persons who could not take part in the defence of the city to leave it without delay, but the Mobile *Register*, of the same date, discredits this information, on the ground that the natural difficulties in his way were too great to overcome. The distance from Morton to Mobile is at least 160 miles; and if he should march in a direct line, he would be compelled to open new roads for the greater part of the way. The country is destitute of supplies, and he must therefore carry all his subsistence, and one day's heavy rain would effectually stay his progress.

An official dispatch to the Rebel War Department announced, on the 18th inst., that General SHERMAN had reached Quitman, a village on the Mobile and Ohio railroad, 100 miles from Mobile; but a close reconnoissance by General MAURY disclosed the fact that the Union forces at that place did not probably number over a thousand men, and the movement was thought to be nothing more than a raid for the purpose of destroying the trestlework of the railroad in that vicinity, while the main body of the army was thrown upon Meridian. A later report, through Union sources, says that Selma in Alabama, had fallen into the possession of our troops, though it is a matter of doubt whether they belonged to SHERMAN's or to SMITH's expedition.

Our readers will find the subject of this great movement more fully discussed in our editorial columns. For its results, they must await with patience the developments of time.

ADVICES from General SMITH's cavalry expedition up to the 17th, represent that he found the Tallahatchie River guarded for fifteen miles in front of Holly Springs, as FORREST expected that he would attempt to effect a passage near that place. While his advanced brigade of infantry occupied the enemy's attention from the side, he moved east with cavalry to New Albany, where he expected to cross on the 16th, but was delayed twenty-four hours by the movements of General WADDELL's brigade. THEY, it is to be observed Potosaw, where skirmishing was still in progress when the couriers left with dispatches. His command were in excellent condition, and felt confident of achieving a complete success.

The Rebel War Department has received an official dispatch from Mobile stating that the Union forces had made a bloodless demonstration with gunboats and a land force at Grand's Pass, about 35 miles from Mobile. Grand's Pass is an artificial cut into Pascagoula Bay, and there was an apprehension that the Union forces were attempting this approach from BANKS' lines and from the Mississippi River. Stormy weather appears to have intervened and occasioned a delay in active operations; but there is no question that Fort FARRAGUT was prepared for an attack upon Mobile, and that he was only waiting for favorable weather to give the Rebels a taste of the dash and fire which carried him past the Rebel forts on the Mississippi and compelled the surrender of New Orleans.

General GILLMORE and staff returned to Port Royal on the 15th from the Florida expedition. The expedition was a complete and important success. We learn from General GILLMORE's official report that a portion of his command under Brigadier-General SEYMOUR, convoyed by the gunboat *Norwich*, Captain MERRIAM, ascended the St. John's River on the 7th inst. and landed at Jacksonville on the afternoon of the same day. The advance, under Colonel GUY V. HENRY, pushed forward into the interior on the night of the 8th, passed by the enemy, drawn up in line of battle at Camp Vinegar, seven miles from Jacksonville, surprised and captured a battery three miles in the rear of the camp about midnight and reached Baldwin about sunrise. At the approach of our troops the enemy fled, sunk the steamer *St. Mary's*, and burned 270 bales of cotton a few miles above Jacksonville. Our forces captured, without the loss of a man, about 100 prisoners, eight pieces of artillery in serviceable condition, and a large amount of other valuable property. The forces were still pushing on through the State, and no portion of the expedition had returned.

THERE was some skirmishing with the enemy before Chattanooga on the 23d inst. General PALMER succeeded in driving him to Tunnel Hill, Georgia, when he made a stand, opening heavily upon our troops with field-pieces.

A BATTALION of the 11th Tennessee Cavalry, stationed on the Virginia road about five miles east of Cumberland Gap, were surprised and surrounded by a large force of Rebel cavalry at daylight on the 22d inst. Most of the command were captured. At the same time the Rebels attacked our outposts at Powell's Bridge on Tazewell road, five miles south, consisting of 50 men in charge of Captain PICKERING, 24th Kentucky Infantry, supported by a block house. The Rebels were repulsed three times, when Captain PICKERING with his men were withdrawn to prevent their being cut off from the Gap.

We regret to find that some misapprehension has been occasioned by the incautious wording of a sentence in the article on the Naval Academy at Newport, which appeared in this journal a few weeks since. In speaking of the difficulties surrounding the Superintendent of the Academy, at the commencement of the Rebellion, owing to the fact that he scarcely knew whom he could trust, we did not suppose that we should be thought to refer to officers of the Academy Among them were men whose history, both before and since this Rebellion, has shown how worthy they were of confidence, both as officers and as citizens; and it was to their co-operation with the plans of the Superintendent that the safety of the Academy was, in a large measure, owing. We regret that anything in our article should have been construed to convey a different impression.

LIEUTENANT COMMANDER DAWSON PERRIN, U. S. N., died on the 20th, in Philadelphia, aged 36 years. His funeral took place on Monday, from the Washington House, and his remains were followed to their last resting place by a large concourse of naval officers and others. Lieutenant Commander PERRIN entered the naval service on the 30th of September, 1841, having been appointed from Maryland, his native State. His first orders were to the razee *Independence*, 54, then attached to the Home Squadron. In 1843, he joined the frigate *Savannah*, 44, Captain ANDREW FITZHUGH, of the Pacific Squadron. Subsequently he was transferred to the frigate *Brandywine*, 44, making the cruise in her. He returned in November, 1845, and awaited orders until 1846, when he was ordered to the steamer *Princeton*; he was detached from her in July, 1847, and ordered to the naval school preparatory to promotion. He was a passed midshipman in 1848, and in 1849 he was ordered to the store ship *Relief*. From her he was detached in April, 1849, and ordered to duty in the Coast Survey, where he remained until July, 1850, when he was ordered to the frigate *Raritan*, 44, but was transferred to the sloop *St. Marys*. In 1852 he was detached from that vessel and ordered to the Observatory at Washington, where he remained until October, 1853, when he was sent to the receiving ship, at Philadelphia. From her he was again ordered to Coast Survey duty. He was promoted to a lieutenant, September 15, 1855. In 1856 he received orders to the store ship *Fredonia*, at Valparaiso, and he remained in her until ordered to the steam sloop *Lancaster*, in 1859, on which he served until ordered home in 1861, when he was promoted to be a lieutenant commander, and ordered to ordnance duty at Old Point Comfort, Va. He served his country faithfully for twenty-four years, and out of that time was at sea over thirteen years. He was ordered a few months ago to the command of the gunboat *Pocahontas*. He has left behind him a large circle of friends, and the Navy will feel his loss deeply.

THE MILITARY SYSTEMS OF EUROPE.

THE FRENCH SYSTEM.

The lectures of Prof. J. VIAL before the French "Ecole d'Militaire d'application d'Etat-Major," of which a second edition was published in 1863, furnish the latest and most comprehensive information concerning the existing military institutions of Europe and the principles on which they are founded. Our own war has largely increased the study of foreign military systems, and the imminence of great conflicts between the European powers excites additional interest in them. We propose to give, in a few articles, an abridged translation of those parts of M. VIAL's lectures which will furnish the most desirable information concerning the permanent military organizations and the accumulations of resources which these powers have at command.

M. VIAL divides military history into two great periods—the ancient and the modern—the line of division being the middle of the 14th century. It is unnecessary to review the former period; in the latter, the existing system of modern armies has been gradually created. A regular organization succeeded the feudal system, and the infantry, which had been despised by the Knights of the middle ages, again rose into importance. In 1445, CHARLES VII. formed the first regular army establishment. Some years later CHARLES VIII. marched into Rome with a powerful and well-organized army, accompanied by a large train of artillery. Artillery acquired a prominent importance; although the pieces were clumsy they made great havoc among infantry, which war still armed with pikes, and among masses many ranks in depth. Small arms were still less manageable than the cannon, and at the commencement of the 16th century the proportion of arquebuses to lances was only 1 to 10.

Improvements continued in the 16th century. The musket succeeded to the arquebuse; the number of ranks of infantry was reduced from ten to six; regiments were organized by HENRY II., and brigades by GUSTAVUS ADOLPHUS. Finally, in the 18th century, bayonets were invented and pikes were abandoned. This is the true epoch of the modern military system which, under the wars of the French Republic and Empire required nearly its present portion. The number of ranks in the line of battle was gradually diminished, until NAPOLEON at Leipsic reduced them from three to two—the formation since retained.

The military systems of nations are based on these seven principal elements:—A permanent army, national reserve, methods of recruiting, means of discipline, principles of instruction, rules of administration, and military establishments. Each of these is discussed. The strength of a permanent army in time of peace is to be deduced from considerations of the population and its growth, its revenues, the extent of frontiers, the strength and disposition of neighboring powers, and the qualities of the people. Experience has shown that the composition of a proper strength for a permanent army among the nations of Europe from 1-40 to 1-200 of the population is the best proportion. Usually 1-100, and is the one adopted in France, Austria and Prussia. The strength of the armies of the principal powers is about 400,000 on the peace footing. The effective "mean" for war is one-third more, or 600,000: while the maximum strength to be drawn from the population must be determined by the nature of the emergency. The highest proportion is about one-fifth or one-sixth, but in France it has never reached above 1-25 or 1-26. This was in 1793, when the nation had 1,200,000 men under arms.

It is necessary to follow the author in the discussion of the remainder of the seven elements noted. We will proceed to give a detailed account of the composition of the French army.

The population of France, according to the census of 1862, is 37,382,225; including Algeria, it may be called 37,-000,000. The frontiers, except upon the north, are designated by nature, and covered by respectable obstacles. The annexation of Nice and Savoy gives upon the side of Italy a natural frontier. The State is compact and homogeneous, the inhabitants speaking the same language, professing the same religion, and habituated for a long time to live under the same Government.

The public force of France presents three principal elements:—The permanent army, the reserve, and the national guard.

The effective of the permanent army is about 400,000 on the peace footing, and on the war footing 600,000—the reserve being about 200,000.

The *Etat-Major-General* comprises the Marshals of France, of whom the number is six in time of peace and twelve in time of war; eighty generals of division and 160 generals of brigades. These three classes of generals command the great fractions of the army—armées, army corps, divisions and brigades. In most European armies there are special generals for the corps, but in the French system the corps are commanded indifferently by either the marshals or generals of divisions.

Then comes the *Etat-Major*, comprising 680 officers, as follows:—35 colonels, 35 lieutenant-colonels, 110 chefs d' escadrons, 200 captains, 100 lieutenants. The *Etat-Major-General* and the corps of *Etat-Major* form the head of the army, and connect themselves with all the arms. They form the frame (cadre) of the grand units of organization—the brigades, divisions, corps and armées.

The Imperial Guard is composed of two divisions of infantry of two brigades each, and one division of cavalry. The first division of infantry comprises—

One regiment of *gendarmerie* (foot).
Three regiments of grenadiers.
One regiment of zouaves.

The second division comprises—

Four regiments of voltigeurs.
One battalion of sharpshooters (foot).

The cavalry division forms three brigades, as follows:—

1. A squadron of gendarmerie and two regiments of cuirassiers
2. A regiment of lancers and one of dragoons.
3. A regiment of chasseurs and one of guides.

The artillery of the Guard is composed as follows:

One division of foot artillery.
One regiment of mounted artillery.
One regiment of horse artillery.
One squadron of artificers.

There is also a division of engineers, and a squadron of the train of equipages.

The French infantry (of the line) comprises—

One hundred regiments of the line.
Twenty battalions of chasseurs (foot).
Three regiments of zouaves.
One battalion of "nageurs pontoniers" (firemen).
Three battalions light infantry of Algeria.
Five companies of "tirailleurs de discipline."
Two companies of "tirailleurs indigènes."
Five companies "disciplinaires des colonies."
One regiment of foreigners.
Three regiments of Algerian tirailleurs.
One company of "sapeurs conducteurs."
One company of veteran fusiliers.

Each regiment comprises four battalions of six companies of which three are active and one at the dépôt.

The *Etat-Major* of the regiments are as:—A colonel, a lieutenant-colonel, three chiefs of battalions, a major, four captains, "adjutant-majors," a captain paymaster, a captain of the "habillement," an assistant to the treasurer, a standard bearer, seventeen officers of the "habillement," a surgeon of the 1st and the 2d class, an adjutant, a chief of music, having the rank of sous-lieutenant. There is also a "petit état-major" composed of four adjutants, a drum major, two drum corporals, one corporal sapper, an under chief of music, and a woman accountant.

The *cadre* of a company comprehends:—A captain, a lieutenant, a sous-lieutenant, a sergeant-major, a quartermaster, four sergeants, eight corporals. Its effective is from 50 to 60 men in time of peace, and from 100 to 120 in time of war.

The French cavalry is composed as follows:—Two regiments of cuirassiers, four of lancers, four of dragoons, the cavalry of the reserve; twelve regiments of dragoons and eight of lancers, forming the cavalry of the line; twelve regiments of chasseurs, eight of hussars and three of chasseurs d'Afrique, forming the light cavalry. There are also three regiments of Spahis for the service in Algeria, and ten companies on the re-mounting service.

The *état-major* of the regiments is similar to that of the infantry, except that there are a "captain instructor," veterinary surgeons, and some other slight differences. In the squadron there are a captain, two lieutenants, three sous-lieutenants, with other subordinate officers. The effective of the squadron is from 100 to 120 men and 75 or 100 horses in time of peace, and 150 to 175 men and 125 or 150 horses in time of war. There are more officers in the cavalry than in the infantry, on account of the nature of the service, and because the officers are themselves combatants.

The *état-major* of the artillery is eight generals of division, sixteen generals of brigade, fifty colonels and fifty lieutenant-colonels, with subordinate officers. The force is composed of five regiments of foot artillery, one of pontonniers, ten of mounted artillery, four or horse artillery, twelve companies of workmen, two of armorers, six squadron of the train, and four companies of veteran canonneers. The foot regiments have sixteen batteries, the mounted ten, and the horse eight. The officers are also similar to those of the infantry and cavalry. A mounted battery on the war footing has two captains, two lieutenants, an adjutant, and the subordinate officers. The effective of the battery is about 200 canonneers and 200 horses.

The engineers have 4 generals of division, 8 generals of brigade, 26 colonels, and 25 lieutenant-colonels, with subordinate officers. The force is composed of three regiments of two battalions each, and two companies of workmen.

The *gendarmerie* is composed of 26 departmental legions, and one for Algeria; four companies of colonial *gendarmerie*; the guard of Paris and a company of veterans.

The "*troupes d'administration*" are composed of fifteen sections—one of workmen, one of clothing and encampment, and 13 others for clearing lands, baking, hospital attendance, &c. There is also a corps of military equipage, comprising five squadrons of four companies each, and four companies of workmen for repairs and construction.

The *état-major* of places comprises 144 commandants, 12 majors, 173 adjutants, 34 secretaries, 5 almoners.

The corps of intendance, charged with the administration of the army, comprises 1 intendant inspecter-general, 26 intendants, 150 sous-intendants, 80 assistants.

The service of health comprises 8 inspectors, 90 principals, 638 majors, and 570 aides-majors.

There are 385 veterinarians. Finally, there are officers of administration, of whom 350 are for the hospitals, 940 for clothing and encampment, 450 for subsidence, and 400 in the bureau of the intendance.

The reserves comprise the reserves of the army and the National Guard. The yearly contingent is about 100,000 men, and of this number a portion is immediately taken into the army and the remainder receive military instructions for three years (six months in all), and are then likely to be called out. The age of liability to service is twenty years, and the time of service seven years. Experience has shown that the best age for soldiers is from twenty to twenty-five years.

Horses are provided at fourteen "dépôts de remonte," which have many branches, where, under the direction of cavalry officers, horses are purchased. There are seven companies of "ouvriers de remonte" in attendance on these dépôts. Horses are also raised for the service, the Government owning several dépôts of stallions. There are also two schools for training.

The military schools are—

1. Of La Flèche for the education of the sons of officers without fortunes, and of sons-officers killed by the enemy.
2. Of St. Cyr for the formation of officers of the infantry, cavalry, and marine corps.
3. The school of the cavalry, to form instructors in that arm.
4. The staff school.
5. The polytechnic school to educate young men for different public services and for the artillery, engineers, and marine service.
6. The school of application of artillery and engineers at Metz, composed of scholars selected from the polytechnic schools, and destined for employment in those branches.
7. School of medicine and pharmacy at Paris.
8. Veterinary school.
9. School of fencing at Vincennes.
10. Normal gymnastic school at Joinville-le-Pont near Vincennes.

Besides various public buildings devoted to the uses of the military department, the noted dea invalides, &c., there are the following establishments of material:

1. A central dépôt of artillery at St. Thomas d'Aquin.
2. A dépôt of powder and saltpetre.
3. Fourteen schools of artillery.
4. Five brass foundries of arms.
5. Various forges and shops for the erection of artillery officers.
6. Two manufactories of arms, at Chatellerault and Tulle.
7. Eight powder manufactories, at Bergerac and the rebineries of saltpetre.
8. A school of pyrotechny at Metz.
9. An armorial museum at Paris and preserved antient.

The engineers charged with the barracks and military places have—

1. Barracks at various points, with grounds for manœuvres. It is necessary to have 200,000 acres and 50,000 horses in time of peace.
2. Quarters for ministers and general officers.
3. An arsenal of engineering, three regimental schools, a depôt of plans, and a plan-relief of Paris.
4. The engineers have also charge of fortified places, of which there are about 230.

MOBILE AND ITS DEFENCES.

The important operations now in progress for the capture of Mobile, in the gathering of a large fleet of gunboats off Mobile harbor, and the march of General SHERMAN from Vicksburg, make that city the object of so much interest at this time, that the following account of its defences and its condition will be of value and interest:

The land defences of Mobile consist of three lines of strong earthworks, extending five or six miles to the rear of the city. The first is on the northeast side, and is curved, stretching around from near the river to a considerable distance in the rear of the town. The second line is on the east side of the river, between Blakely and Mobile. Near the dépôt of the Mobile and Ohio railroad, a little way down the river, is Spanish Fort, consisting of one ten-inch gun, and three rifled thirty-two pounders. The third line is believed to be to the northwest of the city, and intended for defence against an overland force, marching towards the city from an inland direction. Along the east coast of Mobile bay are Battery Huger, batteries Charlotte, Cedar Plain, Grand Spell and Lighthouse battery, each of which consists of thirty-two pound rifled cannon mounted in earthworks. The land is, however, level and low, and presents no natural advantages for a defence. Fort Morgan and Gaines, guarding the entrance to Mobile bay, are the first obstacles that a fleet will encounter in attempting to enter from the gulf. Fort Morgan is situated on the southwestern extremity of a long spur of land, that separates Bon Secour Bay from the Mexican Gulf. This commands the two easterly channels of entrance, while the western one, and Grant's Pass, are immediately under the guns of Fort Gaines, a casemated fortification. Between the forts and the city, the channels are obstructed by lines of stout spiles driven in the mud, and a sloop loaded with stone is stationed directly in the centre of the channel that runs through Dog River Bar, ready to be sunk on the passage of the forts. In the Mobile River, considerably above the city, an iron-clad ram and four wooden gun-boats are afloat. The iron-clad, according to the Confederate journals, is a failure, and little reliance is placed upon it.

The harbor of Mobile is generally shallow, and it was customary for heavy shipping to anchor just inside of Dauphine's Island, near the entrance to the bay, and some twenty-eight miles from the city. Steamers, however, being more easily managed, were admitted under the guidance

of skillful pilots, and even sailing vessels of six or seven hundred tons could approach the city.

Commercially considered, Mobile is the natural entrepôt and depot for the great cotton and agricultural district drained by the Alabama, Tombigbee and Black Warrior Rivers and their tributaries, and of the country traversed by the Mobile and Ohio Railroad, including a great part of Alabama and Mississippi, and a part of south eastern Georgia. Next to New Orleans, on the coast, Mobile ranked as the third exporting city of the United States, New York and New Orleans only taking precedence. The valley of Alabama is one of the most fertile regions of North America, and the mineral resources of the State beside coal and iron ore, Mountains of coal, gold, manganese, marble, galena, limestone and others.

CORRESPONDENCE.

BLOCKADE RUNNING.

To the Editor of the Army and Navy Journal:

SIR:—There is occasionally something irresistibly droll about the legislation which the Rebel Congress takes the trouble to perpetrate. A few days ago, for instance, it passed a bill prohibiting the exportation of cotton, tobacco, naval and military stores, molasses, sugar or rice, under the penalty of forfeiture "of any vessel, vehicle, or any slaves or animals engaged in the transportation thereof;" and inasmuch as it as poor rule which does not work both ways, the same regulation has been soon followed up this measure with a bill prohibiting the importation of certain luxuries out of the Confederacy, in the case of which the penalty is by a curious coincidence the very day the Richmond papers containing these measures reached the North, we received information that a fleet of fifteen fine steamers, loaded with cotton, and during the first fortnight of February, destroyed four of the fastest blockade runners in the Rebel service—the *Don*, the *Nashville*, the *Ranger* and the *Lynx*—and the *Young Tom* ting these fleets together, it looks very much as if the Rebel Congress had been moved by the laudable desire to *stop Don's* blockade runners, and had instructed that of the "Ros" and the Grapes."

The Confederates not only dictate these "hazards of war grapes"—they go so far as to make the plucking of them through the blockade "a high misdemeanor," punishable by fine and imprisonment. It is to be hoped that our authorities Mr. DAVIS to grant permits for the shipment of cotton and other Southern staples; but if our cruisers off Wilmington mistook the *Ranger*, for an opportunity to permits to run the blockade which may bear Mr. DAVIS's signature, will have to be accompanied by Admiral LAIRD's ticket they will be made available; and then the destination of the vessels will be changed to New York or Boston from Nassau or Liverpool. It is to be hoped, at all events, that the Rebel journals, which are so ready to abuse Secretary WELLES when a blockade runner slips through our squadrons along the Southern coast, will now favor him with a eulogy or space to praise his efficiency and that of his Admirals?

THE REGULARS ENLISTED IN 1860.

To the Editor of the Army and Navy Journal:

SIR—Just as soon as Congress is doing all it can to legislate bounties and increase of pay to colored soldiers, which is nothing more than justice, and should have been allowed them when first accepted as soldiers, it behooves the loyal press and Congressional individual who still retains some little sympathy for the white soldiers, to propose that justice shall be done a certain class of soldiers who have served a full whole to the men who enlisted in 1860, before the rebellion. These men enlisted for five years, and have now served between three and four years, have fought through nearly all the heavy battles in the different sections of the country, cheerfully and bravely endured the hard service of their country's flag on every hostile occasion; and have suffered every hardship incident to the active life of the soldier in the field. For all this, I am sorry to say, they are not receiving a thing more than the rather unsubstantial satisfaction of knowing that they have faithfully served their country in the hour of need. I am sure that there is not a brave soldier and patriot could desire; and I would agree with that assertion, were all of our benevolent soldiers treated alike, and the same encouragement. But such is not the case, as the following will show:—Our brethren who enlisted in 1861 obtained by Congressional enactment the benefit and advantage of a shorter term of service (three years); and, in addition, all those whose term of service expires this year are promised a bounty of one hundred and fifty dollars by Government, State and local bounties, amounting in the aggregate to $777, while we of '60, who have served nearly twice as long and have seen twice as much fighting, much more service than many of them, are denied the privilege of re-enlisting, and are forced to look for the plunder on a footing with our more favored brothers in arms, and that because we can not and cannot help ourselves. We appeal to you, Mr. Editor, in the hope that you will bring the matter before the proper authorities, so that while justice is being done the negro soldiers, the old '60 men may obtain the same.

FORT HAMILTON, N. Y., Feb. 17, 1864.

THE GROG RATION IN THE NAVY.

To the Editor of the Army and Navy Journal:

SIR: In looking over your valuable paper of the 30th ult., I find an excellent article from the pen of "Quarter Deck," in which he says, he and others approve of my former letter, with one exception; what that is I know not. In regard to the grog question, I am sorry he has seen fit to misunderstand that I do not advocate its restoration in the Navy. So far as my own person is concerned is true, as my duties are at present, I have no temptation to indulge in it, but I most heartily agree with "Quarter Deck," that the men, the seamen, the boys and sleeve of our ships of war, ought to be allowed to have their gill of whiskey per day. During fifteen years' sea-service in our ships of war, I have seen our old tars encouraged to perform duties nothing less than a friendly act of the captain calling all hands to splice the main brace. I have seen my ship ashore for days. I have ridden out hurricanes and gales in all the oceans known in the world. I have seen my ship-mates wet through and through off Cape Horn and other places. I have seen them kept in all weathers, while riding out a hurricane at sea, with no sails set, and have seen them cheerfully submitting to all these hardships and suffering; and why? because they knew that their captain appreciated such noble conduct, and the old iron-bound grog tub was got up and all hands invited to take a drink of "Nelson's blood," whiskey—this put new life into the men, and their duties were quickly and well done without a murmur. This is not the case now-a-days; the old veterans, as a general, that nearly all of the "old men" of wars-men have left the Navy, and the larger part of the men now in the Navy are hardly fit to man a common fishing smack. Because the Rebellion time after time, and by fits at a time, all the little privileges which were allowed to the men have been taken away. Let the gill of whiskey is taken away. 2d, the men always were allowed to go on shore as often as once in three months, we may say, for example if they get a chance to go once during an absence of one and two years, even in the ports which are firmly held by our forces; and again, the pay for a common seaman of only seventeen dollars per month, is hardly enough to furnish him with decent clothing in a man-of-war, to say nothing more the $18 per month read as if it was $26 per month, this was either an error of the printer or my own which escaped my eyes.)

I now give "Quarter-Deck" to understand that I do not ask for the grog ration to be restored for my own personal benefit. There are a few men in the Navy who have grown gray in the service, I say to Congress, and to all, to give the old sailors their grog. I defy any officer or man to say that he ever saw a sailor drunk or getting into difficulty from drinking the paltry amount of one gill of whiskey per day. Let the grog be restored to the men of the navy and the increase of the pay will be the means of bringing back hundreds, yes, thousands, of our best old men-of-wars-men back to the Navy. There is not a doubt about it, for fear that as fast as the ships come home the old veterans, the bone and sinew of the Navy, will leave it and join the mercantile service, and by the time the Rebellion is ended of these are now serving; men too who are sadly missed, and are now badly replaced by the honorable Secretary of the Navy, to man his fleets of ships. Therefore, I say to "Quarter Deck," that with all my heart I should be glad to see the grog ration restored, and his pay increased. I fear that unless this is done soon, the Navy will lose hundreds of good men. Give Jack his little whiskey—give him his pay—and you will see a good navy in a few Navy Yards idle. A quick settlement of the prize cases will also have a very beneficial effect to induce seamen and good sailors to enlist. These things and we are receiving ships will soon be filled up with good men.

W. F. P.

PAY OF THE PACIFIC SQUADRON.

To the Editor of the Army and Navy Journal:

SIR:—Knowing your friendship that you have kindly devoted a space in your journal to the various grievances of persons connected with the Army and Navy, I take the liberty of calling your attention to the following case of grievance. The officers of the Pacific Squadron that have had the misfortune to be stationed at this port have been paid in greenbacks, thereby sustaining a heavy loss, owing to the depreciation thereof—averaging at least one-third of their pay; and where, as in the case of the officers of the Navy, the pay is small, and only once a year, the loss is very considerable, taken in connection with the extravagant prices charged on all articles necessary for subsistence and clothing. In San Francisco, U. S. legal tenders are not taken as a currency; and it is necessary, in order to pay necessary bills, to purchase gold at the brokers' offices, at a discount of about 35 per cent., thus reducing the pay of officers more than one-third. The employés of the navy yard, mechanics, laborers, &c., receive their pay in greenbacks at par value, but at the rate of discount quoted in the San Francisco money market. The *Daily Bulletin* receive the highest encomiums of the naval officers. The papers in this State have been teeming with statements of the liberality of California in increasing the pay of mechanics employed in his employ; also increasing the pay in the Revenue Service 25 per cent.; but as yet that liberality has not extended to the officers of the Navy. Knowing that the above statements are concurred in by the officers of the Squadron, and having been desired by some of them to forward this, I trust it may find a place in your valuable journal.

AN OFFICER OF THE SQUADRON.

MARE ISLAND, Jan. 22, 1864.

GENERAL MCCALL'S DIVISION.

To the Editor of the Army and Navy Journal:

SIR:—YOUR JOURNAL of February 13th notices an elaborate statement, published in the Philadelphia *Press*, of General Meade, against the purported censure cast by McCLELLAN's Report. It is painfully unpleasant to detract from the honors claimed by gallant men, participators in the Peninsula campaign. The practice has become so prevalent, however, (and I am sorry to say) that Meade must consent to make up his account and newspaper notoriety for the shortcomings in the field, and thereby drown the voice of modest merit in the noise of self-praise. But it is also a matter of public moment, not only for self-defence, but for the sacred truth of history, to put some check on the system. General McCALL's report of Glendale, which he supports by General FOSTER's letter, giving him credit for doing that of which FOSTER could know nothing, being miles away, at which POINTER and also by General MEADE's sub-report, which claims for the division what could only be true of MEADE's brigade (being on the extreme right), that the attack was made on the division left, the line there pierced, and crumbled from left to right). All of this worked up in the elaborate statement in a piece of labored patch-work confusing to the mind's eye than faithful in historic fact.

General MEADE says:—"It was only the stubborn resistance offered by them (McCALL's Division), prolonging the contest 'till after dark, and checking, till that time, the advance of the enemy, that enabled the concentration, during the night, of the whole Army on JAMES River, which saved it. General POINTER says: Had McCALL not held his place on New Market Road, *the line of march of the Army would have been cut by the enemy.*"

The "elaborate statement" says that "McCALL replied "twenty thousand men, under LONGSTREET and HILL," and if McCALL did all this, I will add, as he asserted in addition, "*an attack in his rear*," about half-past three o'clock from Brigadier General JOHN R. BROOKE, whose TOWNSEND batteries in the prize field of Nelson's Farm; supported, about half-past four o'clock, by the two other brigades of McCALL's division; which attack lasted till long after dark, with "heavy loss on both sides." If the elaborate statement claims for McCALL's Division, "the crushing of the overwhelming rebels, notwithstanding the fire in the rear," he should bear with the report of the commanding general of the brigade mustering the most of those who must have kept the division up to its work and received them, exhausted, in their arms at the moment of victory, after twelve hours of fighting.

The number of regiments then received was ascertained by the number of regimental colors collected for the purpose of rallying the troops.

The time when the panic-stricken horses and men rushed pell-mell into the encampment about half-past three o'clock and continued until other matters called off the attention, such as a *victorious enemy's yell*. It was, in fact, the fighting of the troops of the division, in the rear of position *left* by McCALL's left and centre, that POINTER heard at Malvern. These troops, despite the demoralizing effect of a stampede of the trains, artillery, and infantry, in such vast numbers, breaking wildly through their lines, rendering all the attempts to rally of no avail, continued to fight and resist the advancing victorious enemy in full career,—and drove them back after McCALL's "stubborn resistance" was overcome, and, in the words of POINTER, "the line was at last checked and"—the "two wings separated," and, but for SEDGWICK's Division, the Army of the Potomac was in a perilous position. It is true that so heavy a loss had not barely given, in the commanding general's report, should not be stripped from those who were the real heroes of charity. There is nothing so stubborn and sometimes so impolite as *truth*. One dislikes to write and feels more loth to publish it, when it bears upon the face of it, that it has been made prejudicial to justice, the veil of oblivion might have fallen over the misfortunes of the past.

WHO WAS THERE.

GENERAL WISTAR'S EXPEDITION.

THE following account of the recent Peninsula Expedition is sent to us by a reliable correspondent, who took part in its events to the end. We will be one of the first to listen and correct the account published in the JOURNAL of the 13th inst. In writing at that time we had nothing to guide us but the daily newspaper reports, upon which, in the absence of just such especial and accurate information as our correspondent now offers us, we were compelled to rely. We would here suggest that officers in the Army may do much to assist us in our laborious effort to publish accurate information in regard to military movements, by sending to us either privately or for publication correct statements of the facts coming under their notice. Many correspondents for such information, but would be glad to receive a brief and authentic history of every military movement. Our correspondent with General WISTAR says:

The facts are, that the expedition started from near Williamsburg on the morning of Saturday, 6th. The infantry and artillery commenced their march at 9 A. M., the cavalry (under Colonel SPEAR) and Lieut. VONNEBRIKA and the cavalry (under Colonel SPEAR), that the plan was to cross at 11 P. M., passing the infantry on the way, and arriving at Bottom's Bridge, fifty-four miles from their starting point, before 2 o'clock on the morning of Sunday, the 7th inst.—that is, in less than sixteen hours. The infantry and artillery under General WISTAR reached Providence Forge, twenty-seven miles from their starting point, at 3 A. M., or in eighteen hours, and, having halted only three hours, pushed on to Bottom's Bridge. But only three hours, pushed on to Bottom's Bridge. But only three hours passed from the sound of firing in front, and the reports sent back by Colonel SPEAR, that the plan of the attack by the cavalry had been foiled, and that nothing was to be gained by forcing a passage, and General WISTAR therefore sent word to Colonel SPEAR to return. The cavalry retired, and the infantry and artillery still advancing to their support, at Baltimore Cross Roads, only seven miles from the bridge, and fifty-seven miles from their starting point, met SPEAR's command, at exactly noon on the 7th —so that the infantry column had reached forty-seven miles in twenty-seven hours, including all of three halts.

It is believed that this was one of the most remarkable marches of the war, having been accomplished in the midst of storm and rain, and a good part of it during the hours of ordinary sleep and darkness at night. The failure of the expedition was due to the discovery, in advance, by the rebels of the plan of attack, under sentence of death, who escaped from Williamsburgh, and from other sources, and the withdrawal of the cavalry, rendering it useless, and the not to any lack of courage, or energy, or fortitude on the part of the troops, for every one will do a simple act of justice by correcting your report. I may here say that none of them came from General GILLMORE's department.

P. F. CABE, Company B, 16th Regiment, Indiana Volunteers, has invented a device for cleaning guns. It consists of a cylindrical plunger which has its periphery composed of an elastic or other soft elastic material, coated with, or of indiarubber or other substance, emery or other scouring or polishing material, and which is fitted with a screw and nut, by which it may be expanded circumferentially. The rod on which it may be expanded circumferentially. The rod on which it may be expanded into the bore of the arm; and is furnished with a screwed socket, by which it is screwed to the ramrod when the gun requires to be cleaned.

SUBMARINE ORDNANCE.

JUST as we had laid the flattering unction to our souls that though our Monitors were not available as ocean vessels, they were nevertheless very nearly perfect as harbor batteries, the practical realization of an old idea, once deemed chimerical, has deprived us of even this small measure of consolation. Till within a recent period it was supposed that the bottom of a ship was sufficiently protected against the penetration of shot by the surrounding body of water. Six feet of plating below the water line was considered amply sufficient to guard against danger in that direction; for though frigates and ships of the line have been struck in action, the damage which caused the disaster was seldom inflicted more than a few below the water line. The experience of several centuries of naval warfare had only served to confirm the general opinion on this point. It was demonstrated in hundreds of naval engagements that round shot—and no other was in use—was unable to penetrate the water for any distance, unless fired in a direction as nearly vertical that its power as a projectile against the side of a ship was entirely neutralized. As it was clearly impossible to overcome the glancing propensities of round shot, when fired down upon the surface of the water, it became a question whether a submerged battery could not be made available. One of the first to experiment on this idea was ROBERT FULTON. This gentleman placed a five-pounder gun in a water-tight box, only the muzzle, which was protected by a water-tight tompion, protruding outside. This apparatus was deposited three feet under water, and the gun when fired by means of a live coal dropped upon the vent through a tin tube. It was ascertained that the shot struck the bottom of the river at a distance of forty feet from the muzzle of the gun, imbedding itself in the mud and sand. No injury at all was done to the gun. The same experiment was made another trial with the same gun, using a charge of twenty-four ounces of powder. The ball penetrated a target constructed of pine logs eleven and a half inches thick, and placed at the distance of twelve feet from the muzzle of the gun. Equally favorable results were subsequently obtained with a gun carrying a hundred pound shot.

The failure to follow up these experiments, which seemed to promise results of vast importance, was due to several causes. Until quite recently it was supposed to be impossible to fire a gun under water without danger of its bursting; and even should this difficulty be overcome, it was evident that with the round shot the submerged gun could be used with effect only at very close quarters, a condition not always to be obtained with ease. But the invention of rifled cannon and elongated projectiles, introduced a new phase of the question. In swift rivalry with other nations we have built vessels which we fondly deemed impregnable; we loaded our *Monitors* ore *Ironsides*, our *Roanokes* with as a heavy battery of as small as they could carry, and it seemed at last as though the plates, under the enlightened system of naval warfare, could bid defiance to any guns which could be practically worked on ship-board. It was yet to be shown that the enormous guns which are capable at short ranges of smashing plates 4½ inches thick, if loaded and used at sea, though it would be rash to say that the difficulties in the way of their use may not be overcome in time. It requires an excellent gun to penetrate such armor even at a short range, while at 700 or 800 yards, the heaviest projectiles in practical use are scarcely able to make a rent upon its surface. But while the sides of our vessels were thus amply protected, this sheathing was regarded as sufficient protection to their bottoms. An inch of iron plating, it was thought, could laugh to scorn the force of submarine shots even at short range. This was the theory we first accepted in the Battle of the WHITEWASH. We learn from the recently published Ordnance reports in England that this gentleman, in the winter of 1857 and the spring of 1858, carried out a series of experiments, with one of the 24-pounder howitzers to ascertain whether, when fired above water, the bended shot would penetrate beneath the surface. The gun used was a brass howitzer of between 13 cwt. and 14 cwt., and but 4 ft. 8 in. long. The projectile, a shell, weighed exactly 24 lbs.; the charge consisted of 2¼ lbs. of the target, consisting of a wooden butt, 9 ft. high and 8 ft. wide, formed of 4 in. oak plank nailed to two vertical piles, and distant 32 yards from the battery. After the third round, the plank was doubled, making it 8 in. thick. The gun was 15 ft. above a horizontal plane passing through the foot of the butt. The shell held every round above. Directly the surface first struck, and before the target was thick enough to enable us to draw a fair comparison between the damage done to it, and that which a ship's bottom of the ordinary strength would have suffered if in the same place, we find, in the succeeding rounds, the projectile invariably entered the water, although striking it at an angle of only 7 deg.; in most cases penetrating the target, ranging beyond it, and sinking into the sand. Take the eighth round as a specimen. The official report states, that "the shell entered the water 17 ft. from the butt, passed through the butt about 3 ft. 6 in. from the bottom, in the same direction as it was fired, entered the mud "17 ft. 6 in. beyond, and penetrated 18 ft. 3 in. into it, to a "depth of 2 ft. below the surface. Total penetration through "water, wood, and soft mud, 53 ft."

The results of these experiments sink into comparative insignificance before those obtained from the ARMSTRONG 110-pounder gun, fired under somewhat similar conditions. On the 20th of June, 1862, this gun was placed on a platform erected on the beach, in such a position that when the tide rose it was submerged to the depth of six feet. When the tide was out, it was loaded with service charges and service shot, the powder being enclosed in a bladder. When the gun was entirely submerged to the above depth, it was discharged, by means of a fuse, at a submerged target, distant twenty-five feet from the muzzle. The projectile, during the first few rounds, consisted of the ordinary ARMSTRONG compound shell, filled with gunpowder, and sometimes twelve pounds of powder. These missiles proved at first to be very inefficacious, the resistance of the water apparently breaking them up soon after they quitted the gun. After a while, care was taken to exclude water from the bore of the gun, by covering the muzzle with an old drumhead and canvas, well luted with white lead. The result obtained was decisive. In the language of the official report the shell, an empty one, "struck the butt 2 ft. below "the point aimed at, *cutting through a pile 14 in. thick*, and "was picked up 3 ft. beyond the opposite side. The next "round but one consisted of a solid shot, 17lbs. charge. "Shot struck 6 in. to the left of the point aimed at, 4 ft. 6 "in. below the surface of the water, and passed through a "butt consisting of 13½ in. piles with 6 in. oak plank bolted "on in front. Shot passed through, breaking probably "sunk to a considerable depth in the soft mud."

The subject of submarine ordnance is of great importance, not only in regard to the results already obtained, but as threatening a total revolution in the method of naval warfare, and consequently in the whole system of harbor defence. In another article we shall discuss in detail the subsequent experiments with the ARMSTRONG gun, recently alluded to in the JOURNAL, upon a submerged hulk, which demonstrate that the heaviest vessels can be penetrated by means of rifled guns below the water line, and also explain some of the contrivances proposed in this country and in England, for facilitating the firing of guns from the lower deck of a vessel beneath the surface of the water.

THE WAR IN SCHLESWIG-HOLSTEIN.

SEVERAL weeks before the recent advance of the allied German armies into the northern duchy, the Danes, in pursuance of a policy which bears every mark of English dictation, evacuated Holstein, and assembled all their means of defence in Schleswig. This duchy, which has now become the theatre of war, comprises an area strangely insignificant when compared with the vast territories over which our own military operations are extended. It contains but thirteen towns, of which Flensburg, containing 18,000 inhabitants, is the most important, and its area comprises 6,750 square miles. In 1860 the population consisted of 378,000 inhabitants, of which 150,000 were Germans.

In this duchy the Danes concentrated a force of 40,000 to 45,000 men, under the command of Lieutenant-General de Meza, an accomplished but aged soldier, in whom the fire of youthful enterprise had long since turned to ashes. His headquarters were established at Flensburgh. The Danish line of defence rested on the Eider. This river takes its rise in a small lake at about ten miles from Kiel. It traverses several other lakes, among them the Westen-See and the Flemhourdt-See, directs its course to the west near Rhynestadt, whence Rendsburg forms the northern boundary of the German duchies, and after a course of about sixty miles falls into the Northern Ocean near Tonningen. The Eider being navigable from Rendsburg, it was expected that the Danish gunboats would render great service in the passage of the Eider.

Previous to this advance the Austrian forces, 25,000 strong, were concentrated in front of Rendsburg. At daybreak, on the morning of the first of February, the Austrians commenced moving, intending to make a rapid march across the river and attack the Duppelers before the Danes could form their troops in their defences. The crossing was accomplished without loss, the fortifications of Rendsburg being too weak to admit of a vigorous resistance on the part of the Danes, who retired precipitately on the approach of the Austrians.

The Prussians appear to have crossed the Eider canal at about the same time, and on the 2d of February attacked the Danes at Missunde, a fortified town east of the Schlei, and a few miles distant from Schleswig. In front of Missunde were some strong works, which were connected with the town by a *tête de pont*. The Prussians, 9,000 strong, under command of Prince Frederick Charles, attacked these works at 10 A. M., but after repeated assaults were compelled to retreat, having sustained a loss of about 300 killed and wounded. The Danish force is said to have been 2,000 men.

On the 3d instant, the Austrian vanguard with the vanguard of the Prussian guards, advanced against Schleswig, repulsed the Danes between Lottert and Quttorf, and continued to advance until they came under the fire of the guns mounted on the Dannewerke. The Danes made a desperate resistance, but were compelled to retreat, leaving two hundred prisoners, six heavy guns and a portion of their ammunition and baggage trains, in the hands of the Austrians. It was expected that they would make a determined stand at the Dannewerke, but General de Meza decided that his 40,000 to 45,000 men, even behind such a bulwark, could not successfully oppose a force of 75,000 Prussians and Austrians; and on the 6th inst. he evacuated Schleswig and the Dannewerke, blew up the fortifications at Missunde, and retreated through Flensburg in full haste towards Duppel, and these, after a severe battle, to the island of Olsen, leaving behind, it is said, 120 pieces of artillery. The greater portion of the Prussian army crossed the Schlei near Arnis, by means of fishing boats and pontoons, and immediately pushed northward to cut off the retreat of the Danes. The roads are said to be literally blockaded with abandoned cannon, which the exhausted horses were unable to draw further. The Danish army is said to be in a state of complete disorganization.

The news of this retreat created the greatest excitement at Copenhagen, and the king felt constrained to recall General de Meza from the command of the army. So great was the popular indignation and foment that the Rigsraad felt the necessity of taking steps to allay the excitement. In an address to the army was voted on the 9th, declaring for the most energetic prosecution of the war, and the following resolution was passed by both Houses:

The Rigsraad fully recognizing the extreme gravity of the time, expects that the nation will perceive the necessity of upholding tranquility and order, and will carry out in the Rigsraad maintaining the honor and independence of the country by all the legal means at its command, and on the part of the army to take all measures for the most energetic defence for the purpose.

It has been decided by the allied Germans to raze the Dannewerke, and the disarmament had already commenced on the 9th. The armies of Prussians had divided the captured cannon between them.

But though the London *Times* asserts that the Danes have lost everything but honor, and believes that henceforth the kingdom of Denmark will be limited to Jutland and the Islands, it is by no means certain that the war is at an end. It is indeed unlikely that the Danes will persist in renewing Schleswig by force of arms, and it is certain that the incomprehensible strategy of General de Meza has deprived them of their strongest line of defence; but they are still possessed of a very determined resistance, and by means of their fleet may do immense damage and of danger to the maritime interests of Prussia and Austria. The latest advices from England say that that Power has proposed an armistice, preliminary to a conference. The proposition, which is supported by France, Russia and Sweden, is said to be the evacuation by the Danes of Schleswig with the exception of the Island of Olsen, to which their army had retreated after the evacuation of Duppel. But if the German Powers refuse to assent to this proposal and persist in prosecuting the treaty of 1852, it would seem to be impossible that England and France should avoid being drawn into the quarrel. Should this take place, the war may attain vast dimensions before summer, and be transferred from Denmark to the Rhine and Venetia.

MAJOR-GENERAL FREMONT writes to Major-General Schenck, Chairman of the House Military Committee, that he requested to be relieved from the Army in Virginia because he could not accept the rank which might be given under General Pope as an unmerited insult; that since then he has received his orders; he was promised a command but did not get it; that he has not applied for back pay since these services when he should be recalled to active service; and that he has drawn no pay. "Since the close of the session of Congress, to be applied where it might alleviate distressed resulting from the war, and it has been used accordingly."

MR. GEORGE SEDGEON, of New York, has patented an improved turret for iron-clad vessels, his object being to furnish a shot proof, easily-constructed turret, without the use of bolt excessively employed in the sheets which compose it. This is effected by making the several sheets of the turret with curved grooves and tongues. It would seem that the main defect of the turret is the difficulty of repairing the effects of shot. The three plates of which the turret is formed are grooved and tongued, and where of equal hardness, damage would be communicated from the outer to the inner ones. Thus all the three plates would be injured and repairs extensively complicated.

THE Revenue Service Commission, consisting at present of Messrs. Geo. W. Blunt, Ezra Nye, and Thomas E. Sickels, have finished their labors, and reported to Congress. Their duties are the same as those of their predecessors—to select and recommend for appointment applicants for places in the revenue service. The grades to be filled are principally those of first and second lieutenants and assistant engineers.

MILITARY MATTERS IN CONGRESS.

SENATE.

The great feature of the week was the message through both Houses of the Enrolment bill. The closing debate in the Senate was sharp and personal. Mr. LANE of Indiana, opposed the passage of the bill, because of the exemption clause which it retained. Mr. WILKINSON, of Minnesota, also voted against it, because in his opinion the bill was unconstitutional. There should be no exemptions for the army. It provides that we shall pay the local owners of slaves $300 for every slave enlisted, and appears to credit the slaves to the account of the State to which they belong. The commutation money paid in a free State is to be credited to the slaveholder for his slave, and the state is to be credited with the slave so paid for. Mr. W. did not see, if the law takes the son of aged parents, the appropriate way of providing for their support is to present or bestow, why the slaveholder should be paid whose slave was taken. In a year from now slave property would be of no value. That $300 was a most extravagant price for a slave. But in giving freedom to the enlisted slave the bill was a great advance on the former one. Objections of a different character were offered by Mr. DAVIS, of Kentucky. He objected, first, to the surrender into the hands of the President of the power to raise armies, saying that Congress had no power to make and the President no power to accept such a surrender; secondly, that the bill recognized the enrolment of negro troops; thirdly, that it declares the liberation of slaves immediately upon their being mustered into the service of the United States. These provisions of the bill were defended by Mr. HOWARD of Michigan, WILSON, and others, and the bill as reported by the Committee of Conference was finally passed by a vote of 28 to 16.

The Committee on Claims, to whom was referred the case of H. C. De Almas, has failed to be satisfied with the case for their consideration. Mr. De Almas complains that he has been grievously misused by the Senate in being rejected as a Brigadier-General, and by General HALLECK, who, he says, has prevented him from gaining distinction in the army or an honorable death. The request was granted, and the consideration in the case was indefinitely postponed.

Another applicant for a Navy Yard has appeared. Mr. ERNEST, of Pennsylvania, presented petitions praying that the Committee on Naval Affairs to inquire into the expediency of establishing a yard at Newcastle, in that State. He briefly set forth the claims of that place and the advantages to its facilities for obtaining coal and materials required in naval construction. The resolution was agreed to.

The following important joint resolutions were introduced by Mr. CONNESS, of California:

Be it Resolved, &c., First, that the Secretary of War shall cause to be and he hereby directed to either such persons as may desire to enter the as said service of the United States, and who are found to be qualified as may be by the Secretary of War and the Secretary of Navy, which enlistment shall be entered into under the direction of the Secretary of War, in such manner as persons enlisted in the naval service receive prize money, persons so enlisted shall be entitled to receive prize money in like manner with like emolument.

Second—That the President of the United States may, whenever in his judgment the public service requires, authorize and direct the transfer of persons enlisted in the land service, from such regiments to the naval service, or from the naval service to the land service, under such regulations as he may prescribe; provided, nevertheless, that the number of persons so transferred from the land service to the naval service shall not exceed in the aggregate the number of seamen required by law to be kept in the naval service; and provided further, that the number of officers transferred in any manner from the military service shall not exceed the number of officers of the same grade and rank who may be transferred at any time for enlistment to the military service, shall be transferred from the naval service to the land service, under the same regulations of the proper appropriation for the land service.

Mr. CONNESS explained that the joint resolutions give discretionary power to the President to transfer seamen enlisted in the Army to the Navy, and to make up crews for ships of war to be sent to the Pacific coast. The Navy Department was ready to send ships to that coast for its protection, but by reason of the great bounties paid to enlisted men in the army it was difficult to obtain sailors, and this provision was intended to meet the difficulty and enable the Government to send a fleet to the Pacific. Mr. CONNESS offered the following amendment:

Be it further Resolved, That there shall be paid to each enlisted able or ordinary seaman, who shall enlist in the naval service for the term of three months' pay as a bounty to be refunded to the Treasury from any claim for bounty which such enlisted seaman may have in the army. The amendment was adopted, and the resolutions were then agreed to. The same resolutions were also passed by the House.

The subject of a standing army is beginning to attract attention. Mr. WILSON brought to the consideration of the Senate, not in a very imposing manner, by Mr. SUMNER, who presented the petition of a citizen of Arkansas, which sets forth that he has been in the Federal army seven of the best for a soldier, and asking that Congress shall establish, after the close of the present war, a regular army of 200,000 men, composed entirely of negroes, to be officered by white men entirely. The petition was referred to the Military Committee.

The joint resolution to equalize the pay of soldiers being under discussion, Mr. WILSON presented a modification of his amendment, providing officers, by voluntary agreement with the President to allow bounties to negro troops previous to the passage of the act. The amendment as modified was reported. Mr. DAVIS, of Kentucky, objected to the amendment to disarm the colored troops and to provide for their enlistment by bounties and pay. The amendment was rejected by a decisive vote. In reply to a question by Mr. CLARK of N. H., why black men should not be armed, Mr. DAVIS incorrectly stated that the question forty times already in the Senate. Mr. CLARK remarked that this was not merely a question about the pay of colored troops, but a question whether white or but black men into the field to save our white men. It was a matter of interest to the country that the black man should be employed, because it saved the blood of the white man. When we put arms in the hands of the black man, and he went then in the service of our country to advantage, he should not therefore be enslaved. The true field of having been in the service should be a protection from bondage. A further amendment was offered by Mr. COLLAMER, of Vermont, which provides that all persons enlisted into the service under the call of 1863 for 300,000 volunteers, shall receive the same pay and bounty. The consideration of the subject is postponed.

The Senate Committee on Military Affairs has been instructed to enquire into the expediency of increasing the number of cadets in the Military Academy to the number of four hundred, and requiring the age of the candidates to be not less than sixteen years, and also raising the standard of qualifications and for changing the manner of their appointment, so as to provide that the examination for admission shall be based upon the merits of the candidate.

A debate on the 24th inst., on the amendment to the joint resolution to revive the office of Lieutenant-General, striking out of the House bill the provision recommending Grant, Sherman, and Sheridan to be promoted. In the course of the debate Mr. SHERMAN criticised the General-in-Chief, who was defended by Mr. JOHNSON, who said, in the first place, he was not responsible for it, and consulted his opinion has not always been adopted, as is well known. So far as the Army of the Potomac was concerned, victory had been won by it, and it was a great army, even opposed against equal numbers; and if General HALLECK's advice had been followed after the glorious victories of South Mountain and Antietam, and a column sent up on the Virginia side to intercept them, the rebel army would have been captured by General McCLELLAN.

HOUSE.

With the exception of the passage of the Enrollment bill, little business of importance connected with military affairs was transacted during the week by the House. Mr. GOBLE, of New York, reported a joint resolution, explanatory of certain acts of Congress, that after the nine months' militia called out under those acts, were entitled to the same bounty as the three years' men. Navy Appropriation bill, in the course of which Mr. WHITE of Ohio argued that the war was wrong, and therefore ought to be stopped, and that the Committee on Thousand additional copies of General McCLELLAN's Report were ordered to be printed.

The amendment to the Naval Appropriation bill, that seamen be paid in gold, was disagreed to. Mr. RICE, of Massachusetts, moved to increase the appropriation for the construction and repair of vessels from $22,800,000 to $26,300,000. He explained the necessity for this appropriation, and stated that a portion of the amount would be made in another bill for iron sea-going vessels so that we may be somewhat on a par with the navies of France and England. The amendment was agreed to. The Committee of Conference was appointed on the amendment to the lieutenant-general bill.

MEDICAL DEPARTMENT.

ORDERED.

Surgeon E. B. Dalton, U. S. Vols., has been relieved from duty in the Department of Virginia and North Carolina, and ordered to report to Surgeon-General Wood, for temporary special duty in the Army of the Potomac for assignment to duty.

Surgeon Joseph R. Lafferty, U. S. Vols., has been relieved from duty in the Department of the Gulf, and ordered to report in person to Surgeon-General Wood, for assignment to duty as Assistant Surgeon-General of Volunteers, with the rank of Colonel.

Assistant Surgeon Harvey B. Brown, U. S. Vols., has been relieved from duty at Fort Delaware, New Castle, Del., and ordered to report in person without delay to the commanding general of the Department of New Mexico for assignment to duty.

Surgeon Wm. R. De Witt, U. S. Vols., has been relieved from duty in the Department of the Gulf, and ordered to report in person without delay to the commanding general of the Army of the Potomac for assignment to duty.

Surgeon L. H. Holden, U. S. A., has been relieved from duty in the Department of the Cumberland, and ordered to Chicago, Illinois, Ill., without delay, and relieve Surgeon J. B. Porter (retired) in charge at that place.

TRANSFERRED.

Assistant Surgeon Reuben Long, serving in the 132th New York Vols., has been transferred to the 127th New York Vols., his original command, which has been consolidated with that regiment, to date July 19, 1863, the day he reported for duty.

LEAVE OF ABSENCE

Permission to visit Washington, D. C., has been granted Surgeon W. D. Stewart, U. S. Vols.

APPOINTED.

Dr. A. M. Peebles, of Auburn, Me., has been appointed Assistant Surgeon of the 20th U. S. Colored Troops.

John H. McKnight, of Chicago, Ill., Surgeon U. S. Vols.

HOSPITAL CLOSED.

The General Hospital at Point Pleasant, Va., has been closed.

DISCHARGED.

The board of examination convened at Convalescent Camp, near Alexandria, Va., by special orders No. 7, current series, of the War Department, for the examination of Surgeon Wm. Thomas, was adjourned, has been dissolved, and the officers named therein has been ordered to report to the Provost Marshal General, as directed in paragraph 1.

HONORABLY DISCHARGED.

The following enlisted men have been honorably discharged the service, with a view to their enlistment as Hospital Stewards, U. S. Army:

Sergeant George Hulin, Co. F, 6th Minnesota Vols.

Private Wm. Wilson, Co. K, 1st Regiment Maine Vols.

Corporal Henry B. Colahan, Co. D, 100th Pennsylvania Vols.

HONORABLY DISCHARGED.

Hospital Steward Wm. Thomas, U. S. Army, has been dishonorably discharged the service on account of other worthlessness.

NAVY YARDS.

BROOKLYN NAVY YARD.

On February 19, the *Meredita*, which has been lying for some time past at the Navy Yard, brought up the *Florida*. On February 20, the *Tritonia*, which has been undergoing repairs at Petty's wharf, Williamsburgh, was brought to the Yard. The *Neosho* sailed from the Navy Yard on February 15, and arrived at Mound City, Illinois, February 19. The *Grand Gulf* sailed February 22. She has been North for some time, receiving extensive repairs to her engines and boilers. She has had a new screw put in her. She sailed from here a few vessel in September, and was but a short time on the Wilmington blockade before she was ordered to be sent home for repairs. The double-ender iron-clad *Onondaga*, Captain Melancthon Smith, Commander, made her first trip on February 25, attaining a speed of about nine knots and fifteen minutes, which is considered to be a very satisfactory manner. Her guns—two 15-inch and two 150-pounder Parrott—were fired at the sand heaps on Coney Island to test the gun carriages, with excellent results. Mr. Reaney, the inventor of a patented system of iron-plating, which he claims is infringed upon in the construction of this vessel, has commenced a suit to recover damages, which he fixes at a heavy amount.

WASHINGTON NAVY YARD.

Captain M. P. Jones has been detached from the command of the Yard and ordered to the *Pembroke*. Captain Rowan, late of the Delaware Department, has been assigned to duty in his stead. The gunboat *Pinequot*, of the North Atlantic Blockading Squadron, arrived here on Wednesday last with 33 prisoners, captured on board the Rebel blockade-runners *Dee*, *Ella and Anna* and *Nutfield*. After taking in a supply of coal, she left again on Saturday.

The gunboat *Sebago*, which has been lying at the Yard since December last, has been ordered to coal up, and will again go into active service on the Potomac. This vessel all along has been deemed too small for service; but at length the Department have found work for her in the Potomac Flotilla. The repairs to the gunboats *Yuchin* and *Freeborn* are nearly completed, the former having had her boilers and engines the early part of the week. The iron-clad *Waterer* is still lying at the Yard, waiting for the rest of her crew. Two Dahlgren 9-inchers are all that have yet been put on board of her armament, and she is now fully equal to cope with any vessel afloat. She will receive sailing orders in a few days. The coast survey steamer *Bibb* will be taken off the navy next week.

MARE ISLAND NAVY YARD.

A correspondent writes:—The Russian fleet, under Admiral Popoff, consisting of the following vessels: The *Bogatyre* (flag-ship), *Kniaz-Pojarsky*, *Admiral Ahsroff* and *Vitiaz*, arrived some time past at the Yard undergoing thorough repairs, and, with the exception of a few slight repairs to the *Bogatyr*, are all in a seaworthy condition. The *Admiral Ahsroff* is undergoing very important repairs, but her repairs will probably be completed in less than a month. The *Lancaster*, at last accounts, was at Acapulco, and the *Saginaw* at Mazatlan. The *Narragansett* is now at the Navy Yard, Mare Island, on account of representations from the headquarters of the Pacific Squadron of the necessity of her undergoing such a thorough repair upon the commercial interests of this coast, and to destroy the valuable property in mills and lumber belonging to loyal American citizens in the vicinity of the Sound. Her return is expected daily.

Major-General Scammon and staff have arrived in Richmond and been lodged in the Libby prison.

The General Court-Martial convened at Knoxville on December 14th.

Colonel Orland Smith, of the 73d Ohio, has resigned. Lieutenant-Colonel W. Dehass, of the 77th, has been dismissed.

Brigadier-General George Crook arrived at Charleston, West Virginia, on the 13th, to take a command in the Department of West Virginia.

Lieutenant-Colonel Arthur C. Ducat, Inspector-General of the Tennessee Departmental staff, has resigned on account of ill health.

Lieutenant-Colonel Spaulding, 18th Michigan, Provost Marshal of Nashville, has resigned, in order to accept a position in the Treasury Department.

Major-General Burnside arrived in Portland, Maine, on the 22d, and was escorted through the city by a civic and military procession.

Major-General Dana, in a letter, dated Matagorda Bay, January 27th, to the Governor of Rhode Island, pays a high compliment to the discipline and bravery of the First battalion 14th (colored) Rhode Island Heavy Artillery, commanded by Major Comstock.

The steamer *Ariel* arrived here on the 24th ultimo says the United States corvette *St. Louis* left there that day to intercept an English bark with guns and stores for the rebel cruiser *Florida*.

The Charleston *Mercury* says:—We are glad to announce that Messrs. Lamar, Cobb & Co. have run through the blockade, and arrived safely in a Confederate port with valuable cargoes.

General John Morgan and his two staff officers who escaped with him have been made the recipients of a grand ovation and testimonial from the State of North Carolina. The testimonial consisted of a magnificent horse to each and seven sets of elegant and costly equestrians.

Mr. Charles R. Seammon has been confirmed by the Senate as Surveyor of Customs for the Galena customs service; Myrick Snow as Second Lieutenant in the Revenue Cutter service; and William Walker as Third Lieutenant in the same service.

Brigadier-General Augustus L. Chetlain, accompanied by Lieutenant George Mason, Aide-de-Camp, has arrived at Memphis. Brigadier-General Chetlain has assumed command by order of Adjutant-General Thomas, of all regiments and detachments of colored troops in Tennessee, and all officers in connection with the same will report to him.

The inquiry into the cases of Major-Generals Crittenden and McCook, by the Court in session at Louisville, has been closed, and the testimony in Chetlain has assumed command,

STEEL GUNS.

THE following interesting article is from the *Mechanic's Magazine*, of London:

The first essential to any gun is strength. This is true of the lightest field-piece made, as well as of the heaviest ordnance found in our ships or our forts. The accuracy of aim and extent of range on which the efficiency of the first depends, can only be secured by the use of a material capable of sustaining the strain due to sharp rifling; while the power of punching and penetrating depends, and throwing heavy shot to great distances—the characteristics of a good naval gun—depends directly on the quantity of powder which may be burnt within it without injury to the metal of which it is composed. In comparing guns of a class—rifles with rifles, and smooth-bores with smooth-bores—the quantity of powder burnt is primarily the measure of their efficiency to a great extent. A variation in the system of grooving, or in the length of chase, may produce some difference in the results obtained; but this difference is small when compared with that produced by heavy, instead of light charges. The construction of a good 12-pounder field-piece is no very difficult problem. Moderate charges of powder secure a sufficiently extended range; and, as very large masses of metal are not required in the formation of this class of artillery, the material of which it is composed, whether it be wrought iron or cast steel, brass, or gun-metal, can always be worked up into a gun still retaining its powers of endurance unimpaired. With heavy ordnance the case is different. The amount and size of such masses of metal as are found in a 100-pounder or 150-pounder, taxes the utmost skill of the engineer. The process of working wrought iron into the requisite shape, is uncertain to a degree; one part of the mass is burned, or partially burned, another part is unwrought, owing to the welding temperature. With cast iron we are no better off. All the evils of contraction, crystallization, and chemical action throw themselves in our path, and render it impossible to a satisfactory result. Nor is this all. In order to pass or smelt—the more effectual operation of the two—a 81 inch armour plate, with its initial weight of 6 tons, a furnace and hitherto this has only been obtained by the use of excessive charges of powder. Now, the destructive effects of this material on a gun, become far more serious as the heavier quantities ignited. We thus find that the metal required to sustain a comparatively low charge of powder, is fired uniformly in a state of greater or less deterioration, from the injurious effects induced by the processes of manufacture which it has undergone in order to bring it into the shape of a gun. All attempts at an increase in quantity of metal, in order to compensate for these defects in quality, are more or less failures. The best artificially made iron is unite in admitting that nothing is gained in the contraction by increasing the thickness and weight of metal round of the bore; and as to wrought-iron, heavy masses and uncertain welding go hand-in-hand. The destruction of a gun is seldom or never an instantaneous process. From the minute to be visible without the aid of a microscope, rises first within the chase; these extend with each succeeding round; and the gun finally bursts when they have before now pointed out that the effect of a heavy charge is, in the first instance, preventive of recoil. In theory, if such it can be called, gathers proof from the history of every gun which has been tested *à outrance*. A mass of granite or a lump of cast-iron, may be overcome by means of a heavy hammer, without fracture at once ensuing; but it the pressure is continued for a sufficiently long time, small cracks begin to appear, the mass crumbles and breaks, and disintegrates under repeated blows, and, finally, the mass falls to pieces. Precisely the same thing takes place in a gun; and the effect is one which we venture to say, in the amount of pressure, however intense or long continued, can produce. To corroborate the theory of our blows, we increase the dimensions of the blocks struck, the granite or cast-iron, will sustain these effects for an indefinite period; but no increase in the weight of the gun can increase the portion of it which receives the direct impact of the blow, without being more or less beaten down, destroyed, or crumbled, and it is on the hand that the greatest labor is required of producing such an effect. Now it is on this very qualification of hardness that we look to overcome a heavy gun materially depends; and it is not too much to say that, in the absence, no amount of metal, however disposed, will produce a satisfactory result. In addition to answer as it should, the requirements of our naval service.

No material found in reasonable quantities possesses such a combination of enduring power as steel. It may be brought to a degree of hardness rivalling the diamond, or made so tough, that, while working like lead, it will sustain a tensile strain half as great again as that which will be wrought iron ever forged. In small quantities it can be worked with comparative ease, while forging, turning, and turning present no difficulties. The chemical analysis and breaking characteristic inevitably bring us to the conclusion that no other material exists, ultimately adapted to the construction of guns, as a moderately hard steel. We find all the best properties of this metal uniting in bearing testimony to its applicability to ordnance purposes. Sir W. ARMSTRONG, the patron of wrought iron, in his evidence before the Ordnance Committee, says: "From the 'the very first I saw, and I still feel, that steel is the 'proper metal for the barrel of a gun, if it can be obtained." He can scarcely be said to have had the chance of being forged to obtain it; and the encouragement given by our Government to other inventors who brought forward steel guns, is a matter of history to which we do not need to advert. Sir W. ARMSTRONG summed up the gist of the whole question, when he said, "If it can be obtained." A mass of steel, of good or even fair quality, weighing even a ton, would have been regarded as a curiosity ten years ago. Thanks to private enterprise, both here and abroad, masses of ten times the weight may be had now. The use of steel in a thing of yesterday, and improvements in its manufacture and production crop up around us year by year. There is little doubt that any demand for steel in quantity, suitable for ordnance, will be forthcoming; and before ten years elapse, it is probable that the use of wrought iron will become as habitual as that of wrought iron. The splendid ingots exhibited by KRUPP were not so much the result of particular ores, accurate mixtures, or a careful attention to chemical affinities, as of a system of organized labor scarcely to be met with elsewhere than at Essen. The whole merit of their production consisted in the simultaneous pouring of a great number of small quantities of melted steel, The mass of Essen ores are so blended that a hundred tons are withdrawn at once from their furnaces, and emptied of their contents into a common receptable, at the same moment, by signal; a signal which, in the place of bringing the pots to the same temperature might ruin the whole process—such mistakes seldom occur, however. The apparatus for forging the ingots is on a scale of power unequalled in than the order and system which gives them existence. The steam hammer of Essen is the largest in use on the world; the cast-iron anvil-block, sunk deep in the earth, weighing not less than 800 tons, cast in huge masses bolted and fitted together, is another feature which. It is not remarkable that the Essen guns are popular all over the Continent; all the defects induced by imperfect rifling are, being made of the material supplied by the splendid quality of the metal of which the gun is composed.

It is not necessary to the production of a good steel gun, that it should be formed of a homogeneous mass. The BEARDY steel gun, for naval and battery use, consists of a central steel core, 9 in. to 4 in. thick in the chase, jacketed for about half its length with steel hoops accurately turned inside to a fixed diameter, regulated to the thousandth part of an inch, and shrunk on the central tube previously prepared for their reception in the lathe. Two, and sometimes three additional hoops are superimposed; and so accurately is the quality of the steel known, and the amount of shrinkage provided, that the BEARDY gun PRESENTS no signs of weakness after the severest practice. The construction of the WHITWORTH gun is almost the same; the rings being forced on to a slightly-tapered internal tube, instead of being shrunk on. The method of formation which possesses many important practical advantages. The merits of the magnificent WHITWORTH 70-pounder are too well known to be mentioned.

There appears to be a peculiar resilience about steel, not possessed by any other material. The bends of the ancients when worked into guns is attributable. The inner rings of a steel gun probably expand, the bore dilating, and the outer rings of the jacket contracting, and the force leading to produce rupture is thus diffused through every portion of the structure of the gun far more effectually than in brown wrought iron. The scarcely less scarcely admirable of sufficient expansion; while wrought-iron, although yielding more or less to a strain, does not possess the same power of returning to its original dimensions, suffering a molecular disturbance, fatal to the durability of the gun. It is on account of this peculiarity that steel guns can be exceedingly hard, that it might be found worth while to case-harden the interior of even wrought-iron guns. The process would be of little value in the case of the apprehend of the kind would be very trifling. Even when mild steel is used, the case-hardened process might possibly be used with advantage, for the interior of it were, from the excessive hardness within to a moderate softness without.

WHITWORTH AND ARMSTRONG.

WE gave last week a somewhat extended notice of the last work of Sir T. EMERSON TENNANT upon the progress of experiments and construction in artillery during the last seven years. The subject is stated in so interesting a manner that we will re-open the book to make a few extracts relating to the two principal gun-makers, MR. WHITWORTH and SIR WILLIAM ARMSTRONG.

FIRST, OF MR. WHITWORTH:—

It is the belief of MR. WHITWORTH that the superiority of all machine-made work depends upon the degree of power of measuring with unerring precision, and, associated with it, the faculty of producing a true plane surface, that is one so absolutely true that when any two of them are put in equal truth, their contact must be in all parts complete. MR. ANTHONY GIBBS, M.P., MR. AIREY, in his evidence before a committee of the House of Lords in 1855, stated that the degree to which MR. WHITWORTH had succeeded in "making a perfect plane surface was entirely unknown to the world "for his time." To such a pitch of excellence has he brought it by a process peculiar to himself, that a plate of cast iron prepared by him, with the face of smooth and unpolished, will, when placed in contact so intimate as to enable the operator to lift the under one with it, as if by its actual adhesion to the other. It is to the fact that the air is almost impalpable layer of atmospheric air may still remain between, the upper and under one on the unscalded particles, as if floating on quicksilver. This is the true standard to accuracy MR. WHITWORTH, in the search for a means of producing it, has established. The machine constructed by machine, so accurately and delicately made, as to measure objects which differ even by the millionth part of an inch—the machine which is capable of detecting by the touch alone it has ceased to be discernible by the eye. So nice is the adjustment, that by using it an inch of steel can be held to be an inch, only so long as the temperature does not 62 degrees, the slightest excess of temperature producing an appreciable elongation. Upon a standard yard, a square bar of steel, when placed in the machine is expanded by the slightest touch of the finger as to show an appreciable lengthening of the bar. It is to the power of measuring small amounts of heat thus imparted. It might be supposed that the means of measures so minute must be but abstract and visionary, and that it could not be put to the ordinary purposes of life; but the reverse is the case. MR. WHITWORTH was impatient of even the slightest error of measurement, and has applied it to his employment to work to the 20,000th part of an inch, till measures so diminutive have become as familiar as those of larger dimensions. In the most celebrated workshops in England, thirty years ago, mechanics were wont to say of criticising work which was "out" by the 32d part of an inch, whereas in his works an error of "division" is at once noticed and corrected, a division being the 10,000 part of an inch. The influence of these improvements in mechanical means has imparted a distinctive character of accuracy to the machinery of the United Kingdom, placing it in advance of all other countries; and to this nothing has been more signally contributed than the system of gauges, graduated to a fixed scale as constant measures of size. The practical engineers are indebted to the studious labors of MR. WHITWORTH.

MR. WHITWORTH was applied to, by the authorities of the day, to furnish designs for a complete set of new machinery for the Enfield rifle establishment.

It would seem difficult for him to have under taken to supply the machines required, adapting them to known construction and making the necessary modifications suggested by himself in the machinery already in use. Application of such a commission on the terms proposed would have been of great commercial profit to his firm. But so treated by a higher motive, he took first himself report in complying with the request; and in explanation of his scruples, he "urged," says LORD HARDINGE, "the importance of ascertaining what the best principles of machinery known secret, before any machine could be constructed, to make a machine that should be further alteration. It was next proposed to him to undertake the construction of machinery for producing the rifle barrel only; but to the barrel, also, he objected, that the machinery would be applied; and in the absence of the requisite knowledge, he stated frankly that before giving an answer he wished to visit the establishments of the Government manufacturers at Enfield and Birmingham, and to obtain from them all the information which he could find. To Enfield," he says in a report to the Secretary for War, "great differences of opinion among them, and statements I received were so contradictory, that I was unable to arrive at any satisfactory conclusion." The truth was that the gun trade generally in England at that time was described in the House of Commons as "in a state of chaos." "A state of chaos" indeed. The most skilful mechanics engaged in it worked by "hunk" rather than by system, and the making of the rifle of single parts was carried on with little dependence on the dexterity of the machinist, who had no defined lawful measure to work by. The only just, however, to mention of such commence as many of those engaged in the trade to state that the adherence to working by hand instead of by machinery was not from choice, but necessity, as much demand was too limited to justify the erection of apparatus so costly as that which would have required to supply the trade with rifles.

In this dilemma MR. WHITWORTH, instead of grasping at the order for new machinery for Enfield, offered to the Board of Ordnance to undertake the manufacture of rifle barrels in order to determine the true principle on which such machinery should be constructed; provided a shooting gallery was erected for him near Manchester at his own direction, in which to carry on the necessary trials, and thus obtain the data required. The liberal request was of course to be defrayed by the Treasury; but he intimated his readiness to devote his time and attention to the object gratuitously, solely that he might be relieved with which it had inspired him. The gallery, he said, must be enclosed, in order to insure the protection of the experimental barrels, and to secure them from all fallacious causes. To it he proposed to commence a series of trials with the best barrels made either which could then be produced. To those which proved the best he would apply certain tests, to determine the precise form of the barrels which were to be made by the machinery of which he then they severally excelled, and of the sources to which the excellence was due; and thus, by combining results, he hoped to obtain the conditions required for producing the most perfect instrument. The information so acquired he was at the service of the Government, to whom, in order to facilitate its application, he would supply standard gauges, with directions for their use. For created success in the construction of machinery and expenditure rifle giving the greatest possible range and accuracy without the minutest variance in excellence and quality, he had the confidence to expect that the Government would act on the teachings of experience derived from his accomplishment of the two great mechanical desiderata—The production of the most perfect machinery and steady standard. The power of making measurements with any required exactness, "even to the millionth part of an inch."

The proposal of MR. WHITWORTH was accepted. A gallery was erected at MR. WHITWORTH's residence, near Manchester, and the result of the experiments there made was the new famous Whitworth rifle. The "unknown secret" was found to consist in an "improved system of rifling; a turn "in the spiral of the groove greater than ever applied rifle; "bore in diameter one fifth-less; an elongated projectile, "capable of a mechanical fit; and last, but not least, a "more refined process of manufacture" to it.

The Whitworth rifle was formally tried in competition with the best Enfield muskets at Hythe, in April, 1857, in the presence of the Minister of War and a large assemblage of officers and scientific men from all parts. Among others, the superintendent of the Enfield factory, and General HAY the chief of the School of Musketry for the Army. The trial was conducted with the most perfect fairness. It ended the Government musket three to one. Up to that time, of the best figure of merit obtained by any rifle, at home or abroad, was 27; that is to say, the best shooting and given an average of shots within a circle of 27 inches mean radius from the centre of the target. The Whitworth lodged an average of shots within a mean radius of four inches and a half from the same distance; thus obtaining a figure of merit of 4½ as against 27, a proportion of 6 to 1 in favor of the rifle which it maintained at 1,000 yards and upwards. At 1,400 yards the Enfield shot so wildly that the range could not be kept; and at 1,000 yards the trials with it ceased al-

gether, whilst the Whitworth continued to exhibit its accuracy as before.

Sir WILLIAM ARMSTRONG is thus introduced:—

Sir WILLIAM GEORGE ARMSTRONG, a descendant of one of the old Border families, was educated for the profession of the law. His own tastes inclined him to be an engineer rather than a jurist, but unlike many another similarly circumstanced, who "passed a season when he should engage," he devoted himself resolutely to his adopted purpose; and till he was 37 years of age, he practised with success as counsel in the Court of Chancery and Equity at Newcastle. Still, the portion of his life which he passed in his office forms but an episode in his career; his passion for mechanical science can be manifested even, in his boyhood, he continued to cherish concurrently with his legal pursuits, and eventually he withdrew from the bar to devote himself exclusively to the study of the other. His earliest distinction as an engineer he achieved while still practising as a lawyer. It is connected with an invention, the influence of which is highly indicative at once of the best and the capacity of his mind. During an excursion in the mountainous district of Yorkshire about the year 1835, his attention was attracted to the waste of power in a stream which, after descending from a considerable height, in successive cascades and rapids, exhausted the last remnant of its power in turning a mill-wheel at the foot of the hill. Although the force required was apparently out of all attitude or "head" from which the current came, he observed that the portion in use was taken from a level which formed less than a twentieth part of the whole descent. Struck with the inadequacy of a single wheel as a means of realising the full power of such a fall, and perceiving the practicability of rendering the entire head available by conducting the water in an iron pipe, and causing it to act upon suitable machinery below, he applied himself to devising an engine to be worked by water pressure.

Such was the origin of the hydraulic crane, and other forms of the same engine, on the same principle, devised by the author; and although the idea had previously occurred to others, and attempts had been made to render water subservient to the lifting of weights, it will be in the minds of Saxony and Cornwall, former appliances for the purpose were not only clumsy and inefficient, but defective, because they were so entirely different from his own, that his merit as an inventor remains incontestable. From the first idea of taking advantage of the pressure of water, to the means to avoid himself of the force residing in town supplies of water drawn from considerable elevations, and this led eventually to the construction of the valves into which water was forced by the steam engine, in order to give the required "head." In addition to cranes for loading and unloading ships, with great docks at Liverpool, London, and elsewhere, the newly organized power has been applied, amongst many other purposes, to the opening and closing of dock-gates, swing-bridges, and sluices; which it effects with a rapidity limited only by considerations of safety or convenience. At the foot of Northumberland Street, on the north bank of the river, the *Quarterly Review*," under the piston of every hoist, at every dock gate, sluices and sconcheons, the power lies dormant, but a moment's touch, applied to the valve which is set in motion a force sufficient to raise a mass weighing fifty or one hundred tons, and either to place in its true line the ship or dock gate, or to open wide the sluice of the arms of the cranes. With equal ease the gates of locks 100 feet in width are opened and closed, and the largest of the 'Leviathan' works of the dockyard done without a stranger being able to perceive what it is that sets everything in motion." The success of this invention was the turning point in Sir WILLIAM ARMSTRONG'S career. "Up to this period," says a local journal, in a biographical sketch of its distinguished townsman, "he had lived the life of a lawyer, that of a solicitor, but his strong bias for mechanical and scientific pursuits, and the successful results of his mechanical genius led him to relinquish that profession, and, in conjunction with a few friends who cooperated with him, to commence the firm of Messrs. Watson & Armstrong, and to enter into one of the largest and most important establishments in the kingdom.

GENERAL GARFIELD ON GENERAL ROSECRANS.—General GARFIELD, member from Ohio, recently made a spirited speech in the House in defence and praise of General ROSECRANS, with whom he served as chief of staff. He said:—

The thanks of Congress had become a cheap thing. The time was when the thanks of Congress were bestowed only for great deeds, and then in the most solemn manner. But thanks are now given not only for victories, but for indecisive ones, and so one inquired whether in thanking one man something was not left unsaid. He was not willing to thank any man, that he had not seen fit to interpose any objection. Now, however, when it came so close to his own history he could not remain silent and see a name, though without protest. He appealed to the House not to do an injustice by singling out a subordinate in battle (General THOMAS), and to make the thanks of Congress mean more than a mere word about the principal, not only in the battle of Chickamauga, but in a series of important campaigns. Some one had said that Congress had already given thanks to General ROSECRANS, but that was last year, for his conduct at Murfreesboro. He (Garfield) was glad that it was said. That was a defeat we might welcome all such disasters. If our Army continued to suffer such defeats the rebel armies would soon be destroyed, and the great cause triumphant. That the object of the movement at Chickamauga was to drive the enemy beyond the Tennessee River, and lay the base for future operations. The Army of the Cumberland met and repelled the rebels, and gained the key of the Cumberland Mountains and held it. If there had been a greater success against such odds since the war began, he had not heard of it. Our Army on that day, not more than 45,000, met not less than 75,000 of the enemy, and for two days threw the mighty forces upon us, and in the afternoon not more than 35,000 of our troops were left fighting, and at the last charge the rebels were driven from our border. The history of the country would tell us that ROSECRANS was the hero in Western Virginia at the commencement of this war, but another had carried away the honor.

Mr. GARFIELD rapidly traced the military operations of General ROSECRANS at Bowling Green, Murfreesboro, and at other points, and said at Chattanooga we had numbers superior to the enemy, while at Chickamauga the rebels outnumbered us. Would General THOMAS, but for the record, cast THOMAS would not desire to be honored at the expense of General ROSECRANS. General THOMAS' name deserved to be written in letters of gold. Before he parted with General THOMAS, the latter said to him in the most solemn manner and tone, that he would say to all means pressure the removal of ROSECRANS from the command of the "Army." This general, said Mr. CARFIELD, you would harden with thanks at the expense of his superior officer.

ARMY AND NAVY PERSONAL.

Major-General Meade was in Washington last week, returning to the Army of the Potomac on the 21st.

Assistant Secretary of War WATSON and Gen. WILLIAM WHITING, Solicitor of the War Department, have returned to Washington from their visit North.

Major-General Gillmore and staff arrived at Fort Royal from Florida on the 19th, and left for Hilton Head on the 20th.

Brigadier-General Willich reached Nashville direct from Knoxville on February 14.

Captain Oscar Malleus, late of St. Louis, has been appointed Acting Mayor of New Orleans.

Captain James Cran and Lieutenant Abram Selley, 97th Pa., have been honorably discharged the service.

General Sir JOHN MICHEL, who succeeded to the District of Vicksburgh, Major-General McPherson having accompanied General Sherman, with most of his corps.

Maj. Gen. O. M. MITCHEL has ordered to Nashville, Tenn., as superintendent of United States military roads at that point.

Brigadier-General D. H. Rucker, chief quartermaster of the 9th corps of Washington, has asked to be relieved from duty in Washington and sent into the field.

Captain Charles R. Mason, 2d U. S. Marine Regiment, was accidentally killed on Matagorda Island, on the 21st of January, and died instantly.

Captain H. H. Sigmon, Corps Q. M. U. S. A., has been announced as Chief Signal officer of the Department of the South.

Brigadier-General R. S. Granger, commanding the post at Nashville, Tenn., has been designated as the military commander of that city.

Captain Hunter Brooke, Additional Aid-de-camp, U. S. A., has been appointed Acting Judge-Advocate of the Department of the Cumberland.

Major-General Thomas has appointed Acting Aides-de-camp Lieutenant Henry Lee, 1st Missouri Volunteer Cavalry, and Lieutenant James K. Reynolds, Assistant Adjutants General upon his staff.

Leaves of absence and furloughs are now granted to officers and enlisted men of the Army of the Cumberland, at the rate of five per cent. of the aggregate strength of the Army.

Captain J. Bates Dickson, U. S. Vols., has been relieved from duty at the Headquarters of the Department of the Cumberland at Nashville, Tenn., and ordered to report for duty at the Headquarters, Department of the Ohio.

Major-General Gillmore has announced the following named officers as Assistant-Commissaries of Musters, of the Department of the South: Lieut. Col. E. Lord, 3d New York Vols., Captain G. R. Leonard, 22d New York Vols., and 1st Lieutenant James A. Cuzzi, 79th Ohio Vols.

Colonel S. A. Hurlbut, General Master-General of Ohio, has been temporarily relieved, at his own request, by the Secretary of War. Colonel Patten, of a New Hampshire regiment, succeeds him.

Colonel WILLIAM MOORE of the 73d Pennsylvania Regiment, has tendered his resignation, and it has been accepted. The cause of his resignation was that the wounds he once got shot wounds received at the battle of Chancellorsville, which render him unfit for field duty.

Brigadier-General Wilcox has been relieved of his command of the First division of Major-General Stoneman's Army, and ordered to Cairo to report to the Chief of Cavalry Bureau in Washington. Brigadier-General CLEM succeeds General Davidson, and Brigadier-General Kimball takes command of General Stoneman's 2d division.

The Second Levee, on the evening of the 22d, gave a ball, at the headquarters of Major-General Warren. Among the guests were Vice-President Hamlin, General WOOL, Secretary SEWARD, Secretary Edward A. Brownson, Governor Ramsey; Generals Meade, Warren, Pleasonton, Sedgwick, Sykes, Kilpatrick, Gregg, Custer, Merritt, Wells, and Col. Sykes. Kilpatrick's band furnished the Second corps and General Kilpatrick's cavalry division. The review was highly satisfactory.

On the night of the 22d, Major Malone, Paymaster in the United States Army, was robbed in Washington of $70,000, which he had drawn from the Treasury Department, and carrying to the front to pay certain regiments there. It appears that after drawing the money he took it to his home and put it in a trunk, which he supposed it was safe in. Some time during the night the trunk was taken from his room, and this morning a servant in the house found the trunk in the stable, broken open, and an amount of postage currency scattered around. A number of arrests have been made on suspicion.

THE U. S. steamer *Massachusetts*, A. V. LE W. H. PAGE, commanding, arrived at Philadelphia, February 22d, from her sixteenth trip, since March 11th, 1863. The following statistics of the trips made by the *Massachusetts* will be found interesting. The South Atlantic Blockading Squadron from March 11th, 1863, to February 22d, 1864, will be found interesting. The trips to and from the North Atlantic Squadron concluded August 24, 1863:

For the first six months she stopped at the following stations:—Old Inlet, N. C.; New Inlet, N. C.; Beaufort Inlet, N. C.; Mussell's Inlet, S. C.; Georgetown, S. C.; Bull's Bay, S. C.; Charleston, S. C.; Stono River, S. C.; Edisto River, S. C.; Port Royal Harbor, S. C.; Tybee Roads, Ga.; Warsaw Sound, Ga.; Assabaw Sound, Ga.; St Catherines, Ga.; Sapelo Sound, Ga.; Doboy Sound, Ga.; St. Simons Sound, Ga.; Fernandina, Fla.; St. Johns River, Fla.; Fort Clinch Inlet, Fla. The last five months she has stopped only at Charleston, and all the above-named ports of S. Carolina.

Amount of cargo carried:—Fresh beef, 341,600 lbs.; pork, 5,520,000 lbs.; vegetables, 10,378 bbls.; lemons, 50 boxes; oranges, 50 boxes; and miscellaneous for officers, 1,000 packages; ordnance stores, powder, &c., for the fleet, 150 tons; clothing and provisions (other than fresh supplies), 2,206 packages; letters and papers, 100 packages; several prize cargoes cotton, &c., &c. She has steamed 32,072 miles; passages, 204; vessels boarded, 1,016; passengers carried, 2,900; invalids, 509; refugees, 258.

Great credit is due the Navy Department for the energy and perfection with which the system of supplies has been carried out. Constant and regular communication has been maintained by means of the supply squadron along a far more extensive coast than was ever before blockaded by any nation, and the dates of arrival of a supply steamer are looked forward to with great anxiety and pleasure, every one being sure of receiving letters and papers from friends at home, as well as that indispensable article, a newspaper.

There are four other supply ships running to the different blockading squadrons on the coast, besides several schooners.

The following organization of the Engineer Department of the Army of the Cumberland has been announced by Major-General THOMAS. The Department consists of the following branches: The Military Engineers of the Staff, the Topographical Engineers of the Staff, and the Engineers of the Line. The Military Engineers consist of the Staff of the General commanding consists of the following officers: Captain William D. Merrill, U. S. Engineers, Chief Engineer, and Pilot Lieutenants George Thompson, Henry Wharton and William J. Twining, U. S. Engineers.

The Topographical Engineers of the Department Staff are Captain William E. Merrill, Captain W. C. Margedant, Captain Orlando M. Poe, Lieutenant Frank U. Otley, and Lieutenant G. Bowers, 10th Missouri Volunteers.

The Engineer Troops of the Line are as follows: The Pioneer Brigade, Colonel Timothy R. Stanley, 19th Ind., 88th Indiana Volunteers, the Engineer Brigade (18th Ohio Volunteers, 13th Ohio and Michigan Volunteers), Colonel Wilder D. Wood, 1st Lieut. T. R. Stanley, 19th Ind., and the Michigan Engineers and Mechanics, commanded by Lieut. Col. Duane.

Lieutenant Keller, A. A. Q. M., Engineer Brigade, in addition to his other duties, has been ordered to act as Depot Engineer Quarter Master until such an officer can be appointed.

A SHARP RECRUITING OFFICER.—In the course of some remarks on the joint resolution to equalize the pay of soldiers, Mr. HOLMAN, of Vermont, related the following anecdote of the war of 1812:—

We had a lieutenant by the name of BEEBAN, who was a famous recruiting officer. I say 'was' because he is now in the service. He was sent down to Middlebury, in Vermont, to recruit in the winter of 1812-13. In the spring the recruits were to be ready to march. There were forty or eighty of them. When we came to muster them in according to their enlistment, it was found on examining the men that he (Beeban) had put down the age of his recruits about twenty men to each man drawn, and three or four as beardless as boys. When we came to look at the recruits and put the soldier's uniform on them and place them in the ranks, there was distress and trouble enough. If we had been compelled to carry out the enlistment as it appeared, I do not know how we should ever have done it. I will only add that BEEBAN took care to stipulate that he should never serve with his own recruits.

Major-General Schofield, in his order, upon assuming the command of the Department and Army of the Ohio, announces that the Department Staff will remain unchanged until the General commanding shall otherwise direct: Major Aide-de-Camp; Major E. N. Strong, Aide-de-Camp; Captain Louis Fitzgerald, Aide-de-Camp; and Captain George E. Leonard, Aide-de-Camp. All of the present staff of Major-General Foster, are relieved from duty in the Department. Major J. A. Campbell, Assistant Adjutant-General, William H. Paine, Aide-de-Camp, Captain Charles E. Eagle, Aide-de-Camp, and Captain O. W. Schofield, Aide-de-Camp, are announced on the staff of the Major-General commanding.

The following gentlemen constitute a permanent committee appointed by the Navy Department to examine new inventions and improvements in ordnance: Rear Admiral and Chief of Bureau of Navigation; Professor A. D. Bache, Superintendent of the United States Coast Survey; Professor Joseph Henry, Secretary of Smithsonian Institution; Brigadier-General J. G. Barnard, Lieutenant-Colonel of Engineers; Joseph Saxton, Assistant Superintendent of Weights and Measures. The headquarters of the committee are in Washington; and all communications should be addressed to Hon. Gideon Welles, Secretary of the Navy.

A CORRESPONDENT writes:—An interesting ceremony took place in the village of Franklin, La., on the 3d inst. A beautiful flag was given to the heroes from the flag-staff, in front of the town. The troops in and around were assembled, and amid the playing of bands, the booming of cannon, and the hurras of the multitude, the National ensign was hoisted to the mast-head. This flag-staff was erected by the 13th Connecticut, a regiment from the Constitution country by our Army. This is the first United States flag which has been formally raised in Franklin. The 13th Connecticut, which was present, had the honor of commanding officer, Major-General FRANKLIN. It was a highly successful performance.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to tactical and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FOUR DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Officers in the service of the United States (Army or Quartermasters', Paymaster's or other depts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the Journal.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

In order to many correspondents, the Publisher would explain that the press of work upon the printing office has delayed the reprinting of Number 4 of the Journal, for which a large number of subscriptions are awaiting. Number 4 will, however, be ready by the 4th of March, and will be mailed to all who may desire it.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, FEBRUARY 27, 1864.

THE CAMPAIGN IN THE SOUTHWEST.

IT is one of the consequences of SHERMAN's rapid and brilliant march into the heart of the Gulf States that he has caused a panic in the mind of the Rebel people and papers extremely unfavorable to anything like accuracy of reports as to his movements. We hear of him at one and the same time moving in diametrically opposite directions—he is reported as advancing southward on Mobile, and as advancing eastward on Montgomery. In one Richmond telegram he is announced at Quitman; in another at Selma. The explanation of this probably is that SHERMAN is moving in more than one column, and is sending out raiding parties in various directions, while his main army marches for the point where the country belongs not to SHERMAN's column, but to the cavalry command of SMITH and GRIERSON who have not been authentically heard from since they set out from Corinth and Holly Springs. The result of this admirable policy is that SHERMAN's advance has thrown the whole Rebel Southwest into the wildest excitement and made each one of a dozen points expect his advent. From *expecting* it, there is an easy step to reporting it be an *actuality*. We ought therefore to receive all current reports with heavy grains of allowance. Neither can we expect any more credible reports through our own sources, for SHERMAN having like CORTEZ, when he burnt his boats behind him, destroyed bridges in his rear and cut loose from his communications with his base, we have nothing to do but wait with patience the achievement of some decisive result, when communications will be opened up.

In this condition of things we have no disposition to outrun by guesses upon the line the actual development of General SHERMAN's plan. And yet, this is in no wise inconsistent with our having perfectly well defined ideas as to the general object to be accomplished in this campaign. In this regard we have seen nothing to conflict with, while there has been everything to confirm, the concept set forth in the last issue of this JOURNAL. The supreme object to be accomplished by such a campaign as that which General SHERMAN is now making, is the seizure of the great strategic line formed by the two affluents of the Mobile river—the possession of which gives us water base on the Gulf, water highways to the heart of Alabama and Mississippi, cuts the one main line of rebel inter-communication, threatens JOHNSTON's force, and practically expels the Rebels from the centre zone. Holding their ultimate conception clearly in mind, we see that the prime and indispensable desideratum—the condition precedent to the profitable occupation of any of the strategic points on the prolongation of the line from Vicksburgh, is the opening of the Tombigbee by the seizure of its key, which is Mobile. Whether, therefore, General SHERMAN will make a march on the rear of Mobile will depend on conditions of which we can necessarily have no information; and whether the original intention in this regard may have been, the actual course pursued will, as a matter of course, be controlled by the upshot of affairs in the other arm of the general combination.

There is no longer any doubt now that the naval force of FARRAGUT and a military expedition from BANKS' command are lending their cooperation in the general plan of campaign of which we regard the operations of SHERMAN as but one portion. The specific purpose accomplished by this expeditionary force is of course the capture of Mobile. Through Rebel sources we have intelligence of the presence of the fleet in the immediate vicinity of Mobile—namely at GRANT's Pass—where the Rebel works seem to have been less of an obstacle to the advance of our gallant sailor, than was anticipated.

We are not blind to the fact, that, like all acts of "grand war," such a combination as seems to be indicated between SHERMAN's column and the force of FARRAGUT and BANKS is hazardous. It demands for its successful execution the utmost boldness, energy, and rapidity, and, with all said and done, much still depend partly on the fortune of war. Certainly the execution of the project could not have been entrusted to better hands than those that have it in their keeping. SHERMAN's march to the Mobile and Ohio railroad—a hundred and forty miles in eleven days—is well characterized by the Rebels as the most rapid and brilliant feat of the war. In discussing the question before the fact, last week, we said it would be good marching if he struck this line in three weeks or a month. We then, indeed, were going on the theory that he would restore to the Southern Mississippi railroad as he advanced. But instead of doing so, he has destroyed it, thus abandoning his base on the Mississippi. This shows conclusively that it is the purpose to open up a new base on the Gulf. The system of operations aiming to effect this stands out as altogether the boldest conception of the war. Its development will be watched with the greatest interest, both by the public and by professional soldiers.

FLORIDA AND THE REBEL ARMIES.

GENERAL GILLMORE's expedition into Florida has brought to light a curious document, the authenticity of which is vouched for by General GILLMORE and SEYMOUR. This is a secret circular, dated November 23, 1863, issued by Major P. W. WHITE, Chief Commissary of Florida, to his subordinate officers throughout the State, impressing upon them the positive necessity of gathering together all the cattle possible, and sending them forward promptly to the respective armies. He makes his appeal by quoting from letters which he had received from the different quartermasters in the rebel States, urging him to use every energy to relieve their pressing necessities. The officer who supplied General BRAGG's army, declared it "absolutely and actually essential" that the cattle that could possibly be supplied him should be forwarded at once; thus all "other resources were exhausted," that "bacon was almost exhausted"; that beef was "their only hope," and that for this they were dependent upon Florida. The Chief Commissary of Georgia announces that "the troops in Charleston are in great extremity." "We look alone to you," he says, "for cattle; those in Georgia are "exhausted." The Chief Commissary of South Carolina reports that that State furnishes "not one tenth of what is required" for the 40,000 troops and laborers in the neighborhood of Charleston, and Major MILLER, of Savannah, writes, "starvation stares the army in the face; the handwriting is "on the wall." Upon these statements Major WHITE founds his appeal to the citizens of Florida, and he concludes by requesting those who might receive this circular, not to allow it to go out of their possession, but to read it to such persons as they know to "be prudent."

There is not so much danger of exaggerating the importance of this singular circular, as of inferring that the rebel resources must be virtually exhausted, when those who have to provide for the sustenance of the armies, are compelled to fall back upon so small a State as Florida, as their main source of supply. In fact, the comments which some of the daily journals make upon this document would induce the belief that Florida ranks the lowest among the beef-producing States of the Confederacy, and the census returns for 1860 certainly have served to strengthen the impression, for they furnish the following figures, which show at a glance the proportion of cattle in Florida to that in the other States, upon which the main armies in the South are compelled to rely:

	No. Wrk'g Oxen.	Sheep.	Swine.	Cows.	Other Cattle.
Florida	58,256	1,767	18,617	47,848	72,704	84,102
Alabama	10,722	62,486	399,041	1,106,640	244,015	533,181
Georgia	56,056	19,487	312,042	676,894	281,824	439,167
S. Carolina	34,009	22,629	235,599	480,179	160,852	453,346

Comparatively to its area, therefore, it is plain Florida is by no means as well stocked as the States in its immediate vicinity; but it is to be remembered that these figures do not represent the resources which would be first drawn upon for meat supplies. The quartermasters throughout the Confederacy have already been compelled to slaughter milch cows and young cattle, and while the army to which we pressed us at Vicksburgh, mule meat was furnished them, but all these quadrupeds, are, of course, the last resort of a starving army. Major WHITE undoubtedly wished first to gather up the animals grazing upon the prairies of Florida, for the public seem to have overlooked or forgotten a fact of natural history, that it is favorable to Florida,—that there are 2,273,008 acres of unimproved territory in that State, a large proportion of which is prairie land, and that especially in the central parts of the State, live stock of every kind abound, for no shelter is needed to protect animals from the weather, and beeves and swine feed an abundance of the year round. It is of course impossible to estimate, with any accuracy, the number of animals which run at large in these districts. One correspondent gives 2,000,000 as the aggregate, and says that they average but 400 pounds each; but these figures are altogether too general to be regarded as reliable. Until last November, however, it is safe to infer that these resources were comparatively untouched, for then no large armies had occupied the State, absorbing every thing within their reach, and leaving devastation in their track; and while the Mississipi was under Confederate control it was more convenient to draw from the exhaustless supplies of Southwest.

It is generally understood that during the last four months large droves of cattle have been drawn from Florida, but the limited facilities for transportation which that State possesses have seriously checked the rapid transfer of these supplies, and the presence of General GILLMORE's forces will only be likely to expedite the movement of his own lines. It will of course be virtually impossible at present for our forces to cut off all communication between Florida and the rest of the Confederacy, but they can, even with the positions they now hold, put an extensive embargo upon the transfer of these supplies, and it is evident from the tone of Major WHITE's appeal that this will involve embarrassment and perplexities upon the quartermasters at Atlanta, Mobile, Savannah and Charleston. When an individual of limited means has exhausted the bank bills which he may have been fortunate enough to possess, he counts his small change carefully; and this circular, as well as numerous other indications which we have been receiving from the South for the last six months, shows clearly that the resources of the Confederacy are so reduced that the loss of every ox or hog which can be kept from going forward to the forces in the field tells upon the efficiency of the respective armies.

HARBOR DEFENCE IN ENGLAND.

WE gave some account last week of a lecture recently delivered before the Royal United Service Institution of England by Captain TYLER, R. E., and of the discussion which followed. The lecture suggests a curious change in the public confidence heretofore reposed by England in her Navy. There was a time when she wrote with honest and well-founded pride,

> "Britannia needs no bulwarks,
> No towers along the steep;
> "Her march is o'er the mountain waves,
> "Her home is on the deep."

But Captain TYLER proposes that the entrance into the Solent Sea should be defended by forts on the Warner Shoal, No-Man's Land, the Horse-Sand, &c., thus confessing that the time has come when England requires "towers along the steep" to render that march upon the mountain waves secure, whose sweep was once the proudest boast of England's chivalry. For a part of Captain TYLER's proposed new method of matching another foe on his native seas, is to station behind these forts and under their protection, the new navy of Great Britain—there to watch an op-

portunity of making a successful dash upon the vessels of a hostile fleet. This proposition of Captain TYLER is not more curious than the fact that, although there were Navy officers present, his problem was discussed upon its merits; and there was not one gentleman in the room who seemed to remember that it was with the thunders from her native oak that she once met the gallant Frenchman, and that it was from the mast-heads of her ships of war that "the meteor "flag of England once burned through danger's trouble night."

And again, we may place under the head of strange things the proposition of Sir JOHN DALRYMPLE HAY, to station twelve ships chained to each other behind a boom, as an obstruction to the harbor, with twelve manœuvring ships behind them; that is, to resort to that very method of defence which the French employed in the Basque Roads, when a Scotch Captain led with such remarkable gallantry where an English Admiral, with an equally remarkable prudence, did not think it safe to follow, leaving the harvest ungeneered, which a bolder man had reaped. And it may be mentioned as another noteworthy circumstance, that Sir EDWARD BELCHER'S mind on this occasion, was employed on the very idea which, in the case of the famous ex-English Rear-Admiral's thoughts would have been turned towards the inquiring of—figuratively speaking—

"What rhubarb, senna, or what purgative drug
"Would *scour* these Frenchmen hence?"

But so far as our cousins across the water are concerned, it is satisfactory to perceive that, however doubtful and anxious they may be about the French, they feel perfectly comfortable with regard to ourselves, if we may judge by the following recent announciation of a braggart Englishman: "With iron-clad "ships of war of small tonnage this country would effectually overawe America, because such ships could "ascend the St. Lawrence River and the Lakes, de"scend into Lake Champlain, and even threaten the "upper Mississippi across the Illinois Canal!"

THE REBEL MILITARY BILL.

A LATE number of the Richmond *Enquirer* contains the Military Bill which passed the Rebel Congress a few days previous to its final adjournment. As it differs in several important points from those to which we have previously alluded, we will give a brief abstract of its principal provisions. It declares that all white men between the ages of 17 and 50 shall be in the military service of the Confederate States "during the war," and that all between the ages of 18 and 45 "shall be retained during the "present war" in the same organization in which they were serving at the time of the passage of this act, unless they are regularly discharged or honorably retired. Taking it for granted that the empty thanks of Congress are not enough to compensate the soldiers who go through the form of "re-enlisting" under this clause, the law generously votes one hundred dollars bounty to each non-commissioned officer and private who shall so re-enlist in the service on October 1st; but this bounty is payable only in a six per cent. government bond, and as it takes twenty-two dollars of Rebel currency to purchase one dollar in specie, it is probable that a lively imagination will be required to discover any pecuniary value in one of those promises to pay seven months from the present time.

The law also provides for detailing all between 17 and 18 years of age into a reserve corps, not to serve out of the State in which they reside, but prohibits the assignment of any of this class to duty in any of the bureaus, departments, or hospitals. Those who are declared physically disqualified for active service, and persons between 45 and 50 years of age, are to attend to this kind of work. The President is also authorized to make details of artisans, mechanics, or persons of scientific skill, to perform "indispensable duties "in the different departments."

The exemptions which this law authorizes differ in some respects from those permitted by the bill which the Rebel Senate framed. The public printer and such journeymen as he shall certify on oath to be indispensable to the performance of the work of his office are added to the list of favored ones, and the clause in the old law shielding professors and teachers was allowed to die. One person as owner or agriculturist is to be exempted on each farm or plantation upon which there are now, and were on January 1, fifteen able-bodied field hands between the ages of 16 and 60. This is a trifle more liberal than the bill we sketched a short time since, which named twenty as the number of slaves necessary to exempt an owner, but the conditions are much more stringent. In no case is more than one person to be exempted for one farm or plantation, and he is required to execute a bond pledging himself to deliver at such place as the Secretary of War may designate, within twelve months next ensuing, one hundred pounds of bacon, or its equivalent in pork, if the government elects, and one hundred pounds of nett beef (on foot) for each able-bodied slave on the plantation. In certain cases the Secretary of War is empowered to direct a commutation of this meat to two-thirds in grain, which shall be delivered at equivalent rates. The person exempted under this clause of the law also binds himself to sell his marketable surplus of provisions and grain at the prices fixed under the impressment act.

The Secretary of War is authorized, under the direction of the President, to detail such persons as he may be satisfied ought to be exempted "on ac"count of public necessity," and to ensure the prosecution of the work, and the provisioning for the army and for the families of soldiers. He may also grant exemptions or details on such terms as he may prescribe, to such overseers, farmers or planters "as he "may be satisfied will be more useful to the country "in the pursuit of agriculture than in the military "service;" but these are to be revoked whenever those exempted shall fail diligently to employ in good faith their own skill, capital and labor exclusively in the production of grain and other provisions, to be sold to the government at the prices which it shall name.

Inasmuch as experience has demonstrated that there are not now enough men at home to properly attend to their agricultural duties, it remains to see how Mr. DAVIS can comply with this permissory provision of the law without disorganizing the armies now in the field. In any event, he may hereafter be held responsible by the press and people for any scarcity of supplies, and it is further probable that he will wish before the next campaign to ask the Congress had not conferred these dictatorial privileges upon him. Certainly, it seems as if no more stringent law than this could well be devised, and the members of the Congress which has just dissolved will probably have the satisfaction of reflecting that they have done all in their power to "develope" as well as to exhaust the resources of their country. The Rebel army, however, will entertain the conviction that its Congress has gone as far as it was possible for it to do in recruiting the shattered ranks of the regiments in the field, and strengthening them to open the spring campaign vigorously. Has the Federal Congress done as well by its Army? We think not.

IN the New York *Times* of the 21st inst., we find an account of the performance at sea of the fine new iron-clad, the *Re d' Italia*, and under the head of "Introductory" this paragraph occurs:

Since Noah's ark was made, the bulwarks of ships have been high and straight. When iron-clads came in vogue these features were preserved, and iron laid plainly on the old-fashioned sides. The *Re d' Italia* is the first broadside ironclad vessel with newly-shaped bulwarks. Her sides illustrate an attempt to counteract the oscillatory influence of armor, by inclining the upper portion of her bulwarks toward the centre of her hull. The idea is American, and its first practical test is over. Nothing hitherto written about this craft has touched this point—in which every other attribute is secondary. Hence the importance of the trial trip, just concluded.

Now, since the days of NOAH'S ark very many improvements have been made in ships' models, and their bulwarks have not by any means been made high and straight, as witness nearly every war ship afloat. When iron-clads "came in vogue" these features were not preserved, as every body knows who has seen or read of the *Merrimac*, or the gunboats on the Western waters: the sides of these ships are inclined at various angles with the hulls. The *Re d' Italia* is not the first broadside vessel with newly shaped bulwarks; for the *Keokuk*, the *Ironsides*, the *Galena*, and any number of British armored ships are built thus, and the sides of the *Re d' Italia* illustrated nothing new in this respect. The idea is not American, and is *not* an important advantage. Shot fired at long range are received by inclined sides at nearly right angles, the most favorable situation for penetration. In attempting to pass Fort Darling the *Galena* was riddled, as the elevation of the guns in the Fort gave a right line to the angle of her sides. The reporter is undoubtedly correct in observing that nothing has hitherto been written about this point of the *Re d' Italia*, and, he might have added, for the reason that those familiar with the subject see nothing in it to provoke comment. The remainder of the article consists of the reporter's "opinions" about the seaworthiness of the ship, and is a pattern of style as regards obscurity and opaqueness. If those who are unfamiliar with nautical and engineering science would confine themselves to the narration of facts on such occasions, and leave speculation to those who are competent for it, they would not bring journalism of this character into disrepute or mislead the public by false information.

ON the 7th of August, 1862, Brigadier-General HENRY W. BENHAM, an officer of long and distinguished service in the Corps of Engineers of the Regular Army, and who was made a brigadier-general of Volunteers on the 23d of August, 1861, was reduced from this latter rank, through a conception that he had broken positive orders in making an unsuccessful attack upon the Rebel works at Secessionville, on James Island, S. C. This attack was made June 16th, 1862, and was believed by General BENHAM to be necessary to enable the holding of his position, which he had been ordered by Major-General HUNTER, his commanding officer, to "secure," at the same time that he was directed not to advance against Charleston. The attack was ordered to be made at the earliest daylight, but did not actually take place till after sunrise; and this delay General BENHAM attributed the severe loss which followed. Without preferring charges against him, General HUNTER ordered his arrest, and sent him out of the Department. It may be remembered that the newspaper correspondents—who had no kindly feeling towards General BENHAM, who never sought to conciliate their favor—were severe in their criticisms. Influenced by a misconception of facts, and in accordance with the hasty judgments of the time, the Government revoked General BENHAM'S commission as brigadier-general of Volunteers, and he was returned to duty as a field officer of Engineers.

After several months delay—in January, 1863—during which time this officer had no trial nor could not obtain even a notice of any charges preferred against him, the matter was brought to the attention of the PRESIDENT, who did him the justice to order an examination of the case by Colonel HOLT, the Judge-Advocate of the Army. On the 26th of January, 1863, Colonel HOLT laid before a report of his investigations, which entirely exonerated General BENHAM from blame: he was restored to his rank and assigned to the command of the Engineer brigade of the Army of the Potomac, which position he has since held with credit to himself and to the country.

Meantime there have gone out among the people, and to the world, crude kindergarten of the war, utterly false and injurious accounts of the affair on James Island. It is to correct these mis-statements, and, at this late day, to do justice to an officer of twenty-seven years' gallant service, that the report of Colonel COLT is now made public. As for ourselves, we are glad of the opportunity to publish it, for the sake of the thing itself, and we think it due to General BENHAM to say that we write without his solicitation and without having communicated with him on the subject. There are one or two other officers to whom a similar wrong has been done, and who deserve a similar public exoneration.

It is not necessary that we should detail the moral of this history, but we would ask the public to remember it and give it heed when they are disposed to pass hasty judgments in regard to military movements about which they have no trustworthy information.

IT is reported that a Danish and a Swedish man-of-war were at St. Thomas on the 6th, coaling, preparatory to visiting New York, and it is suggested that their intention is to be in wait for the Prussian and Austrian vessels now in this port.

By order of the Secretary of War, Alton, Illinois, attached to the Department of the Missouri, in General Orders No. 125, September 10th, 1863, has been retransferred to that Department from the Northern Department.

THE iron-clad *Canonicus* made a second trip from Boston on the 20th and returned on the 24th, a clear sign that she will be detained several weeks for repairs. The gun carriages were damaged under circumstances which proved their inefficiency. One of the bolters was also damaged.

FOREIGN MILITARY AND NAVAL MATTERS.

CAPTAIN BLAKELY is engaged in manufacturing steel field guns for Denmark.

The *Royal Sovereign*, unpoh ship, is ordered to be completed so far as to be able to be undocked on the 8th March. Every exertion has been made for some time to expedite the work on board this ship.

The British War Department has given orders for the supply of an 800-pounder gun to be manufactured by Captain BLAKELY, to be fired at the Royal Arsenal Iron built with increased charge, and to be proved "to destruction."

IT is currently reported that a suspension of arms has been ordered by the National Committee of War-saw. Although would be but a brief respite and of voluntary inaction, to prepare fresh forces, in order to resume the struggle against the Russians in the spring.

ANOTHER soldier has been tried at Lyons. A man named BROSSE, excited by ghost stories, got up and declared he would go in search of one. He took his musket with him, met another soldier, and shot him dead. The defence was, eight campaigns and a wound in the hand. The sentence was five years' imprisonment and military degradation.

AN examination of the iron screw steam troop-ship *Sequere* at Devonport, England, disclosed the fact that one of the plates was so much eaten away with rust that it has been regarded as a matter of wonder how she reached England without some serious mishap having occurred to her. An extraordinary quantity of weeds, barnacles, and other filth had accumulated on the bottom of this vessel.

THE *Laughing*, 50, 3,000 horse-power screw steamer, the name of which has been removed from the list of vessels of the Royal British Navy, is to be laid up in the service. Every precaution will be taken, it is said, to prevent the *Laughing*, as well as other vessels which are ordered to be sold, falling into the hands of persons who might use them in committing an infraction of the English neutrality laws.

THE British Admiralty has ordered six pairs of engines with twin screws, similar in design and power to the engines of the screw steamer *Experiment* recently fitted by the steam factory department at Portsmouth Dockyard, and the experimental trials of which, both as regards speed and steering power or capabilities of towing, have been attended with the most satisfactory results. The engines thus ordered will be fitted to the hunches of six first-class ships in commission.

RECENT experiments at Shoeburyness and Portsmouth have proved that spherical steel shot fired from any modern gun at short range would penetrate armor plates of 5½ inches in thickness are so destructive that our present armor-plating must be worse than useless at close quarters. The splinters would be more to be dreaded, we fired from a smaply rifled gun, and its effect when so fired from this description of weapon upon armor plates is to be specially guarded.

NEW regulations, dated January 1, 1864, which took effect from the beginning of this year, have been issued in regard to the examination of candidates for commission in the British Army. They take the place of the regulations issued on September 1, 1863, and on previous days. By the former regulations the age of candidates examined for direct appointments was required to be not under 18, the latest limit for the infantry being 25, for the cavalry 25, and for colonial corps 28 years. The age of 18 years is now found further notice from 18 to 20 years for the infantry, from 18 to 22 for the cavalry, and from 18 to 26 years for colonial corps.

A PARTIAL trial was made recently at Portsmouth dockyard of a folding boat, intended by the inventor for use with two or more of our ships. The boat is flat-bottomed, with pointed ends, and will carry 20 people on a very light draught of water. In receiving passengers from ships with high mountainous of abandonment at sea it would require to be heavily ballasted in addition to its human freight, in order to render it safe. In great moderate weather the very small space twenty such boats would occupy when folded and stowed away on board ship, and the large amount of boat accommodation which would thus be available in the event of disaster.

The London *Army and Navy Gazette* says that the WHITWORTH and ARMSTRONG Committee, appointed at Woolwich by the War Department to report on the competitive merits of the two rival gunmakers, have received a notification from the WHITWORTH Company stating that their manufactures are still incomplete, and that no definite time can be fixed at present for the trial to take place. The whole of the ARMSTRONG guns are now in readiness at Woolwich and Shoeburyness, and are as follows:—Three 12-pound muzzle-loaders, rifled on the short principle; three 40-pound breech-loaders, and six 70-pound breech-loaders. The WHITWORTH guns proposed to be furnished for the trial are six 12-pounders, as above, and three 70-pounders.

According to the report of a British Army Surgeon the healthfulness of the various foreign military stations has much improved within a few years. The mortality in the regiments stationed at Jamaica formerly ran as high as 200 in 1,000 of strength per annum, or a British regiment was entirely destroyed in about three years and a half. At a later period the mean of four healthy years gave in the same colony sixty-seven deaths in 1,000 of strength per annum. Up to 1855 it was as high as 60·8 per 1,000 of strength; it is now reduced to 20·4 per 1,000. In Bengal, mortality has been 78·3 per 1,000 (a regiment destroyed in eleven years); Bombay mortality has been 50 per 1,000; Madras mortality has been 38·8 per 1,000, or nearly twice as healthy as Bengal. The highest in Bengal was 66 per 1,000 men; lowest ditto, 51 per 1,000; the highest in Bombay was 80 per 1,000 men; lowest ditto 48 per 1,000.

AN East Indian newspaper speaks of a new species of rifle bullet on the shell principle, invented by Captain FORBERTY, of the British Army. The bullet, according to our authority, is much the same in shape as the conical one at present in use by the British Army, but is hollow and filled with a charge in the hollow of course, and the inner surface is cut into three divisions by means of circles described upon the sides. In this cylinder a fuse is placed, percussion—which remains a mystery with the inventor—is placed. "It is said that upon striking an object, the diminutive shell will explode with terrific force. Should this invention prove a success, and should the bullet be introduced into the service, to get wounded will in most cases be to be killed outright."

THE Glasgow *Mail* says that a formidable ram, now approaching completion in one of the ship-yards of that city, has been purchased for the Danish Government. This is the second armor-clad which the Danes have obtained from the Clyde. The former ram, a cupola ship, built according to the plan of Captain COLES, of 1,246 tons burden, is a fine sea-going vessel of 240-horse power, was commissioned from the MESSRS. SCOTT, and now forms part of the Danish fleet under the command of Admiral STEEN BILLE. The present is a much more powerful ship. Her burden is 3,500 tons; her engines are 500-horse power, and she has a proof which will enable her to carry everything for another vessel to come into collision with.

GENERAL KRZYWANOWSKY, as we learn from the *Invalide Russe*, has been appointed Governor of Lithuania in place of Count MURAVIEFF. The *Invalide Russe* believes that the new governor will not find it an easy task to pacify Lithuania, it says, except some small bands, which are hovering on the borders and exist only by plunder, is completely pacified, and the new governor will have only to regulate the civil administration in the provinces which the insurrection has inflicted on the country. Every day deputations of priests and nobles present themselves at Wilna to inform the new governor of their loyalty and fidelity. The address brought by the last deputation, which arrived at Wilna on the 1st of January, was covered by 1,500 signatures.

A BLAKELY cast-steel gun, while being proved previously to its being shipped for the Russian Government, burst between the outer hoops at the back of the trunnions, and on the following day, by desire of Captain BLAKELY, the charge was increased to 50 lb. of powder, and the same cylinder—viz., one of 3 cwt. and 1 qr. Notwithstanding the increased charge of 15 lb. of powder and the injury to the hoop, the proof was perfectly satisfactory. The 9-inch bore is surrounded by four tubes of cast-steel hoops, shrunk on hot-wise, and appears capable of resisting any amount of shock or pressure proof, after an outer tube had split, shows that three of the hoops have been cut by the explosive force of any requisite charge; and in future the outer ring, which was 3 in. broad by 3 in. thick, will be diminished. The results are expressed, however, whether these guns can resist the concussion of explosion, with which it is stated they are intended to be charged.

A NEW iron-clad vessel of the smaller class, which is about to be introduced into the British Navy, will soon be commenced at Pembroke Dockyard. Admiral SARTORIUS writes to the London *Times* on the subject of the English iron-plated ships. He says that Mr. REED has not yet confessed what he himself always held, that the vessels of the *Warrior* and *Black Prince* class are a mistake. They are too large and unhandy for service, and are utterly unfit for coast service. The Monitors, also, he considers unfit for ocean service. He would have small, speedy vessels, which shall themselves be the gun carriage, movable by the twin-screw. This twin-screw, he says, is the great discovery due to Mr. REED, to be a most important invention, since it gives the power of turning round and round without going ahead or astern. The Admiral says that the largest ships he thinks the guns have won the day. These are capable of infinite improvement, but the limit of progress has been reached in ships.

A CORRESPONDENT of an English paper writes that the iron-ship *Black Prince*, on her recent voyage from Cape Town to Gibraltar Bay, proved herself to be the "finest ship in the world." She left Cape Town 6.30 A. M., he writes, Admiral DACRES made a signal for all ships in the outer ship, the *Warrior*, to have a sailing match till 1 P. M. The *Warrior* responded on the 1st gaining a stiff breeze we soon ran the *Warrior* and the *Defence* both down. At 11.50 the breeze freshened, and became a gale, accompanied by a heavy surging sea; still, nothing daunted, Captain WAINWRIGHT, assisted by Commander RICH, carried out the admiral's order, and kept the canvas on her to see what the iron fleet was made of. She acted to admiration well, and having once obtained a fair heel over, she was a perfect "top" to the *Warrior*. We had a few casualties, split two jibs, stay sails and fore top sail, carried away jib-boom, and sprung foretop gallant mast. With all we had a dry deck, as she rode the seas like a duck, quite contrary to all expectations of so heavy an iron ship.

THE iron masts of the *Achilles*, the largest ever constructed for a vessel-of war, were successfully fixed on the 6th January last by means of the massive floating sheers, which were brought down from the dockyard to Gillingham Reach for that purpose. The mainmast weighs no less than 21 tons 12 cwt.; its length below the fid hooles, diameter 3 feet 6 inches, and length of head from mouths 20 feet. Each mast is formed of three curved plates half an inch in thickness, which are riveted to the double shell of each, the joints where the vertical edges of the plates meet being so forged that the outsides of the masts show no ridges. Under the head the vertical joints have strong tierons are placed, to which are riveted the plates forming the mast; the rivets on the outside being countersunk so as to leave the exterior of the mast consequently presenting a round and perfectly smooth surface. The masts are parallel from the heel to the heads, when a horizontal plate is introduced, which is made to carry the top and this plate facilitates the reduction of the size of the mast from the hounds to the top. Where the shrouds pass over the masts the plates are double, to resist the extra strain at that point.

THE London *Times* boasts that in spite of the start the French got in launching *La Gloire* and *La Normandie*, the English have completed of them in the number of iron-clad ships afloat, the number launched and fitting, and in the number building, while in the following particulars of strength, size, and speed the French possess no ship of a power that can be even named in comparison with those of the English iron-clad *Defence* class of frigates. It is claimed that the English have in their navy about as many as six of the French; three launched and fitting as against three of the French; six nearly ready for launching against two nearly ready of the French; and five in various stages of building, while the French have six in the same condition—a total in all of twenty-four English to eight French vessels against us, belonging to France. It is believed also that the French Marine intend to commence no new vessels this year; but that they will wait to see what effect is given to the plan of the *Bellerophon* will be begun in England. The *Times* proceeds to praise its *Warriors* and *Monitors* as the most splendid ships of war in the country, declaring in its usual boastful tone that they have never been equalled or even approached. It closes a long article on the subject by saying that "on the whole, "on a comparison of the iron-clad fleets of the two "countries, we have every reason to feel proud of our "own, and when it is added that leading proud—to feel "secure while we have got them."

THE ATTACK ON MOBILE.

THE New-Orleans correspondent of the *Index*, the rebel organ in England, writing under date of January 9th, thus refers to the preparations for an attack upon Mobile:

Regiments are arriving at Ship Island from Pensacola, while others are being withdrawn from Florida from the city to East Pascagoula, and other points on the Mississippi sound, south-west of Mobile. Banks cannot mean to threaten seriously Mobile with the force at present at his disposal, though should he advance inland from East Pascagoula towards the city, even on a raid or for a reconnoissance in force, I am sanguine that he will receive a short stick vigorously. Banks may have the co-operation of a gunboat flotilla in the Pascagoula-Mississippi river point—Port Hudson, Natchez, or Vicksburg—on the river. I have heard a rumor to that effect, and the arrival here of General M. JEFF. THOMPSON, of Federal notoriety, of all the forces on the river between Port Hudson and Memphis, gives some share of color to the report. He has been here now going on a week, apparently doing nothing, doubtless with Banks. The extraordinary and unprecedented weather which has prevailed here during the last ten days would have prevented any movement by either Banks or Thompson. General DABNEY O. MAURY, who commands in Mobile, has doubtless taken the measure of his breast of a force vouchsafed by the weather, and is now ready for the enemy. I make for granted that he is fully aware of the intended move, for the Federal commanders have not yet been able to make even the least significant movement without its being promptly communicated to the meanest Confederate post. The spy system of the Confederate War Department is vast beyond precedent and almost wholly voluntary. Should General MAURY, however, learn that Banks in command in Mississippi, will be able to spare him fully 16,000 men, and retain at the same time sufficient force to hold in check any force Thompson may command, as above suppose, indeed, that column should turn out to be much larger than averaged, Dabney could at present spare for such an expedition. I am assured that a force of from 12,000 to 20,000 men can be concentrated at Mobile in twenty-four hours, and that Dabney has learned of the extent and nature of the city defences on the land side. No force would be more than enough to hold it against twice its numbers if there is no fleet to assist besieging it from the bay or Bay Ste Is the harbor. I opine the Federals know well enough that they would be just as little glory or profit in such a venture as in that on Charleston, Savannah, and Mobile, and it would prove itself ere long.

THE ARMSTRONG SHUNT.

The prestige of Sir WILLIAM ARMSTRONG'S guns is steadily on the decline in England. The heavy breech-loading guns manufactured on his system have been irretrievably condemned, and it is questionable whether those up to 40-pounders will be retained for field service. Even the monster "shunt" gun, which was ushered before the world with such a flourish of trumpets, has disappointed the expectations of the public. As we anticipated last week, the accumulation as a 600-pounder was calculated to create a false impression; but this is an old trick. For the past two years we have had a wonder of this kind every week, the best specimens of the extraordinary performances of the 7-inch ARMSTRONG breech-loader, which was decommissioned as a failure, as a 300-pounder at Shoeburyness, first classed according to a spherical shot of the same diameter as the bore, and then as a 600-pounder in the same way turns out to be only a 300-pounder, which, used as a rifled gun, is not more effective in range and penetration than a 200-pounder smooth-bore. The peculiar system of rifling adopted by SIR WILLIAM not only weakens the gun, but occasions a loss of initial velocity of about one-fifth. The term "shunt" applied by him to his method of rifling, would seem to convey the idea that the projectile shifts from one set of grooves to another. But that is not the case. The rifs on the projectile, when the charge explodes, jump from the driving to the bearing set of grooves, over all the rifled projectiles do. The rifling consists of ten grooves in the bore, and ten corresponding rifs in the shot. The rifs are broad, and, six to one, the projectile has the bearing rifs. Yielding to the pressure of the gas, the soft metal studs are intended to equalize the friction of the bearing surfaces, and reduce the strain on the gun; but they might raise from the inequalities of the surfaces in contact, as the projectile passes through the bore.

At the present day, the large "shunt" gun, weighing twenty-two tons, was hurled alternately with cast-iron cylindrical rifled shot of 12 inches diameter and 700 pounds, and with cast-iron round shot of 304 pounds and the same charge. At 120 yards from the mouth of the gun, the velocity of the rifled shot was 1,265 feet per second, and that of the round shot, 1,565 feet per second. Fired as a smoothbore, and loaded with a 300-pound round shot, the gun could bear without danger a much heavier charge of powder than when loaded with a 600-pound rifled cylinder, thus giving the smooth-bore system a decided superiority over the rifled. SIR WILLIAM, who was unable to manufacture a breech-loader more powerful than a 7-inch bore—the equivalent of a 40-pound smooth-bore—has failed completely in producing a 13-inch rifled muzzle-loader, which, though called a 600-pounder, is in fact less powerful than a 300-pound smooth-bore. This system of rifling has been proved to be inferior to that of BASHLEY BRITTEN, which in the recent trials gave with a charge of one-tenth a greater initial velocity than the ARMSTRONG with a charge of one-eighth.

At a recent meeting of the United Service Institution, Captain FISHBOURNE, R. N., read a paper on Naval Ordnance, in which he asserted that the ARMSTRONG rifling system was an old one, and unsuited for projectiles of considerable facts. He believed that at no distant day the whole of the coil-manufactured guns (ARMSTRONG'S) would become old-fashioned, were all in a state of disappointment, and had to be treated as a fragile and unhealthy article. Only one thing was wanted to complete the programme of putting their guns out of service, and that was to shoot the sensible artillerymen with them. Among other defects, they were apt to burst through the flaking of metal from the charges, and this was one of their greatest defects. They burst, or blew out their breeches. So much for tension. Then as to torsion. With low charges, and a round bullet, a much slower discharge took place than from a smooth-bore; and this in many cases at sea, would be a fatal failure. With regard to the projectiles coated with lead, he said that the lead in the course of a short time exfoliated without being used at all; the effect of other climates might be conceived as the lead was in use for a short time. The gun was certain from this cause, and the flight of the projectile was most unsteady.

As we intimated last week, the English Government have been compelled to acknowledge, in a halting way, the inferiority of the ARMSTRONG breech-loader, but the fate of the ARMSTRONG "shunt" remains to be decided. While Captain BLAKELY, and other contractors, are manufacturing for foreign governments coil-guns, there is not a word in reply to the ARMSTRONGS, that government voluntarily adopts the latter. The science of artillery is indeed a conjecture; but of all the guns before the world, the English have adopted the one which seems to promise the least satisfactory results at the greatest cost.

THE HISTORY OF RIFLED ARTILLERY.

The following remarks in regard to the history of rifled artillery we extract from Sir J. S. TENNANT'S book, entitled "The Story of the Guns:"—

The idea of rifling artillery was far from being new; it had been tried in Germany more than a century before our time, and BORMAN, the accomplished inventor of the "ballistic pendulum" for determining the relative velocity of projectiles, experimented on rifled field-pieces in England so far back as 1745. In Sweden, FRANCIS AND HENRY THEODORE ARESKOG, at Brunsch in 1830, and again at St. Petersburgh in 1836, had in succession renewed the attempt. Colonel CAVALLI in Sardinia, Captee, VON WAHLEN in Denmark, each carried on experiments in rifling, and combined with it breech-loading; but the measure of their success was not attended by the practical adoption of any of their plans. Colonel THEVENIN DE BEAULIEU made more than one effort between 1840 and 1852 to revive the subject in France, and at length, in 1854, NAPOLEON III., himself an authority on artillery, convinced by the protraction of the operations before Sebastopol of the insufficiency of smoothbore siege guns to meet the requirements of modern warfare, directed the immediate adoption of rifled siege cannon, uniting in one piece various suggestions of previous inventors, amongst others of BARON WARRENDORF and Lieutenant ENGSTROM, some brass guns were grooved under the direction of Colonel THEVILLE DE BEAULIEU, and sent for immediate service to Algeria. With further improvements, suggested by their trial there, and afterwards in Cochin China, France was the first to possess herself of rifled field guns, and the earliest opportunity for the display of their destructive forces was afforded by the Italian campaign of 1856. The guns there employed were rifled with six grooved grooves, and being capable of firing ordinary ammunition as well as elongated projectiles from long distances, they sustained for reserve of fire, and were found to be the cheapest of cavalry, and ploughed through squadrons at close quarters with case shot and canister. This result was a signal for the adoption of rifled guns by the artillery of Europe. Impressed with its importance, England was the first of the great powers to follow the lead. The superiority of her navy gave her advance upon it, that specimens of her newly-developed skill in the manufactory of rifled cannon, displayed at the Great Exhibition in the year 1851, excited the most unrestrained admiration of M. THEVILLE DE BEAULIEU, who acted as the commissioner of France. Fascinated by the beauty of the English guns, and seeing the most complete subjection on the surpassing quality and splendor of their workmanship, "I am free to confess," exclaimed the French officer, "that I returned his phrase by the consoling reflection that although so examples of French artillery were exhibited in competition with those of England and WURTEMBURG, still its paramount influence was apparent, in these magnificent productions of its rivals. The remark, however true, embodied only a part of the truth. For England, though thus suddenly stimulated to exertion, was impelled less by the performance of her rivals than by the fearful lessons of the recently developed powers of the rifle. The cooperation of artillery with infantry in the field rendered such a combination essential to the success of either arm, that attention which raised the qualities of the one necessitated a corresponding change in the other.

THE DEFENCE OF COASTS.—We noticed, two weeks ago, an article by Captain GRIVEL in the *Revue Contemporaine*, entitled "*Le Guerre des Cotes.*" The article is continued in a subsequent number of the same publication, and especial attention is given to the subject of the defence of coasts. After remarking on the excellence of earth-works for the defence of coasts, and the ease with which they can be constructing such works by facilities of iron-cased gunboats, Captain GRIVEL says that the large iron-clads, built with a view to encagement between forts in the open sea, may sometimes contribute to the defence of coasts in deep roadsteads of sufficient extent to allow of their manœuvring easily if engaged with Admiral LARDNOUSE'S powerful spur. Floating batteries, drawing but a few feet of water, but mounted with powerful artillery, are also stated to be available in the defence of ports, acting like squares of infantry in the field-tactics of former days. The old vessels which now encumber the ports, may be utilized as floating batteries, and made to do service as the defence of ports, if cut down to the lowest tier, and a projection of iron plates added to the sides of the ship. They may also be armed with spurs, and driven, at a small risk, against the enemy's vessels. Every military port, according to the writer, should be provided with boarding-rams, for the spur, he thinks, will soon rival the cannon, and become the great specific of coast defence. Rams need hardly be armed with guns, but should be covered with iron armor all over, fast-goers, and easy to work. They must draw but little water, and be able to carry within a small space. Ready for any night to make vigorous sallies, chained together at the entrance of a port, these rams will form a barrier which it will require a small fleet to break down. They may occasionally be rendered more formidable by a turret armed, with a heavy gun. In case of their springing a leak, catching fire, or any other serious damage, they must be able to run into some safe creek or river whither the enemy cannot follow them. Captain GRIVEL then passes to gunboats, which, in his opinion, are not large enough to be useful on land. They may throw themselves into skirmishing order, watch the enemy from a distance, and when he is in the act of firing a large vessels; they offer but an uncertain target to the guns of a ship, and can take refuge in any small port or creek, and be approximately safe. Among the enemy's merchant shipping or breaking a blockade.

ARMY GAZETTE.

NOTICE TO DELINQUENTS.

The following officers, having been reported at the headquarters of the Army for absence without leave, are hereby notified that they will stand dismissed from the service, if they do not report themselves within thirty days from February 25, 1864, they appear before the Military Commission in session at Washington, of which Major-General DAVID HUNTER, United States Volunteers, is President, and make satisfactory defence to the charges preferred against them:

Absence without proper authority.

First Lieutenant William G. Ashton, company G, 150th Pennsylvania volunteers.

First Lieutenant Andrew J. Bingham, company G, 128th Ohio volunteers.

Lieutenant Gustave Schnef, 128th New York volunteers.

Surgeon William H. Bell, 1st Rhode Island volunteers.

Second Lieutenant George W. Moore, company O, 118 Pennsylvania volunteers.

Captain William T. Wiggin, company C, 40th New York volunteers.

Second Lieutenant William Tisdal, company H, 48th New York volunteers.

First Lieutenant L. Herlek, 9th New York cavalry.

Captain F. F. Bryant, 2d New York cavalry.

First Lieutenant D. B. McKenzie, 8th New York cavalry.

Second Lieutenant Thomas Hall, 10th Illinois cavalry.

Second Lieutenant O. W. Cockey, 1st Maryland volunteers.

Second Lieutenant Wm. C. Adams, 8th Maryland volunteers.

Captain D. H. Brown, 1st Maryland cavalry, Potomac.

Captain Joseph C. Smith, 10th Illinois cavalry.

Captain J. J. Hall, 1st Maryland cavalry, Potomac.

Second Lieutenant G. A. Bruce, 10th Illinois cavalry.

Captain Lyman Richardson, 1st Nebraska cavalry.

Lieutenant Henry Clayton, 38th Iowa volunteers.

First Lieutenant G. E. Brown, 109th New York volunteers.

Second Lieutenant James J. Glynn, 175th New York volunteers.

Absence without leave.

Captain Daniel H. Connor, company A, 24 regiment infantry, Pennsylvania reserves.

Absence without leave.

First Lieutenant R. M. Cross, 20th Massachusetts volunteers.

Chaplain W. Olwen, 46th Pennsylvania volunteers.

First Lieutenant Samuel Haynes, 45th Pennsylvania volunteers.

First Lieutenant D. D. Seely, 45th Pennsylvania volunteers.

First Lieutenant R. F. Coates, 103d Pennsylvania volunteers.

First Lieutenant W. G. Ashton, 150th Pennsylvania volunteers.

Assistant Surgeon Absalom Moss, 100th Pennsylvania volunteers.

TO BE RECOMMENDED FOR DISMISSAL.

Captain Sr. M. Dunlap, Assistant Quartermaster of volunteers, having been reported at headquarters of the Army for failing to report to Cincinnati, Ohio, as ordered, is hereby notified that he will be recommended for dismissal from the service of the United States, unless within three days from March 2, 1864, he reports himself to the Military Commission in session at Washington, of which Brigadier-General HOLDEN is President, and makes satisfactory defence to the charges against him.

EXEMPT FROM AFFEARING.

Captain Edward Treacy, 2d United States cavalry, having been reported at the headquarters of the Army as failing to report at Cincinnati, Ohio, as ordered, for which he was published officially February 13th, 1864, is hereby notified that he is relieved from appearing before the commission in session in Washington, of which Brigadier-General HOLDEN is President, subsequently explanation having been made in his case to this effect.

HONORABLE DISCHARGE FOR DELINQUENCY.

TREASURY DEPARTMENT,
SECOND COMPTROLLER'S OFFICE,
February 8, 1864.

SIR: I have respectfully to state, that from information received from the Third Auditor, it appears that the following officers named in the annexed list have been erroneously reported to this office as delinquent in the rendition of their accounts for the months set opposite their names.

With great respect, your obedient servant,
J. M. BROADHEAD,
Comptroller.

HON. SECRETARY OF WAR.

Captain R. P. Ford, Texas, July, August, 1863.

Lieutenant J. H. Singleton, Texas, July, August, 1863.

Lieutenant Wm. Hall, Texas, July, 1863.

Lieutenant H. Daley, Texas, July, 1863.

Lieutenant J. R. Wood, Texas, July, 1863.

Lieutenant A. R. Kennedy, Texas, July, August, September, 1863.

TREASURY DEPARTMENT,
SECOND COMPTROLLER'S OFFICE,
February 8, 1864.

SIR: I have respectfully to state, that from information received from the Third Auditor, it appears that the officers named in the annexed list have been erroneously reported to this office as delinquent in the rendition of their accounts for the months set opposite their names.

With great respect, your obedient servant,
J. M. BROADHEAD,
Comptroller.

HON. SECRETARY OF WAR.

Lieutenant-Colonel R. McCleary, June, July, August, September, October, 1863.

Lieutenant F. M. Sanders, June, July, August, September, October, 1863.

Lieutenant W. H. Gill, June, July, August, September, October, 1863.

Lieutenant Frederick O. Ogden, September, 1863.

Captain Lyman Bissell, June, July, August, 1863.

Captain A. C. Quigley, June, August, September, October, 1863.

Captain C. Hopkins, July, August, 1863.

Captain D. W. Evans, June, July, August, September, 1863.

Captain Seneth F. Low, June, July, August, September, 1863.

Assistant Surgeon Augustus Thomas, 1st Connecticut heavy, 1863.

Captain Robert Gunkin, September, 1863.

Lieutenant Joseph Bowen, June, July, August, September, October, 1863.

Sergeant Jas. Bulkley, (Co.), June, July, 1863.

Assistant Surgeon Gordon, June, July, August, September, October, November, 1863.

Lieutenant W. Tucker, June, August, September, October, 1863.

Lieutenant R. W. Lawrence, November, 1863.

Captain W. H. Hall, June, July, August, 1863.

Captain J. E. McLeish, September, 1863.

Captain Lewis James Peters, June, July, August, 1863.

Captain W. O. Rankin, October, 1863.

Lieutenant J. W. Hall, June, July, August, 1863.

Captain E. T. Reed, October, 1863.

Captain J. F. Bennett, August, September, October, 1863.

Captain M. C. Garber, June, July, August, September, October, November, 1863.

DISMISSAL.

For the week ending February 20, 1864.

Lieutenant-Colonel Wells De Hass, 7th Ohio Volunteers, to date December 1, 1863, for absence without proper authority.

Captain John Mann, 34th Ohio volunteers, to date February 15, 1864, for desertion.

Assistant Surgeon A. L. Williams, 9th Ohio volunteers, to date February 15, 1864.

Assistant Surgeon Jonathan E. Davis, 21st Michigan volunteers; cited.

Assistant Surgeon H. S. Taft, 16th Ohio volunteers, to date February 15, 1864, for absence without leave. Dismissal has been published officially and failed to appear before the commission.

First Lieutenant James Wesley Jones, 1st Kansas, to date February 15, 1864, for drunkenness.

First Lieutenant Wm. Ferguson, 124th Illinois volunteers, to date January 26, 1864, for absence without proper authority, having been published officially and failed to appear before the commission.

First Lieutenant W. D. Hubbell, 1st Pennsylvania reserves, to date February 15, 1864, for neglecting to report to his regiment, having been without authority, and to pass the guard with a citizen's pass. Second Lieutenant Hiram Dorman, 124th Illinois volunteers, to date February 17, 1864, with loss of all pay and allowances, for deserting his regiment.

Second Lieutenant Wm. Hamilton, 124th Illinois volunteers, to date February 15, 1864, for drunkenness and disgraceful conduct.

Second Lieutenant Edward Bell, 124th Regiment Invalid corps, to date February 15, 1864, for intemperance.

DISMISSAL CONTINUED.

The order of dismissal published in the list issued in the following case has been confirmed:

Captain George G. Morgan, 11th New Hampshire volunteers, to date April 10, 1863, for resigned regiment on the eve of battle, having been twice previously reprimanded for the same offence.

DISMISSALS REVOKED.

The orders of dismissal in the following cases have been revoked:

Captain Theodore Smith, Assistant Quartermaster of volunteers.

Captain John Coates, 1st U. S. cavalry, dismissed he is honorably discharged as of the date of dismissal.

SENTENCES BY COURT-MARTIAL.

First Lieutenant Charles Wilson, 1st Connecticut Vols., to be cashiered for the service for drunkenness on duty, conduct unbecoming an officer and a gentleman, and disobedience of orders. Sentence approved and confirmed by Major-General Dix, commanding the Department of the East.

Captain Orlando C. Farquhar, 123d Ohio Vols., to be dishonorably discharged the service of the United States, and forever disqualified for holding any office in the militia or military service of the United States, and to forfeit all pay and allowances, and to be imprisoned for the period of one month at such place as the proper authority may direct, for conduct prejudicial to good order and military discipline.

NAVY GAZETTE.

REGULAR NAVAL SERVICE.

ORDERED.

Acting Second Assistant Engineer James H. Morrison, to the *Juba*.
Paymaster W. A. Ingersoll, to temporary duty in the Norfolk Navy Yard.

Hall, Wm. H. Brown, Acting Assistant Engineers Aaron B. Armstrong, Richard Irwin and Washington Tuttle; Acting Assistant Paymasters Francis Le Vely Teale, John Hawkins and J. M. Marnhan; Acting Third Assistant Engineers Frederick O. Wentworth, Frank Royce and Wesley Rogers, of the Mississippi Squadron.

Conclusion of General McClellan's Report, from page 447 of Supplement.

every field were cut, and the enemy's position made more than a single corps accomplished the object of the fighting, and, by securing to the river by Wilcox's Landing, left to the army a retreat and a secure victory.

The army of the Potomac was first reduced by the withdrawal from my command of the division of General Blenker, which was ordered to the Mountain Department, commanded by Fremont. We had scarcely landed on the Peninsula when it was further reduced by a dispatch requiring me to detach General Gorman's brigade to Newport News, no matter which I had expected to take two thousand men from that point to the front. Subsequently, General Franklin's division, then stationed at Yorktown, was received the news of the withdrawal of General McDowell's corps, and the defeat of General Banks. This compelled the withdrawal of the original plan of the campaign. About one third of my entire army then remained on the line of the Potomac, and the enemy, in length rather than a brigade was then taken from me. Instead of a rapid advance which would have left Richmond in our rear, and insured its evacuation, it was only left to besiege Yorktown. That siege was successfully and expeditiously conducted, and resulted in the capture of a large force of the enemy, and the possession of the strongest line of defense I ever saw, except that which covered Washington, and guarded by an army larger than our entire force. The enemy left us no choice but to follow up the brave men who compelled my command. Relying still on the support which the vast power of our steamboat fleet would give the army, and on the success which seemed to insure it, we pressed forward. Two weather was strong against us, and the roads were in the worst possible condition, but we must move; the Confederacy rose to a higher stage than had been known for years from the Chickahominy to the James river, and on the second, and the right wing extended to effect a junction with re-enforcements which were then approaching by land, and the arrival of which was the complete success of the campaign seemed clear. The battles of the 31st of May and 1st of June, and the victory which we won on the first corps, with the aid of which, had it come, we should then have been on the enemy's capital, and the success of the battle of Fair Oaks could not be more, under such overwhelming disappointment, than the battle of Seven Pines. Again we fell back to the James river and had assurance when they landed back, again and again, the vastly superior numbers of the army of the Potomac, and again accomplish the object which that seemed to have been expected of them. But one course was left to the army, and that was to change its base of operations to a better base—one of the most hazardous movements in war. The army of the Potomac, with the aid of the navy, made the change in safety of route, to its hands, was equal to the occasion. The seven days are memorable in the annals of war, and the army of the Potomac and those of the Union and constitution fought an extraordinary enemy by day and night, through swamps, marshes and thickets, and by the end of the battle, closing the terrible series of conflicts with the ever-memorable victory of Malvern Hill, secured the safety of the army transferred, the entire eastern army of the confederacy, and thus rescued for them the capital of the nation. The army of the Potomac was now on the banks of the James. Richmond was still within our grasp, and the enemy's army was defeated and demoralized. Reinforcements were necessary, and the highest but vitals contingent events proved me wise, provided in Washington. Reinforcements were to assume the offensive, and the army of the Potomac was to be withdrawn from it, than the army of the Potomac for the desire of the Government, and the army of the Potomac was withdrawn from the Peninsula. I am sure I am proud that I was ordered to the command of the troops for the defence of Washington, and that I was able, by the exercise of great skill, assistance, and pain, and suffering of the war, but not but the confidence of the army, to withdraw it from the Peninsula. I am proud of the fifteen days' struggle, and courage. I feel there are Maryland, Pennsylvania and Washington, and the army of the Potomac, and the army of the enemy on the rugged height of South Mountain, pursued him to the Potomac, and the army of the enemy had been broken and disappointed, across the Potomac into Virginia.

The army had need of rest. After the terrible experiences of battles and marches, with scarcely an interval of repose since they had gone through them, they were now leaving the Peninsula, the scene of Washington; the defeat in Virginia; the victory at South Mountain, and again at Antietam, it was not surprising that they were in a very degree destitute of the absolute necessaries to efficiency. Shoes were worn out, blankets were lost; clothing was in rags; in short, the army was unfit for active service, and no interval for rest and refreshment was necessary. When the army proceeded regular routine to bind the army across the river, renovated, refreshed, in good spirits and discipline, and prepared for the fighting to a position where from condition of decisive victory, when, in the midst of the enemy's country, it was necessary to connect with the army, I was removed from the command.

I am devoted to the army, and that my last campaign with the army was crowned with a victory which saved the nation from the greatest peril in its history, and by which I have not accomplished the object if, by this report, the army of the Potomac is not placed high on the list of the armies of the world. In short, I desire to do justice to which it belongs. Always ready for battle, always keen, steadfast in its confidence in its leader, it is with the army of the Potomac ever have come to attribute its want of success, under myself, or under other commanders, to the want of support, and to the failure to fulfill public duty of American soldiers.

I have the honor to urge upon my position of that army, from the commanding general to the private, my lack of devotion to the service of the United States, to the Government, and to the Union of the States and the Union. They have proved their fealty in much sorrow, suffering, danger, through the valley of death. They have proved their fealty in much sorrow, suffering, danger, through the valley of death. They have proved their fealty in much sorrow, suffering, danger, through the valley of death

MAJOR-GENERAL ROSECRANS closed a recent speech to the Missouri Legislature by saying, "I am no prophet and therefore do not predict as to any conclusion; but I take great pleasure in saying that I have a profound conviction that the struggle will be concluded soon, that the conflict will be over, that we shall have peace, that we shall have national security and a free republican government in the future, and nothing that may now threaten it. I think the days are now brighter than they ever have been before. We have only to stand permitting a single effort, to prepare for another struggle, and of course in that portion of my duty I shall be willing to assist you, but in all other respects you may count upon me as one of those who are desirous of seeing around the ends which I have thus explained; and I hope and trust we may all live to enjoy the benefits of that course and of it precisely succeed."

THE Commission, consisting of Major-General HITCHCOCK, Brigadier-General CRAWFORD, and Major HALPINE, which has been revising the articles of War, have completed their labors and made a report to the Secretary of War. This report has been referred to the Judge-Advocate-General, and will soon be laid before Congress.

DIED.

LINEE—Killed at the battle of Moore Creek, East Tenn., December 28th, 1863, HARVEY B. LINEE, First Lieutenant, Company I, 1st and Acting Adjutant 25th Pennsylvania (Anderson's) Cavalry.

PROPOSALS FOR MATERIALS FOR THE NAVY.

NAVY DEPARTMENT,
BUREAU OF STEAM ENGINEERING,
WASHINGTON, D. C., February 16, 1864.

SEALED PROPOSALS will be received at this office until the first day of March next, at which time the opening will be commenced.

For the several articles required for the steam machinery of the Navy," that they may be distinguished from other descriptions, and described in the specifications of the Bureau of Engineering.

The materials and articles embraced by the classes named are those which are usually kept in stock by manufacturers, and which will be furnished to such dealers to offer, on application to the Bureau of Engineering, Navy Department, Washington, or navy agent nearest thereto, and those of all the yards upon the Atlantic coast, and the Gulf of Mexico, and the Mississippi, for the convenience of dealers in each, such classes only will be required to be delivered at the yard to which the bid may be made. Bidders will be required to state in their proposals the schedule or classes of their own yards, leave a copy of the specifications with the navy agent, and ascertain whether that which may be judged whether it will be desirable to make bids for the whole of the class at any one yard, or for any one or more articles of the class, and to state the address of an American manufactory.

Bids will be made for the whole of the class at any one yard upon one of the printed schedules, or in strict conformity therewith, and will be addressed to the undersigned.

Upon application to the Bureau, or to the superintendent of any navy yard, a schedule will be furnished to any bidder desiring it, which will specify the quantity required at the respective navy yards.

The contracts will bear date the day the notification is given that the bid has been accepted.

Supplies in the full amount will be required to ships the succeeding month, and thereafter as called for. The articles will be delivered, free of charge, at the respective navy yards or navy agent. As additional securities, twenty per centum will be withheld from the payments on the first bill after each tract shall have been completed; and eighty per centum of the whole amount contracted for will be paid monthly on the first succeeding month, will be paid by the navy agents at the points where the articles are delivered, on the certificate of the inspecting officer that the articles have been received, and that they are such as have been passed by the secretary of the Treasury.

Bidders are requested to examine carefully all the respective navy yards:

KITTERY, MAINE.

Published and for sale by the single copy or dozen, wholesale and retail, by
T. B. PETERSON & BROTHERS,
306 Chestnut-st., Philadelphia.
Copies of any of the above will be sent to any one, by mail, postage, on remitting the price of ones wanted to us.

PROPOSALS FOR RAISING WRECKS AT NORFOLK, VA., AND IN THE VICINITY.
NAVY DEPARTMENT, February 4, 1864.
PROPOSALS will be received at the Navy Department until the 1st day of March, 1864, for raising or wrecking and removing the materials, and delivering the same at the Navy Yard, Gosport, Va., the wrecks of the following ships, viz:
Frigates Cumberland and Congress, at Newport News, Hampton Roads, Navy Yard being inland.
The small steamer Whitehall, at Old Point.
Frigates Roanoke and Columbia, and Sloop-of-sloths ships Pennsylvania, Delaware and Columbia, in the vicinity of the Navy Yard.
Bidders for this contract will take into consideration the difficulties attending the raising of large vessels, and whatever may be on board of her, either public or private property, will be delivered at the Navy Yard, Gosport, Va., or at any other convenient place which the Government may designate, without any charge. Ammunition then may be obtained necessary to raise the wrecks.
It will be required by the Government that the contractor commence as soon as possible after the 1st day of February, and not to engage or commence on any other work until the Government is free from contract, or that work is completed.
The Government will also claim the right of designating the order in which, after the contract, the wrecks are to be raised, also to direct the manner the wreck shall be lifted and secured.
No sale or appraisement can be claimed by the contractors on any wreck until all the wrecks named above have been removed, and duly received by the commandant, naval officer, or authority of the Department.
No wreck will be considered removed while any portion of keel or floor timbers remain.
All the vessels, as well as fragments of timber and other materials (which may be the result of blasting), must be disposed of by the Navy Yard, and at such places as the commandant may designate. And such property, after it has been received by the commandant, shall be considered in charge of the United States Government, and subject to the orders of the officers or officials of the contractor to be made.
All the vessels and materials during the wrecks must be furnished at the expense of the contractors.
Bidders must state the price per ton for raising or wrecking and delivering each vessel, also for wrecking, the vessel remaining in the water, and the expense to be approximated by the Department, and pay a deposit proportionate to the magnitude of the vessels or any part, as the Department may require.
The Navy Department reserves the right of rejecting any proposition that the contract will be executed if awarded. The Government reserves the right to set aside or purchase who have not the proper means provided for carrying out the work of handling the contract if the work is not executed in due proportion to the time fixed for completing the work, or proposals must also state the time required to do the work.
Proposals will be sealed, and endorsed "Proposals for raising wrecks at Norfolk," &c., so as to prevent them being opened with other letters.

SAMUEL V. NILES,
(Late of the General Land Office)
MILITARY, NAVAL, AND GENERAL AGENCY,
(Established in 1857.)
Office and Residence, 202 14-st. bet. 5th & 6th av., WASHINGTON, D. C.
Having had the exclusive charge of the "Resolution, Act of May 7 1862, Military Bounty Land Warrant Agency Land office, for several years, and being familiar with the business of the various bureaus of the War Department and of the Bureau of the "Commissioner of Pensions," will give prompt attention to the duties of Attorney and Solicitor in the adjustment and collection of
DEMANDS AND CLAIMS AGAINST THE GOVERNMENT.
In all departments, especially claims growing out of the present war.
Particular attention given to Pensions due to Officers, Soldiers, Seamen, Marines, and to the widows, children, and other heirs of those who have been killed, or died from wounds and sickness contracted in the service.
Claims prosecuted for property captured, for purchases of Contractors, Quartermasters, and for services rendered, &c., and for horses lost, killed, or killed in the service, and for the Bounty, Arrears of Pay, and Back Pay due Officers, Soldiers, Seamen and Seamen of the United States, or their heirs at law.
Any business from the General Land Office, Indian Office, or other Departments, Courts, or Claims Commissions, requiring the services of an Attorney, will meet with prompt attention.

WASHINGTON CITY,
A. R. POTTS, Proprietor.

REVERE HOUSE,
BOWDOIN SQUARE,
and
TREMONT HOUSE,
cor. of Tremont and Beacon streets, Boston.
The most centrally located Hotels in the City of Boston in the city. These hotels are the resorts of the officers of the Army and Navy when visiting Boston, and are the most thoroughfare, and for luxurious comfort and sumptuousness they are not surpassed in the country. The Revere Stevens having retired from active business, they are now under the superintendence of
BINGHAM, WHEELEY & CO.

A STOR HOUSE.
STETSON & CO.,
PROPRIETORS,
Broadway, New York.

TAYLOR'S SALOON.
This elegant establishment, at the corner of Broadway and Franklin streets, is one of the curiosities of New York, and visitors to the city, who have not visited it, have missed one of the most curious places of interest. Combining the refreshments of an eating-house with the delicacies of a rare treat. It has very appropriately been called the "Delmonico" of Broadway. Here, where a sense of delicacy has the greatest epicure could desire, which is not to be found there, it is possible to obtain it.

Between Third and Fourth Streets,
PHILADELPHIA.
The best business man's house in the city, being in the immediate vicinity of the principal Banking Houses, Custom House, Post Office, and the Building business.
HENRY NEIL.

A BOOK FOR EVERY SOLDIER AND MARINE.
WELLS' ARMY AND NAVY HANDY BOOK;
Or, Every Soldier and Marine His own Army Doctor.
Read what the NEW YORK DISPATCH says of the work:
"This work is precisely what it purports to be, a 'handy book' for the soldier, the marine and the sailor. It is compiled from the most authentic sources, and is therefore reliable. There is no possible subject that can arise in the service of the one to whom it is addressed, by referring to its pages, cannot obtain the desired information. It gives rules of health and comfort, prepared with great care from the large experience of the Sanitary Commission, and numerous other instructions for the guidance of the soldier when on the battle field, or in camp. It tells how to bury the dead and tells of the last shanks who would otherwise be buried alive. It tells how to restore the apparently drowned to life when they are not. It tells how to restore the apparently drowned to life when they are not. It tells how to restore the apparently drowned to life when they are not

DYSPEPSIA, AND
DISEASES RESULTING FROM
DISORDERS OF THE LIVER
AND DIGESTIVE ORGANS,
ARE CURED BY
HOOFLAND'S GERMAN BITTERS,
THE GREAT STRENGTHENING
TONIC.
These Bitters have performed more Cures
GIVE BETTER SATISFACTION
THAN ANY OTHER MEDICINE!
How many people to vouch for them!
Than any other article in the market,
As they are to contradict this assertion,
AND WILL, A FEW DOLLARS
buy more than a pint of the Bitters, which will be forwarded by express, on receipt of order, that is not genuine.
HOOFLAND'S GERMAN BITTERS
Will cure every case of
CHRONIC OR NERVOUS DEBILITY, DISEASES OF THE
KIDNEYS, AND DISEASES ARISING FROM
A DISORDERED STOMACH.
Observe the following Symptoms resulting from Disorder of the Digestive Organs:
Constipation, Inward Piles, Fulness of Blood to the Head, Acidity of the Stomach, Nausea, Heartburn, Disgust for Food, Fulness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried or Difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a Lying Posture, Dimness of Vision, Dots or Webs before the Sight, Fever and Dull Pain in the Head, Deficiency of Perspiration, Yellowness of the Skin and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil, and great Depression of Spirits.
Remember, that these Bitters are not alcoholic; contain no Rum or Whiskey, and can't make Drunkards; but are the best Tonic in the world.
READ WHO SAYS SO!
From the Rev. Levi G. Beck, Pastor of the Baptist Church, Pendleton, S. C., formerly of the North Baptist Church, Philadelphia:
PENDLETON, S. C., Dec. 1, 1863.
Dr. C. M. JACKSON:
Have known Hoofland's German Bitters favorably for a number of years. I have used them in my own family, and have been so pleased with their effects that I was induced to recommend them to many others, and now find they have operated in a similar manner to my own case. I take great pleasure in thus publicly proclaiming this fact, and calling the attention of those afflicted with the diseases for which they are intended to benefit, and it is not a rum drink."
Yours truly,
LEVI G. BECK.
From the Rev. J. Newton Brown, D. D., Editor of the *Encyclopedia of Religious Knowledge*, and Christian Chronicle, Philadelphia:
Although not disposed to favor or recommend Patent Medicines in general, through distrust of their Superlatives and efficacy, I yet deem it an sufficient reason why a man may not testify to the benefits he believes himself to have received from them, and a ample grounds, in the hope that he may thus contribute to the benefit of others.
I do this the more readily in regard to Hoofland's German Bitters, prepared by Dr. C. M. Jackson, of this city, because I was prejudiced against them for many years, under the impression that they were chiefly an alcoholic mixture. I was indebted to my friend, Robert Shoemaker, Esq., for the removal of this prejudice by proper tests, and for reasoning me to try them when suffering from great and long continued debility. The use of a few bottles of these Bitters at the beginning of the present year, was followed by a partial relief, and more than the degree of bodily and mental vigor which I had so fully for several months before, and had almost despaired of regaining. I therefore thank God and my friend for directing me to the use of them.
J. NEWTON BROWN.
PRICES.
Large Size (holding nearly double quantity.)
$1.00 per Bottle—half doz. $5 00
Small Size—To cases per Bottle—half doz. $4 00
BEWARE OF COUNTERFEITS.

CAUTION FROM THE AMERICAN WATCH COMPANY.
It having come to our knowledge that imitations of the American Watch have been put upon the market in great numbers, calculated, by their utter worthlessness, to injure the reputation of our genuine productions, and to rob our own interests and the public from imposition, we again publish the trade marks by which alone the public may inevitably be known.
We manufacture four styles of Watches—
The FIRST IN THE MARKET,
"AMERICAN WATCH CO., Waltham, Mass." engraved on the inside plate.
The second has the name
"AMERICAN WATCH CO., Waltham, Mass." engraved on the inside plate.
The third has the name "American Watch Co." printed on the dial, and are warranted in every particular.
The fourth has the name
"AMERICAN WATCH CO., Boston, Mass." engraved on the inside plate, and is not named on the dial.
All the above described Watches are made of various sizes, and are sold in gold or silver cases, as may be ordered.
It is hardly possible for us to accurately describe the numerous imitations to which we have to refer. They are usually inscribed with names so nearly approaching our own as to require the observation of the unaccustomed buyer. Some are represented as made by "American Watch Co. of Boston," and by such company existing. Some are named the "Monitor Watch," the "Home Watch," "Fourth or Vest, Size or style, usually known as the "Soldier's Watch;" others are called "The Appleton Watch," others are sold as "factory" instead of our A. T. Bowles, and in many other ways are the names and numbers of our genuine watches misrepresented. We therefore produce one of the American Watch Company.
The American Watch Co. of Boston will protect them from gross imposition.
A. T. BOWLES, Agent.
D. APPLETON,
Agents for the American Watch Company,
172 Broadway, N. Y.

THE DERINGER PISTOL.
TIFFANY & CO.,
550 AND 552 BROADWAY, NEW YORK,
SOLE AGENTS FOR NEW YORK AND THE AMERICAN STATES.
By a recent arrangement with Mr. DERINGER, the undersigned have undertaken the exclusive agency for New York and New England, of the well-known pocket pistol which is to the inventor and only manufacturer. They propose keeping constantly in store a full assortment, ranging all sizes, and the varieties of this unique pistol, and will be at all times able to fill Trade Orders with promptness and satisfactory prices. The arrangement has become necessary on the part of Mr. Deringer, in order to protect the public from spurious articles assuming to be his make, and from purchasers only, whether at retail, will be safe who appreciate this fact.

SOLDIERS! FOR YOUR INSTRUC-
TION READ THE NEW RELIGIOUS BOOKS.

HEAVEN OUR HOME.

We have no Saviour but Jesus, and no Home but Heaven.

MEET FOR HEAVEN.

A State of Grace upon Earth the only preparation for a State of Glory in Heaven.

"The author in 'Heaven our Home' portrays a Social Heaven, where scattered families meet at last in loving reconciliation, and the geometry of a Resurrection, to spend a never-ending eternity of peace and love. In 'Meet for Heaven' the individual state of the children of God in this world is unfolded, and more especially the state of probation which is set apart for them on earth to fit and prepare loving mortals for the society of the blest."

These very popular books, although recently published, are attracting universal attention by the originality of conception they display, and the truth and force especially at this time, when there is so much mourning and affliction in our land.

Price of each book, handsomely bound in cloth, $1 00. Sent by mail, post-paid.

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.
SUPPLEMENT

VOL. I.—NO. 27. NEW YORK, SATURDAY, FEBRUARY 27, 1864. FIVE DOLLARS PER YEAR.

REPORT
OF
MAJOR-GENERAL GEORGE B. McCLELLAN,
upon the organization of the Army of the Potomac, and its campaigns in Virginia and Maryland, from

July 26, 1861, to November 7, 1862,

together with extracts from the copy transmitted by the Secretary of War, to the House of Representatives; with the addition of a copious Index.

(*Concluded from Supplement to Number 26*).

settled it to ask a prominent part in this severely contested battle. It therefore affords me great satisfaction to withdraw the expression contained in my first dispatch, and heartily give my hearty concurrence to the opinion of the division commander, "that those parts of his command which behaved cheerfully were exceptional cases."

On the 31st, when the battle of Fair Oaks commenced, we had two of our strongest brigades, and the only ones whose leaders had the necessary aggressive and made them almost impassable, so that it was only by the greatest efforts that General Sumner pressed his troops up and partially united in that hard-fought engagement. The bridges became totally useless after this engagement had passed, and others on a more favorable site were constructed.

On my way to headquarters, after the battle of Fair Oaks, I attempted to cross the bridges where General Sumner had taken over his corps on the day previous. At the time General Sumner crossed this was the only available bridge above Bottom's bridge. I found the approach from the right bank for some distance quite submerged in the depth of several feet, and on reaching the place where the bridge had been, I found a gorge part of it carried away, as that I could not get to it. I therefore went over and ordered to send him to Bottom's bridge, six miles below, as the only practicable crossing.

The approaches to New and Nicholsville bridges were also overflowed, and the latter, which was the only one left standing, was the one established upon commanding heights on the opposite side. These batteries were unprotected by strong forts—it is true, a long entrenched line on the right in front, which would have made it necessary, even had the opportunity offered, to have carried it by assault. Under such a contingency battle, with but little prospect of success, before a passage could have been effected.

The only available means, therefore, of crossing the river was at the White Oak ford, and by the bridge at Alexander's. After the battle, we so much as the troops from Richmond's left, and the whole of the right, by way of Bottom's bridge, Alexander's bridge, and thence over the Nicholsville and Richmond. In other words, the line of attack was two wings of the army in time to make a vigorous pursuit of the enemy, with the exception of the brigade of Sedgwick, which had crossed by the fords in front from the field of battle, in simply shaved, and was, I presume, never for a moment seriously questioned by any one who connected with the army of the Potomac. An advance, involving the operation of the two wings by the same Chickahominy, would have been exposed each to detail. Therefore I held the position already gained, and completed our crossing as rapidly as possible.

In the meantime the troops at Fair Oaks were directed to strengthen their position by a strong line of intrenchments, which protected them while the bridges were being built, gave security to the trains, liberated a large force, and secured a safer retreat in the event of disaster.

On the 3d of June I sent the following dispatch:

HEADQUARTERS ARMY OF THE POTOMAC,
"NEW BRIDGE, June 3, 1862—10.20 A. M.

"Our left is everywhere enforced considerably beyond the position it occupied before the battle. I am strong hopes that the Chickahominy will fall, and that we shall be able to cross on the 4th. We have had a terrible time with our communications—bridges and causeways, built with great labor, have been washed away by the sudden freshet, leaving us almost cut off from communication. All that human labor can do is being done to accomplish the passage of the river.

"Heavy rains report the portion of the railway in contact with the enemy's line as abandoned, as it would be serious if the enemy were aware of it. I do not yet know our loss; it has been very heavy; we still have the fighting men unexpended, but not unimpaired. I expect still more fighting before we reach Richmond.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, Secretary of War."

On the same day I received the following from the Secretary of War:

"WASHINGTON, June 3, 1862.

"Your telegram has been received, and we are greatly relieved at your success—and only so, but strengthened in the conviction that our courage is displayed in your troops. You have received, of course, the order assigning to you the command of the forces which are to march in place as your command the Disposable force of that department. The intention is that General McDowell will advance upon Richmond with such an force as he is disposed of, another large body of troops will be at your service.

"The last dispatch from Baltimore shows that the rebels are fleeing, and Jackson in force, from Carlisle. All interests are prospering in the Union, and full confidence is entertained of your brilliant and glorious success.

"EDWIN M. STANTON, *Secretary of War.*

"Major-General McCLELLAN."

On the 5th I received the following from the President:

"WASHINGTON, June 5, 1862.

"With these continuous rains, I am very anxious about the Chickahominy—does it rise in your rear, and crossing your line of communications. Please look to it.

"ABRAHAM LINCOLN, *President.*

"Major-General McCLELLAN."

To which I replied as follows:

"HEADQUARTERS ARMY OF THE POTOMAC,
"NEW BRIDGE, June 5, 1862.

"Your dispatch of 5 P. M. just received. As the Chickahominy has been almost the only obstacle in my way for several days, your inference may rest assured that it has not been overlooked. Every effort has been made to secure the bridges in the rear, and guards stationed to secure it. Nothing of importance, except that it is again raining.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"A. LINCOLN, *President*, Washington."

My views of the condition of our army on the 6th are explained in the following dispatch to the President:

"HEADQUARTERS ARMY OF THE POTOMAC,
"NEW BRIDGE, June 6, 1862.

"Terrible rain-storm during the night and morning—not yet over off. Chickahominy 9 miles; bridges in bad condition. Are still hard at work at them. I have taken every possible step to insure the security of the corps on the right bank, but I cannot re-enforce them here until my bridges are all safe, as my force is not sufficient to operate on both sides of the river, should the enemy attack in that direction, as they may probably attempt. I have to-day ordered the movement of Franklin's division, which probably crossed (8,000) five thousand. Yesterday all field artillery and cavalry, with the exception of one corps, was sent across. I expect that the rain will prevent any serious attack on the left bank. I am satisfied that the loss of the enemy was very considerably greater; they were terribly punished. I mention these facts here merely to show you that the army of the Potomac has had serious work to do, and that we should be glad of a little rest.

"You must make your calculations on the supposition that I have been severed from the beginning in asserting that the serious operations of the campaign would be on the south side of the Chickahominy.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"A. LINCOLN, *President.*"

And in the following to the Secretary of War, on the same day:

"HEADQUARTERS ARMY OF THE POTOMAC,
"NEW BRIDGE, June 6, 1862.

"Please inform me at once what re-enforcements, if any, I can count upon besides Fitz John Porter's, Morell's, and Sykes's, within the next three days, and when each regiment may be expected to arrive. It is of the utmost importance that I should know this at once. The losses in the battle of the 31st and 1st will amount to (7,500) seven thousand. Depend this as confidentially as you please.

"If I can have (5) five new regiments for Fort Monroe and the defenses of the Peninsula, I can bring Franklin's and all from there safely; can well dispose of four more new regiments on my communications. I can well dispose of (10) ten new regiments—(20) twenty-fifteen regiments among the old brigades in bringing them up to their original effective strength. Richmond is a question of time. The regular and volunteer batteries of artillery, as well as for the regular and volunteer regiments of infantry, will be needed. I do not know, but fear that I will no longer be regarded as an alarmist. I believe we have at present the best army in the world.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

Also in my dispatch to the Secretary of War, on the 6th:

"HEADQUARTERS ARMY OF THE POTOMAC,
"NEW BRIDGE, June 6, 1862.

"Almost most of the night; but now cleared, bright sun. Have been engaged in placing batteries in position, and getting others with several batteries on our bridge near this morning. Our communications are now in good order. Franklin's division will begin to cross to-day. The rain forces us to remain at both ends of the bridges, and to cross the troops as they arrive. Impossible for me to cross the troops on the other side, should the enemy attack in force, as I am compelled to do in order to secure the bridges. Will endeavor to send you a more full report to-day.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

On the 8th the Secretary telegraphed as follows:

"WASHINGTON, June 8, 1862—5.30 P. M.

"Your dispatch of 10 A. M. to-day is received. Your suggestion for an entire change of the line of operations from the Chickahominy to a line from the York river, probably as many as you want. The order to ship Franklin's division to Fort Monroe has been countermanded. It is now at Yorktown, and will be sent directly to the ford. Please advise me if this is what they may be sent directly to the ford. Please advise me if this is what you desire.

"EDWIN M. STANTON, *Secretary of War.*

"Major-General McCLELLAN."

On the 9th of June I telegraphed as follows:

"HEADQUARTERS ARMY OF THE POTOMAC, June 7, 1862—4.40 P. M.

"In reply to your dispatch of 2 P. M. to-day, I have the honor to inform you that Generals Porter and Morell have driven the enemy's entire batteries to the depth of three and four feet. I am pushing forward the bridges in spite of this. The enemy are massing and may try to destroy mine in water, to compromise them.

"The whole force I have now is perfect for, entirely impracticable for artillery, or even cavalry, except directly in the narrow roads, which renders my position extremely critical. Many of the rebel army certainly out of the question until we have more favorable weather.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

I could not be a perfect readiness to move forward and take Richmond the moment McDowell reaches here, and the ground will admit the passage of artillery. I am pushing forward my supplies, and make daily reconnoissance of the rebel position and secure in a very advantageous position.

On the 9th I received from the President a dispatch announcing the detachment of Shields's division from the army, and ordering pushing preparations for the movement of McDowell's corps overland to re-enforce me.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

On the 10th I received the following from the President:

"WASHINGTON, June 9, 1862.

"Major-General McCLELLAN:

"I am pushing forward as fast as possible the re-enforcements would be sent me in time for the advance on Richmond, I stated in the foregoing despatch. I am sorry to say that I am not able to do more than I then promised me; but I did not intend to be understood by this that no more than the forces therein mentioned would be sent. The following day's despatch.

"June 10, 1862—3.30 P. M.

"I have again information that Beauregard has arrived, and that more troops are coming to him. I think the force—perhaps more than—whatever—can be attached to this; but it is possible, and ought to be done.

"I am completely checked by the weather. The roads and fields are impassable for artillery, and the river is unfordable. The Chickahominy is in a dreadful state; we have another rain-storm on our hands.

"I shall attack as soon as the weather and ground will permit; but there is no object in attacking until I can move my artillery forces, for reason is altogether abnormal.

"I have, in my judgment, prisoners, to prepare for consideration the propriety of detaining largely from the force designed to strengthen this army. For it would seem that Richmond has now no large organized force in front for it would seem that Richmond has now no large organized force in front of him, while we have. If his entire force is to be thrown on this army with a, allow me to say that the movement of a heavy column from Hudson upon Atlanta. If all the can soon be done, it would better concentrate to military principles to strengthen this army. And even after the re-military principles to strengthen this army. And even after though the re-enforcements would not arrive in season to bear part in the battle before Richmond, the moral effect would be great, and they would probably relieve us from all further embarrassment.

"I am not to be distinctly understood that, whenever the weather permits, I will not attack with the force now under my command, although a larger force would enable me to gain much more decisive results.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"If General Porter returns via Washington, please converse with him as to the condition of things here.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

Our work upon the bridges continued to be pushed forward vigorously until the 26th, during which time it rained almost every day, and the exposure of the men caused much sickness.

On the 11th, the following was received from the Secretary of War:

"WASHINGTON, June 11, 1862.

"Your dispatch of these dates (7.30), returning, has been received. I am fully impressed with the difficulties mentioned, and which no art of war could avoid, but only mitigate by striving to be ahead not to render you every aid in the power of the Government. Your suggestions will be immediately communicated to General McDowell, with a request that he shall conform to them. At last advice his contemplated sending a column to operate with Mitchell against Chattanooga, and thence upon East Tennessee. Buell reports Kentucky and Tennessee to be in a condition to require only nominal military attention. Halleck says the main body of Beauregard's force is with him at Corinth. McCall's force was reported to you as ordered to Fredericksburg. It is not now so. It is intended to send the residue of McDowell's force also to join you as rapidly as possible.

"Fremont had a hard fight, day before yesterday, with Jackson's forces at Union church, and very severe loss on both sides. He claims the victory, but was busily handled. It is clear that a pretty strong force is opposed to him and Jackson for the purpose of detaining the forces here from you. I am urging, as fast as possible, the new levies.

"Everything, general, that can be done will be done without when my God is looking, and when his assistance is not invoked. We shall send to Fremont, Banks, and Shields, and wherever others may have their entire confidence, but we never feel, and never can long, say one more truly your friend, or more anxious to support you, or more grateful to you than we are for your success and glory and wish soon to be relieved by your arms.

"EDWIN M. STANTON, *Secretary of War.*

"Major-General G. B. McCLELLAN."

On the 12th and 13th General McCall's division arrived.

On the 25th of June two squadrons of the 5th United States cavalry, under command of Captain Royall, made a reconnoissance to Old Church, were attacked and overpowered by a force of the enemy's cavalry, numbering about three thousand men, with four guns. They pushed on towards our depots, but at some distance from our main body, and, finding themselves in the enemy's rear, determined to carry it by repossing the Chickahominy at Long Bridge. The burning of two schooners laden with forage, and the enemy's movements, made the destruction of some outlying stores, the kindling of several of the guard and the capture of a number of prisoners, some thirty horses, a Sibley tent, a battalion standard, and a little scout, were the precise results of this expedition.

On the 14th I sent the following dispatch to the President:

"HEADQUARTERS ARMY OF THE POTOMAC,
"CAMP LINCOLN, June 14, 1862—10 A. M.

"All quiet in every direction. The stampede of last night has passed off without disturbing anything. The men are in high spirits, and confident of the general practicable. I shall advance as soon as the bridges across the Chickahominy are completed, and the ground will permit. I think it would be better to have McDowell's force with me at once. I can use them more to advantage.

"I have not yet received your dispatch about McDowell and Shields's command, but will answer it as soon as I have had time to consider it completely under my control. I received a telegram from him repeating the order, and informing me that he was placed so as to join the Peninsula on his arrival.

"My request does not involve the proper spirit. Whatever troops come to me must be disposed of so as to be the most good. I do not feel that, in consenting to this change, as there is not a large force already, General McDowell should wish the general interests to be sacrificed for the purpose of increasing his command.

"If I cannot fully control all his troops, I must refer of them, but would prefer to have them with me while I have, and let others be responsible for the results.

"The President also thinks that he should not be allowed to interfere with me; but General Heck, and all other troops sent me, should be placed completely under my orders. I have no time to lose in writing, but in other way can they be of assistance to me. I therefore request that I may be left entirely free in this matter. Should I not be so, I must ask that my personal considerations to be entertained; you know that I have none.

"The rain has rendered the Chickahominy impassable for all but other sources, that the enemy are retreating, daily increasing in strength, and that we are losing our opportunity.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

On the 26th the following was received from the President:

"EXECUTIVE MANSION, June 26, 1862.

"Your accordance's dispatch of (1) eleven A. M., received, also that of (2) twelve M.

"I have no doubt that Jackson has been re-enforced from here. There is reason to believe that General W. S. Hodge has recently joined Lee's army, with a brigade or division from Charleston. Troops have been sent from Richmond to Gordonsville. There is not the slightest reason to suppose that the enemy intend to evacuate Richmond; he is daily re-enforcing it. The idea that the enemy is fleeing, and that we can make no nuisance casts many lives, yet I am inclined to feel my way, feel by foot, at least, before I can be sure that I can run. I am pressed, I by to recover right the offensive works, covering our position on the side of the Chickahominy, which he occupies. I am not willing to risk the inferiority of numbers, so that I may bring the greatest possible force against the enemy's weakest point, and thus prevent accidents of unforeseen disaster. I would be glad to have permission to try before the reinforcements from Fredericksburg arrive, but the overwhelming of military affairs throughout the whole country. In the meantime, I will not be inactive, but will do all I can to harass the enemy, and prevent the troops put under my command, to Virginia and elsewhere.

"GEO. B. McCLELLAN, *Major-General Commanding.*

"His Excellency A. LINCOLN, *President.*"

On the 27th I received the following:

"WASHINGTON, June 27, 1862—6 P. M.

"Your dispatch of yesterday, two (2) P. M., was received this morning. If it would not be too much exposure to you, and you could spare your force to send under your immediate command, I would be glad to have from there another corps organized and sent to me without delay. Under the present circumstances, as you say, you would be glad to give them. I would rather it should be by some than by telegraph, because of the better assurance of secrecy. As to the numbers and positions of the troops not under your command, in Virginia and elsewhere, even if I could be in with accuracy, which I cannot, I would rather not transmit either by telegraph or letter, because of the chances of its reaching the enemy. I would be very glad to talk with you, but you cannot leave your camp, and I cannot well leave here.

"A. LINCOLN, *President.*

"Major-General GEORGE B. McCLELLAN."

To which I sent the following reply:

"CAMP LINCOLN, June 28—1 P. M.

"I have the honor to acknowledge the receipt of your telegram of

I. P. M. yesterday. Under the circumstances, as stated in your dispatch, I presume it will be better not to issue a pass to Mr. Ould, unless the communication I desired to make.

C. D. MCCLELLAN, *Major-General Commanding.*

"His Excellency the President."

All the information I could obtain, previous to the 24th of June, regarding the movements of General Jackson, led to the belief that he was at Gordonsville, where he was receiving re-enforcements from Richmond via Lynchburg and Staunton; but what his purposes were I could not ascertain. On the 24th I received a dispatch, which I now find, but of no significance, was brought in by our scouts from the direction of Hanover Court-House. It was from Jackson, and was an exact duplicate, from Gordonsville to Richmond, of the dispatch sent at Front Royal, but finally conducted himself to be a decoy. From this dispatch I concluded, which has since been confirmed, that General Jackson's troops were then, as he said, moving to Fredericksburg, along the Virginia Central Railroad, to be in position to attack me on the 26th. I immediately dispatched two trusty scouts to proceed along the railroad and ascertain the truth of the statement, if they were unable, however, to get beyond Hanover Court-house, where they encountered the enemy's pickets, and returned with the report that they obtaining the desired information. On that day I sent the following dispatch:

"HEADQUARTERS ARMY OF THE POTOMAC, June 24, 1862—12 P. M.

"A trusty scout from Gordonsville reports that Jackson's whole force left that place on the 21st, via Charlottesville, for Fredericksburg, and that it was intended to attack my rear on the 26th. I would be glad to hear, at your earliest convenience, whether there is information you have as to the position and movements of Jackson, as well as the reasons from which your information is derived, that I may be the better compare it with what I have.

GEO. B. MCCLELLAN, *Major-General.*"

The following is his reply:

"WASHINGTON, June 25, 1862.

"We have no definite information of the movements or position of Jackson's force. General King yesterday reported a deserter's statement that Jackson's force was moving on Fredericksburg, and other reports place ten thousand rebels under Jackson, at Gordonsville; some reports place ten thousand rebels under Jackson, at Gordonsville; some reports place ten thousand rebels under Jackson, at Gordonsville; some at Charlottesville, purporting to be from deserters. Contrabands and Unionists yesterday reported rumors that Western Virginia was threatened; and Colonel Kelly, who is in command there, reports that a force where Fremont has his depots. The last telegram from Fremont confirms Jackson's movement. The last telegram from Fremont and contrabands are strong in advance at Luray; the people decline to give any definite information. Within the last few days, and since the above, the evidence is strong that for some purpose the enemy is concentrating forces at Jackson's movements are threatening, and that you are to meet the real point of attack. Neither McDowell, who is at Manassas, nor Banks and Fremont, who are in the valley, have any definite or any accurate knowledge of the subject. A letter transmitted to the Department yesterday, purporting to be from a deserter, and dated on the fourth (4th) instant, stated that the actual attack was designed for the next day, and that Richmond was to be left entirely defenseless. In this the report was to be entrusted that Jackson had gone to Richmond, in order to meet you. The letter does not state that he is to be in command. It is believed, however, that Jackson's real movement now is towards the southern side of Richmond, and that he will endeavor to form the communication from that point, to unite. I think, therefore, that while the warning of deserters and contrabands is entitled to weight, it could not safely be disregarded. I will transmit to you any further information on this subject that may be received.

EDWIN M. STANTON, *Secretary of War.*

"Major-General MCCLELLAN."

On the 25th, as I was not informed of the movement intended, an advance of our pickets line of the left was ordered, preparatory to a general forward movement.

Immediately in front of the most advanced redoubt on the Williamsburg road were large open fields; beyond these, at the edge of the timber, some five hundred yards, were the abatis and the enemy's rifle-pits. Further in advance, on the Richmond road, was the house of Mr. Williamson, and the railroad, and commanded by a redoubt and rifle-pits of the enemy.

It was decided to push our lines to the other side of these woods, in order to enable the artillery to command the enemy's rifle-pits. Major-General Heintzelman and Sumner in position to support the attack directed by a division on the Old Orchard road, and Hooker, General Kearney, by assisting that position in the rear.

Between 4 and 5 o'clock, on the morning of the 25th, the advance was begun by General Hobinzelman's corps. The enemy were found to be in force on all along the line, and contested our progress with great spirit. The object was obtained, however, and our object was accomplished. The troops engaged in this affair were those of Generals Hooker and Sickles, the brigades of Kearney, Berry, and Carr, and a part of Richardson's division of Sumner's corps, and a part of Richardson's division of Sumner's corps.

The casualties (not including those in Palmer's brigade, which has not been reported) were as follows: officers killed, 1; wounded, 14; missing, 1; enlisted men killed, 58; wounded, 347; missing, 31; total, 453.

The following telegrams were sent to the Secretary of War, during the day, from the field of operations:

"HEADQUARTERS, June 25, 1862—1:30 P. M.

"We have advanced our pickets on the Williamsburg road very successfully. Our men behaved very handsomely. Some firing still continues.

"G. B. MCCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON."

"HEADQUARTERS, June 25, 1862—3:15 P. M.

"The enemy are making a desperate effort to drive in our right. Kearney's and one-half of Hooker's are where I left them.

"I have this moment re-enforced Hooker's right with a brigade and a battery of artillery, and have ordered the whole of Sumner's corps to his support. Our men are behaving splendidly. The enemy are fighting with desperation. It is not a battle, however, but a series of battles, now in progress. Keyes, and then for all goes well. We hold every inch we gain.

"If we succeed, which we have undertaken, it will be a very important advantage gained. We have driven them far. The fighting is now in the woods. Some loss by General Hooker's division, which has behaved as usual—that is, most splendidly.

"On our right, further back, some of the enemy's batteries in the front.

"G. B. MCCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

"HEADQUARTERS, June 25, 1862—8 P. M.

"The affair is over, and we have gained a victory. It was a most terrible loss, notwithstanding the strong opposition. Our men behaved to all time; and the enemy, I believe, suffered severely. I am glad that Captain De Russey brought gallantly into action under very difficult circumstances. His conduct was worthy of the reputation he has in this place, and is now quiet.

"G. B. MCCLELLAN, *Major-General Commanding.*

"Hon. E. M. STANTON, *Secretary of War.*"

Also, on the same day, the following:

"HEADQUARTERS ARMY OF THE POTOMAC,

"June 25, 1862—8:30 P. M.

"I have just returned from the field, and find your dispatch in regard to Jackson.

"Several contrabands, just in, give information confirming the supposition that Jackson's advance is on my right rear. The whole force, under Jackson in person, is now, said one of the contrabands, in Richmond, yesterday.

"I believe to think that Jackson is about my right and rear. The rebel force is stated at two hundred thousand men, under Beauregard, Jackson and Smith, and Lee. I shall endeavor to maintain my position until the result of these reports to me. But this army will be compelled to fall back if the force in front is not driven back or captured.

"I regret my great inferiority in numbers, but feel that I am in no way responsible for it, as I have not failed to represent fully the necessity of re-enforcements, that this was the decisive point, and that all the available forces of the Government should be concentrated here. I will do all that a general can do with the splendid army I have the honor to command, and, if it is destroyed by overwhelming numbers, can at least die with it and share its fate. But if the result of the action which will probably ensue to-morrow or within a short time, is a disaster, the responsibility cannot be thrown on my shoulders; it must rest where it belongs.

"Since I commenced this I have received additional intelligence confirming the supposition in regard to Jackson's movements and forces given in the first. I shall probably be attacked to-morrow, and now go to the field to direct the movements of troops. I shall do so with a sad heart.

"I feel that there is no use in again asking for re-enforcements.

"G. B. MCCLELLAN, *Major-General.*

"Hon. EDWIN M. STANTON, *Secretary of War.*"

The report of the effect of the "secret service corps," herewith forwarded, from the 24th of June to the 2d of July, inclusive, is confirmed by the enemy, at the time of the evacuation of Yorktown, by news from Richmond, 100,000 men, under the command of Jackson, on the 26th of June, at about 10,000, and the specific information obtained regarding their organization surrounds the belief that the estimate did not exceed the actual strength. It will be observed that the evasions contained in the report of the 24th, and the dispatch of the 25th, to the Secretary of War, in relation to the movements of Jackson, including the forces of Jackson and Ewell, just arrived; and the battalion of artillery, recent troops; five battalions of artillery; twelve companies of infantry and independent cavalry, between Richmond and Fredericksburg, and Jackson's force in the valley of the Shenandoah. There were undoubtedly many others whose designation we do not know.

The enemy's movements commenced near Richmond and were completed for the defense of Richmond and Petersburg, as stated above, on the 26th, 27th, 28th, 29th, and 30th of June.

On the 26th, the day upon which I had decided as the time for our final movement to the rear, commenced the fighting force, and turned my attention to the protection of our communications with the White House.

The event was a bitter confirmation of the military judgment which had been given, and which I had endeavored to avert, by the concentration of the troops of the Peninsula campaign.

I inclose the Secretary of War the following dispatch:

"HEADQUARTERS ARMY OF THE POTOMAC,

"June 26, 1862—3:30 A. M.

"I have just heard that our advanced cavalry pickets on the left bank of the Chickahominy were attacked last night by a force of the enemy's advanced guard. If this be true, you may not hear from me for some days, perhaps for a week or more. If I find that I cannot fall back by a higher, different one, but I shall resist to desperate resistance, and will say my last for the country and my love for it. I shall do my duty as a soldier regardless of consequences, and do not be discouraged if you learn that my force has been compelled to fall back before superior numbers of the enemy. Hope for the best, and I will not deceive the hopes you have placed in me.

"G. B. MCCLELLAN, *Major-General.*

"Hon. E. M. STANTON, *Secretary of War.*"

"HEADQUARTERS ARMY OF THE POTOMAC,

"June 26, 1862—12 P. M.

"Your dispatch and that of the President received. Jackson is driving in my pickets, &c., on the Chickahominy. I expect to be attacked in force this afternoon. I have ordered Porter to push on, as I am unable to predict result of approaching battle unless I know what is in front of Porter. I shall fight the battle to the utmost advantage to ensure success, whether it be victory or defeat, and do not be discouraged if you learn that such is the case. I have seen the President's dispatches from the Secretary of War.

"G. B. MCCLELLAN, *Major-General.*

"Hon. E. M. STANTON, *Secretary of War.*"

The following are the only communications from the Secretary of War:

"WASHINGTON, June 25, 1862—12:30 P. M.

"Your telegram of 6:15 has just been received. The circumstances that have occurred to prevent the forwarding of re-enforcements to your army are too well known to you to need explanation. They have been as distressing to the President as to yourself.

"Every effort has been made by the President and myself to forward them to you. Franklin's division has been detained at Alexandria and Rockville division at Manassas. The President designs to send a part of Sumner's corps to-night.

"EDWIN M. STANTON, *Secretary of War.*

"Major-General G. B. MCCLELLAN."

"WASHINGTON, June 25, 1862—P. M.

"Arrangements are being made to forward re-enforcements to you as rapidly as they can be sent from here, but they can be brought from Manassas to Alexandria much more rapidly than they can be marched from Alexandria to Fredericksburg. They will be followed by more, if needed. McDowell's force is not under my control, but one of the best officers in the service of Virginia, and will operate promptly in your behalf. Nothing will be left undone that can be done to aid you in finishing fully in your success. Keep me advised fully of your condition.

"EDWIN M. STANTON, *Secretary of War.*

"Major-General G. B. MCCLELLAN."

The following are the only communications to three communications sent to the army of the Potomac, and these received on the 26th, 27th, and 28th of June:

"WASHINGTON, June 26, 1862—12:30 P. M.

"Arrangements are being made to forward re-enforcements to you as rapidly as they can be brought from Manassas to Alexandria much more rapidly than they can be marched from Alexandria to Fredericksburg. They will be followed by more, if needed. McDowell's force is not under my control, but one of the best officers in the service of Virginia, and will operate promptly in your behalf. Nothing will be left undone that can be done to aid you in finishing fully in your success. Keep me advised fully of your condition.

"EDWIN M. STANTON, *Secretary of War.*

"Major-General G. B. MCCLELLAN."

"WASHINGTON, June 26, 1862—P. M.

"Your dispatch of 3:30 A. M. has just been received. The President directs me to say to you that reports from all directions indicate that Jackson's force is from 100,000 to 200,000 men, and that you must be prepared for that force. The President directs that you shall not, under any circumstances, leave your position without further orders. As soon as the 20th the approach of the re-enforcements will be made known. Hitchcock's regiment of cavalry, 1,000 strong, passed Fort Monroe yesterday, and will be at the White House to-day. Franklin's division, 12,000 strong, will be at Yorktown to-day. Sumner's division, 12,000 strong, will be at Yorktown to-day. Sumner's division, 12,000 strong, will be at Yorktown to-day. Sumner

as break our lines, although our loss was very heavy. About 7 P. M., when they were driven completely back, Gregg's division, with great fury and energy, re-established the works held by it at the commencement of the engagement. Simultaneously with this movement, Gen. Ayres's division of the Fifth corps, and Robinson's and Kimball's brigades of Smith's corps, brigades always advanced boldly to the front, and by their example as well as by the steadiness of their bearing, encouraged our own troops to make a determined stand. The enemy's attack failed. It was now dark. The enemy, already repulsed several times with heavy loss, and his troops in confusion, did not attempt to renew the attack, but contented himself with firing volleys of musketry. This gave an opportunity to fully re-establish the broken line. Gregg's division, Ayres's division, and the right extension of the Fifth corps, were ordered to renew another attack. Joining their own troops, they moved forward with a cheer, and with great fury, and the loss of many of the wounded, drove the enemy entirely from the ground. The regular infantry formed the rear guard, and about 9 o'clock in the evening, Gregg's division, Ayres's division, and Robinson's brigade behind them. Our loss in this battle, in killed, wounded, and missing, was very heavy, the number of those killed and wounded, or taken prisoners, being about 4,000. The enemy's loss was also very heavy. It is impossible to arrive at the exact number, but it must have been considerably over 5,000, as his dead and wounded, which followed each other in quick succession, and in which the whole army was engaged, [illegible] Although we were driven back, and the line arrived at Herring's building, when the tumult during the whole seven days' fighting, and the confusion of the retreat, the enemy did not for the first time the enemy had been repeatedly driven back, yet the object sought in the movement was attained, for the enemy's left flank and rear again came in contact with our army, and the right wing had now been thrown back to the Quaker road, and the left wing to the south side of the Boydton plank road. The enemy's line of retreat was now cut off by the bridge during the final withdrawal. Great credit is due for the skill and energy and perseverance with which the rear guard (the artillery) was fought, and it was not until the last cannon and caisson had passed the crossing of Hatcher's run that the bridge was set on fire and burned. The guns were then placed in position and fired upon the enemy, who was pressing forward in pursuit. Hancock's corps, Gregg's division, Ayres's division, and Robinson's brigade, were then withdrawn to the north bank of the stream, and with a battery of artillery on the high ground on the north side of the run, formed a line to hold the enemy in front of General Parke.

HEADQUARTERS, SIXTH CORPS, }
June 26—6 P. M. }

General R. B. Marcy:

I think I can hold the intrenchments with four brigades for twenty-four hours. I have lost about two thousand men in the engagement of to-day. On either side of the river, but the men are so tired and worn out that I fear they would not be in a condition to fight another day, a month or any distance.

E. P. BRECKINRIDGE,
Brigadier-General.

Telegrams from General Hotchkiss, on the 25th and 26th, to the effect that the enemy was in large force in front of Gordon's Hooker and Ewell's, and on the Valley pike, in front of Early's, Rodes's, and Johnson's divisions, caused the opinion, on the night of the 26th, to be entertained that Lee was about withdrawing his army from the front of Petersburg.

General Ryan telegraphed: "As to how many men will be able to fight this position [on the Weldon railroad] I cannot say. I think that if the enemy is as strong as ever in flesh, it having at all times opposed to me only about one-third of my command, I can hold it."

On the morning of the 27th, the following dispatch was sent to General Sheridan:

HEADQUARTERS ARMY OF THE POTOMAC, }
June 27, 1864—10 A. M. }

General R. P. Sumner, commanding Second Army Corps:

General Meade directs that you withdraw your command from the line moved down to the woods in front of General Sumner.

By command of Major-General MEADE.
S. H. MARCY, Chief of Staff.

At 11 o'clock, A. M., General Sumner telegraphed as follows: "The enemy threaten my left very heavily. Can I have help from Smith?" To this he telegraphed: "Sharp shelling on both sides." At 2:45, P. M.: "Enemy attacking me in force on my left. Can I have help from Smith?" to which no reply was received.

At 3 o'clock, A. M., General Sumner telegraphed as follows: "The enemy threaten my left very heavily. Can I have help from Smith? If so, he must be sent at once, as I cannot be much longer."

In accordance with orders given on the night of the 26th, General Smith's command was ordered to embark on the steamer Spaulding for Fortress Monroe, soon after daybreak on the morning of the 27th; but, on the firing in front of General Sumner's line, the order was countermanded, and A. D. H. General Parker called for reinforcements. I ordered them to report, and at 5 P. M. sent him the following note:

"I inclose to you a crossing Alexander's bridge with his whole command. Having just received a dispatch from General Meade, that you have ordered down Sumner's and Birney's men's service, and you can spare no more from your front, I send you Smith's command."

During the day the following dispatches were received, which will show the condition of affairs in the right bank of the Chickahominy:

JUNE 27, 1864.

To Colonel A. V. Colburn, A. A. G.:

General Smith thinks that the enemy is massing heavy columns in front of Bridge No. 2 [Alexander's bridge], and that he will attack in force at the river, opposite it. Three regiments are reported to be moving from Sumner's to Smith's front. Is Sumner's command to be withdrawn?

W. D. FRANKLIN.

Afterwards he telegraphed "The enemy has begun an attack on Smith's left in force. Sumner's left is also engaged with the enemy. Sheridan is now moving down with Crook from a battery of mine pieces on the north side of the river. Shall I withdraw Sumner's and Smith's troops? Sumner will soon have a crossing open from their front to mine."

Afterward (at 5:45? M.) he followed up with the following verbal message from General Keyes:

"Please send me one brigade of Couch's division to those hend-quarters without delay. A staff officer will be here to direct the brigade to the bridge."

Subsequently the following was sent to General Sumner and Franklin:

"Is there any side of the enemy being in your front? Can you spare any regiments from Sumner's division to reinforce General Keyes?"

At 8:45, P. M., the following was received from General Franklin at Bermuda Hundred. Afterward (at 9:30? P. M.) the following was sent to General Sumner:

General Sumner replied as follows:

"I am engaged to repel the last defense of my position to my front line alone, I can send French with three regiments and Brooker with his large brigade. I can't spare more, as the enemy's line is so long that it would be hazardous to do it."

Since then he has been ordered to reinforce General Porter, as has been observed.

At 2:25, P. M. I sent the following to General Franklin:

"Affair is hard pressed. It is not a question of prudence, but of policy. Smith's command must go to the north side of the river. Do it at once, together. I have ordered eight regiments of Sumner's to support Porter, from brigade of Couch's to this place.

Hinkman's reserve to go in rear of Sumner. If possible, send a brigade to support Porter. It should follow the regiments ordered from Sumner."

At 2:25, P. M. the following was sent to General Sumner:

"If it is possible, send another brigade to reinforce General Smith. It is said heavy columns are moving down on his front."

From the foregoing dispatches it will be seen that Hancock's troops were sent from the right bank of the river to reinforce General Porter, and that the corps commanders were left with smaller forces to hold their positions than they deemed adequate. To leave them more, even though Hancock's troops had been promptly sent back, would have been to risk the [illegible] of imperiling the whole movement across the Chickahominy.

CONCENTRATION OF THE ARMY.

The operations of this day proved the movement superiority of the enemy, and were attended with results the most disastrous to the army. The position of the Chickahominy, which had already turned our right, and was in position to menace our communications with the White House, by way of the Quaker road, was also in large force between the corps and Richmond. This rendered a junction of our forces impossible. This might probably have been effected on the left bank of the river, but to do so a concentration had been effected on the left bank, it is possible we might, with our entire force, have defeated the enemy there; but at that time they held the roads leading to the White House, so that it would be necessary to open a new line of communication supply within advance of the army in that direction, and the guarding of those trains would have necessarily required a considerable force. This battle we would have been compelled to fight, if concentrated on this bank of the river. Had we crossed the Chickahominy, and taken up a position in force upon the Richmond side of the river, operating upon our rear, and, if [illegible] we would have been forced to fall back to the White House. This would have uncovered Richmond, and left the enemy's communications with the supply depot at the White House entirely exposed, our entire supply train, if not the greater part of the army, would have been captured. The fact that the enemy did not pursue that they expected this, and as they themselves acknowledge, they were not prepared for it, and were unwilling to attack us in position, concentrated all our forces on the right bank of the river. During the night of the 27th, our position was as follows: The Second corps, near Jones's, were gathered there. It may be asked why, after the concentration of our forces on the right bank of the river, a portion of the large part of the enemy drawn away from Richmond, I did not, instead of attacking his forces in front of Petersburg, attack him at once and directly on Richmond. It will be remembered that at this position we had been compelled to abandon the greater part of the material that he would cover our communications with the supply depot at the White House, and that the Fifth corps, which had been left to cover the trains, and to hold the position on Richmond, it would have required considerable time to carry this position, and to have moved upon Richmond with the army, and the enemy would have had time to concentrate his forces on our arms, the enemy would have still been occupied our supply communications between Richmond and Petersburg, and the result of the operation was uncertain. If, on the other hand, the enemy had concentrated all his forces against the army, and defeated it, Richmond would not have been defeated, we must, in all probability, have lost our trains before reaching the fortifications. The failure of the movement to the left was the principal one Sonk movement to the James River, with the exception of the one of Wilson's cavalry, which was unsuccessful, the following engagement at Malvern Hill was the most decisive of all.

BATTLE OF MALVERN HILL.

On the morning of the 27th of June I ascertained the corps commanders on my headquarters and informed them of my plans, to recross the Chickahominy, and attack the enemy on the right bank. Orders were issued to move 5th corps, with its artillery and baggage, across the Chickahominy by the bridges at Jones's, and to take up a position on the right of the Second corps, and to hold the line of the Chickahominy from the extreme right to the Quaker road. Before daybreak on the 28th I went to Jones's bridge with General Meade, and after seeing that the directing the withdrawal of the trains and supplies of the army. On there were given to the commanding officers of corps, orders were issued for the movement and the necessary baggage of the different corps, and the movement commenced at daylight. The movement was conducted with the army. Orders were also given to leave with Generals Keyes and Smith's commands two days' rations in haversacks, and a number of surgeons and attendants, with a beautiful supply of rations and medicines. The bridges were taken up as soon as the troops had crossed, and the trains, transferred to the James river without loss. On the morning of the 29th, Generals Keyes and Smith withdrawing his command from Golding's farm, the enemy opened upon General Smith's division from the woods in front of Fort Pocahontas, and from Gaines' hill on the opposite side of the Chickahominy, and shortly afterward the enemy's infantry appeared. To carry the works about to be vacated, but this attack was repulsed by the fire of our gunboats. The 5th corps, General Warren's corps, moved to the left, and took up a position on the right of the Second corps, with its left resting on White Oak swamp. The 6th corps and 9th corps moved to the left of the Fifth corps, and took up a position on the Quaker road and Long bridge. McClellan division was ordered on the right of the Fifth corps, and Robinson's division of the same corps position to assist in covering the remaining troops and trains. During the same day the corps of General Franklin and Smith, and the cavalry of Smith, were ordered to an interior line, the left resting on Keyes' old intrenchments and covering the left of the line of the Chickahominy. General Hincher's division of Franklin's corps was ordered to Savage's station to support Keyes, and General Brooks's brigade of Smith's corps to the same point. The object was to cover the withdrawal of the trains, and then to retire across the White Oak swamp, and to the south side of the James river.

LETTER TO SECRETARY STANTON.

On the night of the 28th I received a letter from the Secretary of War:

HEADQUARTERS ARMY OF THE POTOMAC, }
June 28, 1862—12:20, A. M. }

I may know the full history of the day, I will state briefly what I know. The right bank—we received several strong attacks. On the left bank our line was attacked in force, and driven back with heavy slaughtering, but they were overwhelmed by vastly superior numbers, even after the reinforcements had been sent to them. The enemy's loss must be very heavy. Ours will prove to be the most terrible of the war. Sumner's and Franklin's corps fought with desperation, and Sumner's was overpowered by numbers. Our regiments were cut to pieces. Our troops were superb, and I count upon what we let to save another battle in comparison with the past. Our loss in artillery will be small. We have lost thousand (20,000) or even ten thousand (10,000) fresh troops to use to-morrow, I trust, in the battle which will be fought. I am in excellent spirits, and shall be glad to cover my retreat and save the material and personnel of the army. I will do my best to do so. I have no apprehension of our honor, and no one need blush for the Army of the Potomac. I have sent this hasty note to relieve you from the first anxiety. I regret that I am not responsible for this, and I say it with the consciousness of a heart that bleeds for its poor children. I am not overwhelmed, but am confidently sanctified to day. I still hope to retrieve our fortunes; but to do this the Government must do its part. I have done, and shall continue right that I do. You must send me very large reinforcements, and send them at once. We require at least 20,000 infantry and artillery to-day. I think I can withdraw all our material. Please understand that in this letter we have not lost a single gun, and also that we have gained. In addition to what I have already said, I only wish to say to the President that the Army of the Potomac will be unjustly dealt by if it is not kept entire. My force was too weak—I merely intended a feint which to cover the movement of Franklin, but the feint was made in earnest, and the result has been a battle from which I would gain if I could be reinforced. I know that the Government has not sustained the army. If you do not do so now, the fault will not be mine. You may rely upon it that I will not sacrifice one minute to you, or to any other person in Washington. You have done your best to sustain the army.

To HON. E. M. STANTON.

The headquarters camp at Savage's station was broken up early on the morning of the 29th, and the troops moved to White Oak swamp. An essential part of the day's operations was the passage of the trains, the artillery, and the other property which accompanied from the direction of New Market and Richmond, as well as the immediate and secure establishment of the communications with the army. I spent the day in examining the ground, directing the posting of the troops, and in giving instructions to the corps commanders. The following order was issued to the corps commanders:

HEADQUARTERS ARMY OF THE POTOMAC, }
June 29, 1862—10 A. M. }

The enemy is moving down the Williamsburg road, I could not learn in force, with the evident intention of attacking our trains and rear guard. The army will move to-day to the position selected yesterday, with the following exceptions: The Second corps will move to the position assigned to the Fifth corps, and the Fifth corps will move by the Quaker road, and will form on the left of the Second corps, with its left resting on White Oak swamp. The 6th corps and 9th corps will move to the position assigned to the Second corps, and will form on the left of the Fifth corps, with its left resting on the Quaker road. The artillery will move with the troops to which it belongs. The trains will move to the position assigned to them yesterday. The cavalry will move to the position assigned to them yesterday. The commanding officers of corps will see that their commands are supplied with ammunition and provisions and the necessary baggage of the different corps, and the movement commenced at daylight. The movement was conducted with the army. Orders were also given to leave with Generals Keyes and Smith's commands two days' rations in haversacks, and a number of surgeons and attendants, with a beautiful supply of rations and medicines. The bridges were taken up as soon as the troops had crossed, and the trains, transferred to the James river without loss. On the morning of the 29th, the following dispatch was sent to General Sumner:

Headquarters Army of the Potomac, }
June 29, 1862—12:20, A. M. }

General R. P. Sumner, commanding Second Army Corps:

General Meade directs that you withdraw your command from the line moved down to the woods in front of General Sumner.

By command of Major-General MEADE.
S. H. MARCY, Chief of Staff.

At 11 o'clock, A. M., General Sumner telegraphed as follows: "The enemy threaten my left very heavily. Can I have help from Smith?" To this he telegraphed: "Sharp shelling on both sides." At 2:45, P. M.: "Enemy attacking me in force on my left. Can I have help from Smith?" to which no reply was received.

At 3 o'clock, A. M., General Sumner telegraphed as follows: "The enemy threaten my left very heavily. Can I have help from Smith? If so, he must be sent at once, as I cannot be much longer."

In accordance with orders given on the night of the 26th, General Smith's command was ordered to embark on the steamer Spaulding for Fortress Monroe, soon after daybreak on the morning of the 27th; but, on the firing in front of General Sumner's line, the order was countermanded, and A. D. H. General Parker called for reinforcements. I ordered them to report, and at 5 P. M. sent him the following note:

"I inclose to you a crossing Alexander's bridge with his whole command. Having just received a dispatch from General Meade, that you have ordered down Sumner's and Birney's men's service, and you can spare no more from your front, I send you Smith's command."

During the day the following dispatches were received, which will show the condition of affairs in the right bank of the Chickahominy:

JUNE 27, 1862.

To Colonel A. V. Colburn, A. A. G.:

General Smith thinks that the enemy is massing heavy columns in front of Bridge No. 2 [Alexander's bridge], and that he will attack in force at the river, opposite it. Three regiments are reported to be moving from Sumner's to Smith's front. Is Sumner's command to be withdrawn?

W. D. FRANKLIN.

Afterwards he telegraphed "The enemy has begun an attack on Smith's left in force. Sumner's left is also engaged with the enemy. Sheridan is now moving down with Crook from a battery of mine pieces on the north side of the river. Shall I withdraw Sumner's and Smith's troops? Sumner will soon have a crossing open from their front to mine."

Afterward (at 5:45? M.) he followed up with the following verbal message from General Keyes:

"Please send me one brigade of Couch's division to those hend-quarters without delay. A staff officer will be here to direct the brigade to the bridge."

Subsequently the following was sent to General Sumner and Franklin:

"Is there any side of the enemy being in your front? Can you spare any regiments from Sumner's division to reinforce General Keyes?"

At 8:45, P. M., the following was received from General Franklin at Bermuda Hundred. Afterward (at 9:30? P. M.) the following was sent to General Sumner:

General Sumner replied as follows:

"I am engaged to repel the last defense of my position to my front line alone, I can send French with three regiments and Brooker with his large brigade. I can't spare more, as the enemy's line is so long that it would be hazardous to do it."

Since then he has been ordered to reinforce General Porter, as has been observed.

At 2:25, P. M. I sent the following to General Franklin:

"Affair is hard pressed. It is not a question of prudence, but of policy. Smith's command must go to the north side of the river. Do it at once, together. I have ordered eight regiments of Sumner's to support Porter, from brigade of Couch's to this place.

Hinkman's reserve to go in rear of Sumner. If possible, send a brigade to support Porter. It should follow the regiments ordered from Sumner."

At 2:25, P. M. the following was sent to General Sumner:

"If it is possible, send another brigade to reinforce General Smith. It is said heavy columns are moving down on his front."

From the foregoing dispatches it will be seen that Hancock's troops were sent from the right bank of the river to reinforce General Porter, and that the corps commanders were left with smaller forces to hold their positions than they deemed adequate. To leave them more, even though Hancock's troops had been promptly sent back, would have been to risk the [illegible] of imperiling the whole movement across the Chickahominy.

CONCENTRATION OF THE ARMY.

The operations of this day proved the movement superiority of the enemy, and were attended with results the most disastrous to the army. The position of the Chickahominy, which had already turned our right, and was in position to menace our communications with the White House, by way of the Quaker road, was also in large force between the corps and Richmond. This rendered a junction of our forces impossible. This might probably have been effected on the left bank of the river, but to do so a concentration had been effected on the left bank, it is possible we might, with our entire force, have defeated the enemy there; but at that time they held the roads leading to the White House, so that it would be necessary to open a new line of communication supply within advance of the army in that direction, and the guarding of those trains would have necessarily required a considerable force. This battle we would have been compelled to fight, if concentrated on this bank of the river. Had we crossed the Chickahominy, and taken up a position in force upon the Richmond side of the river, operating upon our rear, and, if [illegible] we would have been forced to fall back to the White House. This would have uncovered Richmond, and left the enemy's communications with the supply depot at the White House entirely exposed, our entire supply train, if not the greater part of the army, would have been captured. The fact that the enemy did not pursue that they expected this, and as they themselves acknowledge, they were not prepared for it, and were unwilling to attack us in position, concentrated all our forces on the right bank of the river. During the night of the 27th, our position was as follows: The Second corps, near Jones's, were gathered there. It may be asked why, after the concentration of our forces on the right bank of the river, a portion of the large part of the enemy drawn away from Richmond, I did not, instead of attacking his forces in front of Petersburg, attack him at once and directly on Richmond. It will be remembered that at this position we had been compelled to abandon the greater part of the material that he would cover our communications with the supply depot at the White House, and that the Fifth corps, which had been left to cover the trains, and to hold the position on Richmond, it would have required considerable time to carry this position, and to have moved upon Richmond with the army, and the enemy would have still been occupied our supply communications between Richmond and Petersburg, and the result of the operation was uncertain. If, on the other hand, the enemy had concentrated all his forces against the army, and defeated it, Richmond would not have been defeated, we must, in all probability, have lost our trains before reaching the fortifications. The failure of the movement to the left was the principal one Sonk movement to the James River, with the exception of the one of Wilson's cavalry, which was unsuccessful, the following engagement at Malvern Hill was the most decisive of all.

BATTLE OF MALVERN HILL.

On the morning of the 27th of June I ascertained the corps commanders on my headquarters and informed them of my plans, to recross the Chickahominy, and attack the enemy on the right bank. Orders were issued to move 5th corps, with its artillery and baggage, across the Chickahominy by the bridges at Jones's, and to take up a position on the right of the Second corps, and to hold the line of the Chickahominy from the extreme right to the Quaker road. Before daybreak on the 28th I went to Jones's bridge with General Meade, and after seeing that the directing the withdrawal of the trains and supplies of the army. On there were given to the commanding officers of corps, orders were issued for the movement

his regiment to Malvern, which position I recovered to be the key to the position in the rear of Richmond and was the cause of my not reaching the passage of the trains, and to rectify the positions of the troops.

Everything being thus right, I sent aids to the different corps commanders to forward them what I had done on the left, and to give information of the condition of affairs on the right. I received from Messrs. Morrill, and having made arrangements for mutual communication from Malvern by signals, went on board of Captain Wise's gunboat, lying near, to confer with him in reference to the condition of our supply vessels, and the state of the roads on the river. It was his opinion that it would be necessary for the army to fall back to the position below Turkey Bend, as the channel there was the only navigable one that it would not be possible to keep up the transports, should the enemy succeed in effectually planting batteries on the north and eastern bank. Upon the termination of the interview, I returned to Malvern Hill, and remained there till after midnight.

BATTLE OF NEWSOM'S FARM OR GLENDALE.

Everything being now in good condition, I proceeded to march with Sedgwick's division to Glendale (Newsom's farm). General Keyes's corps commanding the rear guard, was ordered to march from Malvern on the New Market road, but in advance of the point where the road turns off to Glendale. This road, which is the direct continuation of the New Market road, with Meade's brigade on the right, Seymour's on the left, and Sedgwick's behind, constituted the line of march. The remnant, of the Fifth Pennsylvania, in reserve; Randol's regular battery on the right; Kerns's on Cooper's farm; Hexamer's on the left; Arnold's, Dehrlich's and Knowlton's batteries, of the Artillery reserve, on the left—all in full view. Hill's division, of A. P. Hill's corps, pursued the front and rear guards, and, intercepted toward the right by the New Market road, and a wood east of it, engaged Meade's brigade. The fight lasted about eight hundred yards; its fish about one thousand yards. On the left of the road, Seymour's brigade, Kerns's battery, and the Pennsylvania and Rhode Island cavalry, were engaged with Pender's division and the Cavalry Brigade of General Stuart's army, and the Cavalry Brigade of General Stuart's army, and the Cavalry Brigade of General Fitzhugh Lee. The object of General Keyes's left to connect with General Slocum's left. General Meade's right was connected with General Reserve's left, and General Reserve's left

The following telegram was sent on the 8th:

HEADQUARTERS ARMY OF THE POTOMAC,
Berkeley, July 7, 1863—8:30, A.M.

At the town in starting there was a report that the enemy had left Hagerstown by General Meade. The enemy have not attacked. My position is very strong, and daily becoming more so. It was attacked, but I shall laugh at them. I have been anxious about my communications. I have no communication with it with Flag-Officer Foote, though last night. He is confident he can keep the river open. He has eight light draught gunboats, and more to be sent up. He has my men in splendid spirits, and anxious for the fight. He cannot at all as pleased about me, and don't care if I abandon it an army.

G. B. MCCLELLAN,
Major-General.

A. Lincoln, President.

While unfavorable to and director of the operations of all our armies in the field, I had become deeply impressed with the importance of not only preventing the concentration of the enemy on the conduct of the war, which, in my judgment, were assuming all its original and its successful character, and of placing the armies in the country's enemy, there were no fully confirmed that I considered it to be my duty to express my views to you, and to exhibit a candid expression of the more important of these views from the circumstances of the case, when the time has arrived, I will lay my views and service, as well on the Government of the nation.

Since I failed to see you at Washington on the 6th inst., I already published.

The following is a copy of my letter to Mr. Lincoln

HEADQUARTERS ARMY OF THE POTOMAC,
Camp near Berkeley, July 7, 1863—9 P.M.

MR. PRESIDENT: You have been fully informed that the rebel army is in front of us, and standing on the defensive. Their line of battle is so extensive, reaching as by blocking our river communications by land, I consider it my duty to move upon them at once and force them to fight in position where they cannot turn our flanks. In view of possible contingencies, to say before you definitely my views for your general guidance. You will readily see that the future course of the rebellion, although its general plan must depend on the result of operations in Virginia, will be materially modified by the effect of the present campaign, and the depth of the defeat which we inflict upon the enemy. Should circumstances render it necessary to withdraw from the front of Richmond, it will be impossible to withdraw the army of the Potomac to the defenses of Washington, except by water, as the country is impassable for artillery and trains. Should we be compelled to retire

In the mean time I will do all in my power to carry out what I conceive to be your wishes.

GEO. B. McCLELLAN, *Major-General.*
Major-General H. W. HALLECK,
Commanding United States Army, Washington, D. C.

The movement I received the instructions for reviewing the 4th, I at once gave the necessary directions for carrying them out.

With the small amount of transportation at hand, the removal of the reserve corps alone would necessarily take several days, and in the mean time, I deemed it unadvisable to determine what I should do with the others.

The troops required to send them away as quickly as possible, and to notify the Quartermaster-General when they were started.

Being ignorant of what the Army under my command was expected to do, or which troops were to be moved, I am unable to give you the following dispatch:

HEADQUARTERS ARMY OF THE POTOMAC,
Harrison's Landing, August 6, 1862.

I hear of sick attempts at Fort Monroe; nearly for recovering my sick? How, to what extent can I depend upon it? Please inform me. There are not many who need go.

I am but little informed of the intentions of the government in regard to this Army, I am unable to judge what proportion of the sick should remain, and what should be sent away.

GEO. B. McCLELLAN, *Major-General Commanding.*
Major-General H. W. HALLECK,
Commanding United States Army Washington.

If the Army must be withdrawed, it is very important that it should be unincumbered with any sick, wounded, or other men who might, at a moment's notice, be unable to march. It is my wish to do so quickly as circumstances will allow, but the position we now occupied, three days since, was of such a character as to be especially to be cared, and the patients returned to duty.

Under these circumstances it is important in the event of a forward advance of the troops, I should be so to send the utmost consequence that I should not have to be encumbered. I am unable to fix this date to the satisfaction of H. [illegible] 20 to the 30, before receiving the following telegram:

WASHINGTON, August 6, 1862—9 P. M.

I have waited most anxiously to learn the result of your forced reconnoissance movement, and I can not but hope that before this it has been sent away, and I can get no answer to my telegrams.

It is extremely important to relieve your army from all obstacles to Aquia Creek. You will take immediate measures to effect this covering the movement of your troops.

Its real object and withdrawal should be concealed even from your own officers.

Your material and transportation should be removed first. You will examine carefully, with the assistance of the navy, every road, reach, and supply to the naval forces for all the assistance they can render you. Your movement should be made by the shortest possible routes. The entire execution of the movement is left to your discretion and judgment.

You will make such forces as you may deem proper at Fort Monroe, Yorktown, and Gloucester Point subject to your order.

H. W. HALLECK,
Major-General Commanding United States Army.

Major-General GEO. B. McCLELLAN,
Commanding Army of the Potomac.

I proceeded to obey this order with all possible rapidity, drawing my troops to Yorktown, with the intention of placing the entire Army of the Potomac from Harrison's Landing, where its communications had to be abandoned, to Yorktown, and thence by water to Aquia Creek, would, at that time, have the most disastrous effect upon our morale.

I did not, as the commander of that army, allow the occasion to pass without delivering my feeling and opinion freely and subject to the authorities in the following telegrams:

HEADQUARTERS ARMY OF THE POTOMAC,
Berkley, August 4, 1862—12 m.

Your telegram of last evening to Colonel Key, received this A. M., has caused me the greatest pain I ever experienced, for I am convinced that the order it indicates will prove the most fatal one the government or our cause. I feel it will be a fatal blow. Several days must elapse before the movement can commence. The country is so flooded as to render it impossible for the guns to progress, I say that careful reconnoissance may be given to the contrary.

The army is in a most critical condition and condition. We hold a crescent on both banks of the James River, the points of which are in my rear, and the extremities of the gunboats, I consider our communications as now secure.

We are within twenty miles from Richmond, with the whole force that the enemy in force sufficient to fight a battle until we have massed there. Our force is now reduced by sickness to about 45,000 men within ten (10) miles of Richmond. Our longest line of communication is now reduced to about fifteen miles. Reduce it by one half the all of the guns now on the south bank of the James River, and the army is secure, certainly to a defensive position.

At Aquia Creek we would be seventy-five (75) miles from Richmond, with no means to reach it but by land.

From here to Fort Monroe is a march of about seventy (70) miles. But I regard it as impossible for the army to reach there in any force at all, except by land.

To move the movement would then be a amount of one hundred and eighty (180) miles to reach a point now only twenty-five (25) miles from Richmond, with the certainty of losing the greater part of the artillery and transportation.

Add to this the certain demoralization of this army which would ensue, and the moral effect upon the country, the delight of the north, and the strong probability that it would influence foreign powers to recognize our rebellion, and the certainty that the enemy would be able to make it my imperative duty to save the capital, and I have stated the reasons which, in my opinion, render the order fatal to the cause that I prize above my life, and which would be prejudicial to the safety of the capital.

It may be said that there are no reinforcements available. I admit that I cannot see the end of the war, but I am convinced that a strict defence in front of Washington and Harper's Ferry is to these positions at the end of the campaign, than the same force at Fortress there. Here, directly in front of this Army, is the heart of the rebellion. Its capture or destruction would be the most severe blow which the enemy could receive. It would be the most effective method of relieving Washington from all danger.

And every one must have brought here, a decided victory here, and what [illegible] would be the effect upon the country? Would not the greatest rejoicing be heard from one end of the north to the other? Would not all the resources of the country be poured forward to make it my imperative duty to keep in the strictest communication with my base of supplies? Would not the effect be the same as that of the capture of Richmond?

Again, I say that I do not see how reinforcements can reach me. Every available man that can be

ASSISTANT QUARTERMASTER'S OFFICE, ARMY OF THE POTOMAC,
Harrisburg, August 31, 1863.

COLONEL: In reply to the communication from General Meigs, which was received by me this morning, I have to state that there are but very few unemployed transports not already destined, either for the use of the hospital department, for the transportation of the 1st Corps, or for the necessary service in the harbor. I think the number will not exceed a dozen. With exactly such vessels as these I can transport about two thousand infantry. These boats are, however, directed to leave for the bay as they are loaded, some have already cleared. The evacuation of this country regiment is going on very slowly, and it is not to be expected that it will be completed for some days to come. I have at the department and one commissioned officer at the wharf, to render to the enlisted men all the assistance in his power. Every regiment is to be issued on vessels, hospitals, ordnance baggage, and other service property will be shipped on separate vessels. Most of the regiments are under the regular issues of forage, &c., are suspended, to avoid great confusion and delay. But this issue is carried out in the case of a few cases, if any infantry is ordered to embark on these country transports, the ordnance officer will issue forage for them.

I know of no transports that are expected here to-day, except the steamer Thomas Powell, Quincy Gaskill, master, which is now ordered to be sent up to Alexandria for the 1st Corps.

The transports with the artillery left for Acquia Creek before the receipt of the 4th inst. order from General Meigs. They were ordered to remain there until further orders.

I am, very respectfully, your obedient servant,

Captain and A. A. G. U. S. A.

Brig. Genl. RUFUS INGALLS,
Chief Quartermaster, Army of the Potomac.

On the 31th I received the following:—

HARRISBURG, August 12, 1863—12 m.

The Quartermaster-General informs me that nearly every available steamer in the country is now employed in the service of the Government. Philadelphia, Baltimore, and New York, should transfers with the transportation of troops to the front, have drawn to them all the steamers that could be spared for the purpose. Recently there have been sent to the Army of the Potomac from Acquia Creek in less than two 24 days, and by passengers alone in addition to the troops, 20,000 men. Of these, 12,000 were sent in a single day by a river steamer of large capacity. And it is supposed that 40 night of the same kind could be made.

Besides these, there are a large fleet of freight vessels which could be used in transports.

The task of any material on shore is the most serious one to the Government, carried to that part of the Army which could not get water transportation. Of this there is but little. Supplies for the Army are now sent by the way of the Alexandria Railroad. Most large articles of ordnance have been sent by water, and can be so sent, by day or night, to the same point.

I am sure that you have been satisfied from the first that the difficulty was not want. We cannot now hastily transit supply vessels for troops or animals. Transports must be provided for them. The Army of the Potomac has been supplied at the rate of 1,000 tons per day.

I further will say that every good day in embarking troops and material at Alexandria and Acquia Creek, the enemy is losing his opportunity for attack, without any additional advance should at once be built in each place. I am, very respectfully, your obedient servant,

H. W. HALLECK, *Major-General.*

Major General G. B. MCCLELLAN,
Commanding the Army of the Potomac.

HEADQUARTERS ARMY OF THE POTOMAC,
August 13, 1863—10 a. m.

Your dispatch of noon to-day received. It is positively the last that a move can and will be made from Alexandria. Every boat that can be spared from any duty has been ordered. Before your orders were received, Colonel Ingalls had ordered all the boats that could be spared from the transportation of troops to go to Acquia Creek. More than one-half of the number have arrived.

There are most vessels at Monroe—such as Albemarle and Baltic—which draw too much water to go to Alexandria, and cannot be spared from the James River. Perrine Ship Albemarle and Baltic with various cases, for New York, Boston, and Philadelphia, are now at Monroe. Will they be ordered to the bay or other duties? Most large vessels, such as Vanderbilt, are on hand, by my order in former days.

I am sure that you have been satisfied from the first that the difficulty was not want. We cannot now hastily transit supply vessels for troops or animals. Transports must be provided for them. The Army of the Potomac has been supplied at the rate of 1,000 tons per day.

I further will say that every good day in embarking troops and material at Alexandria and Acquia Creek, the enemy is losing his opportunity for attack, without any additional advance should at once be built in each place. I am, very respectfully, your obedient servant,

H. W. HALLECK, *Major-General.*

I do not think other accommodations at Acquia are altogether inadequate for loading two regiments at a time, and the boats can be sent down as fast as the troops are ready.

Loading will assist them from shallow water. You will find a steam tug very handy to move them. We had nearly two hundred when we were here. Some of the boats are unfit for service, and will be sent to the rear. Others will be sent to the James River, and others to Alexandria. We are much impeded here because our wharves are used night and day for the transfer of supplies. I have a wharf at Alexandria and Washington, 60 six wagons abreast.

We all the furnaces at Alexandria and Washington, 60 six wagons abreast. Alexandria and Washington, 60 six wagons abreast.

Where are you, and what is left of affairs—what is now in your front, right, and left? Some of my intelligent officers say that Lee is falling back, but what of enemy? Enemy burned Bull Run bridge but night was nearly upon us.

O. B. McCLELLAN, *Major-General.*

Major-General HEINTZELMAN, Warrenton.

Keep special reports. Confer.

E. S.—If these general officers are not at the places named, nearest approximate ones can be arranged for several.

I also telegraphed to the Quartermaster-General as follows:

I have sent all the information I possess to Burnside, including what is from Cincinnati. Should think, however, that you could get more from Cincinnati and Louisville. Burnside's movements seem to me to be very slow. Should think he could find time to write me more frequently. Have had no letter from him since he marched through Kentucky. I forwarded a communication with Porter and myself to Burnside, which I sent to Cincinnati, asking for certain information in a few hours. I shall send the next enemy I get hold of here. Have had no information from Burnside since he left Lexington. Have written to him to send me information. Should think he could get it from the many thousands of prisoners fleeing of questions. I can see that I get no information.

Major-General BALLOCK, Gen. C. S. Army.

In view of the reports of Generals Averell, Avg. 27, 1863—42 p. m., which throw the mass of prisoners upon him, to move on with Franklin to Centreville or Gainesville, and to-morrow to Manassas Junction, and to-day to-morrow to leave my transfers to Lower Rappahannock is no longer necessary.

I have issued no further orders to Franklin.

Major-General HALLECK, *Washington, D. C.*

Major-General HALLECK, *Washington, D. C.* Avg. 27, 1863—12 p. m.

My aid has just returned from General Franklin's camp; reports that Franklin's command is in good condition, and that he has sent out a force to-day to the ford to gain information. Franklin's force is about 12,000 men. Reno's force is about 10,000 men, the remaining at Centreville, and have sent to recruit the depot. I am not certain to send on to the river. Are the works garrisoned and ready for defense?

Major-General HALLECK, *Washington, D. C.*

WASHINGTON, Avg. 27, 1863—12 p. m.

What batteries and what force of Reno's command can be spared to reinforce for the advance of troops to reinforce Pope, or to enable him to recruit his troops?

There should be two garrisons at Aquia creek and Belle Plain, and the remainder of Reno's command should be kept in readiness to be promptly ready for all necessary duties of the army.

Answer as I am not General Casey, or some other commanding officer, I write to you. Answer as I am not General Casey, or some other officer, I do not know where they are. I am trying to find them, and will soon be time for marching my troops. Where is Reno?

O. B. McCLELLAN, *Major-General.*

Maj.-Gen. H. W. HALLECK, *Washington.*

ALEXANDRIA, Avg. 27, 1863—1.35 p. m.

Franklin's artillery has no horses, except for 10 low guns without caissons. I cannot move it to-day. Reno's artillery is with his troops, and I cannot interfere with it. Franklin's troops are now on the road to Centreville. Reno's are encamped for the night on the works in front of Washington in his entrenchments. Of course I can move them to Centreville to-morrow, and thence to Pope and assistance.

Can Franklin, without his artillery or cavalry, effect any useful purpose to-day?

Should not Burnside take steps at once to evacuate Falmouth and Aquia, in the event of Pope's defeat, and retreat of his army? Where would he then be best in that direction?

I do not think we have force enough in hand to form a connection with Pope, whose exact position we do not know. Are we safe in the direction of the valley?

Maj.-Gen. HALLECK, *Washington.*

ALEXANDRIA, Avg. 27, 1863—1.55 p. m.

I learn that Porter's brigade, sent this morning to Bull Run bridge, is either at or near Centreville.

I had the honor to report to you that I could not move Franklin's artillery, receiving reinforcements every moment; also, that Cadwallader is in possession of the forts in front of Washington, and that Reno's command, with Cluseret's brigade, is south between the Potomac and Occoquan, and that Reno's troops are now on the road to Centreville. Franklin's troops are now on the road to Centreville. Franklin's troops are now on the road to Centreville. Franklin

The President informed me that he had reason to believe that the report of Gen. Pope, that he (Pope) was about to resign was correct. I urged him to reconsider his determination. He said he always supposed, as a special favor, to see my influence in correcting the state of things. I replied, substantially, that I was confident that the President disliked me; that I was sure, whatever estimate the Army of the Potomac might entertain of General Pope, that they would cheer him, of course, more than they would me. I do not think, however, that I was understood. I then told him that I would cheerfully telegraph to General Pope, or do anything else in my power to gratify his wishes and relieve his anxiety; urged, however, that I was always happy to serve him, and he could never forget my action in the matter, &c., and left.

I then wrote the following telegram to General Pope, which was sent to him by the general-in-chief:

WASHINGTON, September 3, 1862.

I ask of you, for my sake, that of the country, and the old army of which I am proud, to forget and forgive the past, and to remember only that we are fellow-soldiers fighting for the same cause. We cannot afford to be separated at this juncture. The welfare of the country, our honor, and all depends now upon the speedy concentration of all our forces. I am sure that you will do me the justice to believe that for the sake of my friends in the army of the Potomac, and for the love I bear to the old army, I would not say this unless I felt that it was my duty. I am willing to do anything I can do, consistently with my honor, to restore harmony and concert of action between the commanders of the Armies of Virginia, and am doing all I can to restore good feeling, which will become necessary.

GEORGE B. MCCLELLAN.

Major-General POPE.

To which he sent the following reply:

HEADQUARTERS ARMY OF VIRGINIA, 9 o'clock, September 3, 1862.

You may rest assured that all your friends, as well as myself, will, I am confident, well over give, as they have given, to General Pope their cordial support, aid and co-operation, and will serve him as they have served him, with all their ability, as wounded, and accidental wraps since our devoted duty.

F. J. PORTER.

General GEORGE B. MCCLELLAN, Commanding, Washington.

Neither at the time I wrote the telegram, nor at any other time, did I ask for or solicit command for General Porter had done, or would be, in any manner desirous to deprive him of the command of the army which he had so ably led. Such an idea never entered my mind. The dispatch in question was written at the request of the President.

On the morning of the 2d the President and General Halleck came to my house, and I received from them verbal information of the state of affairs on the front; that our officers were in a bad condition; that the army was in a bad condition; that the men were utterly worn out, and that much straggling, &c. He instructed me to take steps at once to stop the straggling, and to reorganize the army, and to put it in order for the field, and to go out to meet and take command of the army, when it presented itself. I left the President and General Halleck on this business—commencing everything to my hands.

In pursuance of the order I issued the orders, and sent an aid to General Pope with the following letter:

HEADQUARTERS, WASHINGTON, September 2, 1862.

GENERAL: General Halleck instructs me to request to know if you will be willing to ride across to Washington without unnecessary delay. He thinks that you should do so, and that you will be able to return in a few hours. He will decide reasonable.

In order to have troops upon ground with which they are already familiar, I would be glad to have you direct upon what point the troops now coming to Alexandria, &c., should be directed to report when they arrive. Franklin's to the works in front of Alexandria, Kearny's at Fort Albany, Sumner's at Fort Lincoln, or if practicable, to the Chain bridge, Sumner either to Fort Albany or to Alexandria, as you may think necessary.

In haste, general, very truly yours,

GEO. B. MCCLELLAN,

Major-General commanding United States Army.

Major-General JOHN POPE, Commanding Army of Virginia.

In the afternoon I crossed the Potomac and rode to the front, and at Upton's hill met Generals Sumner and McDowell, who had come out from Pope and Meclowell. After getting what information I could from them, I rode on to the front. I found the troops in the forts and intrenchments in front, troops scrambling in the direction of Alexandria; and hearing nothing from the direction of Centreville, I sent Generals Sumner and McDowell in charge of Sumner, Porter, and Sigel were retreating, and leaving their wounded there. I was not prepared to assume command of the army, and did not three orders, by the shortest line to meet the army, when it presented itself, and to go out to meet and take command of the army, when it presented itself, and to go out to meet and take command of the army, when I received a note from General Halleck, informing me that Pope had been relieved—commanding everything to my hands.

In haste, general, very truly yours,

GEO. B. MCCLELLAN,

Major-General commanding United States Army.

Major General JOHN POPE, Commanding Army of Virginia.

In the afternoon I crossed the Potomac and rode to the front, and at Upton's hill met Generals Sumner and McDowell, who had come out from Pope and Meclowell. After getting what information I could from them, I rode on to the front. I found the troops in the forts and intrenchments in front, troops scrambling in the direction of Alexandria; and hearing nothing from the direction of Centreville, I sent Generals Sumner and McDowell in charge of Sumner, Porter, and Sigel were retreating, and leaving their wounded there. I was not prepared to assume command of the army, and did not three orders, by the shortest line to meet

Colonel Mix instructed him to say that he could hold out with certainty two days longer.

I directed him to make his way back, if possible, with the information that I was approaching rapidly, and did not doubt I could relieve the place.

On the same afternoon I wrote the following letter to Colonel Mix, and dispatched three copies by three different couriers, on different routes. I did not, however, learn that any of them were successful in reaching Harper's Ferry:

HEADQUARTERS, *September 14, 1862.*

COLONEL: The army is now rapidly concentrating here. We are now at Frederick, and I shall be in Boonsboro' to-night. I hope you will be able to shoot enough to hold out until to-morrow night. If you cannot, I advise you to destroy the guns, spike them, and withdraw your command, making your way entirely to the rear. You can carry with you any supplies you may be able to get. Do not attempt to withdraw your command by the Maryland Heights with your whole force. If you should find it advisable to withdraw a portion of your force, you can do so, and I will cover your withdrawal with my entire force. Should you not hear from me by to-morrow night, you will be governed by circumstances. Hoffman is the best road.

I am, colonel, very truly yours, H. W. HALLECK, *Major-General Commanding.*

Colonel D. S. MIX.

On the previous day I had sent General Franklin the following instructions:

HEADQUARTERS ARMY OF THE POTOMAC,
FREDERICK, *September 13, 1862—8 P.M.*

GENERAL: I have just received the following dispatch from General Halleck, commanding the army. Jackson has crossed the Potomac, and is now in Maryland. The Harrisburg road via Emmitsburg crosses the river. A division on the south side of the river would be in a very good position to cut off Jackson's retreat in that direction. Maryland Heights has been examined and the division of R. H. Jackson ordered to occupy it. Colonel Miles, at Harper's Ferry, has 12,000 troops. He reports that he can hold out for a week with provisions and forage. The firing shows that Miles still holds out. Longstreet now is more in Boonsboro' than Hagerstown. Jackson is between the two. You will, therefore, proceed to-night, General's courtesy in being so sluggish. If we have missed out all the remaining troops will be pushed forward as rapidly as possible. You will take command of the troops designated, and will move with the utmost celerity and vigor to support him. The whole of the cavalry, horse artillery, and ammunition not with the army will be sent to you as rapidly as possible. You will move on Boonsboro', and, if you find the enemy in force there, you will attack him immediately, and not stop for anything but a battle. Harper's Ferry must be relieved at all hazards. Couch's division will probably throw the head of its army on Boonsboro' to-night. Sumner's corps will be up by the morning, and Hooker's from about there. Burnside's will be up to-morrow night.

GEORGE B. MCCLELLAN, *Major-General Commanding.*

Major-General W. B. FRANKLIN, *Commanding 6th Corps.*

Again, on the 14th, I sent him the following:

HEADQUARTERS ARMY OF THE POTOMAC,
FREDERICK, *September 14, 1862—6 A.M.*

Your dispatch of 9 last received. Send back to Harper's Ferry all the cavalry you can spare, and all the artillery not with the army. Keep up a strong force on the south side of the river, and be prepared to attack the enemy's rear should he attempt to cross the river. If you find the enemy in very great force in any of these positions, you will not attack, but withdraw your command to the north side of the river. In the event you will probably throw the mass of the army on the south side of the river, and I will be with you in person. Keep me fully informed of the movements of the enemy.

GEORGE B. MCCLELLAN, *Major-General Commanding.*

Major-General W. B. FRANKLIN, *Commanding 6th Corps.*

General Franklin pushed his corps rapidly forward towards Crampton's pass, and on the morning of the 14th found the enemy in force, and immediately in front of which he found the enemy's infantry posted in force on both sides of the road, and his artillery in position commanding the road the approaches to the pass. Slocum's division was formed upon the right of the road, and Smith's division upon the left of the road. Slocum's line was formed of Bartlett's and Torbert's brigades, supported by Newton, whose advance was posted on the crest of the hill in front of the enemy's artillery on the right. The enemy were driven from their position at the base of the hill, and the crest of the hill was carried by Bartlett's and shortly forced back on the slope until they reached the position of Newton's advance, when the enemy's infantry and artillery were checked and retired. From this position the enemy's artillery, in addition to their artillery on the right, kept up a constant fire of shot and shell.

On the left of the road, Brooke's and Irwin's brigades, of Smith's division, advanced in line of battle, Brooke's brigade moving along the mountain in the same steady manner, driving the enemy before them until the crest was carried. Irwin's brigade moved up the ravine in two different organizations, each hundred stand of arms, one piece of artillery, and thirty cavalry, supported by Hancock's brigade, of Smith's division. It was conducted by General Franklin in all its details. These detachments gave a report of General Franklin's movements, which, however, did not result according to the gallant officers and men engaged.

The loss in General Franklin's corps was not heavy, and was killed, Killed, four hundred and sixteen wounded, and two missing. The enemy's loss was very great, as many as could be counted from the hill on which our artillery could not be used with any effect. The slain of the action found General Franklin's advance on the ground, and the wounded left in the hills within three and a half miles of the pass on Maryland heights where he halted, on the road to Harper's Ferry. On the 15th the 6th Corps formed a junction with the garrison of Harper's Ferry and is not here personally with General Franklin's corps, but will report to you in person at Harper's Ferry.

On the night of the 14th the following dispatch was sent to General Franklin:

BOONSBORO', *September 15—1 A.M.*

GENERAL: The commanding General directs that you occupy, with your command, the road from Rohrersville to Sharpsburg, and attack the enemy in the morning, if it be possible to find his position, in case it should be assumed by the evening that he is retreating. Should you succeed in opening communication with Colonel Miles, you will inform him that the commanding General directs that he should proceed to-day to this army with his force. The remainder of the command will be withdrawn from Harper's Ferry and Maryland Heights, and will follow the movements of your corps. Should you not succeed in opening communication with Colonel Miles, you will withdraw your command to this side of the river, and proceed to-day to this army with him. The commander of the forces will be governed by circumstances in regard to the route he will take. Should you succeed in opening communication with Colonel Miles, and he should not be able to withdraw his force to-day, you will endeavor to hold upon him and our position at Harper's Ferry.

By command of Major-General McClellan.

GEORGE B. RUGGLES, *Colonel and Aide-de-camp.*

General FRANKLIN,
Commanding 6th Corps.

On the 15th the following were received from General Franklin:

HEADQUARTERS 6TH ARMY CORPS,
In Pleasant Valley, three miles from Rohrersville,
SEPTEMBER 15, 1862—8 P.M.

GENERAL: My command reached this point at 2 P.M. I have not been able to learn if Colonel Miles' forces have crossed the river. General Couch ordered Miles' troops to cross the river, and I have not heard from him since. I have ordered Miles to report to me with his command. The enemy is drawn up in line of battle about two miles from here, on the road to Sharpsburg, with his left resting on the mountain, and his right on the road to Harper's Ferry. I have not been able to hear from him. If Harper's Ferry has fallen—and the firing in the direction of that place leads me to fear it has—I should not be reinforced.

W. B. FRANKLIN, *Brig.-Gen. Com. Corps.*

General G. B. MCCLELLAN.

GENERAL: I have received your dispatch by Captain Ritchie. The enemy is in my front, and I am now engaged in a severe contest with him. I have not been able to open communication with Colonel Miles, nor can I do so unless I drive the enemy from his position. The enemy's force is very large. They outflank me on the right, and I am in danger of being overwhelmed. I am doing everything in my power to hold out, and will do so as long as possible. In the mean time I wish you to send me reinforcements. I have not been able to hear from Colonel Miles, nor can I do so unless the force I am in front. I have had a very close action of it, and the position is very heavy.

W. B. FRANKLIN, *Brig.-Gen. Com. Corps.*

General G. B. MCCLELLAN, *Commanding.*

Soon after this General Harper's Ferry at 8 A.M. on the 15th, as the cessation of firing there indicated, and General Franklin was ordered to return when he was to attack the large force in front of him, and pressing the line hard by the right of the left, when he was ordered to throw on to Maryland Heights, after sending Couch's division on to Maryland Heights, and to attack the enemy's rear as directed when he was ordered to engage the troops of the enemy on the morning of the 16th General Franklin was ordered to send Hoffman's brigade and a section of artillery in the direction of Keyes-ville, to cut off the retreat of the enemy's force in the direction of Leesburg, Pennsylvania, to throw the 6th United States cavalry and a section of artillery and provost guard to the front of the right wing of the remainder of his forces in the direction of Middletown in pursuit of the enemy.

After skirmishing with the enemy all the morning, and driving them from several strong positions, he reached Turner's gap of the South Mountain in the afternoon, and found the enemy in force and apparently determined to defend the pass. He sent back for infantry to General Burnside, who had been directed to support him, and prepared to make a reconnoissance of the position.

The South mountain is the highest point about one thousand feet in height, and on general direction is from northeast to southwest. The national road from Frederick to Boonsboro' and Hagerstown, Md., passes directly through Turner's gap, a depression which is some four hundred feet above the base.

The mountain on the north side of the turnpike is divided into two ridges, with a valley between, which is very deep at the base, becomes a ridge at the summit, and then a deep ravine. There are two roads which cross the crest of the mountain north of the gap, one of which joins the turnpike at the summit, and the other a little to the east, called the "Old Sharpsburg road," is nearly parallel to and about half a mile distant from the turnpike, until it reaches the crest of the mountain, when it bends off to the left. The other road, called the "Mount Tabor road," passes off to the right from the turnpike about a mile from the base, and, keeping to the high crest and along the first ridge, reaches the Old Sharpsburg road before the summit is reached.

On the night of the 13th the positions of the different corps were as follows:

Reno's corps at Middletown, except Benham's division at Frederick.

Hooker's corps on the Monocacy, two miles from Frederick.

Sumner's corps near Frederick.

Franklin's corps at Buckeystown.

Burnside's corps at Frederick.

The orders from headquarters for the march on the 14th were as follows:

Reno, 11.30 p.m.—Hooker to march at daylight to Middletown.

Reno, 1 a.m.—Sumner to march at 6 A.M. to support Hooker, on the Middletown and Hagerstown road.

Reno, 1 a.m.—Franklin in reserve to follow Sykes closely.

Reno, 6.45 p.m.—Turner to move at 5 A.M.

Reno, 6.45 p.m.—Burnside to march on the Shookstown road to Middletown.

Reno, 6.45 p.m.—Couch ordered to move to Jefferson with his whole division.

On the 14th General Pleasonton continued his reconnoissance. Gilsmith's battery and cavalry and Reynolds's battery (of Reno's corps) were sent to the front, and General Pleasonton established a battery on the fine on the enemy's position in the gap.

About noon General Reno's corps was ordered up to support General Pleasonton, and, on his advance, near Middletown, at 8 A.M. the 1st brigade of Reno's corps, General Scammon's, was sent to the front up the old Sharpsburg road to General Pleasonton's left, and the enemy and severely driven off in the direction of Fox's gap. Colonel Crook's brigade, of Cox's division, was then sent to the support of General Scammon, and information having been received from General Reno that the enemy were in force on the mountain, Colonel Crook's brigade was ordered to ascend the position. Two 20 pounder Parrotts of Simmons's battery were placed in position on the road, supported by Scammon's brigade in position near the turnpike, where they had good service during the day in shelling the enemy's batteries. Colonel Crook's brigade, consisting of 1,800 men, was deployed, and, well covered by the skirmishers, moved up the slope to the right of the road, driving the enemy's skirmishers before it, in good order. It encountered in passing the crest one established itself there, it moved down the slope to the front, where a heavy rebel infantry force was in line of battle, and the fire of a battery which poured grape and canister down the road. Here the fight was very desperate. Colonel Crooke's brigade marched in column as supporting distances.

Colonel Crook's brigade consisted of the 11th Ohio, Colonel Ewing; the 28th Ohio, Colonel Hayes; the 36th Ohio, Colonel Lane; the 23d Ohio, Colonel Comly; and the 12th West Virginia, Colonel Carroll. Colonel Ewing was of his gallant men moved up with great delicacy, and Colonel Hayes, who succeeded to the command of the brigade when Crook fell, when fallen having done considerable execution) it was soon silenced and driven off.

One regiment of Crook's brigade was now deployed on Scammon's right, and Colonel Crook's brigade was formed in column of attack the first line and relieved the regiments in front of them when hard pressed, and the fight was continued with great vigor. The rebels had the open space in the woods, where it did good service during the rest of the day.

The enemy several times attempted to retake the crest, advancing with their colors, but were driven back each time. Colonel Scammon's brigade was moved to the right, and formed column on both sides of the road. It was soon engaged, and the enemy were driven back. Colonel Crook's brigade was relieved, and the corps was coming up. General Wilcox's division was the first to arrive. General Pleasonton ordered him to the support of General Scammon, and General Pleasonton as to a position. The latter indicated that on the left of the road, and the former that on the right. Wilcox's division, instead of moving to occupy this ground, when he received an order from General Reno to move to the left of the road, moved to the left of the road, and in rear of Scammon's brigade. Two regiments were detached to support Cook's battery, and the remainder of Wilcox's division was formed and placed in position near the turn of the road, (on the crest,) and opened fire on the enemy's batteries on the right of the gap. Scammon was ordered to deploy to the right of the road, when the enemy suddenly appeared in force on the crest of the hill to the left of the road, and the road at this point, drove off Cook's cannoneers with their muskets, and attempted to capture the battery. The regiments (who had just been relieved from the 9th New York and 28th Michigan previously rallied, charged front under a heavy fire, and drove the enemy back, and saved the battery. Captain Cook and wounded. Order was soon restored, and the division moved on to the crest of the hill. The enemy were formed en masse in a position under the hillside into the woods into advanced. It was expected that they would attack the batteries, but they did not fire on the batteries on the other side of the turnpike, and lost heavily.

The enemy's artillery fire was severe when they first arrived at the base of the mountain, and the former directed the latter to move up the hill, and to move upon the enemy's position with his whole force. This was done, and the enemy's position with his whole force of the enemy's position with his whole force of the enemy's position with his whole force of

"ANTIETAM."

On the night of the battle of South Mountain, orders were given to the commanding officers of the several brigades to picket at early dawn. The pickets reported the fact that the enemy had left his positions, and in pursuance thereof were ordered forward. Gen. Hooker's division, under the gallant Ricketts, and the three corps under General Sumner, Hooker, and Mansfield, pushed on, and discovered that the enemy had assumed command of the line of which had been held by Generals Longstreet and Stonewall Jackson, (Hill's corps excepted,) reliable and reserve (the latter consisting at that time mainly of General Hill's troops) were driving. Drawn by the old infantry tactics of Napoleon to move into Pleasant valley, except Hill's corps, by detachment, and to concentrate at Boonsboro' and Hagerstown.

Gen. Burnside and Porter, upon receiving the result from information gained by reconnoissance, pushed on their forces as rapidly as the circumstances

permitted, through Brownsville and found there a force of the enemy much superior in numbers to his own, drawn up in a strong position, to receive attack. At this point the contest was severe, and resulted the occurrence of that piece.

The fighting continued with great activity in Boonsboro' gaps, requiring energy, skilling and wounding a number, not supporting 250 prisoners and deserters.

General Richardson's division of the 6th corps pressing the rear guard of the enemy with the 1st brigade, Gen. Caldwell, and the 2d brigade, Gen. Meagher, the main body of the enemy, occupying in large force a strong position a few miles in front of Sharpsburg.

Gen. Richardson's division of the 6th corps, Gen. Smith's division, had been urged to engage the enemy during the late action, but, by reason of the great distance of the corps from the field of battle, the division could not be attacked at once; it was, however, ordered to the front, and, after a short time, was in position for attack, and moved to engage in the action. The division was formed in two lines of battle, the 1st brigade, Gen. Richardson's and Sykes, in position; the other two were held in reserve. The 1st brigade, Gen. Caldwell, commanded the

The enemy occupied a strong position on the heights, on the west side of the Antietam creek, displaying a large force of infantry and cavalry. The artillery was posted on the heights, and commanded the approaches to the bridge. The bridge is in sight on the Keedysville road and Sharpsburg turnpike, which crosses the Antietam creek. The bridge is about 400 feet in length, and is a stone structure, with three arches. The creek is fordable for infantry, and Pettit's battery, 1st New York artillery.

The division of Gen. Richardson's, the 2d brigade, Gen. Meagher, was in reserving fire, halted and deployed near Antietam river, on the west of the turnpike leading to Sharpsburg. The 1st brigade, Gen. Caldwell, engages on the old Sharpsburg road, came up and deployed to the left of General Richardson's division, in the following order:

Antietam creek, in the vicinity, is crossed by four stone bridges—the upper one on the Boonsboro' and Hagerstown turnpike, the next on the Keedysville and Sharpsburg turnpike, some two and a half miles below the first-named bridge, the third on the road from Rohrbach's to Sharpsburg road; and the fourth near the mouth of Antietam creek, on the road leading from Rohrbach's to the ford, and known as Burnside's bridge, also below the third. The stream is sluggish, with few and difficult fords. After a careful reconnoissance, it was found that it was not practicable to attack that day, and it was directed the placing of the batteries in position to command the approaches to the bridges and the entire range, massing them near and on both sides of the Sharpsburg turnpike. The troops were ordered to bivouac on their arms in the vicinity of the batteries.

At the opening of the fifth, it was discovered that the enemy had changed his position, and that his line of battle was now formed on the heights overlooking the bridges, the batteries being posted on the most commanding positions. The ground in front of the enemy's position is undulating, and the slopes of the hills are covered with fields of corn and timber, the latter principally reserved for the purpose of concealing the movements of troops. The ground in front of the bridges is open, and the approaches to the bridges are completely commanded by the batteries of the enemy. The bridges are also commanded by the infantry posted behind the stone walls on the opposite side of the creek. The ground in front of the bridges is open, and the approaches to the bridges are completely commanded by the batteries of the enemy. The bridges are also commanded by the infantry posted behind the stone walls on the opposite side of the creek.

Gen. Burnside's plan of battle, described on No. 3, near this point, was promptly carried by columns preceded by rifle pits, stone fences, &c., and concealed by the corn and timber. The plan of battle, as described in the following table, there existed in here accompanied by others in close rear. In all fourteen guns were posted on the hills overlooking the bridge, and five guns were taken from view by the hills, on which their line of battle was formed, could command the approaches to the bridge. The fire from the guns of their line could readily reinforce any point threatened by our attack. Three bridges were commanded by the fire of the guns of the enemy, and Antietam, their flanks and rear protected by these means, was out of the situation of the bridges, and the fords were in front of the line of battle in extensive earthen.

On the right, the Sharpsburg turnpike, on both sides of the Sharpsburg bridge, were Sumner's and Hooker's corps. In advance, on the right of the turnpike and in front of Sharpsburg, was the 1st corps, Gen. Hooker. To the left of General Sumner's corps was posted. General Sykes's division of General Porter's corps, and on the left of General Sykes's was that of General Richardson, protecting the bridge No. 2, over the Antietam. On the left of the bridge, and in front of the ford, was the 9th corps, Gen. Burnside's corps.

About 8 o'clock in the morning, while considerable changes in the position of General Sumner's corps, and directed him to advance to a strong position in the timber in front of the bridge, and to hold the bridge and the approaches to the bridge carefully. In front of General Sumner's and Hooker's corps, the enemy's line of battle was formed in the timber, with the overhanging the Antietam, and between the turnpike and Fry's house on the right, and the bridge and ford on the left. Between the two Kimmel's and Lieutenant Weaver's batteries of twenty-pounder Parrott guns, the first of which is in charge of Lieutenant Weaver, and the 2d, Captain Weeks's three-inch and Lieutenant Dolphinde's brass 12-pounder batteries, in charge of Lieutenant Dolphinde, were posted. The 1st was to hold a position to Pleasant valley in front of Brownsville, with a strong force of the enemy in front. The 2d corps, General Mansfield, and Porter's corps was en route from Boonsboro', and General Humphrey's division of corps was in the vicinity of Keedysville. The 1st corps was engaged on the 16th this enemy opened a heavy fire of artillery on our position, which was replied to by Hooker's batteries, and the engagement of the time, but was frequently renewed during the day. In the heavy fire of the morning, the 1st corps, commanded by General Hooker, on the left artillery, was severely wounded while directing the operations of batteries.

A late afternoon before I could move the troops to their position the enemy was being rapidly reinforced, and was massing his forces from the left, which lined up by the enemy, examining the ground, and making new dispositions of his forces. Under the cover of the timber and rolling ground the enemy had been enabled to bring his forces to the front and form his line of battle, and to make his dispositions for attack, and was ready to assume the offensive. On reaching the ground, I found the enemy in force on my left, and the 1st corps, General Hooker, engaged in the fight. The 1st corps, General Hooker, with his corps, consisting of General Meade's division, on the right, and Doubleday's, in the centre, and Ricketts's on the left, and Hatch's, I, about three-quarters of a mile, to the front of the bridge, and Hatch's, I, about three-quarters of a mile, to the front of the bridge, and Hatch's, I, about three-quarters of a mile, to the front of the bridge

tack of the enemy on this position, but for the timely arrival of his corps, and how bravely and gallantly it succeeded in piercing the enemy's line between General Sedgwick and General Warren, and driving him backward from his two breastworks of General Sloum's divisions, General Meade's and General Torbert's, to form a new position. General Meade's line had been so fully contested before by General Sumner and General Hancock, that the reserves of the enemy had been used as reserves. At this time General Sumner, having command of the right, directed further offensive operations to be postponed, as the repulse of this, the only remaining corps available for attack, would yield the safety of the whole army.

General Porter's corps, consisting of General Sykes's division of regulars and General Griffin's division of volunteers, which had been occupied a position on the east side of Antietam creek, upon the main turnpike leading from Sharpsburg to Boonsboro, and on the line of the enemy's line. This corps filled the interval between the right wing and General Burnside's corps, and was ready to meet any opponent from the enemy's position to our trains of supply. It was necessary to watch this part of our line with great care, because not the enemy should take advantage of the first exhibition of weakness to break through it, and so cut us off from the purposes of piercing our centre and turning our rear, or to fall upon our trains of supply, and so force us to fight or to retreat into the enemy's country, where we should be without the means of subsistence, and have no recourse to relief or close up the gap.

The order for the movement of the aforesaid corps was: At light, I found that Sumner's, Hooker's, and Mansfield's corps had not sufficiently recovered from the effects of the battle of the 17th to hold severely wounded, and the report of affairs was nothing less promising. At the rate of twenty minutes between the firing of two brigades from Hooker's corps, the only available troops, to influence the battle, were Sykes's corps, which had been thrown forward across the Antietam bridge on the main road to attack and drive back the enemy's sharpshooters, who annoyed exceedingly Hooker's flank, and to threaten his advance on the left; Warren's brigade of Porter's corps, was ordered to take the place of Sykes's on the road; as that Porter was left at one time with only a portion of a brigade of regulars and one of volunteers, and Griffin's division of three thousand men to hold the important position.

General Sumner was ordered to send forward the spirited artillery attempt during the day to advance on the enemy's centre, but the enemy's sharpshooters were so much scattered and demoralized, by the fire of the artillery, and the deadly concentrated fire from the position of some of his troops, I directed the different commanders to hold their positions, and not to advance. The day was lost to us without the assistance of the two brigades from the centre, I commanded the army, which was in a state of great confusion.

General Sumner's division regained a portion of General Sumner's troops, and a general rout was prevented by the steadiness of General Sedgwick's division. The enemy opened several heavy fires of artillery on the position of our troops until dark, but our batteries replied with effect.

On the morning of the 18th General Pleasonton, with his cavalry division, and the Horse Artillery, under Captain Robertson, Captain and Lieutenant Hollon, of the 2d artillery, and Captain Gibson, 3d artillery, was ordered to advance on the enemy's centre and right wing, across bridge No. 3, and support the left of General Sumner's line. The bridge was passed by a line of battle, and skirmishers, cavalry skirmishers were thrown out, and Captain Gibson with two pieces of artillery, supported by cavalry, advanced with rapidity and audacity to within a few hundred yards of the enemy's line of battle, when the enemy opened with artillery. The firing was kept up for about two hours, when, the enemy's line of battle on the left having been turned by Burnside's and Von Steeb's batteries, United States artillery, Lieut. Crosby, Hazlett, Roberts, and Hilton attacked the enemy's batteries on the west of Antietam, Captain Gibson having been placed in position on the road to the ford by General Sumner's order. These batteries did good service, concentrating their fire on the column of the enemy about to attack General Sumner's position, and compelling it to fall shelter behind the hills in rear.

General Hooker's corps had been in position since the 15th, exposed to the enemy's artillery and sharpshooters. General Mansfield came on the field, and, pointed out to him the position on the right of General Sykes. Continually, under the vigilant watch of the enemy, this corps gained a vital point.

The position on the batteries under General Pleasonton being one of great importance, and subject to the fire of the enemy's sharpshooters, under Captain Pelouze, 2d infantry, was sent to his support. Subsequently Captain Pelouze was severely wounded in the thigh, and, his infantry, were sent across to assist in driving off the sharpshooters of the enemy.

The position held by the 2d and 10th battalions of regulars, under the batteries, compelled the evacuation of a battery of the enemy to abandon their guns, and the sharpshooters annoyed them so much as to be unable to bring them off. The heavy loss of this small body of men attests their gallantry.

The troops of General Burnside held the left of the line opposite bridge No. 3. The enemy, on the morning of the 18th, made a heavy attack on the left. Preparatory to this attack, on the evening of the 18th, General Burnside's corps was ordered to cross the ford on the left, and took up a position nearer the bridge.

I visited General Burnside's position on the 18th, and after pointing out to him the proper dispositions to be made of his troops during the night, directed that before daylight on the 19th he should proceed to attack the enemy's right on the following morning, and directed him to act with great circumspection.

General Burnside's corps, consisting of the divisions of Generals Cox, Wilcox, and Sturgis, and the 2d brigade of General Potter's division, General Cox's division, on the right, General Wilcox's division in the centre, and General Sturgis's on the left, with General Potter's division, with orders to attack the enemy's right wing, to support General Wilcox's division on the left.

The centre of the army was in position on the night of the 18th.

Early on the morning of the 19th I ordered General Burnside to carry his troops into battle. This movement was made with the left in the front, and so much further orders.

At 4 o'clock in the morning I was met by Lieutenant Wilson, topographical engineer, to carry the bridge, then to gain possession of the heights overlooking the bridge, and to support the movement of Burnside and his rear.

After some time had elapsed, not hearing from him, I dispatched an aid to ascertain what had been done. The aid returned with the information that the enemy had possession of the bridge. I then sent back with an order to General Burnside to assault the bridge at once, and carry it at the point of the bayonet. I waited for some time with the report that the bridge was still in the possession of the enemy. Whereupon I ordered General Burnside in person to proceed to deliver to General Burnside my positive order to push forward his troops without further delay, and carry the bridge, and to cross the bridge at the point of the bayonet; and I ordered Colonel Sackett to remain with him and see that the order was executed to the letter and promptly.

"Tell them three hours' delay, the bridge was carried at one o'clock in the afternoon, and the troops of the left wing commenced operations. Other troops were then thrown over, and the enemy driven back over the hills, and the battle was fought on the left.

A halt was then made by General Burnside's advance until 2 p. m., upon information that a column of the enemy was advancing. I sent from General Burnside that I desired him to push forward his troops with the utmost vigor, and carry the enemy's position at all hazards, that the movements was vital to our success; that this was the time when everything for love or gold was to be done, and it must and to be accomplished. This is, in his judgment, his attack would fail, to inform me as soon as possible, that I might know what I should send elsewh ere on the field. He replied that he would soon advance, and that he was then in the act of turning the enemy's right on the left, would perish. Upon this report, I again immediately sent General Key to General Burnside, to impress upon him that it was possible to hasten the victory, or storm it and carry the heights; to employ the whole of the remainder of the morning in the attack, and if he was so, that his troops might be rewished. The advance was then ordered, and the enemy driven from his position on the left, and the heights were carried. Darkness put a stop to our operations for the night. Skirmishing continued during the night, and was steadily dark, the continuance of firing, and the position of the enemy's sharpshooters. Hooker attacked General Burnside's troops on their left flank, and found them to retire to it have for all into some the bridge.

If this important movement had been consummated two hours earlier, a position would have been secured upon the heights, from which our batteries might have enfiladed the greater part of the enemy's line, and turned their right and rear, our victory might thus have been much more decisive.

The subsequent movements of General Burnside's operations as given in his rep ort:

"At 9 o'clock brigade was ordered to storm the bridge. This brigade, No. 2, is a stone structure of three arches with stone parapets, 12 feet wide, and the stream on the right is fordable. The enemy had commanded the eastern approaches to the bridge. On the hill side, immediately by the bridge, was a stone fence running parallel to the stream, the ones of the roadway, as it wound on the hill, were covered with rifle pits, and the crest was lined with fie works, and the woods that covered the slopes, were filled with the enemy's riflemen, and batteries were in position to enfilade the bridge and its approaches.

General Rodman was ordered to cross the ford below the bridge. From Colonel Crook's position it was found impossible to carry the bridge.

General Sturgis was ordered to make a detail from his division for the assault. This detail consisted of the 2d Maryland and the New Hampshire. These regiments made several successive attacks in good order, and gallantly, but failed to carry it.

The artillery on the left were ordered to concentrate their fire on the bridge and the enemy's position. Lieutenant Durell was sent to Captain Sturgis's battery to a position to command the bridge, but that fire was not effective. The commanding officer ordered to assault the bridge. Taking advantage of a small spur of the hills on the right, and the cover of the fire of artillery, the 51st New York and 51st Pennsylvania charged across the bridge and carried the position.

The artillery and the attacking party under the brigade of Colonel Crook's as a support. The enemy withdrew to still higher ground, where he was in the new position on the crest of the hill artillery on the troops in the new position on the crest of the hill the 9th New York.

General Rodman's divisions succeeded in crossing the ford after a long line of skirmishers, and formed on the left of Sturgis's division. Rumsom's brigade crossing as support. General Wilcox's division was ordered to cross the ford on General Rodman's right.

These dispositions being completed about 3 o'clock, the command to advance was given. General Cox's division, Colonel Scammon's and Durell's batteries accompanied Rodman's division; Cook's battery, Sturgis's division, and Von Steeb's battery, Wilcox's division, Colonel Crook's brigade. A section of Simmons's battery and Hollon's battery, Cox's division, were ordered to the left. The order for the advance was obeyed by the troops with alacrity. General Rodman's division, on the right, was directed to move on the road to Sharpsburg, leading from the crossing of the ford, and to form in line of battle on the hill overlooking Sturgis's bridge, with the left of General Cox's division. Upon the advance of the troops of the 9th New York, of General Rodman's division, captured one of the enemy's batteries, and drove the enemy from it. At the commencement this driving the enemy to the main heights on the left of the town, and the two divisions of Generals Cox and Rodman had also made their way to the front of the enemy's position. Colonel Scammon's brigade, of General Cox

...ment Corps, but will be out of it by morning. I think he has a force of fifty thousand men.

...ing to reach every dispatch I have the honor to report that the enemy is now in full retreat on Strasburg, and that the whole of my force is ordered in pursuit. I have also the honor to recommend the recess achievements of this gallant officer to your favorable notice.

...ing all accounts I have given my force of men, colors, small arms, &c., captured, and I would do no with some accuracy. I hope to be able to furnish you with the full details in accordance with your order.

G. R. McCLELLAN, *Major-General Commanding.*

Major-General HALLECK, *General-in-Chief.*

On the same day I telegraphed as follows:

HEADQUARTERS ARMY OF THE POTOMAC,
September 21, 1862.

As darkness came, now on the Virginia side of the Potomac, must in a great measure be terminated the operations of the present campaign. Before it closed, I sent a general reconnoissance in force across the river, which has developed the fact that the enemy has left but comparatively small forces in our immediate front. The whole result is very satisfactory.

D. R. McCLELLAN, *Major-General Commanding.*

HD.-QR. R. W. HALLECK, Gen. C. S. Army.

Harper's Ferry and Maryland Heights and General Williams' corps on the 20th, and on the 22d General Sumner took possession of Harper's Ferry.

It will be observed that the above dispatches do not give the number of our forces for the defence of the national capital, on the day of the battle of Antietam. I have since ascertained that the number was 87,164 infantry and artillery, and 12,410 cavalry. The actual strength of the army, after the subtracting of detached forces, was somewhat less than the above numbers, but it was sufficient for the purposes of General Pope. Our numbers were increased by about 20,000 men during the battle, and I have no doubt that they had lost something of that "*esprit du corps*" upon which, in the field, victory depends. Had we been defeated, which was quite possible, or were not, the greatest part of their clothing and camp equipage, which was necessarily transported in wagons, would have fallen into the British again.

The intelligence from the enemy was crossing the Potomac into Maryland, was received in Washington on the 4th of September, and the army began to move forward on the following day. It was a long march, and the following, so that not a very brief interval of time was allowed to the troops to procure supplies.

The sanguinary battles of South Mountain and Antietam fought by this army a few days afterwards, the latter the most sanguinary of the war, resulted in a loss to us of ten general officers, many regimental and inferior officers, and 12,410 men killed, wounded and missing, which is the aggregate to fifteen thousand two hundred and twenty (15,220), for some regiments were not in the battle, and others suffered more than mentioned in the letter on the 15th.

In General Stuart's report, dated forty-one (41) commissioned officers and eight hundred and nineteen (819) enlisted men had been killed; four (4) general officers, and two (2) of his staff, and one hundred and forty-three thousand seven hundred and eight (3,708) enlisted men had been wounded, besides the missing, which is not stated. This is a loss which will be appreciate men in those splendid veteran corps, in this case battle, for the greatest loss fell upon the First and Second Corps.

In General Hooker's corps, the only one engaged in the severest part of the engagement, were killed two hundred and nineteen (2,219).

The entire army had been engaged in the battle of Antietam, and was in the highest state of discipline, and want of sleep and rest, previous to the battle.

The enemy's army recrossed the Potomac into Virginia the means of transportation at our disposal, and without molestation, and with the loss of nothing of consequence in advance.

Many of the stragglers, and many broken, arms of whom had fought like heroes, but the mounds of others had been a good deal impaired in their courage and discipline, and the fact that they had been defeated, as well as to acquire the necessary drill and discipline.

Every effort was made by the army to be prepared to cross the river with the main army over a very short and difficult ford in pursuit of the retreating enemy, and on the 7th of October, the day after the battle, the enemy pass that stream, which was liable at any time to rise above a foot, and the army followed on the 8th and 9th.

I telegraphed on the 8th to the General-in-chief as follows:

As soon as that portion of the army now on this side of the Ft. this army should be reorganized. It is absolutely necessary to secure its efficiency, that this shall be accomplished as soon as possible. Our men and officers are supposed to occupy the numerous existing vacancies. There are infantry who are without officers, and officers without men, and cavalry who are without a single commissioned officer.

On the 12th the army was reinforced to the general-in-chief:

HEADQUARTERS ARMY OF THE POTOMAC,
October 12, 1862—9 a. m.

From several different sources I learn that General R. E. Lee is still upon the Upper Potomac, and that his army is in the vicinity of Winchester. Should the General-in-chief deem it advisable, I will move my command in that direction, with a view to forcing the enemy from that stream, which was liable at any time to rise above a foot, and thus cut off my communications with Washington.

I telegraphed on the 13th to the General-in-chief as follows:

As soon as that portion of the army now on this side of the Ft. this army should be reorganized. It is absolutely necessary to secure its efficiency, that this shall be accomplished as soon as possible. Our men and officers are supposed to occupy the numerous existing vacancies. There are infantry who are without officers, and officers without men, and cavalry who are without a single commissioned officer.

On the 13th the army was reinforced to the general-in-chief:

HEADQUARTERS ARMY OF THE POTOMAC,
October 13, 1862—9 a. m.

From several different sources I learn that General R. E. Lee is still upon the Upper Potomac, and that his army is in the vicinity of Winchester. Should the General-in-chief deem it advisable, I will move my command in that direction, with a view to forcing the enemy from that stream, which was liable at any time to rise above a foot, and thus cut off my communications with Washington.

I telegraphed on the 13th to the General-in-chief as follows:

Information received from various sources leaves no doubt that the rebel army is moving to the Upper Potomac, with the intention of crossing at Williamsport or Shepherdstown. I shall move my command in that direction, and will endeavor to force the enemy to battle before he can recross the river. Please inform me whether I am to consider Harper's Ferry as part of my command.

On the 14th I received the following telegram from General Halleck:

Major-General HALLECK, *General-in-Chief of the Army.*

On the 14th I made the following report:

HEADQUARTERS ARMY OF THE POTOMAC,
October 14, 1862—9 a. m.

If the information in my Thursday's dispatch points to the main body of the enemy's forces, and not to a mere raiding party, I shall move my command to-day, not along the Shenandoah. These mountain roads are narrow, and the country is exhausted. I shall move by the roads on the east side of the Blue Ridge, unless, I think, of some strong reasons to the contrary.

I have been compelled to halt the troops for supplies, and have ordered forward all the wagons that could be collected. Many of the horses are unfit for service, and will be left behind. I have ordered forward all the cavalry horses that can be procured, and will mount as many men as possible. Many of the men are barefoot, and will be left behind. I have ordered forward all the shoes

Statement of Clothing and Camp Equipage issued at the Depots of the Army of the Potomac from September 1, 1862, to October 31, 1863.

The course of the reduction of our cavalry force have already been noticed. The difficulty in getting new supplies from the usual sources led to an attempt to obtain them in the country, and the cavalry corps were ordered to purchase their own horses. Two following are the telegrams and letters on this subject:

HEADQUARTERS ARMY OF THE POTOMAC,
October 16, 1863—1 P. M.

It is absolutely necessary that entire overcoats must be taken to supply the cavalry of this army with mounted overcoats. The present rate of supply (1,000 per hundred) will not keep our cavalry supplied. Please order the issue of 1,000 of Washington. From this number no more will be issued.

By command of Major-General MEADE.
GEORGE M. MCCLELLAN, *Major-General.*
General H. W. HALLECK, *General-in-Chief.*

The general-in-chief, in a letter to me, dated Washington, D. C., October 14, 1863, replies to this dispatch in the following language:

"I have received your telegram of to-day in your telegrams of the 14th and 15th to be investigated.

* * * * * * *

"In regard to horses, you say that the present rate of supply is only 60 per cent. for the cavalry force in the front of Washington. I find from the records that the issues for the last six weeks have been 5,784, making an average per week of 1,450."

One thousand and fifty (1,050) is the number stated in the original dispatch, now in my possession, and is not only figures where it is 1,450. If the number was written eighty-nine full, I can hardly see how it is possible for the telegraph operator to have omitted a hundred in the transmission of the message.

HEADQUARTERS ARMY OF THE POTOMAC,
October 16, 1863—7 P. M.

With my cavalry force it is impossible to operate on the front of the Potomac properly, or even take the reconnoissances that are necessary for our protection. In the absence of cavalry the enemy can move his forces through the mountains to the right or left without our knowledge. This will embarrass and delay your plans, and it was not to be supposed that I would leave the cavalry entirely in the rear, for I regard the service as of the most important, and immediately increased, under my hypothesis, whether to guard the rear, or advance on the enemy's flank.

By command of Major-General MEADE.
GEO. M. MCCLELLAN, *Major-General.*
General H. W. HALLECK, *General-in-Chief.*

The following is the statement from the Quartermaster-General:

"Immediately after the battle of Antietam efforts were directed to supply the deficiencies in clothing and horses. Large requisitions were prepared and sent in. The artillery and cavalry especially required a large proportion of horses to be supplied by battle, or by purchase in the field. Both of these arms were deficient when they left Washington. At Antietam the cavalry and artillery lost about 10,000 horses, and the infantry probably 4,000 animals out of service. Horses reported perfectly well one day were found to be dead lame the next, and in all cases of horses where it would end, or what number would cover the loss. They were attacked in the front and rear by the enemy, and were subjected to the appearance of his demands. Animals kept at rest would recover in time, but could not be worked. I made application to the Secretary of War for horses at once, but it was replied, on the ground that the outstanding contracts provided for enough, but they were not delivered sufficiently fast, nor in sufficient numbers until late in October and early in November. I was authorized to buy 2,500 late in October, but the delivery was not completed until in November, after we had reached Warrenton."

In a letter from General Meigs, written on the 14th of October, not addressed to the general-in-chief, it is stated: "There have been issued, therefore, by the order of the Secretary of War, at Washington and Washington, to regular issues, (9,054) like thousand two hundred and fifty-four horses.

What number of horses were sent to General Pope before his return to Washington, I have no means of ascertaining; but the following statement made upon my order, by the chief quartermaster with the army, and who had means for procuring correct information, fully shows my mind the conclusion that the Quartermaster-General was in error:

HEADQUARTERS ARMY OF THE POTOMAC,
Chief Quartermaster's Office, October 31, 1863.

Horses purchased since September 1, 1863, 2,000.

Quartermaster-General Meigs and myself, in the month of October, 1862, visited Washington, and issued to the horses twice the immediate command of Major-General George B. McClellan. 2,000

Horses purchased since September 1, 1863, by Captain J. J. Dana, Assistant Quartermaster in Washington. 2,000

Issued to horses at and near Washington which have since joined the command. 2,000

Issued to Colonel Ingalls, last named and turned over by Captain Dana to the horses at Alexandria. 2,000

Issued by Captain J. J. Dana, Assistant Quartermaster, to the forces in the vicinity of Washington. 2,000

Gross total, purchased by Colonel S. Ingalls, Chief Quartermaster, and issued and turned over to Captain J. J. Dana, Assistant Quartermaster, to the entire Army of the Potomac and the forces around Washington. 10,000

About 3,000 horses have been turned over to the Quartermaster's Department by officers as unfit for service, nearly 1,000 shoeless, and the rest sick, being worn out and diseased.

Respectfully yours,
FRED. MYERS,
Brevet-Col. and Quartermaster.

This official statement, made up from the reports of the several officers who received and distributed the horses, establish the true state of the case, and gives the actual number of horses sent by the army of the Potomac, and the troops around Washington, during a period of eight weeks at (7,178) seven thousand one hundred and seventy-eight or (3,078) two thousand and seventy-eight less than the number stated by the Quartermaster-General.

Supposing that (1,500) fifteen hundred were issued to the army under General Pope previous to the battle of Bull Run, and that these were lost, there would still remain (578) five hundred and seventy-eight horses which he does not account for.

The letter of the general in chief to the Secretary of War on the 25th of October, and the letter of the latter to the general-in-chief on the the 14th of October, convey the impression that, upon my repeated applications for cavalry and artillery horses for the army of the Potomac, I had received a much greater number than was really the case.

It will be seen from letter No. 1 that the number of horses I had established to by General Meigs, only (3,018) three thousand and eighteen and thirteen more to date of my letter, and which were to follow and attack the enemy. Of course the conclusion was drawn by the public that the cavalry and artillery of the army of the Potomac were fully supplied with horses, and that the failure of the army to attack the enemy was owing to other causes than the want of horses for carrying on operations for carrying out the order to advance upon the enemy, as the general-in-chief had a right to expect.

During the same period that we were receiving the horses alluded to, about (2,000) three thousand of our horses were taken from us by the quartermaster's department, and 1,500 more reported as in such condition that they ought to be turned in to the depot. I was informed by one of the active army some 700 short of the number required to make good existing deficiencies, by the time the horses could be received. The issue of horses to the cavalry and artillery of the army of the Potomac, during the campaign and those

"the intersection of Manassas Junction would complete the system for the defence of the approaches to Washington and the upper Potomac. Its importance as a military position is apparent from the fact that the force it is to be carried into effect. I still regard it as essential under all circumstances.

"The views of the chief engineer of this army, in regard to the defences and garrison of Washington, are perfectly just and correct, and in my opinion.

"To the only troops under my command, outside of the organization of the army of the Potomac, are the Maryland infantry, under General Kenly, the Second Delaware, the Pennsylvania cavalry, the Rhode Island battery, the Fifth New York cavalry; total, 2,254 infantry, one battery and 800 cavalry.

"These are the only troops available for the defence of the line of the Potomac, guarding the Baltimore and Ohio Railroad between Hancock and Cumberland.

"As I have no department, but command simply an active army in the field, my responsibility for the safety of the line of the railroad and the States north of it ends terminate the moment I advance or fall back to such a point as will enable me to cover the Potomac at the fords for the general-in-chief to decide, and which I regard as beyond my province, in this.

"If, then, the safety of Harper's Ferry and the line of the Potomac as regards that point may be secured at the army south of the Shenandoah, and the line left to take care of itself?

"If, it is deemed necessary to hold the line, or that heretofore indicated in advance of it, how many troops shall be placed there, at what points, and what the numbers and of what arms to be assigned to each, and where shall they be supplied—i. e., from the army, or from other sources?

"Omitting the detached troops mentioned above, and the small garrisons at Harper's Ferry and Frederick, the effective force of infantry of this army for duty to be about (110,000) one hundred and eleven thousand, officers and men, present for duty with the colors, exclusive of Wyoming, but does not include Hatteras Inlet, Newbern, Suffolk, and Beaufort.

"Harper's Ferry and Maryland Heights have been made very secure, it is possible that the enemy may, if it supplies the garrison, may be reduced so as to be starved into a surrender, or compelled to evacuate it by its general retreat. Harper's Ferry is, and the Baltimore and Ohio Railroad may be easily exposed.

"I am not aware that the enemy has any force in the valley, and have nothing of the number of troops at Baltimore, &c.

"As long as the army of the Potomac is kept intact, it is the fact that a great portion of Kenly's army is probably now at liberty to unite itself with Lee's retreating army.

"I commence crossing the river in Berlin in the morning, and must get a pontage-train from Washington immediately.

"G. B. MCCLELLAN, *Major-General Commanding.*

"Major-General HALLECK, *General-in-Chief.*"

To which I received the following reply:

WASHINGTON, *October 26, 1862—1.30 P. M.*

"In addition to the command which you had when I came here, you have been assigned to the command of the Shenandoah Valley. You have been authorized to use any troops within your reach in General Wool's department and in Western Virginia. You have also been authorized to take under your direction, with the single restriction that he is not to remove the troops from Washington) all the troops in the valley of the Shenandoah.

Since you left Washington I have advised and suggested in relation to your movements; but I have given no order and made no change in your plan. The government has entrusted you with defeating and driving out the Rebel army from the valley of the Shenandoah, and has left you in the manner you may adopt for that purpose. You are informed of my views, but you are not ordered to adopt them. You are left free to act as you may deem best.

"I will not conceal from your own discretion in regard to what points on the Potomac and the Baltimore and Ohio Railroad are to be occupied or fortified, it is the wish of the government that you should consult confidentially on that line. Moreover, I think it will be time enough to decide upon the defences of Harper's Ferry, Maryland Heights, and Loudoun Hill, when the enemy is driven south of them, and they come into our possession.

"I do not think that we need have any immediate fear of Burnside's force. You are aware that Longstreet's corps has left for the South, but about (600) four hundred miles.

"H. W. HALLECK, *General-in-Chief.*

"Major-General G. B. MCCLELLAN."

On the 26th I issued the following:

HEADQUARTERS ARMY OF THE POTOMAC,
Warrenton, October 26, 1862—11 P. M.

On the 25th instant I received a despatch from the President, in which it was stated he desires to guard the line of the Potomac when the army shall have crossed the river, and to protect it and keep open the line of railroad with Baltimore and driving away the rebel troops that are now in the valley of the Shenandoah, and directing me to submit a plan for accomplishing these objects. I have not yet had time to give the subject the consideration the occasion has on the moment my despatch will permit, at the same time inquiring for the purpose of ascertaining the President's views, whether there is adequate force to meet the rebel army before us.

The Shenandoah Valley is not within my command. The shortest line to be all in Harper's Ferry, passing through Williamsport, Kelly's Ford, and Chester Gap, is about (100) one hundred miles. I am not disposed to believe that rebel raiders will cross the Potomac in force between Harper's Ferry and Cumberland down to Hancock's Ferry.

The force of the army of the Potomac is now in a security that great extent at this time, and will be benefited as it advances by the railroad from Harper's Ferry, whereas, I consider, recommend that some new organization of large corps be made, and that Franklin's corps be left in the valley of the Shenandoah.

There should be a brigade of infantry and section of artillery at the bridge at Berlin, and a brigade of infantry and section of artillery at Point of Rocks, to guard the railroad bridges. There should be a brigade of infantry with a section of artillery at each place if possible. This is on the supposition that the enemy's force in the valley of the Shenandoah is not in the Blue Ridge; if they are part of it, the occupation of the points named in the Blue Ridge; if they are part of it, the occupation of the points named in the Blue Ridge will be necessary, and will require more troops than I have indicated.

There are now several regiments of cavalry, including General Richardson, in the valley of the Shenandoah that should be sent to the army of the Potomac.

I repeat, that I do not look upon the troops I have been able to leave in the line any means adequate to the security of the line of railroad and the States north of it, but merely as the only description of troops adequate to this service, and that, in my opinion, the force should be larger.

G. B. MCCLELLAN, *Major-General, Commanding.*

Major General HALLECK, *General-in-Chief.*

To which I received on the 30th this reply:

WASHINGTON, *October 30, 1862—12.30 A. M.*

The telegram of yesterday was received this morning. I am glad to learn that you have crossed the river, and that your plans whatever you may be in pursuance of the instructions heretofore given. Those instructions can be read from here to the upper Potomac. The question of the line to be guarded is one which I cannot decide. It is for you to recommend.

"Major-General G. B. MCCLELLAN. H. W. HALLECK, *General-in-Chief.*

I accompanied all the time the army in its movements, and was responsible to the vicinity of Shepherdstown. General Morell was placed in command of the corps of Fitz John Porter, and General Sykes of the regular brigade; General Slocum in command of Harper's Ferry and the line of the railroad, and of the defences.

The orders given to these officers were as follows:

HEADQUARTERS ARMY OF THE POTOMAC,
October 28, 1862—9 P. M.

The general commanding directs that you proceed with your command to-morrow to march to the position you will occupy in the line of battle on the left of the army, and to watch and guard the line of the Potomac from the mouth of the Antietam to the ford at the mouth of the Opequan creek.

"Your right is connected with that take steps to afford proper protection to the sick and wounded in the hospitals in the vicinity of Shepherdstown. Your line of march will be determined by the position placed under the command of General Sykes, General Porter's corps, and the left flank and rear of the Opequan ford, including the ford at the mouth of the Opequan.

"His commanding general also directs that you take immediate steps to repair the bridge at Shepherdstown, and establish a ford for the passage of Harper's Ferry, and to keep open the communication between the army and Harper's Ferry.

"Reports will be made to-night at 9 o'clock, and General Couch can move with his corps. Please acknowledge the receipt of this.

S. WILLIAMS, *Assistant Adjutant General.*

General O. M. MORELL, *Commanding 1st Division.*

On the 25th of October the pontoon bridge at Berlin was constructed, and the army commenced crossing. The enemy's force around the Shenandoah, at Harper's Ferry.

The 1st division of the 5th corps, under the ninth corps, and Pleasanton's brigade of cavalry, were left to watch and guard Loudoun Heights.

The first, sixth, and ninth corps, and the cavalry and the reserve artillery, were directed on Warrenton, by Hale's of October and the 24 of November.

The second and fifth corps crossed at Berlin between the 26th and 30th of October and the 1st of November. Heavy rains delayed the movement, rendering the roads impassable for artillery. The 2d and 5th corps were obliged to halt at least one day at the crossings to complete, as far as possible, the corduroying of roads. The 2d corps moved on an average of two miles per day.

The plan of campaign I adopted during this advance was to move the army, well in hand, parallel to the Blue Ridge, taking Warrenton as the first point of concentration. The movement was made on the line from Berlin by detachments, as we approached it, and guarding them after passing Snicker's Gap, with the cavalry and the reserve artillery between the corps and the Blue Ridge. Hale of October and the 24 of November.

The second and fifth corps crossed at Berlin between the 26th and 30th of October and the 1st of November. Heavy rains delayed the movement, rendering the roads impassable for artillery. The 2d and 5th corps were obliged to halt at least one day at the crossings to complete, as far as possible, the corduroying of roads. The 2d corps moved on an average of two miles per day.

The plan of campaign I adopted during this advance was to move the army, well in hand, parallel to the Blue Ridge, taking Warrenton as the first point of concentration. The movement was made on the line from Berlin by detachments, as we approached it, and guarding them after passing Snicker's Gap, with the cavalry and the reserve artillery between the corps and the Blue Ridge. This of October and the 24 of November.

The second and fifth corps crossed at Berlin between the 26th and 30th of October and the 1st of November. Heavy rains delayed the movement, rendering the roads impassable for artillery. The 2d and 5th corps were obliged to halt at least one day at the crossings to complete, as far as possible, the corduroying of roads. The 2d corps moved on an average of two miles per day.

The plan of campaign I adopted during this advance was to move the army, well in hand, parallel to the Blue Ridge, taking Warrenton as the first point of concentration. The movement was made on the line from Berlin by detachments, as we approached it, and guarding them after passing Snicker's Gap, with the cavalry and the reserve artillery between the corps and the Blue Ridge. This

The 26th the reserve artillery crossed and encamped near Lovettsville. Sherman's division, temporarily attached to the ninth corps, crossed and encamped near Berlin. The 27th the army moved to Purcellville, Hillsboro, and Waterford. The 28th the reserve artillery moved from Hogestown; two divisions of the ninth corps moved to Wheatland, one to Waterford, and Sherman's division the passage of the fords of Shenandoah at Harper's Ferry, and moved into the valley east of Loudoun Heights.

On the 30th the first corps crossed at Berlin and encamped near Lovettsville. The second corps crossed at Berlin and encamped near Waterford. The fifth corps commenced its march from Sharpsburg to Harper's Ferry.

On the 31st the second corps moved to the vicinity of Hillsborough; the ninth corps moved to Wheatland; the first corps moved to Purcellville. The reserve artillery moved to Hogestown.

On the 1st of November the second corps moved to Purcellville and Hillsboro; the ninth corps reached Berlin, and also crossing. Pleasanton's cavalry encamped between Purcellville and Snicker's Gap, and on Bear's Rock.

On the 2d of November the second corps occupied Snicker's gap; the ninth corps, Snicksville; the ninth corps crossed the Potomac and encamped on the Loudoun Heights; the first corps moved to Philomont, Union, Bloomfield, &c. The reserve artillery crossed the Potomac and encamped at Purcellville. Pleasanton drove the enemy out of Union. Averill was engaged with the enemy's cavalry at Philomont. Upon the occupation of Snicker's gap, the advanced to gain possession of it and commenced moving through it. The enemy's cavalry was driven out of it by a few rounds from our rifled guns.

On the 3d the first corps moved to Philomont, Union, Bloomfield, &c. the second corps to the vicinity of Upperville; the fifth corps remained in the vicinity of Berlin; the reserve artillery moved to Hillsboro; the cavalry moved towards Upperville. Pleasanton drove the enemy out of Upperville and Middleburg.

On the 4th the 2d corps took possession of Ashby's gap; the 5th corps passed Chilly Gap; the first corps moved to Rectortown; the reserve artillery moved to Middleburg; the cavalry moved to Rectortown and White Plains. On the 5th the 1st corps moved to Rectortown and White Plains; the 2d corps to Piedmont; the 5th corps to Manassas Gap; the reserve artillery to Piedmont; the cavalry to Salem, with a brigade at Manassas Gap. On the 6th the 1st corps moved to Warrenton; the 2d corps to Rectortown; the 5th corps to Piedmont; the reserve artillery to Salem; the cavalry to Salem, with a brigade at Manassas Gap. On the 7th the 1st corps moved to Warrenton; the 2d corps to Piedmont; the 5th corps to Manassas Gap; the reserve artillery to Salem; the cavalry to Salem, with a brigade at Manassas Gap.

On the 8th the 1st corps moved to Warrenton; the 2d corps to Rectortown; the 5th corps to Manassas Gap; the reserve artillery to White Plains; the 6th corps to Waterloo and vicinity on the Rappahannock; the cavalry to Warrenton. On the 9th Sumner's command, Sickles' division guarding the Orange and Alexandria Railroad, moved to Warrenton Junction; Franklin's command to Warrenton; Hooker's command to Warrenton Junction; Pleasanton across the Rappahannock at Waterloo. On the 10th the 1st corps at Mount Eagle; the 2d at Rectortown, the 5th corps at Manassas Gap; the reserve artillery at White Plains; the 6th corps at Waterloo; the cavalry at Warrenton.

The army was then massed near Warrenton, ready to act in any direction. Reconnoissances were pushed to the Rappahannock at all points. I could whether, during the whole period that I had the honor to command the army of the Potomac, I ever failed to use every exertion to fight a great battle. When I gave up the command to General Burnside, although the army was in excellent condition, and the movement was immediately in our front near Culpeper Junction, with confidence that it would be successful, I was prepared to fight a battle in the mass of their forces west of the Blue Ridge.

The reports from General Pleasanton on the advance indicated the possibility of crossing the two wings of the enemy's forces, and either beating Longstreet separately, or forcing him to fall back on at least upon Gordonsville, to effect his junction with the rest of the army.

The following is from the report, dated, my advanced orders were at Mount Eagle, within nine miles of Culpeper, besides having my flank guarded towards Chester Gap and Thornton's Gap extended to Gaines' Cross Roads, with numerous patrols in the direction of Woodville, Little Washington, and Sperryville.

Deserters, contrabands, refugees from there parties, and also from deserters, prisoners, contrabands, as well as citizens, established the fact of Longstreet, with his command, being at Culpeper, while Jackson, with D. H. Hill, with their commands, were at Gordonsville. Ewell's command was in the vicinity of the Blue Ridge, covering Chester and Thornton's gaps, and also the Blue Ridge, between those points.

"On the 10th day of November, a contraband just from Strasburg came in my camp and reported that Jackson's 2d corps were en route beyond that point, on the railroad to Manassas Junction. Hill was leaving the road and marching by the way of Front Royal, and Ewell was directed to follow into that valley, and was en route for Gainesville.

"Jackson's corps was between Strasburg and Winchester. Ewell and Hill were in the valley. Jackson, from many reports, was in the south were obliged to keep moving to obtain them."

But I received no information that I should have made the attempt on while the enemy as before suggested, and could be have been brought to bear with success upon the enemy's flank and rear. The result would have been a brilliant victory for our army.

On the 10th of November Pleasanton's command was attacked by Longstreet with one division of infantry and Stuart's cavalry, both reported the attack.

This indicates the relative position of our army and that of the enemy on the 10th of November, as I understood it.

It would be impossible to participate in operations, such as those described, without feeling the most implicit confidence in the patriotism, the zeal, and the energetic organization of our armies, and the general conduct of military operations.

Some regret, however, is naturally felt at the want of attention to some general considerations which have been firmly impressed upon the mind of every one who has seen service.

To my mind the most glaring defect in our armies is the absence of the true theory of the relations between the strength of artillery and that of the men of means for the theoretical instruction of the men of officers, and the practical instruction of the men and officers. The improvement of the existing war that it was perhaps impossible, in the early part of the war, to have had a sufficient number of field batteries than which was pursued; but the time has arrived when measures may be taken to remedy the defects which have been caused by that course. I think that the army should be required as a permanent one; that the artillery should be organized permanently; that all who belonged to it had made it their profession for life; and those rules for promotion which have been established by us in the field be made means to excite honorable emulation, premise an esprit de corps and improve efficiency. The artillery should be kept up to its full strength and should be made to feel that merit—and in no way, except, good conduct, and intelligence—could lead to promotion. Let the artillery officers be made to exercise those of a superior grade—all inferior to them entirely relieved from the command of troops of other arms. Schools of practice should be established to secure the theoretical instruction of staff officers and officers of artillery, and the practical instruction of officers of every grade in the duties of their arms. Actual service in the field has shown that the artillery is the most effective arm of the service, and that it is the especial duty of the artillery to overcome the artillery of the enemy. Our artillery should be increased and its organization and composition perfected.

A well-organized system of recruiting and of depots for instruction and discipline is also required. Our army has suffered much from the supply promptly the losses arising from battle or disease. This is especially the case with the infantry. The cavalry and the artillery, on which, from the beginning of the war, have received great attention, and which have never been in want of men, are in a very good condition. We must also urge bodies of well-instructed engineer troops.

The organization of the general staff of the army should be left as professional soldiers. A statement may, perhaps, be necessary to explain the reasons which induced me to change my line of march for a campaign; but those once decided upon, everything should be said to be impracticable to change the general plan, except in the case that no other manner is secure probable. The meeting of individual measures, and the general plan of campaign, is the work of the chief of staff alone, and the general staff should be made to feel that merit—and in no way, except, good conduct, and intelligence—could lead to promotion.

I cannot omit the expression of my thanks to the President for the manner in which he has always met my requests, and the confidence he has given me to retain the military posts which my judgment led me to adopt for the defence of the capital. I have endeavored to adopt such of those views, as to my mind of consistence in me; and it only remains for me to express my thanks to the officers of my personal staff, commencing with chief and the general whom he had placed at the head of the army, for the zeal and ability which they have displayed in the performance of their duties.

If the entire pressure no guarantee in service competent to direct its operations, and to the army of the Potomac, I am sure that it will be found in all fields them and places them in position the better will it be for its success.

I may be permitted the calling attention to the memorandum submitted by me to the President and Secretary of War, under date of the 4th of July, 1862; and other similar communications to him and to the Secretary of War, in relation to the necessity of the increase of the number of our resources it is entirely possible to bring the war to a successful military close. I am fully convinced that the complete and early establishment of the Union in the entire defeat or virtual destruction of the organized armies of the enemy, and the occupation of his territory, should be accomplished and followed by conciliatory measures; and that the rights of persons and property should be respected, as far as can be to bring about a permanent reconciliation of the country. I am also convinced that the employment of the military power, and by which both parties shall perceive that the rights of persons and property will not be respected, and that confined mainly to a plain narrative of such facts as are necessary to explain the military movements of the army, without any attempt to give them facts in the language of dispatches, written at the time, and without any reference to the light which subsequent events have thrown upon the subject. I have not thought it necessary to make the reports of the subordinate commanders, herein annexed, recite the numerous instances of individual bravery and skill by which every battle was marked. Those instances will be found in the reports of the divisions, and should be accompanied

CHICKERING & SONS,

MANUFACTURERS OF

GRAND, SQUARE, AND UPRIGHT

PIANO-FORTES,

Warerooms, 652 Broadway, New York.

The superiority of these Instruments is amply demonstrated by the voluntary testimony of the foremost artists of the day, who claim for them excellence of tone and workmanship hitherto unobtained by any other makers. Mr. Gottschalk's constant use of the Chickering Pianos has scarcely tested their musical qualities, and resulted in establishing the justice of the very flattering estimation in which they are held.

Messrs. C. & Sons have been awarded 60 Prize Medals, over all competitors, for the superiority of their manufacture, their claims resting upon the combined qualities of great power, brilliancy and purity of tone, and elasticity of touch.

The Boston Atlas says:

"It has long been our settled conviction that the Chickering Piano was far superior to the generality of instruments manufactured. On where you will, there is no singing so full, rich, musical tone. They are unapproachable, and in every sense deserve all the high praise which has been lavished upon them. And not from one person only, comparatively speaking, does that praise reach us, but from the great body of the musical public throughout the length and breadth of the land."

This is the largest and oldest Piano-Forte manufactory in the country, and the business is conducted entirely by the three Sons of the late Jonas Chickering, all of whom are educated expressly for this business, and by them exclusively all the improvements which characterize this house, are made. Every part and portion of the Piano is made in the factory, and directly under the supervision of the Messrs. C.

The following complimentary letter was received from Mr. L. M. Gottschalk, January 1st, 1863:

"Messrs. Chickering & Sons—Gentlemen:—

"The great sensation which, in all my recent concerts, has been produced by your Pianos of the new model, the admiring testimony of the artists before whom I have played upon them, and, indeed, the continued revival of the whole public, would exempt me from expatiating upon the excellence of these superb instruments, were it not that the qualities which distinguish them, in my opinion, constitute a merit which are in the progress of musical art, and deserve, in consequence, to attract the attention of all musical people.

"The problem which, for more than half a century, the great European manufacturers have been proposing to themselves, may be stated to this: How to obtain the greatest possible volume of tone without altering its charm, and at the same time to preserve its clearness and homogeneity through all the extent of the key-board.

"These different qualities seem to exclude each other. For instance, one instrument charming in a parlor would become thin and powerless in a large concert hall; another only owed its fame to the sonorousness of its tone, or to a confused vibration produced by a great length of strings. You alone, Messrs. Chickering & Sons, have succeeded, as I fully believe, in combining the different elements which here so long have sought each, in a manner which will henceforth make our modern piano the most complete of instruments.

"Harmonious roundness of tone, force in the bass notes, flexibility in the upper notes, equality throughout all the registers, singing quality in the middle tones and, above all, an astonishing prolongation of sound, without its becoming confused, were signs of an artistic power which I have often witnessed in playing the new instruments for the first time. Soon after, when I had been obliged to transport your piano several hundred miles by land, and to play upon them without the time to have them re-tuned, I was still more surprised at the rare solidity of their construction by finding them in as perfect tune as when they started. Furthermore, when giving concerts unassisted, and playing fifteen or eighteen pieces in succession, I have been capable of appreciating, by the comparatively trifling fatigue which I experienced, the precision and promptness of action which characterizes your instruments.

"Accept, gentlemen, my sincere congratulations. Henceforth the United States may triumphantly compete with Europe in the construction of pianos; and it is not the least of all our commercial triumphs that you have succeeding in matching and surpassing the efforts of the Erards, the Pleyels, the Collards, and the Broadwoods.

"Truly yours,
L. M. GOTTSCHALK.
"December, 1862."

The Home Journal says:

"It may seem a visionary idea that the Piano will one day be the chief in the orchestra. We are drawn to the supposition at this moment almost irresistibly by the recent inspection of a Piano which is almost an orchestra of itself—the latest work issued from the manufactory of the Messrs. Chickering. It now stands in their warerooms in Broadway, where we hope that every one who wishes to take revenge for life and limb will make a call. There have seldom been instruments worthier of a visit from musical New York than this.

All schools of musicians unite in pronouncing the new instruments a success, and some of the most beautiful concert-rooms which we have heard proceeded from sources usually loth to acknowledge depth in any Piano which has brilliancy."

The Sunday Dispatch says:

"The musical world is now much excited on the subject of the late triumph of the Piano-making art as brought out through the unceasing energy and rare inventive genius of Mr. P. Chickering, one of the late founder of the house now primarily firm.

These new Concert Pianos have been introduced by Mr. L. M. Gottschalk at all his late concerts, and have proven their universal superiority over all others, by a wondrous power of endurance, shown under the severest tests that any pianist has ever applied to the instruments.

Musicians and connoisseurs cannot sufficiently admire the combined power, brilliancy, sweetness, and mellowness of these Instruments, while as to the action it is so perfect and elastic that the most delicate lady can produce either a thunder of noise or a gentle musical whisper at will, and either with the most wonderful precision and ease of effort.

Piano makers and dealers crowd into Gottschalk's concert to a degree run mad lately, and of curiosity to hear these new Pianos, to whose undoubted unprecedent concert qualities no discordant voice has as yet been heard.

The Boston Atlas says:

The Piano-Fortes of Chickering & Sons, of this city, are so well known, not only at home, but abroad, that it is hardly necessary to offer a word in their behalf. Nevertheless, it is no more than a pitch and of justice to do so. For years—extending at least through a quarter of a century—these instruments have been preferably finished in the most artistic manner; they have shown such exquisite skill in giving to the master and scan of all instruments, a volume, purity, richness, vigor of tone; in short, they have achieved so entire and wonderful success in giving to a degree of unprecedented perfection that little is left to improve.

We beg to call attention to our new

UPRIGHT PIANOS,

which for convulsions in size, power and purity of tone, and delicacy of action are unsurpassed either in this country or in Europe.

Every Piano made by us is fully warranted.

SECOND-HAND PIANOS.

We have now on hand, which we are prepared to sell at reasonable prices,

THE LARGEST STOCK OF SECOND-HAND PIANOS,

(by various makers), in this city. The list comprises both Cabinets, Squares and Uprights, and have all been put in thorough order.

Piano made to order to suit any style of Furniture, and satisfaction guaranteed.

105 William street, New York.

A COMPLETE REVOLUTION IN THE CARD WORLD!

TIME FOR A CHANGE!

Foreign Intervention! Long enough by a Republican People. Nationally Everything!

The American Card Company's

NEW UNION PLAYING CARDS!

A NATIONAL EMBLEM.

Are the first and only genuine American Cards ever produced, and they are rapidly taking the place of Cards hitherto used, in Clubs, Saloons, Gambling Hells, Steamboats and Cars. Colonel Sibley of Texas, Gen. Price of Missouri, and Gen. Lee of Virginia, have ordered the Union Playing Cards for their troops.

The UNION PLAYING CARDS are the only Cards manufactured by Loyal Citizens, and can therefore only be manufactured by Loyal Citizens. They are the only Cards that are unprecedented in the Card trade, and they will soon be found all over the United States in the market. In playing with these Cards, they are not cheated by the knave on the extra card appearing, as the emblems are as familiar as household words everywhere throughout the American Republic, so they can be used as readily the first session as the second session of the game. They are the most pleasing and attractive Cards ever made. Everybody will have them. Send for a sample pack. They are of an elegant Card case, and there is some bonus for the Cards. The wholesale price of these Cards is $3 per dozen packs, or $25 per hundred packs.

Address, THE UNION CARD COMPANY,
165 William Street, or 613 Broadway, New York.

BOOKS FOR SOLDIERS.

THE ILLUSTRATED WAR,

THE ILLUSTRATED HISTORY OF THE WAR FOR THE UNION,

In the most complete, authentic and reliable history of the war published. It is produced in royal octavo volumes of 1,000 pages each, illustrated with superb engravings. A good reliable agent wanted in every region where we have not one. Send for circulars, with full specimens of agency, address JOHN C. WELLS,
105 William street, New York.

TO SUTLERS AND THE TRADE.

Great to Headquarters for STATIONERY GOODS and Fancy Articles for the use and comfort of the Soldier, if you want to save money and goods you can obtain them at wholesale prices, by calling on or Address, JOHN C. WELLS,
105 William street, New York.

McCLELLAN'S REPORT.

A special arrangement with General McClellan, SHELDON & COMPANY, Publishers, 498 Broadway, New York, enable them to announce that they have nearly ready Major-General McClellan's Report of his connection with the Army of the Potomac, from its first formation, to which will be added a most interesting Introductory Chapter, prepared by General McClellan, on his

CAMPAIGN IN WESTERN VIRGINIA,

And a full account of the organization of the Army of the Potomac, and of the services of the Army at the time of his assuming command. The Report will be illustrated with Maps, Plans, etc., prepared by the Engineers of the Government. One vol. 8vo.

Price $2 50.

ARMY AND NAVY JOURNAL.

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

VOL. I.—NO. 28. NEW YORK, SATURDAY, MARCH 5, 1864. { FIVE DOLLARS PER YEAR. SINGLE COPIES, TEN CENTS.

TO THE READERS OF THE JOURNAL.

We regret that we are compelled this week to print a portion of our edition on paper of quality inferior to that we are accustomed to use. Through some miscarriage, our invoice of paper, which should have been on hand a week since, has failed to reach us, and we have no recent crops to take the next best the market affords, and it is impossible to find anything of the proper size equal in quality to the paper on which the JOURNAL has been printed from its first establishment. We intend to have a full supply of our usual paper before another week, and shall endeavor to guard against such unpleasant accidents in future.

THE MILITARY SITUATION.

A VERY serious reverse has befallen our arms in Florida. The expedition under General SEYMOUR, which undertook to march across the country, met the enemy in superior force strongly posted near Olustee, and suffered a defeat so serious that it was compelled to fall back upon the defences before Jacksonville. In the absence of official reports, we shall merely give a *resumé* of events, refraining from criticism until the publication of those reports shall afford a more reliable basis for a correct and impartial judgment.

Immediately after the occupation of Jacksonville, as recorded in our last issue, our forces were pushed on to Barber's Station, distant about thirty-four miles from Jacksonville. Here and in the immediate vicinity were encamped the troops commanded by Colonels BARTON, MONTGOMERY and HAWLEY; the 40th Regiment Massachusetts Mounted Infantry, Colonel HENRY; the Independent Battalion of Massachusetts Cavalry, under command of Major STEVENS, the batteries of Captains HAMILTON, LANGDON, and ELDER; and a section of the 3d R. I. Artillery. The entire force consisted of about 4,500 Infantry, 400 cavalry, and 20 cannon. The enemy against whom this force was intended to operate was reported to be 13,000 strong.

The entire column left Barber's Station at seven o'clock, Saturday morning, the 20th ult., and pursued the main road towards Lake City, which it was intended to reach the following day. The troops moved in three lines, almost parallel with the road. They reached Sanderson about noon, and though wearied out with a march of sixteen miles, without rest, pushed forward immediately towards Olustee, the point at which General SEYMOUR believed he should meet the enemy. Our troops moved forward in three columns, keeping as before near the railroad, the cavalry in the advance, and the artillery distributed along the line of infantry. The right column, consisting of the 48th, 47th, and 115th New York regiments, was led by Colonel BARTON, of the 48th; the centre column was made up of the cavalry under Major STEVENS, the 40th Massachusetts Mounted Infantry, under Colonel GUY V. HENRY, the 7th Connecticut, the 7th New Hampshire and 54th, commanded by the Colonel MONTGOMERY, consisted of the 54th Massachusetts, the 1st North Carolina, and the 8th U. S. Volunteers.

Our advance cavalry force first came upon the enemy's pickets about six miles from Sanderson, and four or five miles east of Olustee. The pickets retired as we advanced, and fell back upon their main forces, which were strongly posted between swamps, about ten miles beyond Sanderson. The Rebel position was admirably chosen. On the right, their line rested upon a low and rather slight earth work, protected by rifle-pits, their centre was defended by an impassable swamp, while on the left their cavalry was drawn up on a small elevation behind the shelter of a grove of pines. Their camp was intersected by the railroad, on which was placed a battery capable of operating against our left or our centre, while a rifled gun, mounted on a truck, commanded the road. In order to attack this strong position, our troops were compelled to take a stand between two swamps, one in the front, the other in the rear. The artillery was posted within one hundred yards of the enemy's line of battle, a position in which they were exposed to the deadly fire of the Rebel sharp-shooters. After some preliminary skirmishing, our troops advanced upon the enemy's position. The first regiment to come under fire was the 7th New Hampshire, Colonel ABBOTT, of Colonel HAWLEY's brigade. Many of the men belonging to this regiment were inexperienced soldiers; a portion of them, the left flank, had been recently deprived of their rifles and supplied with inferior muskets, without bayonets, and so generally defective that some of them could not be fired. A sharp and destructive fire was poured into their ranks by the Rebel sharp-shooters. In less than twenty minutes 350 men, including the colonel, who was killed, were mown down by the storm of bullets. Unable to return an effective fire with their worthless guns, the left flank at length gave way, and could not be rallied again. The right flank, which still retained the SPENCER repeating rifle, stood their ground until the exhaustion of their ammunition compelled them to withdraw.

The attention of the enemy seems to have been directed chiefly to our centre and right, on which they made persistent and vigorous attacks. Advancing from their position, they pushed down towards our line in great force, with a regiment of cavalry on either flank. Colonel BARTON's brigade and the artillery, with the 8th United States Volunteers, colored troops, received them finely, and for some time checked their progress. The death of Colonel FRIBLEY, of the 8th, and the loss of several valuable officers tended to throw the colored troops into disorder, and after suffering severely from the concentrated fire of a superior force, they fell back in some confusion, exposing the artillery to a heavy flank fire on the left. The men were rapidly shot down at their guns, and those who stepped forward to fill their places too soon shared their fate. The batteries of Captains HAMILTON and LANGDON suffered so severely that towards the close of the engagement they were compelled to suspend firing. In attempting to draw off their guns, most of the horses were killed, and Captain HAMILTON was obliged to leave two guns on the field, for lack of means to bring them away.

The unequal contest was sustained until it became evident that the numerical superiority of the enemy was too great to be overbalanced by the valor of our soldiers. Our line was gradually drawn back, leaving behind it and many of the seriously wounded in the hands of the enemy. This movement was covered by Colonel MONTGOMERY's brigade, the 54th Massachusetts and the 1st North Carolina. They behaved with gallantry, and lost heavily. When BARTON's brigade began to waver, in consequence of their ammunition running low, the 1st North Carolina was sent into line in front, and succeeded in holding the enemy in check. Though Lieutenant-Colonel REID was mortally wounded and Major BOYLE was killed, the men stood firm, and drove the enemy back, when they attempted to flank the left of our line. As our troops retired, the Rebels attempted to flank us on both sides, a movement which was checked by the judicious dispositions of Colonel HENRY. The centre held its ground under a heavy fire from front and flank, until the formation of a new position about a hundred yards to the rear. Soon after the changes of line the enemy made a desperate charge on the centre, but were driven back by ELDER's battery.

The battle closed about sunset, and our men were withdrawn from the field in as orderly manner. There was neither confusion nor straggling, and though the troops were jaded out with marching and severe fighting, they were in no degree depressed by the repulse which they had sustained. For some distance the retreat was conducted in order of battle, under the supposition that the enemy would immediately follow up his advantage; but as no pursuit in force was attempted, the line was soon changed, the troops retiring in column. The retreat was continued until Barber's Station was reached, making a march in one day of 34 miles, and fighting a severe battle three hours and a half in duration. The next morning our troops fell back to Baldwin. Here, on Sunday afternoon, General SEYMOUR arrived in person to superintend the evacuation of the place and the burning of the stores. After a short halt, the retreat was continued, and the army reached the camping ground, near Jacksonville, on Monday afternoon. It is reported from Rebel sources, that the enemy, under General FINNEGAN, have reoccupied Baldwin.

Our loss in this severe battle were probably not under 1,200 killed, wounded and missing. Five guns and a large quantity of small arms were left on the field. Whether this defeat will result in the abandonment of the expedition is not yet clear. Reinforcements have been dispatched to Jacksonville, and our position at that place is certainly secure against any force which the enemy can bring against it. There is a report of the arrest of General SEYMOUR, but we have as yet no official information of the fact.

A SMALL body of troops, under command of Colonel HOWELL, left Hilton Head on the 21st ult., in transports, and proceeded up the Savannah river to Williams's Island, where they arrived about dark. A company of men under Captain GREENLEAF landed in small boats, and made a reconnoissance, in the course of which they had a brisk fight with some of the enemy. The reconnoissance was pushed to within five miles of Savannah. Captain HOWELL returned to Hilton Head on Monday night, bringing with him twenty prisoners.

THE gunboat *Housatonic* was sunk on the 18th ult., by a torpedo off Beach Inlet. The particulars of this occurrence are given in the letter of a correspondent in another column.

REBEL accounts say that FARRAGUT has as yet made no attack on Mobile, and that the fortifications at that place were in perfect order.

A GENERAL summing up of the main features of the military situation will be found in the leading editorial article.

THE MILITARY SYSTEMS OF EUROPE.

SECOND PAPER.

THE BRITISH ARMY.

THE population (in Europe) of Great Britain is about 27,000,000. It is the best protected as to its frontiers of all the nations of Europe, and is the most powerful on the sea. It is also the richest power. Its public force has three elements—the permanent army, the militia and the volunteers. The permanent army costs enormously; it is also difficult to move and subsist, but by its discipline is one of the most solid in Europe. The état-major-general is composed of 50 generals, 70 lieutenant-generals, for the command of divisions, and 114 major-generals for the command of brigades. It has no corps of état-major, but in the regiments is a class of officers, graduates of a special staff school where they studied two years, and afterwards passed some years in the different branches of the service.

The Guard is composed of one regiment of grenadiers of three battalions, two of infantry of two battalions, and three of cavalry. The infantry of the line is composed of 100 regiments, of which the most have only one battalion of ten companies, eight active and two at the dépôt, with an effective of 30 officers and 1,493 men.

There is a number of special regiments for the colonies and a corps of riflemen. The cavalry comprises, besides the three regiments of the Guard, 25 other regiments. The heavy cavalry consists of three regiments of cuirassiers (in the Guard) and two of dragoons; the light cavalry comprises four regiments of light dragoons, five of lancers and six of hussars. There is little distinction between the two kinds except the name. The size of the men and horses determines the appellation. Each regiment comprises four squadrons of two companies each. The artillery comprises a horse brigade of ten batteries, six mounted brigades with forty-eight batteries, and ten brigades of foot artillery with eighty batteries for forts, &c. The engineers have about 342 officers and 32 companies, of 130 men each. Administrative services are performed by a commissariat corps. The discipline still admits of corporeal punishment to certain classes of soldiers. Advancement can be gained by purchase as well as seniority. The army numbers about 212,000 men, of which 66,000 are in India. The navy contains 60,000 sailors and 18,000 marines.

The militia force extends to all the subjects, and service is determined by lot. Its duration is five years. This force is drilled yearly. The number of regiments varies. In 1859, there were 24 of infantry and 15 of artillery. Since then they have greatly diminished. Its effective (on paper) is 120,000 men.

The third element is the volunteers, which were recently organized under fear of invasion. They would render good service in such case. They number about 145,000 men, and are organized and drilled.

The above account does not include the native troops in the East Indian territories.

THE PRUSSIAN ARMY.

The population of Prussia is about 18,000,000. The shape of the kingdom and the want of natural defences on the frontiers, render it difficult not to protect. The population also lacks homogeneity. The country ranks among the chief European powers, chiefly on account of its military resources and the influence it possesses over small neighboring States. Its military force comprises all the men capable of bearing arms between 17 and 50 years of age, and is composed of three elements—the permanent army, the reserves, and the organizations known as the "landwehr" and the "landsturm." The état-major-général is composed of field-marshals, generals of infantry and cavalry to the number of 35, lieutenant-generals to the number of 84, and major-generals to the number of 69. The état-major is composed of two classes—the first is similar to the French dépôt corps, and the second is the staff of the corps d'armée. But these staff officers can at any time return to their regiments.

The forces consist, first, of a company or "chasseurs d'ordonnance" to escort the King; second, the Royal Guard, comprising eight regiments, a regiment of reserves, a battalion of chasseurs and one of tirailleurs—the whole forming two divisions of two brigades each. The cavalry of the Guard comprises eight regiments, forming two brigades. The artillery of the Guard consists of a brigade, and the engineers of a battalion. The whole of the Guard composes a corps of 25,000 to 30,000 men on the war footing. Third, there is the army of the line, which was reorganized in 1860. The infantry consists of—

Thirty-two old regiments of the line.
Eight old regiments of reserve.
Thirty-two new regiments.
Eight battalions of chasseurs.

Each regiment has three battalions of four companies each, each company having 125 men on the peace footing and 250 on the war footing. The total infantry force is about 260,000 men.

The état-major of a regiment is:—
One superior officer commanding.
One major in charge of accounts.
One aid-de-camp.
One surgeon.

The état-major of each battalion is:—
One lieutenant-colonel or major commanding.
One officer of accounts.
One surgeon.

The "cadre" of a company is:—
One captain.
Four lieutenants.
One ensign.
One sergeant-major.
Four sergeants.
Eleven sous-officers.
Four drummers.

The cavalry of the line comprises eight regiments of cuirassiers, eight of dragoons, twelve of hulans, and twelve of hussars. The état-major of the regiments, and the cadres of the squadrons resemble those of the infantry with some additional officers. The artillery comprises an état-major of major-generals, colonels, lieutenant-colonels, majors, &c., and eight brigades. Each of the batteries contains eight pieces, and each brigade twelve batteries, making 96 to each. There is also a force of foot artillery for forts. The engineers comprise a corps d'état-major, a battalion of pioneers of the Guard, mentioned above, and eight battalions of the line. Each battalion has four active companies and two reserve, the effective of the battalion being 500 men on the peace footing and 980 on the war footing.

There is a corps charged with transportation, composed of nine battalions of two companies each; also a body of gendarmerie for each corps and each province, for police purposes. The état-major of places consists of a governor, "major de place," staffer, surgeon and chaplain for each post. There is a corps of administration, composed of intendants, counsellors, assessors, &c. The Prussian army thus described is about 200,000 men on the peace footing and 350,000 on the war footing.

The reserve of the army is formed by furloughs after three years' service—liability to be re-called still existing for four years more. The national reserves are composed of the landwehr of the first and second classes, and the landsturm. These landwehrs are a sort of militia organization, although that of the first class is directly organized and partly officered by the permanent army. The landsturm regiments correspond to those of the army. Each province that furnishes a regiment has also a battalion of the landwehr. They meet 15 days in the autumn for drill. The landwehr of the second class is chiefly a paper organization, comprising men from 32 to 49 years old. The landsturm is a levy in mass of the population, to be made in case of invasion.

There are eight corps d'armée (one from each of the eight provinces), which have been united into four great corps.

For remounts there are eight royal stables, with many dépôts for stallions. Its horses are mostly raised by the government, and others are bought by commissioners at nine dépôts of remounts.

The discipline of the army is extremely rigid. It permits imprisonment, blows under chains, and whipping.

For instruction, there are numerous primary schools for sous-officers and soldiers, schools for aspirants to the grade of officers, schools of cadets, where are admitted the sons of officers destined to a military career, and finally, the schools of application—one for the artillery and engineers, and one for the staff.

The military establishments are numerous. There are arsenals at Berlin, Cologne, Neisse and Dantzic; a foundry of cannon at Spandau; five manufactories of arms at different towns. There are also powder and pyrotechnical factories, retreats for invalid soldiers, barracks, hospitals, magazines and fortresses.

THE AUSTRIAN ARMY.

Austria has about 35,000,000 of population, which is not homogeneous. Its provinces maintain their national individualities. The frontiers of the country are good, except that on the side of Russia. The Austrian army is well organized and large. Its deficiency in homogeneousness is compensated for by its devotion to the sovereign; it is recruited among warlike populations, and possesses great resources. It is like the English army, altogether aristocratic. The officers form a class apart, belonging to the noblesse, or the higher ranks. The soldiers constitute the grade of no officer. They are subjected to a severe discipline, but accept it patiently.

The état-major-general comprises 3 field-marshals, 18 generals of cavalry, 31 lieutenant-field-marshals, and 130 major-generals. The état-major is composed of 18 generals or colonels, 14 lieutenant-colonels, 28 majors, and 80 captains.

There is a small Royal Guard, but not as in France and Prussia, a large Imperial Guard for a chosen reserve corps. The infantry of the line is composed of—

Eighty regiments.
Thirty-two battalions of chasseurs.
One regiment of riflemen of the Tyrol, of eight battalions, called the regiment of the Emperor.
Fourteen frontier regiments.

Each regiment has four battalions, of which two are active, one in garrison, and one at the dépôt. The total of the eight regiments is 320 battalions, numbering on the war footing 327,000 men. The battalion have six companies. In the chasseurs, the effective of the company is 207 men, and the war footing of the forty battalions of chasseurs is 66,000 men; in the infantry, the companies number 60 men on the peace footing and 138 on the war footing. At the head of a regiment of infantry is a "colonel proprietaire," a high dignitary of the empire, who has the right of naming the officers up to the grade of captain. Under him is a colonel commandant, with the other necessary officers.

The Austrian cavalry comprises—
Twelve regiments of cuirassiers.
Two regiments of dragoons.
Eight regiments and a half of hussars.
Twelve regiments of hussars.
Each regiment has six squadrons. In time of war two others are formed for service at the dépôts. The regiments are officered as noticed in the infantry. The squadron comprise, on the war footing, 160 men and 130 horses in the heavy cavalry, and 170 men and 150 horses in the light. The total force is 76,000 men and 54,000 horses.

The artillery comprises 14 regiments, 14 garrisons, and a corps of workmen. Each field regiment (of which there are 12) has 14 batteries, of eight pieces each.

The engineers comprise a corps, regiments of four battalions, of six companies each. The corps of pioneers has six battalions of four companies each. The train of equipages is organized into 24 squadrons, doubled in time of war, so as to comprise 22,000 men and 40,000 horses. There are also six companies for transporting bridge materials. The gendarmerie has ten regiments.

The état-major of places comprises—
Twenty generals.
Twenty colonels or lieutenant-colonels.
Forty majors.
Ten lieutenant and thirty-six captains.
Twenty-seven lieutenants.
Thirty-three non-lieutenants.
Twenty soldiers.
Twenty-three of health.
Eight accountants.

The large number is accounted for by the fact that they are charged with the defence of the places.

The administrative corps comprises 400 officers. There is also a force of officers for the medical department.

The army is organized into ten territorial commands, and numbers 300,000 men on the peace footing, and 600,000 on the war footing.

The reserve is composed of men on furlough after eight years of service. They are held liable for two years more, and their clothing and equipment are kept for them in the magazines until the period has expired.

There are also the frontier regiments, which furnish during peace a local militia, and can be called into the army in time of war. They were established about 1676, to resist Turkish invasions. These regiments are 14 in number, organized like the army. The term of service is 12 years, and they are constantly drilled. Cavalry and artillery are attached to them. The peace footing is 15,000 men, and the war footing 60,000.

The regiments of the army are always recruited in the same districts.

Horses are produced at eight stables, where are kept mares and stallions, and are also purchased at dépôts.

Instruction is well provided for. There are schools to educate sous-officers—rendered necessary by the general ignorance of the people; then schools for the officers—one for the infantry and cavalry, and one for the artillery and engineers. There are also various schools of application, an academy of medicine and surgery, and a veterinary institution. Numerous military establishments for the production of war material also exists.

THE ARMY OF THE GERMAN CONFEDERATION.

The Army of the German Confederation is composed of contingents furnished by the various States. It comprises ten corps d'armée, each of two divisions, each division of two brigades, each brigade of two regiments, and each regiment of two battalions. The strength of the battalions is 800 men. Each regiment has four squadrons of 150 men each. Each corps has 60 cannon.

Austria furnishes three corps, numbering 140,000 men; Prussia three, numbering 120,000; Bavaria one, numbering 50,000; Wurtemburg, Hesse and Baden one, numbering 35,000; Holstein and Nassau one, numbering 16,000; and Hanover and the Hanseatic towns, numbering 64,000. The total is 450,000, with 1,100 cannon. The army is composed of the active and reserve contingents—the first fixed at 1-100 of the population of each State, and the latter at 1-200. The suppression of the latter is under discussion, so to render the whole army active. The force is very considerable, but much weakened by the want of unity, and the disagreements constantly occurring. There are three sets of interests in the Confederation, represented respectively by Prussia, Austria and Bavaria.

THE ITALIAN ARMY.

The Italian army, since the recent changes in Italy, has been put on a peace footing of 250,000 men, and a war footing of 400,000, out of a population of 26,000,000. The état-major comprises 1 commandant-general, 1 major-general, 12 colonels, 20 lieutenant-colonels, 88 majors, 92 captains, and 60 lieutenants. The troops are organized into six corps d'armée, each composed of two, three or four divisions of infantry, with a division of cavalry. The infantry is composed of 84 regiments of four battalions of four companies each,

and at battalions of bersaglieri, having seven depôts. The cavalry is composed of 4 regiments of the line of six squadrons each, 20 regiments of light cavalry, and two regiments of guides of four squadrons each. The artillery is composed of six field regiments with 15 batteries each, three regiments for defence and one of pontonniers. The engineers have two regiments of sappers of three battalions each. The gendarmerie composes 12 legions. The "train" counts three regiments. There is also a corps of intendance, a corps of officers of health, and a corps of veterinaries. The army, by the edicts in force, is in a process of organization and development.

THE RUSSIAN ARMY.

Russia has a total population of 67,500,000, of which 50,000,000 are in Europe. It is composed of fifteen races. Its boundaries are vulnerable only on the side of Europe. Its public force is composed of four elements—the active army, special corps, irregular troops, and the troops of garrison and reserves. The European has a military household of 168 officers, the *état-major-général* contains 110 officers, and the *état-major* 400. There is a royal escort of many squadrons. The active army comprises the Imperial Guard, the corps of grenadiers, and six *corps d'armée*. The special corps are those of Caucasus, Finland, Orenburg, and Siberia. The irregular troops are the 140 regiments of Cossacks, which constitute a kind of territorial militia, though some 40 or 50 regiments can be mobilized. The approximate effective of all these troops is 800,000 men on the peace footing, of which 75,000 are cavalry. An army of reserves is kept organized, which can be mobilized in a few days. There are also the sedentary forces on garrison, dépôt and police duty. There are many military schools and military establishments.

CORRESPONDENCE.

THE LOSS OF THE HUSATONIC.

To the Editor of the Army and Navy Journal:

SIR:—As I have seen no official account of the disaster of the U. S. steamer *Housatonic* may be of interest to many of your readers, I will attempt a brief statement of facts.

On the evening of February 17th, the *Housatonic* was anchored outside the bar, two and a half miles from Beach Inlet battery, and five miles and three-fifths from the nearest light—her usual station on the blockade. There was a hot little wind or sea, the sky was cloudless and the moon shone brightly. The night was favorable for the work almost sufficient, however, to prevent our discerning other vessels on the blockade two or three miles away. The usual lookouts were stationed, and everything on the quarter-deck was on the quarter-deck.

At about 8.45 of the first watch, the officer of the deck discovered, while looking in the direction of Breach Inlet battery, a slight disturbance of the water, like that produced by a porpoise. At first there appeared to be only one, but soon two and then three distant and s-boats. The quartermaster examined it with his glass and pronounced it a school of fish. As it was reported to the officer of the deck, he was at once given to strip the chain, beat to quarters, and call the captain. Just after issuing these orders, the master's mate from the forecastle reported that a torpedo was approaching the officer in charge. The officers and men were promptly on deck, but by this time the submarine machine was so near to that its form and the phosphorescence of its wake were by the motion through the water were plainly visible. At the the quarters had begun, and the men had commenced running towards the stern of the vessel, probably to avoid our broadside guns. When the captain reached the deck, it was on the starboard quarter, and he at once gave the command to train a gun on it were futile. Several shots were fired into it from revolvers and rifles; it also received two charges of buckshot from the starboard gun.

The chain had been clipped and the engines had just begun to move when the crash came, throwing timbers and splinters into the air, and carrying away off the starboard quarter of the vessel. This was immediately followed by a fearful rushing of water into the hole made by the torpedo, black smoke from the stack and the settling of the vessel.

Orders were at once given to clear away the boats, and the two men sprang to the davits of the first cutter, but she was being lowered rapidly. The ship gave a lurch to port, and all the boats on that side were swamped. Many men and some officers jumped overboard and clung to such portions of the wreck as came within reach, while others sought safety in the starboard boats. The *Housatonic* sank in about five minutes, eight lost of water, and two of the boats on the starboard side were lowered. Most of those who had jumped overboard were either picked up by one or the other of these boats, or two boats then pulled for the *Canandaigua*, one and a half miles distant. Assistance was promptly rendered by that vessel to those remaining on the wreck.

Before the next morning, five of our number were found missing.

E. C. HASSELTINE, ensign, was attempting to clear a boat on the port side when it was swamped. He seized the backboard and jumped overboard. He was a good swimmer, but it was impossible to render him any assistance. He was a promising young officer, beloved by all of us.

O. G. METCALF, acting ensign, was said to have been in the cabin, and was probably killed by the explosion of the torpedo. One of the lookouts on the quarter-deck was never heard of.

A quartermaster jumped overboard and was drowned.

A fireman went below for his money, when the ship was sinking, and never came back. The captain was thrown several feet into the air by the force of the explosion, and was painfully but not dangerously bruised and cut.

I was the opinion of all who saw the strange craft, that it was very nearly or entirely under water, that there was no smoke-stack, that it was from twenty to thirty feet in length, and that it was noiseless in its motion through the water. It was not seen after the explosion. The ship was struck on the starboard side, just abaft the mizzen. The force of the explosion seems to have been mainly upward. A piece ten feet square was blown out of her quarter-deck, all the beams and carlines being broken transversely or torn away. The heavy spanker-boom was broken in its thickest part, and the water, for some distance, was white with splinters of oak and pine.

Probably not more than one minute elapsed from the time the torpedo was discovered until the ship was struck, but not over three or four minutes could have passed between the explosion and the sinking of the ship. Had we been struck in any other part of the vessel, more had been given, the loss of life would have been much greater.

The *Housatonic* was a steam-sloop, with a tonnage of 1,240, and she carried a battery of eight smooth guns. She was completed about eighteen months ago, and has been in the blockade service ever since. She was destroyed by a contrivance of this character, and this fact gives to this lamentable affair a significance which it would not otherwise possess. Doubtless the rebels have other machines of this kind in the harbor, ready to come out, and that several more are in process of construction. The country cannot afford her services. The rebels have thereby set another blockading fleets, and the gunboats and steamers on the northern rivers.

X.

OFF CHARLESTON, FEB. 22, 1864.

SUBMARINE WARFARE.

To the Editor of the Army and Navy Journal:

SIR:—As submarine warfare seems to be an interesting subject, and as I have made some quite extensive experiments, on a small scale, I will, with your permission, give the result of them, together with the conclusions I have arrived at in this connection.

Suppose we first look into the obstacles, real and imaginary, and also into the advantages to result from the practical introduction of a system of warfare to be carried on against land or floating defences. The former obstacles are almost all to me or were first below the water-line of a vessel.

It has been a common idea, that a gun, if fired below water, would burst, and that a bullet would instantly cease to think so. Yet there is no reason why a gun should burst, when exploded under water, except from the same cause that it would under water. The resistance offered to the shot by a greater resistance to the progress of shot, before, and after, the shot has left the muzzle, and the muzzle, gun and carriage of the shot, and makes it offer a greater resistance to the action of the powder than its own actual weight would do, it being, perhaps, more correct to say that the shot will not, certainly not more than rifling a gun increases the resistance of the shot over a smooth bore—and certainly not to such an extent as to endanger the bursting of the gun. If a gun be loaded in the ordinary way, and placed under water with its muzzle stopped up, so as to exclude the water and leave a space between the shot and the muzzle, the gun will be likely to burst, because the resistance offered to the shot by the atmosphere, and the weight of the water which it excludes (slight though the resistance, comparatively), will cause a check or reaction to the moving shot, which will burst the gun in the same way that a gun will burst if over-charged with powder, or if the shot—by stopping up the muzzle; in either case the cause of bursting would be the same. The muzzle must not be stopped up, nor must there be any air left in the gun, as it would wet the powder, and also injure the walls of the gun. With a view to ascertain the truth of these facts, I found out how to obviate this trouble. I loaded the gun in the ordinary way with powder and ball, no wadding, and then filled up the muzzle of the gun with the bore of the gun with a light wooden plug, made of pine, and turned down to fit the bore at each end, for bearing surfaces; the remainder I gouged out, so as to form a cup. This plug I put into the muzzle, and allowed one end to rest on the shot, and the other to protrude from the gun, or beyond the muzzle of the gun. Over that I fastened a thin rubber hood, so as to cover up the muzzle and prevent the water from entering, and I fired the gun under water. It might also be found equally good to cement the end next the muzzle; anything, in fact, to keep the water from entering and doing the things mentioned. In withdrawing the wooden plug so as to make it fit the gun too tightly. When a gun is loaded and fired in this way, there is no danger to be apprehended from the explosion of the powder connected with its immersion, at all events—and it may be carried loaded, and run out in the usual way, without danger; a moment's reflection will show that the gas is generated, which exists its force to escape or expand. The shot, the plug of wood, and the water between them, allowing no room for the check of any sort. The wooden plug, on leaving the gun's muzzle, rises rapidly, and at an angle of about 20 deg. to the surface, strikes the water at a distance, rather than water. There are two forces acting on it: One the powder which propels it; the other, the water, which may be said to lift it. The shot, which follows immediately behind it, being heavier than water, does not ascend as the wood does, but goes straight for the object, and will penetrate a ship's side at a much greater distance than is commonly supposed. I think from my experiments, and what I have seen, that a charge loaded in this way will send a shot three or four hundred yards, and I believe at an even greater distance; and, more than this, accurate shooting may be made—accurate enough for all practical purposes. But

There is another thing to be considered. Whether to come at the gun-side when it was swamped. He seized the backboard and jumped overboard. He was a good swimmer, but it was impossible to render him any assistance. He was a promising young officer, beloved by all of us.

O. G. METCALF, acting ensign, was said to have been in the cabin, and was probably killed by the explosion of the torpedo. One of the lookouts on the quarter-deck was never heard of.

A quartermaster jumped overboard and was drowned.

A fireman went below for his money, when the ship was sinking, and never came back. The captain was thrown several feet into the air by the force of the explosion, and was painfully but not dangerously bruised and cut.

I was the opinion of all who saw the strange craft, that it was very nearly or entirely under water, that there was no smoke-stack, that it was from twenty to thirty feet in length,

and without producing a vacuum close to the ship. It was quite a pretty sight; the water in the tube, above the gun's muzzle, was shot up into the air in a column to a great height, and then broke into spray. I found the explosion to be quite a report, and the column moving in a line, almost perpendicular to the line of fire. I found this device answered the purpose intended perfectly, and I believe it could be quite practically applied.

The next consideration is, how to get the gun in and out of the water without suffering the water to enter; but this is such a simple matter of mere mechanical contrivance, as to be not worth troubling about: it may be done in so many ways, and is beneath notice as an obstacle.

The advantages to result from such a system of warfare are many. A ship so armed would carry her guns below the water, and in a fight, the crew and officers, whose quarters would be above the water-line, would all be below the water, and out of harm's way. It would be a very simple matter to make a vessel so that she would not sink with her hull open. Her port holes would be below water, out of sight, and in fighting a ship she would fire her shot under, away, and out of sight. The necessary absence of smoke, it is a mean and cowardly way of fighting, to be sure, but if it is agreed to take "foul holds," and "strike below the belt," we can come down to the same weapons our enemies do. A ship armed with four broadside guns on each side, and two forward and two aft, would be a tremendous engine of destruction at close range for fighting a floating structure. For attacking forts or bombarding towns, she could anchor well out of the enemy's fire, and, by first observing her guns, her fire of shot or shell could be sent on shore from invisible guns, almost or quite as effectually, as regards range, as if they were above the water. I think it to be found that a few more shots would be necessary to "get the "range" when the guns were submerged, than if they were above water, but practice would soon do away with the necessary purposes very accurate firing is not perhaps essential—a ship's length, more or less, would be of little importance, and would not prevent her carrying some guns above water too, to be used at long range, where an accurate sight was required. Large guns, for submarine guns, may be found to be not so effective as smaller ones of greater range, which can be handled easier and served with greater rapidity.

A ship carrying guns below, with gun-ports, might be so constructed as to be more seaworthy than an ordinary "ironclad," and as a great portion of the weight of guns and water would be below the lateral, the tendency to roll would be reduced, and in action the crew would certainly be in a safer position than they are now, as nowadays they are fired at and follow that a ship carrying submerged guns must always use them under water. A shot cannot be fired from above the water into a ship's hull to any injury, or by very great accuracy but it may be fired from below the surface so as to be thrown or land to a very great distance, and with certainty and accuracy. I made many experiments to find out what effect the water affected the flight, or the accuracy of the flight of the shot. The gun used was a 32-pdr. of 57 cwt., the bottom of the box was fastened a long piece of timber, so arranged that it could be adjusted, and on the end of this timber I used a target. The gun was fired from the bottom of the box at this target, with a given charge of powder—the box not being in water—and noted the effect. I then loaded it again, and immersed it in water, and fired it at the same time, the target above the surface. I fired again, and struck the target quite close to the first shot, and with considerable force, quite enough for all practical purposes. I then removed the target and fired a second shot from below the water, and succeeded in striking the target, and was astonished to see what a great range it had, and how accurately in line it was. I then put the target in position again, and immersed the gun and target together, and fired shot which struck and passed clear through the target, and in line with the other shots. These experiments were on a small scale, but they seemed to me conclusive.

I have taken out no patents in this connection, nor do I intend to do so, having already more of such inconvenience than I find either profitable or pleasant to me. I have merely thought I would give my own little experience, trusting, perhaps, it may be of some practical knowledge of the subject. If my one contemplates going into the details of this matter, and should think proper to avail himself of what little knowledge I can impart, I am only too ay it can be had for the asking.

CHAS. W. S. HEATON.

THE MEDICAL OFFICERS OF THE ARMY.

To the Editor of the Army and Navy Journal:

SIR:—In reading some "Suggestions as to the Medical Department of the Army," a number of which I have concluded to offer a short reply through your paper. No one doubts but what abuses have arisen in the medical, as well as in all departments of the Army. But are they attributable to the sources enumerated by the author of the "Suggestions?" In every class of surgeons in our Army may be found men of worth and merit, of a high degree; and men unworthy, not only of the noble profession they have selected, but of a commission. Common observation proves the fact that competency and sobriety are not confined to any one class of surgeons more than another.

There are in our profession those who in their day graduated with honor, but who have become exceedingly rusty in pathology and in therapeutics. This is due to the fact that they have given up general practice, and been guilty of a culpable neglect of modern works. They are therefore not to be blamed for the presence of the graduates of one Army. There are surgeons of volunteers, lately from the schools, that can minutely describe the nerves and arteries of the human body, and enumerate all smallest fibre—who, at the bed-side of the sick soldier, cannot detect pneumonia from pleurisy, or varicella from variola, or rubeola from scarlatina. They are deficient in what the great SCHWARZ considered everything: *Are medici est, fola ex observationibus.* Before they learn to detect idiosyncracies of patients, and peculiarity of climate, they catch at some hobby and ride it to death, where most of their patients have preceded.

There are regimental surgeons—some graduates, and others not—who are not adapted to the practice of medicine and surgery—who, for many previous to the war, had been engaged in avocations disconnected with the profession of

medicine, and who availed themselves of the opportunities, through the influence of friends, of obtaining a position in the Army; and they make a merchandise or trade of the most noble of all callings. Physicians and surgeons, who have voluntarily tendered their services for a limited time, like the classes already referred to, are sometimes incompetent. But, on the other hand, the most skilful and brilliant medical men in the Army may be found amongst that class who have offered their services for an indefinite time. As an evidence of the fact, the medical directors, in their judgment and desire for the welfare of the sick and wounded soldiers, have selected this class of surgeons to fill the most important posts in hospitals, especially in our large cities. And no one familiar with those institutions will say the appointments are injudicious.

As to the statement that physicians go from private practice into the Army to "replenish their purses," it is extremely absurd. The most successful practitioners rarely could accomplish that object with greater ease in any little country town. Every *physician* should know this, and the charge of drunkenness and neglect of duty, common observation and a reference to the dismissals from service, for such unbecoming vices, will enable any one to form his own opinion. Such evidence, which is open for examination by every citizen, is more favorable, to the physicians on contrast.

Admitting that the surgeons and physicians accepted under contract can be released at their pleasure, on the other hand, when their services are not required in the medical department, or if found to be incompetent, either from ignorance, or drunkenness, or recklessness, or from any other cause, they are directly under the charge of the medical director, to whom, and can be unceremoniously dismissed from their position; whereas all other medical officers would have to undergo a process of investigation by a board before their retention detrimental in a greater degree, until it could be effected.

If the author of the "Suggestions" is a surgeon of volunteers, it is not strange that he should suggest the method he has to "*harmonize*." Most men will consent to be harmonized, but very few to be levelled down. Some surgeons of volunteers would in no manner detract from the most worthy of the surgeons, by being assimilated with them; but others would be a reproach to a country medical society.

In reply to note first, I would "suggest" that, unless those medical men who have extraordinary abilities can be induced to give up a private practice of ten or fifteen thousand dollars a year, and go to the front, or where they are needed, the "first six months" of all others of ordinary ability be dispensed with.

NAVY YARD FOR IRON-CLAD VESSELS.

To the Editor of the Army and Navy Journal:

SIR,—As the question of erecting a new navy yard for iron-clad and other vessels is now engaging the attention of Congress, a word or two on that subject may not be inappropriate. As we are going to be put to immense expense as to compete with the navies of the world, no essential point should be wanting. Depth of water ample to float any ship of war now belonging to our navy, or that may be constructed in time to come, in a cardinal pre-requisite. A great navy yard should have at least this facility, that every ship should be able to visit it for repairs and keep it in full preparation for active service upon the sea. We are as yet but upon the threshold of knowledge concerning the art of naval war. The recently discovered fact that cannon can be fired under water with effect, may necessitate the casing of such vessels over a much larger portion of their surface than is now given to their weight, will also increase their depth of draft, and for sea-going purposes an increased depth may prove necessary to promote the steadiness of a ship's motion. Besides, an objection to iron-clad ships has been made, from the fact that their great weight precludes them from operating in a limited number of guns. But facts rebuit this conclusion. The *Monitor*, carrying fifty guns, has just been launched from the yard of the Thames Iron Works and Shipbuilding Company, Blackwall, England, draws 25 feet 6 inches, and other vessels of similar size and draft, are nearly completed at other yards. "Besides," says the *London Times*, "says the London *Army and Naval Gazette*," it is still more "requisite, if England is to maintain its high position among the nations, and be able to shield its vast commerce from "hungry rivals, to have its maritime superiority as undoubted, *ship to ship*, as it is navy to navy, when compared with "the force of any other nation." This language as well befits the United States; and although it may not be good policy at present to build ships of the dimensions of those above referred to, it is manifest that we should be able to build such ships in our navy yards as may be necessary in greater size and draft, if the necessity for doing so should ever arise. There are other points of importance, and which should not be overlooked in locating the navy yard. Where shall the new yard be located? We may refer to the subject again.

AMBUSCADES.

To the Editor of the Army and Navy Journal:

SIR,—As it certainly very often occurs, and often mortifying, to hear of the frequent ambuscades and surprises of detachments of our cavalry from time to time, by guerrillas and other irregular parties of the enemy, the question arises, to attribute it partly to want of proper precaution and management on the part of the officer in command of the detachment?

No detachment, or body of troops, however small, especially cavalry, should move in a wooded or open country as is Virginia, without the proper and regular advance and rear-guard, and also, generally with flankers. The proper proportion for each of these, depends partly upon the strength of the force, and on the proximity to the enemy, and must also depend a great deal upon the judgment of the officer. For instance, a company of cavalry on a reconnoissance, say sixty men, we would tell off, a sergeant corporal, and fifteen men for the advance guard; say eight of those men to be deployed as skirmishers, four on each side of the road, at a distance of say one hundred and fifty yards from the main body, and to keep within sight of and or within sight of the man on the right or left of them towards the road, and never losing sight of each other. Between them and the main body would be the balance of the advance guard on the road ready to support on either side at the road.

The rear-guard need only consist of a portion of the force at a distance of from one hundred to one hundred and fifty yards in the rear of the main body, and its strength, dependent on the strength of the main body, and whether it is marching towards the front or rear rather than the front or in retreat. With the advance properly deployed and vigilant, flankers need hardly be necessary, though it should be said that the nature of the ground on each flank of the main column, and marching parallel with it, at a distance (or interval) of from fifty to one hundred yards from the flank of the column.

In a very close and difficult country, it would be better to have the flankers more numerous, and their horses led in rear of the advance guard.

It is believed, that with these precautions, a sudden surprise or ambuscade by the enemy could be delayed advance guard would soon discover the presence of an enemy, though he be hidden from view from the road, and give the main body time to form line of battle to receive. Nothing is more helpless than a body of cavalry filling the road, and suddenly thrown into confusion by a fire of an unseen but well-directed enemy, though much inferior in numbers to the force attacked; the men falling, and the wounded horses kicking and plunging, the confusion increasing, while the officer hardly knows whether to advance or retreat, and the affair generally ends in the capture or dispersion of the force attacked. SABREUR.

EDUCATION IN THE NAVY.

To the Editor of the Army and Navy Journal:

SIR:—Permit me through the columns of the ARMY AND NAVY JOURNAL to say a few words to my fellow seamen, on the subject of education in the Navy. There are in the naval service of the United States quite a large number of ladies, who, from patriotism or other motives, ship as "First or Second Class Boys." Many of these are totally ignorant of the duties they will soon have even received more than the rudiments (if that) of a common English education. Many of these boys are required to remain in the service for the term of five years, or the very period of their lives when the instructions of a teacher are most required. At the expiration of their term of service they have become habituated to a maritime life, and are fit for little else. They grow up in ignorance, and many a naturally intelligent youth is lost to the country for many positions in which he might be eminently useful to his country and to himself. If he had an opportunity of learning to read and write and cipher, during his hours of leisure hours, when a boy, he might have risen in his calling, or he might have acquired a more thorough knowledge of his business. Many have been deterred by some of your readers, that on large ships there is ample provision made for them. This is true, but only for the proportion of boys who are fortunate enough to get on large ships. What the writer of this article desires is simply this: "If the Government considers a man (for there are those who do not forget themselves as to exclaim, "He is nothing but a common sailor; there is no use in trying to better his condition"), to be worthy of the same considerations as any other human being? Are there not officers enough on board of vessels of the Navy, and on the receiving ships, to detach to devote an hour or two a day to the instruction of these boys who will in time to come be the "bone and sinew" of the Navy? I have frequently heard Captains of all that is required to urge a move in this direction on the part of a number of our energetic officers. The experiment has been tried on board the U. S. Steamer *Crusader* (on the Chesapeake Bay) with the most flattering results. The idea of forming a class of the boys was suggested by the worthy and popular Executive Officer, Lieutenant by the officers, and strongly encouraged and recommended by the commanding officer. The plan was adopted, the idea was suggested, grasped at it with characteristic eagerness, attending to the welfare of those under his command. I do not know if the same experiment has been tried elsewhere, with any desire to be personally benefited thereby. I am no fixturer, but I desire to do justice to all men, and particularly to advance the cause of education.

The boys have manifested a great desire to avail themselves of the opportunity of learning, acquired them, and speak in grateful terms of their officers, upon whom they look with feelings hitherto unknown to them. The writer has frequently seen boys who have come on board who had considerable experience in teaching, and who expresses much gratification at the progress which the next few months will develope.

Would it not be well for other ships to follow the noble example set by the *Crusader*? Is it not worth the trial? Is it not much better for these boys to spend their leisure hours in improving their minds, than in lounging about the decks, and acquiring habits which will frequently mar the best future prospects of many a promising youth? I for one, am of the opinion that it is, and I am certain that these would prove valuable auxiliaries to the Navy.

Hoping that this humble suggestion will prove the means of ameliorating the condition of sailor boys, I am

A NAVY FRIEND.

OFF YORKTOWN, VA., February 21, 1864.

PROVOST-Marshal-General Fry has sent a dispatch to Major Townsend, from which it appears that the Government has not yet determined upon the draft in this month, the current rumors, arising out of the action of Congress in regard to the extension of bounties, that the draft had been postponed till the 1st of April, being unfounded or premature. Volunteering is very brisk at present, and the draft will be necessary only to fill up a small deficiency.

REBEL newspapers report the assignment of General Withers, by order of Lieut.-Gen. Polk, to the command of a new military district, which will embrace all that portion of Alabama, Mississippi and East Louisiana extending to parallel 32, to be called the District of Southern Alabama. Gen. Withers' headquarters will be at Montgomery.

MILITARY MATTERS IN CONGRESS.

SENATE.

THE bill relative to Acting-Assistant Paymasters in the Navy, passed by the Senate on the 25th ult, provides that whenever the Secretary of the United States shall consume any acting-assistant paymaster in the volunteer naval service, on account of his faithful, diligent, and efficient discharge of the duties of assistant paymaster in the Navy, it shall be no assistant paymaster in the Navy, it shall be no objection to his appointment and confirmation that he is over twenty-six years of age: *Provided*, That he do not over thirty years of age: *And provided further*, That the number of paymasters and assistant paymasters as authorized by law be not increased thereby. Another section appropriates to the Navy Department, according to the provisions of this bill, must be between fourteen and eighteen years of age. An important amendment to the bill relating to appointments in the Navy Service was adopted on motion of Mr. GRIMES. It strikes out the provision that officers of the volunteer navy of the service shall be discharged within sixty days after the return of the vessels in which they are employed, and provides, as an amendment to the act of July 16, 1862, authorizing the power to reduce to seamen's rates for three years, or during the war, such officers as absent themselves without leave, commands. The bill reported by Mr. HALE, to establish and equalize the grade of line officers in the Navy, contains so much matter connected with the subject, including a Line officer appointed from the Revenue Service, and is essentially the same as the one that failed to become a law last year. Mr. WILSON introduced a bill to provide for the pay of officers of vessels in the regular army shall be for three instead of five years, and that the pay of officers in the volunteer enlisted prior to July 22, 1861, shall have the privilege of retiring until the 1st day of May, with the existing bounties; that officers who have served for a period of five years out standing ten days, shall receive full pay and allowances for such periods; that enlisted men employed as laborers at the Military Academy, Artillery School, Ordnance Department at Washington or at Geographical Department Headquarters may receive extra pay allowed by law, prior to March 3, 1863; that chaplains shall, when duty by reason of sickness or disease, shall receive full pay without rations, and absent from other causes, shall receive half pay; that chaplains shall be placed on the same footing in respect to pensions as first lieutenants; that there shall be allowed to the latter, one commissary sergeant, one hospital steward, quartermaster, and one commissary, to be selected from the brigade on duty with said battalion; also, one sergeant-major to the battalion commanded.

The Military Committee was instructed, on motion of Mr. WILSON, to inquire into the expediency of amending the articles of war so as to limit the power of all military commanders below the PRESIDENT, from relieving officers from command, except for cause stated in writing.

The bill passed by the House, and reported to the Senate by Mr. WILSON, extending bounties to April 1st, commences a lively debate. Mr. WILSON thought there was no doubt that we were enlisting men more rapidly than we could provide for them, probably at the rate of two thousand men per day. Two hundred thousand men by the 1st of April could be secured under the recent call for five hundred thousand, and the bounties would amount to but a few millions of dollars. Mr. FESSENDEN objected to the bill on the ground that it came before the Senate without the recommendation of the Committee on Finance. Mr. WILSON explained that he was not if the Secretary of War wished for such an extension, he should say so in writing, and Mr. LANE expressed his belief that such was the Secretary's opinion. The bill for the continued payment of bounties. The bill to equalize the pay of officers of the Army, was also discussed.

Both Houses have agreed to the Report of the Committee of Conference on the bill reviving the grade of Lieutenant-General, and the nomination of Gen. GRANT is confirmed by the presiding officers. The bill passed provides that the grade of Lieuten-ant-General and the same is hereby revived in the Army, and that the President of the United States is hereby authorized, whenever he shall deem it expedient, to appoint, by and with the advice and consent of the Senate, a Lieutenant-General, who, subject to the general supreme rules in the military service, not below the grade of Major-General, most distinguished by courage, skill and military conduct, commissioned as Lieutenant-General, shall be authorized, under the direction and during the pleasure of the President of the United States, to command the armies of the United States. That the Lieutenant-General appointed, as hereinbefore provided, shall be entitled to the pay, allowances and emoluments which by existing laws are allowed by May 28, 1798, and also the allowance described in the sixth section of the act approved August 3, 1861, and the additional rations to certain officers. *Provided*, That nothing in this bill contained shall be construed to affect the rank, pay or allowances of Major-General Scott, Lieutenant-General by brevet, and now on the retired list of the Army.

The nomination of General GRANT to the rank of Lieutenant-General, by brevet, was confirmed by the Senate on the 2d inst. A bill was introduced by Mr. GRIMES of Iowa, to amend an act for the better organization and equalization of the staff of the Army of the United States. This bill requires the establishment by a board of examiners of a roster in the pay department, the medical, and professional fitness of the candidate for commission to the office lower than Commodore. If an officer fails in the examination, he is to be placed on the retired list. No further appointments upon the active list are allowed till the number is reduced to that now required by law.

HOUSE.

The Naval Appropriation bill was passed on the 25th ult after a warm debate, in which the management of the Navy Department was severely censured by members of the opposition, and ably defended by its friends. Mr. HARRIS of Indiana, said that the cheeks of the American people mantle with shame at the conduct of the head of the Navy Department. He was followed in the same strain by Mr. DAVIS, of Maryland, who said that the first attack upon Charleston was planned by a cotton spinner, who aimed defiance of the advice of Admiral DUPONT. He was bitterly denounced by the Government, and displaced because it was thought that the iron interest might

be injured by permitting the truth to become known. During the debate, Mr. Brooks spoke of the capture by pirates, showing that although we possess the largest navy in the world, our commerce has suffered losses from the privateers, since the commencement of the war, to the extent of thirteen and a half millions. Mr. BLAIR condemned as unpatriotic the remarks of Mr. DAVIS, as the latter was one whom he characterised as a "cotton spinner" and an officer distinguished for his courage, and as eminent as the office to whom he alluded, and on whom he bestowed his praise. The Navy Department had shrunk from no investigation, and had not called upon its friends to screen its conduct from criticism. He was hesitated to afford all means of investigation. He thought gentlemen ought not, in five minutes' speech, to make such charges against the Navy Department. In reply, Mr. DAVIS disclaimed any intention to do injustice, and said he should be satisfied if the correspondence between the Secretary and the General Depot could be laid before the House. This was subsequently called for, on motion of Mr. BLAIR. It will be seen that the contingency of the attack of the torpedoes upon Fort Sumter in April last, and the orders, reports, &c., previous and subsequent to that attack, will be presented, with a new action, providing for the erection of a floating dock for the monitors at the Navy Yards at New York, Philadelphia, and Boston, not exceeding $250,000, making $627,900 to be appropriated out of the $750,000 heretofore appropriated for a floating dry dock at New York.

The Military Committee have reported a bill to regulate the expediency of increasing the number of cadets at the Military Academy, and a joint resolution to authorize so much of the Enrollment Act as gives pay to officers absent with leave. A resolution of thanks was passed on the 26th, commending Generals Grant, Sherman, commanding the Mississippi Squadron, and the officers and men, for eminent skill in cooperating with the army in reopening the Mississippi River. Another bill, providing for officers and men, were also similarly commended for daring and skill in rescuing Union troops from shipwreck on the Gulf. An important bill relating to enlistments for the Union Army in the Southern States was introduced by Mr. BLAIR. It provides that any person of the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, or Arkansas, who may volunteer in the military service of the United States, for the term of three years or during the war, shall be entitled to the benefits and privileges of the existing laws, enacted into the military service of the United States as they may elect, and in the case of such being colored troops, they shall be assigned to regiments raised by the several States, or sub-divisions of States, procuring such enlistments shall receive credit—provided that such enlistments in any State, under this act, shall not exceed the quota of such State, subject to a call for troops. After being amended by the provision that no enlistment shall be made of any soldier after in or out of the ranks, the bill passed the Senate. It came, unless full credit is given to the State to which the enlisted soldier belongs, the bill was passed. On motion of Mr. FESSENDEN, a resolution was adopted calling upon the PRESIDENT to report what number of veteran volunteers have reenlisted the service, and what number have been discharged from that particular States non-residents have been enrolled. The PRESIDENT subsequently replied, enclosing a communication from the Secretary of War, in which he says his opinion it would be prejudicial to the public service to transmit to the House at the present time the information required. A bill was reported by Mr. JOHNSON, of Indiana, to secure to persons in the military and naval service homesteads confiscated by the rebellion, which is in substance a duplicate. It was referred to the Committee on Public Lands. A series of resolutions on the rebellion were introduced by Mr. CRITTENDEN, of Ohio, and the House, in a strange freak of good humor, passed them all unanimously. They read as follows:—

Resolved, That the present civil war against the armed insurgents, banded under the name of the Southern Confederacy, was brought on by a wicked and unholy and unable rebellion, and that it is not waged by, or aiding and abetting it, have incurred the name of public enemies, and should be treated as such; and that this rebellion ought to be effectually put down, and to prevent a recurrence of such rebellion in future, the cause which led to this one must be permanently removed; all that in the struggle now going on for the safety of our country and free government there is no middle ground on which any good citizen or true patriot can stand, neutrality or indifference, or anything short of a hearty support of the Government, being a crime where the question is between right and wrong.

A bill has been introduced by Mr. FARNUM relative to the captures made by armed vessels in the service of the United States, and placed in the power on the same footing as to prize money with the crews of vessels in the Navy proper. On motion of the same gentleman the House requested the Committee on Naval Affairs to examine what legislation, if any, is necessary to authorize and require the payment of the certificates issued by the Second Auditor and Second Comptroller of the Treasury for arrears of pay and bounty due deceased soldiers, on presentation thereof to payment of the army in Washington as well as in the district where the claimants reside.

The House has voted to end the present session on the last day of June.

The Senate bill, appropriating $40,000 for military protection to the overland emigrants to the Pacific States and Territories, has passed the House. It runs through the Indian country, a distance of six or eight hundred miles, and is infested by robbers and highwaymen.

The following extract from General Orders No. 21, dated War Department, July 27, 1863, is furnished for the information and guidance of all concerned:—Soldiers confined by civil authority are not entitled to pay during such confinement, unless discharged therefrom without trial, or by trial and acquittal; and commanders of companies and detachments are required to state explicitly upon the muster-rolls of their companies or detachments the periods of such confinements, and whether the soldiers so confined were discharged without trial, and, if tried, whether they were acquitted or convicted.

GENERAL ORDERS, No. 64, from the Adjutant-General's office, dated February 15th, 1864:—Whenever refugees from within the rebel lines, or deserters from the rebel armies, present themselves at Union States camps or military posts, they will be immediately examined by the provost-marshal with a view to determine their character and their motive in giving themselves up. It appears that they are induced, in their intention of forever deserting the rebel cause, care will be taken to explain to them that they will not be forced or coerced in the United States army against the rebels, but be kept in confinement. The President's proclamation of December 8, 1863, will be read to them, and if they so desire, the oath therein prescribed will be administered to them. They will then be questioned as to whether they desire employment in the military service; and if so, such arrangement as may be expedient will be made by the several Army commanders for employing them on Government or private labor. Such persons as may come to the Army of the Potomac will be forwarded to the military Governor of Washington, D. C., who will cause them to be employed in such cases, that employment may be given them, if desired, or if not, that they may be sent as far North as Philadelphia.

THE Ninth National Bank of New York has just contributed its quota to the relief of the wounded. It opens President, and the following gentlemen directors: Wm. A. Kohbe, Thomas A. Vyse, Jr., George A. Wicks, Barnet L. Solomon, Oscar S. Hall, Chas. Miller, Wm. H. Hall, Chas. Zeeheimer, J. O. Whitehouse, Joseph U. Orvis. This bank, which is thus established with a capital of $200,000, yesterday so deserved attention to the accounts of officers of the Army and Navy.

LETTERS to Federal prisoners in Richmond should be addressed, in open envelopes, in the following form: "A. B., "Prisoner of War, Private, Company E, 7000th N. Y. Infantry, Richmond, Va." Letters and packages will be enclosed to Theodore Dimon, Agent, State of New York, Norfolk, Va., and will be forwarded gratuitously by him, to purchase a stamp to pay Confederate postage. If these conditions are complied with, Major-General Butler will see that the letters are transmitted through flags of truce.

NAVY YARDS.

BROOKLYN NAVY YARD.

The U. S. steamer *Cactus* arrived at this Yard February 25. The *Cactus* arrived March 1, from the North Atlantic Blockading Squadron, 60 days out, and had thirty-three days, taken on board the blockade runners *Fanny and Jane* and *Pet*. At the present time about fifteen vessels are lying at anchor waiting for orders. It seems as if the season generally had struck work, so far as the Navy is concerned. It is a current saying in this Yard that "the men we have ship on the Government are not worth a glass of grog, and they don't get it." Even those who do ship are so few, that a very large number of the vessels that are sent from this Yard must wait for a crew after they are commissioned. So soon as the evil attains sufficient magnitude to compel a reform, no doubt there will be a remedy found and applied. The Ericsson Battery vessels are lying at anchor between the Navy Yard and Gowanus Bay. Thursday morning at 9 o'clock, on her trial trip up the North River; a large number of gentlemen, including several naval officers, among them Captain Ericsson, the inventor of the vessel, were aboard, and Mr. Secrew, were on board. The vessel would proceed as far up as Weehawken, where her ordnance would be fully tested as well as the working of the new patent compressor.

BOSTON NAVY YARD.

There is a great demand for good seamen at the Charlestown Navy Yard. Since yesterday morning, 9, and *Monitor*-class, and the new patent steamer *Cheshire* are in the stream and only wait for crews.

Prize steamers *Ella and Robert E. Lee* are at the Yard, and will be fitted out for the navy as gunboats immediately. The latter named vessel was formerly the *Giraffe*, and ran as passenger steamer between Liverpool and Dublin, and on her trial trip is said to have made over 20 knots per hour. She is a fine model, and built of hard wood, and it is thought will make a very fast and serviceable vessel.

Within the past three weeks over 200 aliens have been discharged from the Yard. There are only the remainder of her crew, which will shortly leave for the Yard. Among the remainder of her crew, which will doubtless receive this week, as a draft of men is expected from New York. Acting Master Walters, the Master Mate of the Yard, has been detailed to the steamer Monroe as soon as she is ready for sea. There are no new vessels undergoing repairs, and those requiring at present are being pushed rapidly forward in a state of completion. Several vessels commenced in the Yard are in progress, and others to the contemplation. The basin reservoir which, a few years since, was constructed at a great expense, and which was completed to contain 300,000 gallons of water, having been superseded by the abundant supplies from the Potomac, has been demolished and the ground filled in. The old reservoir was thus occupied is deemed so appropriate and every way desirable for a dwelling-quarters for one of the principal officers—that the Department has the building now in process of construction. Workmen are now engaged in renovating and fitting up the building formerly occupied as the paymaster's department, west of the main entrance, for the purpose of a depository for stores, supplies, exhibition of arms submitted for trial, and other amicitiæ, rendering the establishment a great desideratum to the Government, to members of Congress, as well as to the thousands of persons who visit this Navy Yard from every part of the country. With the return of early spring, work on the great ordnance gun foundry will be resumed with vigor. Already some ideas may be formed of its great extent and importance. There are about 1,100 workmen on the rolls, and, with few exceptions, they are classed as No. 1 in their respective branches of employment. The new gateway and walls of the ordnance section of the Yard now present a handsome appearance, while the new roll-call office is a finished improvement.

ACTING MASTER'S MATE S. DAVIS, of the *Steel Brier*, died at the Naval Hospital, Brooklyn, N. Y., on Thursday night, February 27th.

THE new code of naval laws and regulations was to be communicated to Congress on Monday last.

THE ironclad Cincinnati was expected to be launched at Cincinnati during the present week. She believe to the accumulations of materials, and will have one turret and carry two guns.

TWENTY-five of the prisoners captured by the rebels on the occasion of the destruction of the side-wheel steamer *Underwriter*, a boat belonging to the Navy, and used as a ferry-boat, were sent to Goldsboro, N. C., where they are held as prisoners of war.

THE Navy Department has received a bill for the relief of Commander George Preble, who was dismissed from the naval service by the sentence of a court-martial for facts connected with the escape of the *Oreto* into Mobile, and was subsequently restored. The petitioner files his claim for the pay during a period of his suspension, thus doing an act of tardy justice to a very worthy officer.

THE Secretary of the Navy on the 26th ultimo, by Order of Italy has awarded the Crown of Commander of the Order of St. Maurice and St. Lazarus to Captain Napoleon Collins, of the U. S. Navy, and to Admiral Paulding, of the Navy Yard, for the prompt assistance rendered to the Italian corvette *Principe Umberto* and *Re Galantuomo* when she was grounded at Barnegat. Mr. Barney and Admiral Paulding are the only officers who have been knighted of the Order of Commanders of St. Maurice and Lazarus.

On the 12th of February, 1864, the Queen captured the schooner *Lessie*, of Nassau, N. P., near the Bennes River Pass. The cargo consisted of powder, Enfield rifles, salt, sugar, and whiskey. On February 1st, a boat expedition from the U. S. Navy lying in St. Andrew's Sound, Florida, commanded by Acting Master Collingwood, captured a sloop laden with seventy-two bales of Upland cotton and two of Sea Island cotton. The sloop was scuttled the pilots, consisting of a sergeant and six men of the 4th Georgia cavalry, and six civilians. The U. S. steamer *Ethan Allen*, Lieut. Commander Wm. Gibson, and Mobile bar, captured the steamer *Grey Jacket*, bound from Mobile to Nassau, with 500 bales of cotton, 1,000 turpentine. She had twenty-three passengers, who were transferred to the *Colorado*.

MEDICAL DEPARTMENT.

ORDERED.

Surgeon D. G. Brinton, U. S. V., has been relieved from duty in the Army of the Cumberland, and ordered to report in person to Surgeon-General Hammond, Washington, D. C. Ward, U. S. A., at Louisville, Ky., for assignment to duty.

DISCHARGED.

Medical Cadet Francis H. Atkins, U. S. A., now at Judiciary Square Hospital, Washington, D. C., has been discharged from the service by order of the Secretary of War, to enable him to accept the appointment as Assistant Surgeon U. S. Navy.

Medical Cadet Christopher Bischoff, 3d Wisconsin Vols., has been discharged from the service of the United States for physical disability, with condition that he shall receive no final payments until he has satisfied the Government that he is not indebted to the government.

Privates John W. Bailey, Co. G, 123d New York Vols., and Theodore Bailey, Co. G, 123d New York Vols., Judiciary, have been honorably discharged the service, with a view to their enlistment as Hospital Stewards, U. S. A.

Hospital Chaplain Thomas J. Devan, U. S. A., has been honorably discharged the service, by order of the President, on having been ordered supernumerary by the breaking up of the General Hospital at Annapolis, Md.

REVOKED.

So much of special orders of the War Department as dismissed Surgeon J. E. Lent, 34th New York Vols., for absence without leave, has been revoked, and he has been restored to his command, provided the vacancy has not been filled.

RESIGNED.

Surgeon J. T. Hodgen, U. S. V., has resigned.

LEAVE OF ABSENCE EXTENDED.

The leave of absence granted Surgeon Murray Weldman, 2d Pennsylvania Cavalry, has been extended ten days.

APPOINTED.

Private Frank D. Dew, Battery A, 1st Vermont Artillery, to be Surgeon of the 29th U. S. Colored Troops, with rank.

Duncan McLaughlin, of New York, to be Surgeon of the 29th U. S. Colored Troops, with rank as Surgeon in the Colonel S. S. Brewster, at Bryantown, Md.

R. B. Hamilton, of Missouri, to be Assistant Surgeon of the 9d U. S. Colored Troops, and ordered to report to the commanding officer of the regiment, at Point Lookout, Md.

Charles M. Wright, of Connecticut, to be Surgeon of the 3d U. S. Colored Troops, and ordered to report to the commanding officer of the regiment, at Yorktown, Virginia.

Hospital Steward H. W. Reynolds, has been appointed Second Lieutenant, 4th U. S. Colored Troops.

LEAVE OF ABSENCE

Furnished to visit Washington, D. C., has been granted Surgeon J. R. Ledlow, U. S. Vols.

CASUALTIES AT THE BATTLE OF OLUSTEE, FLORIDA.

The following list of casualties among officers of the battle of Olustee, is as complete as we can make it. We regret brief ourselves responsible for the accuracy of the spelling of the names:

KILLED.

Col. Chas. W. Fribley, 8th U. S. Colored Troops.
Lieut. Colonel Wm. Reid, 8th U. S. Colored Troops.
Lieut. Col. C. Foye, Co. K, 47th N. Y.
Second Lieut. E. P. Hayes, Co. A, 7th N. Y.
Capt. T. J. Sawyer, Jr., Co. A, 40th N. Y.
Capt. Wm. Hall, Co. K, 47th N. Y.
Second Lieut. James Gardner, Co. K, 47th N. Y.
Second Lieut. Wm. Gilbert, Co. C, 40th N. Y.
Lieut. Robt. Dempsey, Co. B, 7th Conn.
Lieut. Robt. Dempsey, Co. B, 7th Conn.
Maj. Beggin, 1st N. C. colored.
Capt. Wm. Hall, Co. K, 1st N. C. colored.

WOUNDED.

Col. Henry Moore, 40th N. Y.
Major L. A. Dudley, 7th N. Y.
Lieut. Col. D. Dubois, Co. E, 8th U. S. colored.
Capt. Wm. Hall, Co. K, 47th N. Y.
Capt. T. A. Frist, Co. G, 8th U. S. colored.
Second Lieut. Wm. Gilbert, Co. C, 47th N Y.
Capt. J. S. McDonald, Co. E, 47th N. Y.
Lieut. J. W. Hall, Co. K, 47th N. Y.
Lieut. Col. Chas. Foye, Co. K, 47th N. Y.
Assistant-Surgeon Davenport, remained with the wounded.
Capt. Wm. Brewster, 7th N. Y.
Capt. N. A. Kilbreth, Co. B, shoulder.
Lieut. Col. Chas. Foye, Co. K, 47th N. Y., abdomen.
Lieut. Col. Reid, 8th U. S. colored.
Lieut. Samuels, 8th N. Y., foot.
Lieut. Col. Dubois, Co. E, 8th N. Y.
Lieut. John M. Davis, 115th N. Y., not serious.
Lieut. Col. Reid, 8th U. S. colored.
Capt. T. A. Frist, Co. G, 8th U. S. colored.
Lieut. R. S. Grant, Co. G, 8th U. S. colored.
Lieut. Col. Dubois, Co. E, 8th U. S. colored.
Lieut. T. W. Arris, Co. C, 7th N. Y.
Lieut. Col. Reid, 8th U. S. colored.
Lieut. Robt. Smith, Co. F, 7th N. Y.
Lieut. Col. Reid, 8th U. S. colored.
Lieut. Barton, Co. H, 7th N. Y.
Lieut. Jacobs, Co. G, shoulder.
Capt. Armstrong, Co. K.
Capt. Bandy, Co. C.
Lieut. Col. Dubois, Co. E, 8th Mass. colored.
Lieut. R. H. Jewett, Co. C, 40th Mass.
Capt. John Hendrick, Co. F, 3d U. S. Art., left arm and leg.
Capt. Wm. Brewster, 7th N. Y., thigh.
Lieut. George L. Briggs, Co. H.
Lieut. George W. Dodge, Co. H.
Lieut. Col. Dubois, Co. E, 8th Mass. Mounted Infantry.
Lieut. Peter McCrea, 1st Art.
Lieut. Richardson, 4th Mass. M. I.

SUBMARINE ORDNANCE.

The experiments of which we gave some account last week having demonstrated that a gun could be fired under water without receiving injury, it was determined to continue them, in order to ascertain the effects which might be obtained in actual warfare. The hulk *Griper* was placed in a convenient position on the mud, and a 11-0 pounder was laid horizontally on a platform, twenty feet distant from the hulk, measuring from the muzzle, and trained upon a spot under the hulk's quarter, where the side fell in rapidly, making an angle from the vertical of 42 degrees, thus affording very opportunity for the shot to glance. At the first round the gun was loaded with a flat-headed 110-pound projectile, and a 14-pound charge, and was fired when the water had risen to the height of six feet above the axis of the gun. According to the official report, the shot struck the ship's side about the spot on which the aim was directed, penetrated the armor plating to a sound oak, cut through an 8 in. oak timber (sound), penetrated the inner lining of 4 in. fir (not sound), and struck a large oak rider 18 in. square, into which it penetrated 2 in., total penetration, through sound wood, 21 in. The ship's side was shaken to a considerable extent about the fracture, into which the water poured with great violence, filling the ship immediately. The third charge consisted of a solid projectile with a conical-shaped head. This shot penetrated both sides of the hulk, cutting through two oak timbers, twelve inches of oak planking, the upper part of a knee five inches thick, making a total penetration through sound wood of thirty-three inches. This round would appear to demonstrate the superiority of the conical over the flat-headed projectile when fired under water.

These experiments were all made with solid shot. On the 10th of September the first live shell fired at the *Griper* penetrated the side and burst in passing through, entirely destroying the side for the space of five feet by three feet, and making an open fracture two feet by two feet five inches by the same depth. In the upper part of the ship's side was totally destroyed, the deck above the fracture blown up, and the beam broken.

These experiments proved conclusively that water could not be relied on, at close quarters, as a defense from ships from the effect of shot, whether fired from above or under the surface. With a view to test the effect of submarine shots on plates, a target eight feet by four feet, composed of six 1-inch thickness of boiler plate, bolted together, was secured to the hulk by the *Griper*. In the first two rounds the flat-headed 110-pound projectiles were employed. The resistance offered by the water so far reduced their velocity that they were unable to pierce the armor. But in the third round the conical missile was used, and the official report says that it broke a hole in the plate, driving the fragments through the side into the ship, making an irregular fracture in the target 12 in. by 9 in., broke the shelf-piece, and destroyed the ship's side to a considerable extent.

An interesting series of experiments made in this country by Mr. J. P. Woonbury, in the spring of 1862, also fully demonstrated that an ordinary iron or wooden ship can be easily protected by a small projectile, fired from an indifferent gun even, at a considerable distance from the muzzle of the gun. The result of these experiments was important enough to induce the Secretary of the Navy to make a contract with an eminent ship builder for the construction of a gunboat, partially plated, mounting guns to fire under water. It was a part of the plan to have regular stuffing-boxes, constructed so as to exclude the water from the gun, and the recoil of the gun so regulated by compressors, or other means, as to keep the muzzle of the gun in the stuffing-box long enough, after firing, to close the outer part of the port. When the gun was run in to load, all the water that would enter the ship would be the capacity of the bore of the gun. In running the gun out, the muzzle being stopped by a cannister, it would enter the stuffing-box and plug it tight enough to keep out the water. The outer port would then be closed, and the gun ready for battery, ready for use. This vessel would have been constructed, were not a sudden rise in materials and labor rendered it inexpedient, in the Secretary's opinion, to go on with it.

In England, where more attention has been given to this important subject than in this country, five or six patents for firing guns under water have been already taken out, or applied for. The earliest of these, that of Mr. Page, C. E., bears date the 15th of June, 1861; the second, that of Mr. Burney, of Glasgow, was dated the 9th of May, 1862. The details of two other patents by Captain C. Cozes have not yet been made public. Mr. Page thus describes his invention:—

In vessels-of-war, and other floating batteries, I place a gun or guns, each in a chamber, disposed below the water level, and, into this chamber, I force air at a pressure greater than that due to the depth of water at which the gun is placed. The gun chamber or chambers are connected with a reservoir, in which a plentiful supply of compressed air is maintained. The gun being loaded and trained in position by suitable apparatus, I open a port in the ship's side below the water level, and fire the gun through such port, which is immediately closed. The pressure of air within the chamber causes a rush of air outwards, and prevents the ingress of water to any great extent while firing. Batteries, with the guns so disposed, I propose to bring into sufficient proximity to an enemy's ship, with free it. The projectile will therefore not enter the ship below the water line and destroy it. Guns so situated may be worked in the ordinary way by men, they being also in the pressure chamber.

The invention of Mr. Burley differs in several essential particulars from that of Mr. Page. He says in his description of it:—

In carrying out this invention it is proposed to employ breech-loading ordnance of a novel and peculiar construction, and it is proposed, according to one modification, to fix such gun rigidly on the vessel's side by means of flanges or brackets of sufficient strength and extent to distribute the reaction of the gun over a sufficient portion of section of the vessel's side; or if it is not considered desirable to subject the vessel's side to the recoil, the muzzle of the gun may be projected through a suitable aperture fitted to the vessel's side. The gun is bored completely through, and at a point immediately in front of the charge chamber, there is fitted a valve, which is hermetically actuated by a lever or gearing at the side, and which serves to exclude the water while the gun is being fired, and until such times as it is about to be discharged. At the back of the charge chamber there may be a second tamecock, or, as is preferred, a single plug fixed with a very slight taper, may be forced laterally into a corresponding recess, extending just across the bore, the plug being actuated by a screw and bracket at the side.

The attention of inventors having been directed to this subject, there can be little doubt that vessels will be constructed which will effect another change in naval armament as great as that which followed the adoption of the iron-clads. As our ships already carry on their sides as great a burden of armor as they can keep afloat under, the defence of the bottom seems to involve a total change in the present method of construction. A ship might be constructed so as to carry its armament under water, the gunners and crew being protected against projectiles from above by a shotproof deck. The strongest iron-clad now afloat would be unable to resist the attack of such a vessel, in a fight at close quarters. It is the duty of the Government to take immediate steps to test the practicability of such a mode of marine firing, and also of submarine defence, to a most careful and thorough investigation, and to carry on such independent researches as may be necessary to enable us to keep pace with France and England in the improvement of our means of naval warfare.

We would acknowledge our indebtedness to the *Mechanics' Magazine*, of London, for much of the material of this and the preceding article. That thorough and practical scientific journal has discussed this subject in a series of papers, which possess much value and great interest.

STRENGTH OF OUR ARMIES.

The following, from the Washington correspondence of the Cincinnati *Commercial*, is said to be derived from official sources:—

According to the official report of the Provost-Marshal-General to Congress, 68,243 volunteers enlisted in the Army from the 1st of January, 1863, to the 1st of January, 1864. The draft, during the same period, realized 36,000 men. A total of about 100,000 new men were thus added to the Army in the ten months mentioned. In the same time there were lost by battle, disease, capture, and discharge, did not exceed that number; so that on the 1st of November last the strength of the Army was substantially the same as when on the preceding 1st January. Since the list of November up to last December, however, 40,000 and 114,000 volunteers, under the President's last call, have been formally mustered into the United States service. About 10,000 more are expected to be mustered into the service during January, in I do not include them in my calculations. Thus, our Army is at this moment 112,000 stronger than it was on the 1st of January, 1863, and 154,000 stronger than it was in this all. Up to the end of last week, no less than 65,000 colored troops have been reported as regularly organized in the Department. Of these 24,000 are now disbanded, but not yet formed into regiments. Of the former number, at least one-third are deemed inefficient for service, either that they can safely be employed in offensive operations. The remaining forty thousand are proficient enough to be used for garrisoning our numerous fortifications, depots, and protecting lines of communications, &c. As they fill the places of an equal number of white troops, that would be required for that purpose, they may safely be regarded as a corresponding accession to our effective strength. Next comes the Invalid Corps, organized at this time nearly 25,000 men. Here and elsewhere its services have proved invaluable, and as it has relieved an equal number of troops fit for field duty, it may likewise be put down as a clear gain to the army. Its usefulness is great, not only in garrisoning, guarding, &c., but also in doing away with the principal cause of desertion, which prevailed in the first and second years of the war, viz.: absence without leave, by the men from provost-guards and provost-guards, now extended to every camp of any size. Since the latter system has come seventy thousand deserters and absentees have been sent to their regiments, of whose services the Government was deprived at the beginning of the year, and whose return is tantamount to a reinforcement of the Army to the same number.

Thus it appears, that the Federal Army must have at the present time—the losses in 1863 being balanced, as shown above, by volunteering and conscription—in the same period—strength greater by at least 250,000 men than it had on the 1st of January, 1863. This may seem a large figure, but I know it is rather below than above the footings up of the Provost-Marshal-General. That we have 200,000 men—112,000 whites, the balance colored—in the last two months, is absolutely proved by the official returns. There are still other reasons for a hopeful contemplation of the future. A misimpression prevails among the public at large in the North as to the number of men in the States that will be lost to the service in the course of the year, by the expiration of their terms of enlistment. The total number of men whose term years' service will end previous to the 1st of January next, is not over two hundred thousand. Only about one-fifth of them are credited to the Army before the the first of August next, so that the great mass of the veteran soldiery would remain available under all circumstances, at least for another year, during the summer campaign. But there is already a certainty that the entire one-fifth, or than half of their number will be retained by the country during the war. The Army of the Potomac numbers at present 120,000 men, and it is confidently expected by the War Department that, before the 10th of March, the number will reach from 110,000 to 120,000.

THE RUSSIAN ARMY.

The *Revue des Deux Mondes* in an article on "*La Finances de la Russie*," makes the following estimate of the latest of the public debt sheets 87,457,217 of roubles, or about 250,000,000 francs. So far from seeking to effect reductions under the head, the Russian Government is making active attempts to increase it by endeavoring to contract new loans. The Department of the Russian navy requires about 134,000,000 of roubles (386,000,000 francs). Here, likewise, may be discerned a dangerous tendency towards an increase of expenditure. The military budget, always a point in Russia, notably following the depreciation of the currency, and the treatment of the soldier having in some degree been improved, has undergone a notable and ever-bold scene for the increase of the expenditure. It is in making in great measure to be noised about, that Russia seeks to place itself beyond the reach of any encroaching power. The famous "million of men" of which so many returns are made mention of in the press paper. The war in Poland shows how very far short the number of disposable troops is of such extravagant statements. And how could it be otherwise? Russia's standing army has not been recruited, and it should be attempted at this time putting on one side the ancient Polish provinces, it would not exceed 600,000 men. Russia is not a country for campaigns, for it is more necessary in Russia than elsewhere, that soldiers be constantly tended. What is in truth the actual strength of the army? This is what is in truth the work of comparative statistics. M. Koss, recently estimated the active strength of the Russian army—infantry, guards and grenadiers, 40,000 men; line, 130,000; regular cavalry, 55,000 men; artillery and engineers, 30,000; army of the Caucasus, 100,000; total, 355,000 men, to which may be added about 150,000 men for Cossacks and irregular cavalry. These figures seem to be about the truth.* At the breaking out of the war in Poland the disposable army of operation may be reckoned at 416,160 infantry; 90,200 cavalry, with 12,000 artillery men and engineers; that is to say, a sum total of 650,000 men, excluding the army of the Caucasus (of which the number varies from 115,000 to 165,000 men, the latter figure including the local and irregular levies and military colonies. With this roll of effectives, however, Russia has never been able to concentrate 250,000 men on the field of battle. The whole of the troops, for whom military supervision should be provided, were estimated in 1855 at 845,000 men, and in 1856 at 796,000 men. The difference in favor of the whole of the effectives have wonderfully reduced in seven years this formula would not be found in any country the army figure upon paper for a mass greater than could be brought with the colors. This difference is especially very great in Russia, where a very large sum for the non-effective complexities and lamentable robberies. Where this exists is perfection is among the staff. A special issue of the Invalide Russe, in 1855, enumerated 3,000 staff officers and 30,000 officers; 334 generals and 19,025 officers should have been present under arms, with 696,854 soldiers, but the division maintained that only 400 generals, 15,000 officers, is it that the Russian army, though one of the most considerable in Europe, has only the exaggerated proportion which a willing credulity leads to it. The Polish campaign of 1831, and the heroic struggle sustained at this time by their unfortunate country, have taught us how great would the difficulty of rendering disposable for a war in the West an effective force of 200,000 men, taking into account the imminent necessity of keeping 150,000 men in the war in the Caucasus. If it is desired to increase it, financial resources are wanting, which neither customs duties nor loans can supply. The last resource, that of conscription so easily denied, for Russia suffers already from a surfeit of it, which threatens her with a terrible crisis. We are also led to examine Russia not only as to what she produces and what she expends, but on a third class of facts not less important, that the difficulties she may yet experience from the trial of her credit.

* Lieutenant-Colonel T. T. Lionel Galloway, of the Royal Engineers, and Captain Alderson, of the Royal Artillery, British military commissioners, by Captain Burton, of General Barnard's staff, lately made a visit to the fortifications around Alexandria. The two officers first named are detached engineer officers of the Government, sent out to examine and report upon the progress made by the United States in artillery and fortifications.

† It appears to us that M. Koss does not take sufficiently high estimate for the corps of guards and grenadiers. It is usually employ as to the army of the Caucasus, where it is a part of the regular army. It would be well to add to the 30,000 men serving in fact the Cossacks of the line of the Kouban. The services simultaneously by the Russian armies in Lithuania and Poland must not be forgotten.

BAYONET EXERCISE AT DRESS PARADE.

THE following Manual for bayonet exercise at dress parade is said to be by an experienced officer, who has used it with entire success:—

I. This may be included among the exercises ordered by the commanding officer, after the salute of the line.

II. The battalion being at *shouldered arms*, the Colonel commands:

1. *Close order.*—2. MARCH!

The ranks are closed in the manner prescribed in section 99, Regulations of 1863.

III. The Colonel commands:

1. *Right face.*—2. *By file right.*—FRONT!

At the first command, the battalion faces to the right, in four ranks, as prescribed in the infantry tactics.

When the file closers, the second command, faces to the front, in four ranks, the captains and covering sergeants retire to the rank of file-closers, the captains on the right of the covering sergeants, and the color-bearers exchange posts with the corresponding corporals of the third rank of the color-guard. If there are two color-bearers, they retire, in their proper order, to the interval between them, and the corporals advance through the nearest intervals on the right and left. If there is only one color-bearer, he retires to the interval on his left, and the corporal advances by the nearest interval on the right. The file-closers face to the right and to the front, while the battalion. They stand at *shouldered arms.*

IV. The Colonel commands:

1. *At the head of the line.*—2. *Pass*—*Intervals.*—2. To the *front.*—3. *Open order.*—4. MARCH!—5. *On the centre.*—DRESS! 6. FRONT!

At the first command, the first rank advances fifteen, the second ten, and the third five paces.

The bases of alignment are the men on the right and left ends, and in the color-file of the color-guard, paragraph 9.

At the fourth command, these guides, carefully measuring their distances, take post slightly in advance of the men of their respective ranks, who will not pass them.

At the fifth command, the file closers will at once face inwards, align themselves on those of the color-file, who face to the right, and all invert their pieces. The several ranks promptly dress to the right, and the file closers resume their own positions.

At the sixth command, the officers return to the rear, noncommissioned officers in the rank of file-closers order arms, and the inverted pieces are shouldered, as the guides face to the front.

V. The bayonet exercises (*excepting the right and left volte and thrust*) follow, in such order as the Colonel may direct—the file-closers remaining in the rear.

The commands of caution are separated from those of execution, as in the common manual of arms; otherwise prompt simultaneous movements are impossible. For example:

1. *Prepare to guard*—GUARD!

1. *Parry in tierce (second, &c.)*—2. PARRY!—3. GUARD!

1. *Thrust in prime (second, &c.)*—2. THRUST!—3. GUARD

1. *Lunge in prime (second, &c.) and pursuit (or directly)*—2. LUNGE!—3. GUARD!

1. *Shorten on the right.*—2. SHORTEN!—3. THRUST!—4. GUARD!

1. *Parry a second in retreat.*—2. PARRY!—3. GUARD!

1. *Sink.*—2. *To the rear.*—3. STRIKE!—4. GUARD!

1. *Leap to the rear.*—2. MARCH!

1. *Advance.*—2. MARCH!—3. *Retreat.*—4. MARCH!

1. *Right*—*Rear.*—2. VOLTE—ATTENTION!

If it becomes necessary to modify the alignment of the ranks, the Colonel commands:

1. ATTENTION!—2. *On the centre*—DRESS!—3. FRONT!

At the first command, the men take the position of the soldier at *shouldered arms.* At the second command, the ranks are aligned, as in the manual of arms, paragraph 9.

VI. At the conclusion of the bayonet drill, the men being at *guard*, the Colonel commands:

1. ATTENTION!—2. *Close order.*—3. MARCH!—4. *In two ranks.*—FRONT!—5. COLORS AND GENERAL GUIDES ON THE LINE!—6. GUIDE ON THE LINE!—7. *On the centre*—DRESS! —8. *Open order.*—9. MARCH!

At the first command, the men take the position of the soldier at *shouldered arms*, the officers drawing swords.

At the second command, the ranks are aligned, as in the manual of arms, paragraph 9.

At the third command, the first, second, and third ranks close on the fourth, and stand faced to the rear. The colorbearers and corporals of the color-guard resume their places, passing through the intervals of the rear left file.

At the fourth command, the battalion resumes the order of battle, the Colonel and Adjutant maintaining their positions in front.

At the fifth command, the color-bearers (the first, if there are two) advance two paces, and the general guides file to the line, at a distance of about two paces from the front of the battalion.

VII. The guides having retired, the Colonel commands:

1. *Prepare to open ranks.*—2. *To the rear.*—*Open order.*—3. MARCH!—FRONT!

These follow such exercises as the Colonel may direct.

VIII. The battalion will, with proper instruction, acquire the same precision, rapidity, and uniformity of movement, in the bayonet exercise, as in the common manual of arms.

IX. The bayonet drill, with the rifle-musket, the light-fifle, and high-quarte parties, is not *precisely* fixed by the books of tactics.

In these parties, at dress parade, the pieces, as seen from a flank of the battalion, will incline forward at an angle of forty-five degrees with the horizon, and will appear vertical, as seen from the front. Otherwise these four parties should be omitted.

X. In order to secure *uniformity* in the *orders* and *movements*, the Colonel should, at the outset, thoroughly instruct and drill the officers and non-commissioned officers, and exercise a constant supervision of the instruction of the men; and, as soon as practicable, with the aid of the officers, drill the entire battalion.

ARMY AND NAVY PERSONAL.

BRIGADIER-General Roberts, of Iowa, was at Cairo, Saturday, en route to the department of the Gulf.

MAJOR-General Rosecrans is President of the Mississippi Valley Sanitary Fair, to come off at St. Louis on the 17th of May.

A PRIVATE of the Invalid Corps was last week passed by the Camp Examining Board for the rank of colonel of a colored regiment.

BRIGADIER-General Davidson having been ordered to relieve General Hatch in command of the cavalry bureau at St. Louis, left Cairo Saturday evening.

CAPTAIN Ferguson, late Quartermaster at Alexandria, Va., has been relieved from the Old Capitol prison at Washington, and honorably acquitted.

COLONEL Hunt, who has been on trial before a court-martial in Fort Monroe, has been found guilty, to pay a fine of $2,000, and to be imprisoned until the same be paid.

LIEUTENANT-Colonel M. P. Small, Commissary of Subsistence, U. S. A., has been appointed Chief Commissary of Subsistence of the Department of Virginia and North Carolina.

FIRST Lieutenant Charles P. Brown, 10th Connecticut Vols., has been appointed Assistant Commissary of Musters, subject to the approval of the President, in place of Second Lieutenant A. J. Holbrook, relieved.

MAJOR-General Peck has appointed Colonel Arthur H. Dutton, 21st Connecticut Vols., Chief of his Staff, and Captain Lieutenant Andrew J. Holbrook, Acting Aide-de Camp.

CAPTAIN Eber, Chief Quartermaster of the Cavalry Bureau, has been appointed Quartermaster, vice Colonel Sawtelle, who was succeded by Captain Ekeza, has been ordered to Brownsville, Texas, with the rank of Captain.

On Saturday evening the friends of Colonel A. D. Zabriskie, of the Ninth N. J. Vols., presented him, in Jersey City, presented that officer with a magnificent sword, sash and belt, at the residence of Mayor Haines.

MAJOR-General Banks declines the invitation of 2,000 citizens to speak to the people of Louisiana on the issues of the election now pending in that State. The military authorities ought to throw no influence into the merely political crater.

MAJOR John C. Sherburne, assistant adjutant-general, and chief of General Martindale's staff, has been commissioned by the Governor of the State of New York, colonel of the cavalry regiment known as "Scott's Nine Hundred."

MAJOR-General Cadwalader arrived in Philadelphia on Sunday, after a tour of several weeks, during which time his position as commander of the city of Philadelphia has been filled by Brigadier-General Ferry.

MAJOR-General Dix's McClernand with his staff has reported to General Banks for duty in compliance with orders from Washington, and it is generally supposed that he will at once assume the command of the 13th Army Corps. This relieves General Ord.

A MILWAUKEE dispatch of February 29th, states that Major-General Pope has gone to Chicago, on an active campaign against the hostile Indians on the northwestern border. He has summoned Brigadier-Generals Sibley and Sully to a council of war, which has already arrived. It is designed to use the troops in the Department of the Northwest for effective operations during the coming season. The campaign will open as soon as settled weather arrives.

PRIVATEERING IN THE WAR OF 1812-15.—The Washington correspondent of the New York *Evening Post* has been furnishing to members of Congress, whose attention has been called to the subject, with some interesting facts in reference to the American privateersmen in the war of 1812-15. Some of the facts he has been hearing upon the present situation of the country.

The evidence before the Court of the Navy at that time were predicated upon the employment of 874 commissioned and warrant officers, 3,626 petty officers, seamen and boys; 1,616 riflemen and sharp-shooters, and 4,000 marines for two hundred gun-boats, including 1,800 officers—total, 13,360 men. The expenses were estimated at $23,185,000. The aggregate number of vessels fitted in the war of 1812 were at least $1,000,000, and if the privateers had been thrown upon the government for support another $50,000,000 would have been added.

The prizes taken during the war, by the United States vessels, numbered one hundred and forty, of which seventyfour came safely into port.

Our privateers numbered three hundred, and they were captured by the enemy to the number of 207. The amount of prizes captured by these privateers amounted to 2,611, of which 1,551 arrived North—worth $12,000,000. Those captured by the enemy produced at least $40,000,000 more. The Government offered no bounty for prisoners taken, hence 5,000 prisoners were for long time cooped up in the gloomy prison at Dartmoor, not being exchanged.

THE WAVES AND WIND WAVES.—This subject being under discussion at a recent meeting of the Polytechnic Association of the American Institute of New York, the Chairman said—The self-registering tide-gauge used in the U. S. Coast Survey was invented by Joseph Saxton. One of the most interesting cases of the use of this instrument was that of the great earthquake in Japan, on the 25th of December, 1854. Two voyages at San Diego, in California, registered unusual curves, and the officer at the post, Lieut. Trowbridge, expressed the opinion in his report that it was caused by a submarine earthquake. This proved to be the case, and the wave came clear across the Pacific ocean—5,000 miles! From the curves of the tide-gauges at San Diego and San Francisco, Prof. Bache calculated that the rate of motion of the submarine wave was from 365 to 370 miles per hour, and that the average depth of the ocean on the San Francisco path was 2,500 fathoms, and on the San Diego path 2,100 fathoms. Mr. Wizard said:—Speaking of the action of the tide on wheels, a singular incident happened, a short time since, on board a small steamboat that he had in charge at one time, while moored at Battery (New York). The pumps had been in use, and during the night the tide turned the wheel, and pumped the tank full of salt water. Until the boat been neglected, she would have pumped herself full of water and gone to the bottom.

AMONG other objects of interest now on exhibition at the Albany, N. Y., Relief Bazaar, are a model of the *Merrimac*, made from the wood; a piece of shell thrown by the rebel craft at the *Cumberland*; a cane made from the mainmast; a cutlass brought ashore from the *Cumberland*; a cane, with sword, cipher and letter, from the *Merrimac*; one of the original John Brown lance heads; a Washington's account book; gun presented by General Schuyler to John Henry Ricks; hunting case from the rebel ram *Arkansas*; a relic, autograph letter from General Lee (rebel); Colonel Ellsworth's revolver; General Van Rensselaer's sword, used at the battle of Queenstown; a model of the *Monitor*, constructed of the material from the building, and presented to Washington Ladies' Relief Association; a model of a pontoon bridge, with oars, &c., complete; knife and fork from the Washington's headquarters at Newburgh; and a 120-pound rifle shell, thrown from the celebrated gun "Lady Pelk," at Columbus.

EUROPEAN correspondents say that a number of Austrian naval officers have asked to follow Maximilian I. to Mexico, and have been accepted. The new Emperor, it is said, dreams of nothing else than of creating a powerful navy in the Gulf of Mexico, as the surest means of erecting that famous Roman empire which expresses a new Mexican fiasco. As Grand Admiral of the Austrian navy, the Archduke also endeavored to obtain appropriations for the construction of a number of vessels, but was sorry than he possessed by Austria; but in that country everything is sacrificed to the army, and the Duke's demands were never listened to. As Emperor of Mexico, he will have the power in his own hands, and he hopes, by building up a navy, to stimulate the commercial ambition of the nation, which has, while adding to his own popularity, he adding to the strength of the country. We are also told that several Confederate naval officers, now in Europe, in search and with nothing to do, have asked to be employed by Maximilian in his army and navy, and it is probable that a large number of rebel officers will find their way ultimately into his service.

MAJOR-General Butler, in a General Order, dated Feb. 11th, places all places of public worship in Norfolk and Portsmouth under the charge of the several clergymen, who will see the pulpits properly filled, by displacing, when necessary, the secession ministers, and substituting men of known loyalty, and the same sectarian denomination, either military or civil, subject to the approval of the commanding general. The pews, seats and churches are open equally to all officers and soldiers, white or colored, at the usual hour of worship, and at other times, if desired; and that no church or building shall be applied to other, by either black or gentoo, on the part of the congregation. The necessary expenses will be defrayed, as far as possible, in accordance with the previous usages or regulations of each congregation respectively. No property will be removed, either public or private, without permission from headquarters.

BY order from the Adjutant-General's Department, dated Feb. 18th, upon the death of a commissioned officer, in a general hospital, the surgeon in charge, besides furnishing to the Adjutant-General the required inventory of his effects, will immediately forward to the nearest relative of the officer what effects were left by him. If at the expiration of two months the articles are not called for by a person authorized to receive them, they will be sold at auction, and the proceeds sent to the Treasury, as prescribed by Regulations for the effects of enlisted men. Swords, watches, trinkets, and articles of like value will not be disposed of in this manner, but will be properly labeled with the name, rank, and regiment, and date of death of the owners, and sent to the Assistant-General's Office, to be deposited with the Second Auditor of the Treasury to await the application of the heirs.

GENERAL Orders, No. 76, from the Adjutant-General's Office, dated Feb. 26th, say:—The President directs that the sentence of all deserters, who have been condemned by courts-martial to death, and have not been otherwise acted upon by him, be mitigated to imprisonment during the war, as to New York, Pennsylvania, Florida, where they will be under suitable guards by orders from Army commanders. The Commanding Generals, who have power to act on proceedings of courts-martial in such cases, are authorized, in special cases, to restore to duty deserters under sentence, when, in their judgment, the service will be thereby benefited. Copies of all orders issued under the foregoing authority will be immediately forwarded to the Adjutant-General, and to the Judge-Advocate-General.

COLONEL Myers, Chief Quartermaster at St. Louis, says the great quantity of hay lately burned at Memphis, was burned over which the Government just before the fire. The Government, therefore, is the sole loser. The cost of the hay delivered there was more than $100 per ton. The Quartermaster's Department was at immense trouble more than three months in collecting and shipping it. Many thousands of tons are now stored in the depots, and other districts along the Mississippi, will suffer greatly before the hay can be replaced.

THE Congressional debate on naval questions has elicited the original cost of our navy yards. It was as follows: New York, $40,000; Philadelphia, $37,000; Boston, New York, $40,000; Philadelphia, $37,000; Boston, $39,214; Portsmouth, N. H., $5,500; Norfolk, $19,000; Washington, $4,000; Pensacola, $100,000; Benicia, California, $206,000.

LIEUTENANT-Colonel Charles E. Fuller is announced by Major-General Gillmore as Chief Quartermaster of the 10th Army Corps and Department of the South.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give an early solicitation of all personal matters of general interest; of the movements of vessels; of casualties among officers, &c., &c., promptly and accurately.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to matters of interest to officers.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of treatment.

The subscription of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is merely cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 102 BROADWAY, corner of JOHN STREET.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, MARCH 5, 1864.

PRESENT ASPECT OF MILITARY OPERATIONS.

THE task of those who attempt to form to themselves clear conceptions of the progress of military operations war never more difficult than at this moment. Over the whole theatre of war from the Rappahannock to the Mississippi, and from Chattanooga to the Gulf of Mexico, we see our armies in motion; but the most perplexing obscurity everywhere envelopes their progress and their purposes, and the panting mind toils in vain after the confusing details of advances here and retreats there. In this plight, to possess our souls in patience, becomes at once sound philosophy and a practical necessity. Without attempting, therefore, to go beyond ascertained facts, let us see what points of light we can make out in the present aspects of the military situation.

Hard though it be to give up the hopes which the Nation had cherished regarding the bold and brilliant programme which it seemed to be General SHERMAN'S purpose to put in execution, we are forced, in view of latest reports, to conclude that his plan has been baulked and brought to naught, and that he is now in retreat to his base on the Mississippi River, after having penetrated as far eastward as Meridian. A Rebel dispatch, under date of the 21st February, mentions that SHERMAN'S main column was still at that point—his advance having pushed thirty miles eastward. But a day or two after this, the expected return of SMITH'S cavalry column, on whose cooperation he had relied, he appears to have turned back, and a Rebel dispatch, under date of the 26th, conveys the intelligence that the advance of SHERMAN'S retreating column had reached the Pearl River. From all present appearances the cause of the failure of this movement rests with the cavalry column. It need hardly be said that to the successful execution of such a campaign as that on which General SHERMAN started out, the cooperation of this column was indispensable. Compelled to live on the country, and without the cavalry, neither forage nor subsistence his flanks nor collect information nor mask his movements.

It is impossible for us to know all the causes of this failure on the part of General SMITH'S force to perform the important part supposed to be assigned to it in the combined movements at the Southwest. Weeks had been spent in gathering material and properly organizing all the available cavalry in Western Tennessee and Northern Mississippi. Common report put the aggregate finally collected at ten thousand horsemen. The number was so large that General SMITH felt warranted in writing as follows, to a friend in Buffalo, under date of Collierville, Feb. 9th:—"I expect to start to-morrow or next day with ——— thousand cavalry, for the bowels of Dixie. The Rebels have about ——— thousand in Mississippi, which they can, if they like, concentrate to oppose me." The force, it is safe to say, was larger and better equipped than any before collected during this war, to execute a similar mission. As it was essential to the complete achievement of General SHERMAN'S plan of campaign, that this cavalry column should move forward promptly, every favorable precaution was taken to make it irresistible; and to render assurance doubly sure, General SMITH, General GRANT'S chief of cavalry, was detailed to supervise operations. All these precautions, however, failed to accomplish the desired end. The column, which was to have left Collierville Feb. 3d—the same day that SHERMAN got away from Vicksburg—was delayed until Feb. 11th, in order to enable General WARING to bring up his brigade, composed, we believe, of two regiments of cavalry—Jerseymen and Pennsylvanians. The delay seems to have been sufficient to enable FORREST, RHODDY and CHAMBERS to concentrate their forces against him; it gave General SHERMAN a day's start, and made the point of junction proportionately more difficult. After the expedition had finally started, various circumstances conspired to delay and oppose its progress. From the diary of officers engaged in the expedition, we learn that after the force had been in the saddle seven days, it had reached Okalona, 130 miles southeast of Memphis, an average of but little more than fifteen miles per day from Collierville, the point of departure, and on Feb. 21st it was at West Point, 25 miles further, where the Rebels were able to concentrate such a force and make so vigorous an opposition, that General SMITH was obliged to fall back upon Memphis, making the retrograde march in four days.

Loud complaints are made against General SMITH for his alleged want of boldness and energy, but we are still too much in the dark as to the whole affair to assume to criticize.

The forces under General LONGSTREET have disappeared from before Knoxville, but it is still a matter of doubt where they have gone, whether to reinforce JOHNSTON, to save Richmond from capture by General KILPATRICK, or to make a raid into Kentucky, though it seems probable that they are making their way back into Virginia. When last definitely heard from, General LONGSTREET'S headquarters were at Greenville. A very doubtful rumor says that he has already arrived at Richmond. General SCHOFIELD'S advance is about forty miles east of Knoxville.

There has been as yet no general movement of our troops into Georgia from Chattanooga. In the engagement at Tunnel Hill on the 29th, General PALMER captured over 300 persons.

In Virginia, General CUSTER'S cavalry expedition, which was sent on the 21st ult., to make a demonstration against the enemy's left, in order to draw attention from General KILPATRICK'S movement on the right, remained out the number of days specified in the ject. Making a *detour* by way of Madison Court House and Stanardsville, CUSTER'S force penetrated to within three miles of Charlottsville below Gordonsville, in the rear of LEE'S position, defeated a strong cavalry force under STUART, and returned by a different route, bringing back to camp 50 prisoners, and 300 horses. He had only five men wounded.

The latest intelligence from General KILPATRICK'S cavalry descent upon Richmond, placed him on Sunday, the 29th, at Spotsylvania Court House, within fifty-six miles of the Rebel Capital. Beyond this we have no definite news from his command.

And so the week closes upon a wide field active with important operations, the issue and even the exact character of which are still in the most perplexing obscurity. It is vain to indulge in speculations; but we may look forward to the opening of the clouds, feeling security and confidence in the fact that the cause of the Nation has able defenders in our veteran armies.

HASTY CONDEMNATION OF OFFICERS.

A REPORT comes North that Brigadier-General SEYMOUR, the commander of our troops in the late disastrous affair in Florida, has been placed under arrest by order of Major-General GILLMORE. The report has been telegraphed all over the country, and the result is a very general and very severe condemnation of the officer in question. We could have wished that the newspaper critics had learned wisdom by experience, and awaited the confirmation of the story, and, perhaps, the development of a court of inquiry, before venturing to pass such severe judgment on General SEYMOUR. It is both ungenerous and unmanly to use such rude haste in casting vituperation upon one whose position precludes him from making a defence of his conduct except before an authorized court of inquiry. It may be that General SEYMOUR is guilty of the misconduct alleged. If it be so, the swift judgments of military justice will soon overtake him; and he has been long enough a soldier to understand this fully, and to submit to the consequences of any dereliction of duty.

But in justice to an officer, whose services commenced with the first outbreak of hostilities, when, with his comrades in Fort Sumter, he earned a title to the honor of the Nation by a long and heroic defence of his flag against traitors, and whose whole thought and best energies have been devoted to his duty as a soldier, fighting in defence of his country, we would that the voice of vituperation had for a moment been stayed.

General SEYMOUR entered the Army from the Academy in 1846; in 1847 he was brevetted for meritorious service; in 1860 he was promoted to the rank of captain in the Fifth Artillery; as we have before intimated, he was one of the defenders of Fort Sumter; subsequently Battery C, of the Fifth Artillery, under his command, was assigned to General MCCALL'S division; in April, 1862, he was appointed a Brigadier-General of Volunteers, serving with his brigade with much distinction on the Peninsula and at Antietam; after this he was sent to the Department of the South, where he was welcomed as an accomplished soldier and a gallant gentleman, and thoroughly loyal gentleman. In the attack under General GILLMORE, on Fort Wagner, though unsuccessful, as has been the case with nearly every officer in nearly every assault upon regular works, he won additional renown among military men, and continued to gain the confidence of the commanding general and of all his fellow-officers in the Department.

This is a brief review of General SEYMOUR'S record. It has everywhere been honorable, and one to which he can point with just pride. In view of it, let us stop a moment before we venture to condemn.

Many of the charges brought against him by a daily newspaper of this city, are of such high-standing that we are at a loss to understand how it could so readily, and with such violence, join in assailing General SEYMOUR—is, that he is not an advocate of the employment of negro troops, and has always regarded them with suspicion. The same paper attacks General GILLMORE on the same ground. We believe the charges to be wholly without foundation. The fact of the employment of negro troops has been accepted by every true soldier, whatever his prejudices, as a part of the declared policy of the Government under whose authority he serves, and to whose commands he owes strict obedience. Professional soldiers like General GRANGER and SEYMOUR are the last to attempt to combat positive orders, and the true history of the Department of the South will show that they have obeyed not only the letter but also the spirit of their instructions with reference to negro troops. We have seen the camps of the colored regiments in the Department of the South, and have witnessed their inspections, and we know that none have been more ready to give them credit for their efficiency and soldierly bearing than the two general officers whom the *Evening Post* so unjustly assails.

We do not write in defence of General SEYMOUR'S conduct in the affair on the Ocmulgee. It may be our duty to speak of it in severe condemnation; but we ask for him justice, and a hearing.

THE rumor that England had proposed to the belligerents in Denmark an armistice, based on the evacuation of Schleswig by the Danes, and that this proposal had received the sanction of Russia, France and Sweden, turns out to be unfounded. The announcement that the Danes had retreated from Düppel and concentrated their entire forces in the island of Alsen, is also contradicted. Our latest advices from that quarter, up to the 19th ult., show that the Danes not only still occupied that stronghold, but intended to make a determined stand there against the advance of the allied Germans. They had a force of about 40,000 men within the defences of the town, and were engaged in strengthening the already formidable works. An attack on the entrenchments by the allies on the 18th ult., was successfully resisted, and convinced the Germans that the place could not be taken without a criminal sacrifice of life, except by a regular siege, the preparations for which were being pushed forward with activity. The movement of their siege trains was retarded by a heavy thaw. Operations against the island of Alsen were also to be commenced, and an Austrian pontoon bridge was on its way to Düppel in charge of the Prussian Guard and a hussar

regiment.

The channel which separates Alsen from the main land is only 150 yards wide in the vicinity of Duppel; but as it is commanded by extensive and excellent fortifications, an attempt to cross would be attended with no little danger to the attacking party.

The unexpected success which has crowned the bold movements of Austria and Prussia has made these Powers masters of the situation. They are now in a position to dictate to the smaller German States the terms on which the difficulty shall be settled. We find in the Paris *Memorial Diplomatique* the outlines of an arrangement which will be proposed as soon as Schleswig is cleared of Danish forces. According to this programme, which may be regarded as semi-official, the territorial integrity of Denmark is to be confirmed, the Holstein question to be decided exclusively by the German Diet, and while deciding the future of Schleswig, the constitution and succession questions are to be kept separate, the first being treated as a purely German matter, the second examined by a conference of the signatories of the London treaty, with a representative of the Confederation. The guarantees claimed to prevent future incorporation of Schleswig with Denmark will be personal union, community of administration, and, perhaps, representations. To satisfy the claims of the Prince they will receive formal confirmation of their eventual rights upon the extinction of the present line.

Since the above was in type intelligence has been received that on the 18th ult., the Germans were repulsed in a general attack on the whole line of the Danish position. It is added that their loss was considerable, a statement which accords with the outlines of the plan said to have been agreed upon in case the Danes declined to surrender Düppel. Such a movement will tend to increase the popular feeling in France and England in favor of Denmark, and will engage the serious attention of the governments of both countries. It is war fever now in the air in England. In a recent speech Lord PALMERSTON spoke strongly as to the invasion, and was loudly cheered. The Channel Squadron, now in the Tagus, has been ordered to assemble in the Portland Roads, to await further orders. Several of the French journals utter significant warnings to Prussia.

In our last issue we sketched briefly the Military bill finally passed by the Rebel Congress, and now become the law of the Confederacy. Its provisions are more stringent and sweeping than those of any similar measure, by the application of which the despotisms of the Old World strengthen its armies, and it is, moreover, only one in a series of measures which concentrate in the hands of Mr. JEFFERSON DAVIS, powers which none but a military dictator ever possessed.

An act for funding the currency authorizes the issue of four per cent. registered bonds, payable twenty-years after their date. Treasury notes may be exchanged for these bonds at par until April 1st, next, and until July 1st west, of the Mississippi, and bills of the denomination of five dollars not funded by these dates, are to be taxed 33⅓ per cent., while those of the denomination of one hundred dollars are to be taxed 10 per cent. additional each month, and at the end of the year all outstanding notes will be taxed one hundred per cent., a euphemism for repudiation. To carry on the government, Mr. MEMMINGER is authorized to commence a new issue of Treasury notes "payable two years after the ratification of a treaty of peace with the United States," and he is also empowered to distribute five hundred millions six per cent. bonds, having as security the duty laid upon imports.

The tax bill which accompanies this measure, levies five per cent., in addition to the taxes already fixed, upon the value of real, personal, and mixed property of all descriptions, with some few insignificant exceptions, and ten per cent. additional on gold and silver ware, plate, jewels, watches, &c. In taxing land, slaves, cotton and tobacco, purchased since January 1st, 1862, the price paid is to be the basis. On the purchase and sale of agricultural products, mercantile wares, corn, exchange, stocks, notes and credits of any kind, ten per cent. additional is also laid. Among the exemptions, which are very few, we may note as chief, one thousand dollars of the property of the widow or minor children of any person who has died in the service; five hundred dollars for each head of a family, a hundred dollars additional for each child under and for each son in the army or navy or who has fallen in the service, five hundred dollars additional. To guard effectually against the interposition of any legal obstacles in the way of a prompt enforcement of these laws, "a bill to suspend the privilege of the writ of *"habeas corpus* in certain cases," was also passed, and it is needless to say that it covers precisely those cases in which litigation might avail the unwilling conscript.

Each one of these laws is, of course, strictly a military measure; each one occupies its appropriate place in the military despotism which Mr. DAVIS has labored so indefatigably to erect, and each one of them will be enforced with that relentless rigor which superior force alone can exert. The fact, too, that if the Funding Law is virtual repudiation of hundreds of millions of dollars which the government issued pledging its honor to redeem cent for cent, and which the people accepted in firm faith that this would be done; it matters not if the taxes laid are excessive and onerous; it matters not if the suspension of the writ of *habeas corpus* involves inconsistencies which are positively ludicrous in view of the boasts which the Rebels have so constantly repeated during the last three years; nor does it matter if a rigid enforcement of the Military Bill would depopulate the South and make a desert of its fruitful fields. Mr. DAVIS and those who act with him in the Rebellion, have made this desperate venture, with the determination to achieve victory, and the entire resources of the South have been concentrated in their hands for this purpose. That they will be employed with remorseless energy, no one can doubt. It is not incumbent upon the people of the North to do more than to display equal zeal and determination? Unless this is done promptly, the advance of the spring may bring with it more serious reverses than those we have recently experienced.

THE great cavalry expedition under General SMITH, from which important results were expected, returned to Memphis on the 25th ult., without accomplishing the objects for which it was undertaken. We give the following particulars of the march, in addition to those heretofore published:—The expedition on the 11th reached Okalona, on the Mobile and Ohio Railroad, seventy-five miles south of Corinth and one hundred and thirty miles southeast of Memphis. On the 19th it marched to Egypt, a station about seven miles south of Okalona. Here they destroyed a large quantity of Rebel stores. The expedition met a slight check, on entering it, under General GRIERSON going through Aberdeen on the east side of the railroad, the other on the west side, the two, concentrating at Prairie Station, about seventeen miles south of Okalona, where large quantities of Rebel stores were destroyed. General GRIERSON met with considerable opposition near Aberdeen. On the 20th FORREST was concentrated in force at West Point, and on the 21st our forces encountered him at that place. General SMITH found FORREST, LEE, RHODDY and CHAMBERS combined against him, and after a heavy fight, he was compelled to fall back, leaving three field pieces, four-pounder steel guns, on the field. They were spiked. All the ammunition was saved. In his retreat General SMITH burnt every trestle on the Memphis and Ohio Railroad, and destroyed miles of the track and large quantities of corn. There was heavy fighting in the rear throughout the 22d. The Rebels moved on each flank with the evident design of reaching the Tallahatchie in advance of our force, and forming a junction to prevent our crossing, and capture the whole command, but by forced marching General SMITH passed both flanking columns, and, marching all night, crossed safely at New Albany. Skirmishing was kept up all through the 23d and the 24th. On the 25th the expedition arrived at Collierville, about twenty-five miles east of Memphis, where the greater portion of the men remained. Our total loss during the expedition was about 150. The column burned about 3,000 bales of Confederate cotton, and over a million bushels of corn, and captured over 100 prisoners, 1,000 mules, and a multitude of negroes.

THE publishers of General MCCLELLAN'S edition of his report, solicitous for their profits, are endeavoring to cast discredit on the rival edition, printed by Congress, charging that important matter has been omitted from it to the extent of a page and a half of manuscript. This story has found currency with a portion of the press, some journals going so far as to insinuate evil design on the part of the War Department in the matter. None of these papers venturing to state the character of the alleged omission, we have been at some pains to search it out, and confess to our surprise at the exceeding smallness of the capital in which these cavaliers have been trading. The omission occurs at the end of the "Third Period" of the Report, from which the following paragraph would appear to have been omitted in the Government edition:

It will be seen from what has preceded that I lost no time that could be avoided in moving the Army of the Potomac from the Peninsula to the support of the Army of Virginia; that I spared no effort to hasten the embarkation of the troops at Fort Monroe, Newport News and Yorktown, remaining at Fort Monroe myself until the mass of the Army had sailed; and that after my arrival at Alexandria I left nothing in my power unfinished to push supplies and reinforcements to General POPE. I sent with the troops that moved all the cavalry I could get hold of, even my personal escort was sent away. It was then the railway as a guard, with the provost and camp guard at headquarters, retained less than one hundred men, many of whom were orderlies, invalids, members of bands, etc.; all the headquarter teams that arrived were sent out with supplies and ammunition, none being retained even for the headquarters camp. The squadron that habitually served as my personal escort was left at Falmouth with General BURNSIDE, as he was the senior in command.

As this sentence is merely the summing up of dispatches which preceded it, and which are reproduced with literal fidelity in the edition of the report printed at the Government office, it will readily be seen that it could furnish no temptation for Rebuscate even to a Government as unscrupulous as that of Bomba of Naples. The omission is due either to carelessness in copyist or printer, and is quite as accidental as the one referred to by General MCCLELLAN in the following foot note to page 345 of his edition of the report:—

The following, which was the only order issued on the subject (that of his restoration to command after POPE'S campaign), was published on the 2d of September. It was accidentally omitted in preparing the report:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, September 2, 1862.

Major-General MCCLELLAN will have command of the fortifications of Washington, and of all troops for the defence of the capital.

By order of Major-General HALLECK.
E. D. TOWNSEND, Assistant-Adjutant-General.

THE President has nominated General GRANT for the newly created lieutenant-generalcy, and the Senate and the people have not hesitated to unanimously confirm the nomination.

THE American News Company, of No. 121 Nassau-street, New York, have reprinted General MCCLELLAN'S Report, from the ARMY AND NAVY JOURNAL, and issued it in a neat pamphlet, which they sell for twenty-five cents.

AT the request of the Governor of the State of Vermont, commanding officers of organizations from the State of Vermont are directed by the War Department to forward to the Adjutant-General of that State, at Montpelier, Vermont, one copy of each periodical muster-roll of their command (a fifth copy should be made for this purpose), to enable the State authorities to pay the additional seven dollars per month, under State appropriations, to all enlisted men serving in Vermont organizations.

THE following instructions from the Secretary of War are furnished for the information and guidance of all concerned:—Officers signing the discharge papers of enlisted men who are discharged on surgeon's certificate of disability, will note on the back of the discharge, where the conduct of the man has not been meritorious, as required by General Order No. 212, of 1863, for admission into the Invalid corps, that he is not a proper person for the Invalid corps.

IT having been brought to the notice of the Secretary of War that commanding officers of the South that the enlisted men of his command have not in all cases been made thoroughly acquainted with the Articles of War, it is ordered, that each of said Articles as pertain to *discipline* be read twice a week, to every regiment and detachment in the Department,—on reading to be on Sunday, and, where practicable, by the chaplain.

THE following instructions from the Secretary of War are furnished for the information and guidance of all concerned: from the recommendation of the Acting Surgeon-General, permanently disabled soldiers who are furloughed from various sections of the country are permitted to report to the nearest medical directors, who are hereby authorized to place them in the United States hospitals until further action in their cases can be taken.

WE have a report that Major-General Franz Sigel has been assigned to the command of the military department of West Virginia.

FOREIGN MILITARY AND NAVAL MATTERS.

At the request of the representative of the United States, a Portuguese frigate has been sent from Lisbon to the Azores to watch the confederate steamer.

LIEUT. WALTER LANDOR DICKENS, second son of CHARLES DICKENS, died suddenly at Calcutta on the last day of the old year. He was doing duty with the 42d Highlanders.

THE contemplated reduction in the strength of the English army has been suspended, and it is believed that only about 600 men in the cavalry and 1,200 in the infantry will be reduced.

THE Calcutta *Englishman* says that another Nana Sahib is turned up in Mysore, and it suggests the best way to put a stop to this business would be to hang all pretenders on the strength of their own assertions.

ACCOUNTS from Brest mention the presence of some small Prussian war-craft, under orders for the Baltic. Accounts from the North mention that their arrival is expected by the Danes, who have a superior force looking out for them.

THE Prussian Minister of War, General DE ROON, has applied to the Convent of St. Charles, at Bonn, for eighteen sisters of charity, to attend on the sick and wounded Prussians in Schleswig. The superior-general at Nancy immediately acceded to the general's request.

THERE is now in the Deptford dockyard a model, constructed in the year 1558, of the yacht built for Queen ELIZABETH. The model is in a state of excellent preservation, and recently came into the possession of Mr. BROWN, of the dockyard, at the sale of the effects of a deceased naval officer.

CAPTAIN BLAKELY has at length received an order to manufacture one of his rifled guns of the largest calibre for the British War Department, to be used for experimental purposes; and four experimental guns of various designs are now being manufactured at the Royal Arsenal, Woolwich.

THE Russian Police have discovered at Warsaw, in the secret magazines of the National Government, a large store of infernal machines, bombs, and other murderous and secret warlike implements, similar to the indications afforded by the papers they seized, arrested more than a thousand persons.

A NUMBER of scaling ladders and implements have been forwarded from the Royal Arsenal, Woolwich, to Corfu, for the service of a detachment of Royal Engineers who are employed to raze the fortifications in that island. The number of troops now in the Ionian Islands are ordered to be returned into store at Woolwich.

IT is reported, as an evidence of the military condition of France, that the Paris print shops are selling a new map of Europe for 1866, which represents Italy complete with Rome and Venice, Austria on the Rhine for its frontier; all Germany under the sceptre of Prussia, and a great Scandinavian empire in the north.

A CORPORAL of Spahis was lately taken into one of the Paris military hospitals. He had received a sword thrust in the side in a duel. He refused to reveal the name of his adversary, or the cause of the quarrel. A duel between soldiers or non-commissioned officers, provided certain regulations are complied with, is not contrary to the French articles of war.

M. AUDENET, the builder of the most successful French frigate, *Le Couronne*, has left the Imperial service. He is now at St. Nazaire, superintending the building of some powerful steamers destined to ply between that port and New York. Five of this intended line are being built in England, and three in this country under contract with BROWN & HOUSE.

THE *Pungolo* of Milan states from Laterzi, in the province of Otranto, that a small party of forty soldiers lately left that encampment to hunt brigands, and lasted three hours. After exhausting their ammunition the soldiers attacked the brigands at the point of the bayonet, and put them to flight. One officer was killed and two privates wounded; the loss of brigands is not mentioned.

THE Danish Mayor BLAUNFELD went over into Rendsburg on the 3d ult., with his arms tied, between two Austrian troopers. He was accused of having informed a Prussian detachment that an Austrian column operating in disguise in the Danish rear, and so caused a fatal conflict between them. In his house a complete plan of the Austro-Prussian positions was found, which is said to be supposed that he was connected with a band of spies.

SOME few months ago, Mr. REED stated at a public meeting, that a frigate was in course of construction, which should be so fleet and powerful that she could set anything of the *Alabama* class at defiance. This vessel has not as much progressed as a year's time may be formed of what she will be like. She is moderate in length, and will draw about six feet more water by the stern than the bend, in order that she may be fitted with an enormous screw.

THE Marquis of HASTINGTON stated lately in Parliament that all the expenses incurred by Colonel CRAWLEY, consequent on the recent court-martial which it was usual to allow to a prisoner who had been acquitted of the charges brought against him had been paid by the public. The portion of Colonel CRAWLEY's expenses which were not so paid were those connected with the legal advice and assistance which he had received during the trial, and with which the Government had nothing to do.

A SATISFACTORY experiment has just been made at Portsmouth to test the merits of an invention for preserving iron ships below water mark from the effects of the salt water, and also from the adhering weeds and barnacles, which so much impede a vessel's speed. An iron and steel plate were coated with a solution prayed on cold, after which the plate was sunk into a current of the water. It was found to have that the surface of the plate was free from weeds or barnacles, and perfectly clear, the iron and steel being perceptible through the solution.

BESIDES Düppel and Alsen, the Danes held in Jutland the strong town of Frederica, which, like Sebastopol, has the advantage of being in communication with the sea. When the Prussians first besieged, its garrison was relieved every two days by fresh troops from Fiesin. The position of Düppel is compared to Frederica, which was strongly armed since 1848. Seven formidable works crown the chain of hills which skirts the peninsula, and the water on either side of the isthmus is deep enough to allow of vessels of war taking part in its defence.

AN East Indian journal says that it has been decided that all wives and families of men left destitute, and not only those belonging to the 12 per cent. allowed to reside in barracks and to draw subsistence allowance, will have a passage to and from India free. In each case the passage is to be provided and paid for on a certificate of destitution furnished by the commanding officer, approved by the general officer commanding-in-chief. It is thought that had a rule like this existed after the mutiny campaigns, the white mutiny and the last China war, much misery would have been relieved, and much immorality prevented.

A MAGNIFICENT *bal costumé* was recently given at Paris by the DUKE DE MORNY. Amongst the dresses which created the most sensation was that of Madam TUSE, who was disguised as Hungary enchained, with the national costume, her *tokaeck*, the Hungarian cockade, and other Hungarian emblems, and chains hanging from her headdress to her neck. In her hand she held a small flag, with the embroidered cross of Hungary on it. The whole symbolic language mere striking, she distributed a quantity of *pensées*. Moreover, she hung on the arm of a Venetian. The Austrian envoy, who was present at her *pensées*, accepted the flower, and conversed for some time with the wife of the Garibaldian general.

HER English Majesty's small iron-clad gunboat *Enterprise*, of 4 guns and 120 horse power, was successfully launched at Deptford dockyard on the 9th ult. The *Enterprise*, which is already fitted with four 40-inch shell guns, and has a 120 horse power, is entirely constructed under the personal superintendence of Mr. C. J. REED, chief constructor of the navy. The first experiment with the smallest iron-clad steam vessel yet launched for the government, she is a powerful craft, and would prove most effective in actual service. She is intended will consist of four 110-pounder rifled guns, and the internal arrangements of the vessel are admirable. The safety of the hull may be judged from the fact that for a single armor belt from 5 to 7 inches wide.

THE SULTAN has decreed that, dating from the commencement of the current year, a certain number of youths, from 15 to 20 years of age, Turks, and others each year from among the Greek, Bulgarian, Armenian, and Catholic Armenian communities, shall be educated in the establishments of the Imperial military schools of Constantinople and Paris, with a view to their subsequently receiving commissions in the Turkish army. Half of this number will be brought up for the civil service. These students will likewise be permitted to practice their religion without any restriction. In the same manner as the Christian students in the Imperial School of Medicine; and to prevent any undue influence being exercised on them by their Mahomedan fellow students, it is forbidden to embrace Mahomedanism under pain of expulsion.

THE armor-plates already received at Chatham dockyard for the *Bellerophon* are 6 inches in thickness, and 6 feet 1 inch in length, 1 feet 11 inch in breadth, and their weight is between 6 and 7 tons each. The *Lord Warden* plates are 5½ inches in thickness. The quantity of armor-plates required for the two new iron frigates at Chatham will exceed 2,000 tons, and in anticipation of an increased demand on the Londonderry establishment, a range of new machinery, larger and more powerful than any hitherto in use at either of the Royal dockyards, is being erected to be used in preparing the plates and bars of iron which will be used in encasing the *Bellerophon* and the *Lord Warden*. Several weeks have been lost in the manufacture of the *Bellerophon*, the hulk in which she is to be constructed, in consequence of the works at the dock-entrance not being sufficiently advanced for fixing the new machinery.

A REPORT has been handed to members of the French Chambers of the state of the army in 1863. In 1861 the effective stood at 467,579 men; in 1862 at 422,352 men; and in 1863 the effective of the regular army was only 430,161, thus stationed:—326,103 soldiers in France; 57,361 in Africa; 17,094 in Rome; 2,160 in Cochin China; and 27,827 in Mexico. But several important additions must be made to this strength to make sure force. The army of reserve numbered last year 165,827 men, 35,541 of whom were old soldiers. There were also 11,418 men just sent home on renewable leave, and these men were not thinking either in effectives or reserve. To this non-effective force must be added 5,227 "*hors de troupe*." The real total effective of the French army for the last year, was, therefore, set under 607,406 men. This year the reserve will number a half contract, and be increased by about 35,000 men.

THE new military Turkish journal, the *Djeride Askeril*, gives a list of vessels new in course of construction, or which have been launched since the formation of the Turkish Imperial Navy. Five iron-clads will soon be completed in England, the *Abdul-Aziz*, the *Mesoudi*, the *Mouin-Zafer*, the *Feth-Boulend*, and the *Feltah*; as also a steam corvette for the transport service, the *Sesid Bahri*. The three other iron-clads recently commissioned will be ordered respectively the *Ezedia*, *Fuad*, and *Inwid*; and the screw frigate now building at the arsenal will bear the name of the *Orkani-Zafer*. Besides the above vessels building at the arsenal, the *Nouvel-Adjiz*, and two other screw corvettes, the *Muzafer*, and *Mesoured* are on the stocks at Ismidt. Besides, a steam frigate has been launched at Sinope; two screw corvettes are building at the arsenal at Ghiumlek, the *Meridh*, and the *Nesimi*, and another steam corvette, the *Zelzen*, is in progress at Amasara.

The *Invalide Russe* says that the operations of Messrs. TRIANTSKOUV and DOLGOROUKOV to clear the mouth of the Amur have been successful. Since then the first barrier have been removed the corvette *Pylades*, the frigate *Phara*, and the ships *Gamvid* and *Sachrok*, as well as part the steamer *Amour* and *Ourioi*. At the second barrier have been removed the ships *Twelve Apostles*, *Tchewne*, *Sviatoslaw*, *Dapnes* and *Ourioi*. At the third barrier the frigate *Amour* and all of them more or less damaged. These are the remains of the Russian Black Sea fleet that gained such distinction at Sebastopol. These were destroyed by means of eight large boats and a steamer of 55-horse-power, and of several engines purchased in Europe by COUNTS MUNIN and ORLOFF, notwithstanding the great privileges which the government had granted them, has not been able to fulfill its engagements. The Russian Government, notwithstanding the absence of hydrographic engineers, pursued and achieve the work with intelligence and success.

THE idea of establishing a general system of surgical help, irrespective of race or nationality, originated in Switzerland. General DUFOUR was made President of the Committee. The plan has been laid before the French Government by the direction of the Red Cross Society, and has received the direct approval of the Emperor. The following are the principal points: 1st. Hospitals to be declared neutral; 2d. Medical officers to be exempt; 3d. Nurses to be protected; 4th. Inhabitants to be encouraged in the country where they may be established; 4th. Medical material to be protected; 5th. Soldiers, when cured, to be sent back under escort.

THE FRENCH SHIPS AND GUNS.

A CHERBOURG correspondent of the London *Herald*, speaks of the recently published accounts of the crisis of the French navy, and the remedies now applied to it:

The Journal a few weeks ago—as entirely untrustworthy. He was allowed to examine the ships thoroughly, and to converse with the officers, and the following is his opinion:—

My own opinion of the ships, whatever that may be worth, is, that the French navy is not in a dangerous, more useful than our own (the English). Nay, more, that they possess qualities which ours do not possess. Take, for example, the *Solferino* and another of that class. The rudder is not larger than that which is usually supplied to a merchant ship of 1,000 tons, and the screw-shaft is as small as a merchant ship of 2,000 tons; not more than two men being required at the wheel in the worst weather. So it is with the *Magenta*. Nothing of the kind is well known, can be said of any one of our iron-clads, and it is the opinion of the French officers, that the *Monitor* and other low-lying vessels are not steady in a heavy sea, or at our ships, and express the hope, that as we have been so anxious to build useless ships, we will not be long enough to feel the full force of the superiority of iron-clads altogether. The French officers are of the opinion, that however unpalatable it may be both to the French and British governments, the time must come when they will have to give to engines and coal the weight now appropriated to armor plates, and to the construction of ships that actually allow the shot and shell that may strike a ship's side to pass through and through with no difficulty and few splinters. At the same time they have no notion of giving up their iron-clads. Claiming for them less than the usual amount of French praise that is bestowed on them, and much more than the usual amount of English merit that is awarded them, they say they have in the *Couronne* the most bouyant iron-clad afloat—there being no teak backing to the plates—and in the *Solferino* and *Magenta* the most perfect type of an armored ship that has yet been constructed. We have seen nothing in the way of low-lying ships than these latter, the low bulwarks of their gun deck, and the commodious hatchways of the two fighting decks giving an

the light and ventilation that can possibly be desired. The arrangement of both are also on a peculiar manner. The lines, instead of following the Scott Russell wave-line theory, are straight from stem to stern. To the form of the theory, Captain TRENCHARD, of the *Invincible*, told me he attributed the fine sailing qualities of the ships, the *Sulferina* steaming 12 knots an hour, and what is even more important, being able to open the batteries of both decks effectively, when such fine wood ships as the *Tourville* and the *Napoleon* could neither be an effective shot for defence or attack. The arrangement of both ships extends over two-thirds of the length, and is more or less the form of the stern. The "prong-bow," as it is called, is identical in form with a diamond, raised vertically, and cut through the centre, thus forming two bluff bows, one on each side. Either ship, from the marvellous seaworthiness, would, I have no doubt, prove an awkward customer to any one of our iron-clads. If we encountered, in the Channel, possibly, the alleged superiority of the *Solferino* and *Magenta* to all other iron-clads at the present instant of time, the French officers contend that ships without armor that would steam two knots or so more an hour, and carry a week's more coal, would be still more effective and better worth having.

In the matter of guns, the French officers believe us to be perfectly right. The 600-pounder fired with half a charge of powder—viz., with 70lb. instead of 140lb., the service equivalent, and only three times an hour—a startling joke among them. For this reason, any desire nothing heavier than the old British 32-pounder, as when they exceed this in the ships' guns, the recoil is such that such a gun would be less efficient against an enemy. The favorite French gun, therefore, is a gun throwing a 32lb. round shot or shell, with a charge of powder of 10lb., and grooves for the bolts. On board the *Solferino* and the *Magenta*, the guns are all breech-loading 100-pounders, and it is not perhaps by much the fact that they are, in the service, they would prove a total failure. Captain TRENCHARD kindly ordered the breech of one gun to be fired by my desire, and fouling and derangement are inevitable. Such is the brief story of the French guns and of the French ships. France has been blessed with a succession of able men in the navies. Our money has been squandered to no good purpose, while the French money yields a good if not a perfectly satisfactory return. I cannot close this letter to artillery at Cherbourg the great reserve of guns is of the unprotecting pattern of 1810; and in the park at Toulon, the great reserve is an ancient at 1790.

FRENCH MILITARY WORKS.—Among the works to be executed in Paris by the Department of Engineers during the year figures the addition to the barracks in the Rue Pépinière, the expense of which is estimated at 840,000 f.; also a depôt for artillery and military train, the expense of which building has become indispensable in consequence of the accumulation of stores in the central depôt on the Quai d'Orsay. The new building will be in the Rue de Reuilly, opposite the Palais Avenue de l'Empereur. Among the most remarkable works to be executed in the Ville de Paris during the year advances are barracks for the engineers of the Imperial Guard at Versailles, to replace the buildings occupied by the Emperor's household troops, which will be at last taken down to make room for a hotel for the prefect and for barracks for the gendarmerie. The infantry barracks at Avignon, which, on the 1st January of 1863, were completed. This building is intended to replace the ancient palace of the Popes, which is to be transferred to the Minister of Public Worship, and will enter into a palace for the archbishop. Spacious provision exists for the commissariat are to be executed at Marseilles, and for the military hospital. These stores are to replace similar buildings which belong to the city of Marseilles, and are to be taken down to make room for a new street, to be made. The municipal council have contributed 1,091,000f. New barracks for artillery are to be constructed at Lyons, and the works for new headquarters for the 14th corps d'armée, at Tours, the house, of which the expense will amount to 1,104,000f., to which the department and the city will contribute 400,000f. Other new schemes are likewise to be continued this year by the Minister of War. After the capture of Sebastopol, it was resolved that the fortifications of the harbor should be placed under the protection of the Russian Government until an arrangement was made for placing the bodies in a Christian cemetery. The Russian Consul and the staff and some engineer officers were sent there to collect in one spot the various tombs. The work has been commenced; a cemetery was consecrated on the ground occupied by the Commander-in-Chief of the French forces, and the remains of the Russians have been placed in a vault built in the centre. The names of all these officers are to be inscribed on the one tomb, and those among them whose graves could be identified were to be inscribed separately. The gravestones which covered them are used in the construction of the principal monument. The other monuments in number 17, have been placed in a circle around the first. There is a separate burying ground for each *corps d'armée*, and all are enclosed by a stone wall. An infantry officer, who was selected at the request of the Russians to be guardian of the cemetery, which is to be completely finished in the course of the present year.

DISPOSITION OF THE BRITISH ARMY.—The London *Army and Navy Gazette*, in a note on the unfounded statement that an English squadron was ordered to proceed to the Black Sea mark, thus speaks of the disposition of the British army:

Should political events render it necessary to send an army to the assistance of the Danes, we could send out a most compact and efficient force. Our troops as a body were never in better condition to take the field; and the locality is—as Lord GREY pointed out—so well suited to them that it almost tempts one to wish for war. We have now in the United Kingdom, in addition to the household brigade and depots, 17 regiments of cavalry, 60 batteries of artillery, 10 troops of horse artillery, and 33 battalions of infantry. In the aggregate, the strength of the artillery may be roughly set down at 20,000 men, that of the cavalry at 8,000, the infantry 32,000, or 53,000 altogether. One-half of this force placed beside the Danes would see the Austro-Prussian army on the south side of the Dannewerke, for a period for entrenchments. Supposing we augmented the home-held troops of home number nearly 5,000 men, and after sending our 53,000 men of all arms, we should have a good reserve in them, in the 28,000 now forming regiments and in the 152 regimental depots.

GENERAL ORDER TO THE PRUSSIAN TROOPS.—The following General Order was issued, on the 28th of January, to his soldiers by Prince FREDERICK CHARLES, of Prussia:—

When the King entrusted me with the command of this army corps, he ordered me to express to you, in his name, his expectation that you would fulfil your duties under circumstances. When, on your march to this place, you entered strange towns and villages, the inhabitants, not knowing you, feared you; but your winning and friendly demeanor obtained for you not only good accommodation, but were also the cause of your leaving as friends those places in which you were at first received as foes. This is the way to do honor to the Prussian name. So comport yourselves throughout the campaign which we are going to enter upon. Let this be in mind when in the hour of the Prussian arms demands that you should conquer, but also that you should not forget the compassion as brothers. This is Christian-like, and a good Christian cannot be a bad soldier. The Prussian name is already in good repute with the Danes. It is well known that you have come to help them in a few days it will be known whether we shall have war or peace. Should a second Danish war begin, we shall meet with fortified lines, and that will be a severe task. But your dauntlessness and zeal will be all the more glorious. We shall have to storm entrenchments, the issue of which shall detain no longer than they should. Do not those obstacles conceal the enemy, who is accustomed to fly before our regiments. Forward, then, and do not look for that enemy; let us oppose his retreat; let us dispense his ranks. Having accomplished this result, you will not give the enemy time to rally, but you will pursue him closely, to annihilate him before he seeks refuge on his island. You will, therefore, have some long marches to perform; but after that you will have accomplished rest and good quarters, honor and recompense, and the consciousness of having fulfilled your duty. Austria, for some time since fifty years, will fight by our side. Let us renew the old brotherhood in arms. What a noble emulation is therefore before us! Risk in our ranks the Austrian standard, and old Westphalia will struggle and make efforts to win the meed of victory. You men of Brandenburg! I know you, and you know me, and that is a happy omen. You men of Westphalia! We are not yet known to each other, it is true; but that is the better, for then can be no more favorable opportunity of becoming acquainted with you, and appreciating you specially. Let us, then, all follow the black and white flag, and the same sense. Forward, he who has said to us that he relied upon our doing our duty under all circumstances. With God's help, we shall do it. Long live the King!

(Signed) FREDERICK CHARLES, Prince of Prussia.

NAVY GAZETTE.

UNIFORM FOR THE UNITED STATES NAVY.

(Continued from page 459.)

Full dress.—Frock coat, epaulettes, cocked hat, sword, and plain pantaloons; the coat to be worn fully buttoned. The epaulettes, sword, and hat to be worn by officers on duty only, except by flag officers.

Undress.—The same as full dress, but without cocked hat or epaulettes, and with or without sword.

Undress frock coat.—Same as undress. Swords to be worn at quarters and on leaving a Navy Yard or vessel on duty.

Officers not having any uniform, either full dress or undress, wherever they make official visits to the President of the United States, the Secretary of the Navy, or the commanders or vessels of war will, when sitting as members of courts-martial, courts of inquiry, boards of examination, or when acting as witnesses before such courts, or as witnesses, or in any other capacity.

It is to be worn by officers of the staff and their uniform while on duty in the Navy Department, at the Observatory, or on light-house duty generally.

Officers on leave, furlough will not wear their uniforms, and officers are strictly prohibited from wearing any part of it while suspended from the service, or under arrest or sentence.

On all occasions of ceremony, abroad or in the United States, when commissioned officers are present, or are invited to the attendance of the officers under his command, he shall be careful in such order to assemble them in the uniform of their rank.

Officers attached to vessels of the United States Navy in foreign ports will not wear the uniform without the full epaulette.

Officers appointed on "temporary service" are not required to supply themselves with the uniform, but are required to obtain and wear undress uniforms and side-arms.

Officers transferred from the supernumeraries in the volunteer service of the Navy are to wear the same uniform as is authorized for their respective grades in the regular service.

Before a vessel proceeds to sea, there will be a general muster for the purpose of inspecting the uniforms, and every officer who is provided with the uniform prescribed by the regulations, and the commanding officer of the vessel will see that all deficiencies are supplied.

COATS.

For a *rear-admiral, commodore, captain, commander, lieutenant-commander, lieutenant, master, ensign, and midshipman*, the following articles of assimilated rank, respectively, to be as follows:

For an admiral, a double-breasted coat with the same, and fixed with black silk cords; double-breasted, with nine buttons of bullion in three rows, placed four inches apart, and one inch and a half apart from eye to eye; and a half epaulette on each shoulder, the strap to be of gold, ornamenting at the big bone with a silver foul anchor, and the number of stars on each side thereof, as each ship and one near the bottom of each fold; cuffs to be laced and ornamented as the coat, and the Navy cap.

For *pursers, boatswains, carpenters, and sailmakers*, the same.

For a *chief engineer*, the same as commander, and cuffs, the same, except that the buttons are to be of medium size only.

For a *master's mate* receiving $30 per month, frock coat, of Navy-blue cloth or flannel; rolling collar; single-breasted, with nine Navy buttons of medium size on the breast, one behind on each hip, one near the bottom on each fold, and none on the cuffs. They will also wear a gold star above the cuff, and the Navy cap, with simply the wreath.

For *master's mates* receiving $25 per month, pursers, *masters-at-arms, sergeant majors, and paymasters' stewards*, blue cloth or flannel sack coat, single-breasted, rolling collar, and three rows of gold-lined Navy buttons on the breast, six in each row; and slashed sleeves, with three buttons on each sleeve. They will also wear the Navy cap without wreath or device.

OVERCOATS.

Shall be a cabot overcoat of the cape, of dark blue beaver or pilot cloth, lined throughout with dark blue flannel; skirt to extend four inches below the knee; to have side pockets and breast pocket; double-breasted, with pockets in side seams, and buttons arranged as for frock coat; the cape to be made so that it can be conveyed in pocket, and provided with an extra cloth collar to detach, so as to form a separate garment. On each end of the collar of the overcoat shall be the following devices: For a rear-admiral, two silver stars; commodore, one silver star; captain, three gold lace commanders, a silver star; lieutenant-commander, a gold leaf; lieutenant, two silver bars; master, one silver bar; ensign, one gold cord on the outside of each collar; midshipman, one corresponding assimilated rank are to wear the same distinctive devices as prescribed for officers of the line of their respective grades. The rank of other officers than those above mentioned are to have no devices, and but one stripe on the sleeve.

JACKETS.

Jackets may be worn as "service dress" by all officers, except as present muster, or upon special occasions of ceremony, when a full dress coat is required. For a rear-admiral, a jacket of dark blue cloth or Navy-blue fine flannel, faced with the same, and lined with blue silk; double-breasted, with nine buttons in three rows of bullion, with the same number of small-sized buttons on the breast as for coat; cuffs to be laced and ornamented as the sewing-coat on the cuffs, and the same shoulder straps.

For a *commodore*, the same officers in "service dress" may wear the uniform made of Navy-blue fine flannel. Coats to be lined with black silk. Trousers of the same cloth as the coat, without stripe. The same may be worn as *undress* coat at sea, except at general musters, when the full dress shall be worn. Vests of single-breasted with or without the collars rendered, as on occasions of ceremony, when a different is prescribed by the commanding officer.

CUFF AND SLEEVE ORNAMENTS.

The lace on the cuffs of the coat to be one inch gold lace, a quarter of an inch wide, and to be placed a quarter of an inch apart, except where the lace is to be interwoven. Sleeve and strap lace to be laid joining the cuff seam, and the others distributed in groups appropriately.

For a *rear-admiral*, eight strips, with half an inch space between them, and the upper one to encircle the arm, and sewed on the seam.

For a *commodore*, seven stripes, with half an inch space between them, and sewed on the seam of the sleeve.

For a *captain*, six strips, with half an inch space between them and sewed on the seam.

For a *commander*, five stripes, with half an inch space between them and sewed on the seam of the sleeve.

For a *lieutenant-commander*, four strips, with half an inch space between them and sewed on the seam.

For a *lieutenant*, three stripes; for a *master*, two strips; and for an *ensign*, one strip.

On the upper side of each sleeve, above the lace and following the direction of the seam, there shall be a strip of gold lace, one inch and a half in length, and one-quarter of an inch in breadth, and surmounted by a button of the same pattern as those on the upper edge of the coat.

For a *rear-admiral*, the button to be placed between the lace and the mouth, the star without the lace, and in the same position as the star on the cuff of the sewing-coat.

The cuff and sleeve ornaments of the *staff officers* are to be the same as those of the line officers of the same grade respectively, except in rank, except the gold star, which is to be worn by *line officers only*. No other officers are entitled to the ornaments above described.

PANTALOONS.

For all officers, to be of Navy-blue cloth or white drill, or for "service dress" of Navy-blue fine flannel. Not to be worn over the boot or shoe.

With the trouser, white pantaloons are to be worn at all seasons, unless the latter are authorized by the commanding officer, and are to be worn from the 1st of April to the 1st of October. Not to be worn over the boot or shoe. Vests of the same cloth as those of the trouser, or of the regular sea dress, subject, however, to such changes as may be directed or authorized by the senior officer present in command.

VESTS.

For all officers, single-breasted, standing collar, with nine small Navy buttons in front.

SHOULDER-STRAPS.

All shoulder-straps, except for gunners, boatswains, carpenters, and sailmakers, to be of dark blue cloth, edged with gold lace, a quarter of an inch wide, and lined with dark blue flannel; skirt to extend four inches beyond the point of the shoulder; to have a pocket, double-breasted, with pockets in side seams, and buttons arranged as for frock coat; the cape to be made so that it can be conveyed in pocket, and provided with an extra cloth collar to detach, so as to form a separate garment. On each end of the collar of the overcoat shall be the following devices: For a rear-admiral, two silver stars; commodore, one silver star; captain, three gold lace commanders, a silver star; lieutenant-commander, a gold leaf; lieutenant, two silver bars; master, one silver bar; ensign, one gold cord on the outside of each collar; midshipman, one corresponding assimilated rank are to wear the same distinctive devices as prescribed for officers of the line of their respective grades. The rank of other officers than those above mentioned are to have no devices, and but one stripe on the sleeve.

JACKETS.

Jackets may be worn as "service dress" by all officers, except at present muster, or upon special occasions of ceremony, when a full dress coat is required. For a rear-admiral, a jacket of dark blue cloth or Navy-blue fine flannel, faced with the same, and lined with blue silk; double-breasted, with nine buttons in three rows of bullion, with the same number of small-sized buttons on the breast as for coat; cuffs to be laced and ornamented as the sewing-coat on the cuffs, and the same shoulder straps.

For a *commodore*, the same officers in "service dress" may wear the uniform made of Navy-blue fine flannel. Coats to be lined with black silk. Trousers of the same cloth as the coat, without stripe. The same may be worn as *undress* coat at sea, except at general musters, when the full dress shall be worn. Vests of single-breasted with or without the collars rendered, as on occasions of ceremony, when a different is prescribed by the commanding officer.

CUFF AND SLEEVE ORNAMENTS.

The lace on the cuffs of the coat to be one inch gold lace, a quarter of an inch wide, and to be placed a quarter of an inch apart, except where the lace is to be interwoven. Sleeve and strap lace to be laid joining the cuff seam, and the others distributed in groups appropriately.

For a *rear-admiral*, eight strips, with half an inch space between them, and the upper one to encircle the arm, and sewed on the seam.

For a *commodore*, seven stripes, with half an inch space between them

width straw hats, under the same restrictions as in the case of Jackets; the brim not to be more than four and a half nor less than four inches in height, and the rim not more than three and a half nor less than three inches in width, with a plain band of blue ribbon.

SWORD AND SCABBARD.

For all officers, shall be a cut and thrust blade, not less than twenty-six nor more than twenty-eight inches long; half-basket hilt; gilt or white. Scabbards of black leather; mountings of yellow gilt; and slide or ring.

SWORD-BELTS.

For all officers, shall be of plain black glazed leather, not less than one inch and a half nor more than two inches wide, with shrage of the same width, and not more than three inches in diameter at the sash ends, and a hook in the forward ring to suspend the sword. Buckle of gilt or white metal, as the tribes is diameter, as per pattern. The belt to be worn over the coat.

BUTTONS.

Shall be gilt, convex, and of the size in exterior diameter; large, seven eighths of an inch; medium, seven-tenths of an inch; and small, three fourths of an inch. Each size is to have the same device. See drawings.

CHAVAT.

For all officers, to be of black silk or satin, with a white shirt collar *Navy Regulations*.

DRESS FOR PETTY OFFICERS AND CREW.

Boatswain's mates, carpenter's mates, gunner's mates, sailmaker's mates, and ship's cook, will wear, embroidered in white silk, on the right sleeve of their blue jackets, a foul anchor, with fouled, six inches and medium, of not more than three inches in length, with a star of one inch in diameter one inch above. The same device, embroidered in blue, to be worn on the sleeves of their white frocks to summer.

All petty officers, except ship's cook aforesaid, will wear the same device on their left sleeves.

The cockswain for petty officers, firemen and coal-heavers, and *seamen, ordinary seamen, landsmen and boys, of master*, shall consist of blue cloth frocks and trousers, or blue woollen shirts, and a black silk neckerchief, and shoes, or boots in cold weather. In warm weather a check shirt may be worn and no trousers. Black or white hats, as the commander may for the occasion direct, having proper regard for the comfort of the crew: black silk neckerchiefs and shoes; the collars and cuffs to be lined with blue cotton cloth, and stitched; round with a white tape. The white cloth jumpers and vroses, may be worn by the crew at sea, except on holidays or at quarters.

It is enjoined upon commanding officers and all other commanding officers of the Navy to see that the foregoing regulations are complied with in every subject, and to report any infraction of them to be corrected.

GIDEON WELLES,
Secretary of the Navy.

E. D. TOWNSEND,
Assistant Adjutant-General.

RESOLUTION OF THANKS.

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
WASHINGTON, March 4, 1864.

General Orders, No. 68.

Public Resolution No. 12.

Joint resolution tendering the thanks of Congress to Major-General W. T. Sherman.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the thanks of Congress and of the people of the United States are due, and that the same are hereby tendered, to Major-General W. T. Sherman, Commander of the Department of the Tennessee, and to the officers and soldiers who served under him, for their patient and arduous services, their valor and skill in the battles of the Cumberland, and for their gallantry and heroism in the battle of Chattanooga, which achievement is a great degree to the success of our arms in that glorious victory.

Approved February 22, 1864.

By order of the Secretary of War:

E. D. TOWNSEND, Assistant Adjutant General.

CORRESPONDENCE WITH THE QUARTERMASTERS DEPARTMENT.

QUARTERMASTER-GENERAL'S OFFICE,
WASHINGTON, February 26, 1864.

General Orders, No. 20.

The following officers are announced as on duty in this office, and are empowered to conduct, under the direction and by order of the Quartermaster-General, all the business appertaining connected with their respective divisions of duty, viz:

Colonel Charles Thomas, Assistant Quartermaster-General: The duties connected with contracts and their examination; superintendence of the issue of money and property to accountable Quartermaster's Department, including the money accounts of the clothing and equipping and of recruiting service, and the issue of the same to the New York depot.

Captain Edward E. S. Sibley, Deputy Quartermaster-General: Rolls connected with quarters and hospitals; estimates of funds and quartermaster's supplies, other than for the regular armies and depots; and miscellaneous correspondence of the office.

Colonel S. G. Cary, Quartermaster and Chief Clerk: The ordinary business connected with water transportation.

Colonel Rufus Ingalls, Quartermaster: The ordinary business connected with the clothing and equipage branch of the office.

Captain Daniel C. Kingsbury, Quartermaster: The ordinary business connected with land transportation, as railways, bridges, and turnpikes, and also telegraphs.

Captain Reuben Ellis, Assistant Quartermaster: The ordinary business connected with miscellaneous claims.

Captain George W. Baird, Assistant Quartermaster: The examination of remarks on the accounts of officers; the examination of claims for supplies, other than horses, not presented for the fiscal year; and the distribution of orders and blanks.

Captain Thomas Sturgis, Assistant Quartermaster: Business addressed to the Quartermaster-General, and indorsed on the envelope "Private," with the signature thereto of the officer or person communicating.

M. C. MEIGS,
Quartermaster-General.

NOTICE TO DELINQUENTS.

The following officers, having been reported at the headquarters of the army in the field, or at the stations to which they are severally assigned, that they will stand dismissed from the service of the United States unless, within sixty (60) days from January 16, 1864, they appear before the Military Commission in session in Washington, of which Brigadier-General Thomas M. Vincent, Assistant Adjutant General, is President, and make satisfactory defence to the charges against them :—

Absence without leave.

Second Lieutenant Edward Hall, 22d New York Volunteers.
Lieutenant James H. Grinnell, 9th Ohio Volunteers.
Lieutenant Wm. H. Wilson, 6th Kentucky Volunteers.
First Lieutenant Christian Seaman, 11th Pennsylvania Volunteers.
Lieutenant R. R. Trocher, 5th Ohio Volunteers.
Lieutenant W. H. White, 6th Kentucky Volunteers.

Failing to report for medical treatment in hospital as ordered.

Captain William H. Eldred, 91 Kentucky Cavalry.

For retaining a commission after dismissal from the service, who had been previously discharged on account of physical disability.

First Lieutenant Samuel E. Beers, 161st Pennsylvania Cavalry.

For having withheld and destroyed a commission issued by the Governor of the State to a private of his company.

Captain J. M. Hewitt, 2d Kentucky Battery.

DISMISSALS

For the week ending February 27, 1864.

Captain Thomas P. Slough, 2nd regiment Invalid Corps, to date February 26, 1864, for conduct unbecoming an officer and gentleman, and absence without leave.

Captain Frank W. C. Fox, 1534 New York Volunteers, to date February 29, 1864, for disloyalty and conduct unbecoming an officer and gentleman.

Captain John A. Brunner, 63d Indiana Volunteers, to date February 29, 1864, for habitual absence without leave and inefficiency.

Captain John H. McCune, 51st Ohio Volunteers, to date February 15, 1864, for drunkenness; erroneously published February 22, 1864, as Captain John Mann, 51st Ohio Volunteers.

Captain Gustavus Meiser, 11th regiment Invalid Corps, to date February 29, 1864, for disloyalty and conduct unbecoming an officer and gentleman.

Captain Emilio Pi, 1st Louisiana Native Guards Volunteers, to date February 29, 1864, for conduct prejudicial to good order and military discipline.

First Lieutenant Isaac M. Bobee, 12th regiment Invalid Corps, to date February 29, 1864, for habitual absence without leave and inefficiency, to date February 29, 1864, for habitual absence without leave and inefficiency, to date February 29, 1864, for habitual absence without leave and inefficiency.

DISMISSALS APPROVED.

The orders of dismissal hereinafter specified in the following cases have been approved:

Major Jacob Lawrence, 17th Pennsylvania Cavalry, to date February 17, 1864, for having, in violation of existing orders and the customs of war, left his command while marching and encamping and on the press-posts outside the lines; and

Major Edward Hill, 2d Kentucky Cavalry, to date February 17, 1864, for having sanctioned and authorized the same.

Lieutenant Colonel Thomas Doyle, 1st Kentucky Volunteers, to date February 15, 1864, for leaving his command at Gettysburg, and not reporting to it since, without proper leave.

DISMISSALS REVOKED.

The orders of dismissal in the following cases have been revoked:

First Lieutenant Charles Bell, 7th Kentucky Cavalry, and Second Lieutenant Upton Wilson, 5th Kentucky Volunteers, satisfactory evidence having been furnished in each case upon which dismissal was based was founded in error.

REMITTED FOR CONSIDERATION.

The following officers, heretofore dismissed, are restored, provided the vacancies have not been filled by the Governors of their respective States, as the case may be:

Captain A. J. Alexander, 1st Ohio Cavalry.

Lieutenant P. H. Leal, 144th New York Volunteers.

Lieutenant Colonel W. H. Lamb, 1st Kentucky Cavalry, with pay from the date at which he rejoins his regiment for duty.

Lieutenant Colonel Thomas Doyle, 1st Kentucky Volunteers, with pay from the date at which he rejoins his regiment for duty.

SENTENCES OF COURTS-MARTIAL.

Captain Benjamin F. Sells, 122d Ohio Vols, to be dismissed the service of the United States, for using contemptuous and disrespectful language against the President of the United States, conduct prejudicial to good order and military discipline.

First Lieutenant Edward R. Smith, Co. 8, 87th Penn. Vols, to be cashiered for misbehavior before the enemy.

Captain Hugh Lee, 1st Ohio Cav., to be dismissed the service for conduct to the prejudice of good order and military discipline.

Second Lieutenant Charles Hall, Co. A, 5th Ohio Vols, to be cashiered for drunkenness on duty and conduct to the prejudice of good order and military discipline.

Assistant Surgeon John R. McCullough, to be cashiered for drunkenness on duty.

Captain Wm. H. Gregg, 1st Pennsylvania Reserve Cavalry, to be cashiered for conduct unbecoming an officer and a gentleman.

Second Lieutenant Wm. Hall, 1st Pennsylvania Reserve Cavalry, to be cashiered for drunkenness on duty.

Captain Jacob Williams, 1st Pennsylvania Reserve Cavalry, to be dismissed the service for disobedience of orders and dereliction of duty while on the march and in battle.

Second Lieutenant George J. Geiser, 1st Pennsylvania Reserve Cavalry, to be dismissed the service for absence without leave for forty-six consecutive days on one day sooner due.

The sentences in the above cases have been approved and confirmed by the commanding general of the Army of the Potomac.

First Lieutenant Edward Hall, Co. F, 16th New York Vols, to be dismissed the service for violation of the 6th and 7th articles of war, and conduct unbecoming an officer and a gentleman, and conduct to good order and military discipline.

Captain John Mitchell, Deputy Commissary of Subsistence, 2d brigade, 3d division, 11th army corps, to be cashiered for drunkenness, in violation of the 9th article of war, and conduct to the good order and military discipline, in violation of the 99th article of war, and conduct unbecoming an officer and a gentleman.

First Lieutenant Thomas M. Pickens, Co. B, 2d East Tennessee Cavalry, to be cashiered for drunkenness on duty.

Private Joseph Gornell, Co. D, 116th New York Vols, to be shot to death with musketry, at such time between the hour of 10 a.m. and 2 p.m. to-morrow, March 4, 1864.

The sentences in the above have been approved and confirmed by Major-General Hooker, commanding the Department of the Cumberland.

Private James Wilson, James Thompson and Peter Goodrich, 4th Penn. Vols, to be shot to death with musketry, the sentence confirmed by Major-General Gilmore, commanding the Department of the South.

First Lieutenant F. W. McConkey, Quartermaster of the 6th Ohio Vols, to be dismissed the service for habitual use of opium and alcoholics, for violation of the 9th article of war and selling provisions to officers at more than regular rates, for violation of regulations, commanding the Army of the Cumberland, disapproved of the findings and sentence of the court in the case, but directed that the record be finally withheld in not showing the organization of the court, which renders the sentence inoperative, and that the accused be released from arrest and ordered to return to duty.

Captain Mat Rafferty, 1st Ohio Cav., Acting Commissary of Subsistence of the 3d brigade, 3d division, 11th army corps, to be dismissed the service for conduct unbecoming an officer and a gentleman, disobedience of orders and contemptuous and disrespectful behavior before the commanding general. Major-General Howard, commanding the Army of the Cumberland, disapproves of the finding of the court in the case, but approves the sentence in the belief that the action of the charges do not constitute conduct unbecoming an officer and a gentleman, but that the charges proved against the accused have been partly influenced by his improper feeling, the result of a long and arduous campaign, and directs that he be released from arrest and restored to duty.

Private John Werner, Co. K, 4th Rhode Island Artillery, and Daniel W. Gilbert, Co. K, 4th Rhode Island Artillery, to be shot to death with musketry. Sentences approved and confirmed by Major-General Butler, and ordered to be executed by Brigadier-General Weitzel, at such time before the sentence shall have been read to them.

Captain Lemuel Hall, 1st Penn. Vols, to be cashiered for drunkenness on duty. Sentence approved and confirmed by Major-General Butler, commanding the Department of Virginia and North Carolina.

First Lieutenant J. De Witt Woods, 3d New York Battery, to be dismissed the service, for conduct unbecoming an officer and a gentleman and disobedience of orders. Sentence approved and confirmed by Major-General Augur, commanding the Department of Washington.

Second Lieutenant Thomas S. Stewart, Battery D, 2d Penn. Artillery, to be cashiered for absence without leave and for absence from his command. Sentence approved and confirmed by Major-General Augur, commanding the Department of Washington.

Private John Medica, of the U. S. Military Academy Detachment of Cavalry, to be shot to death with musketry at such time as may enable a battalion under the charge of a staff guard for six days from Cadet Gray, to be executed in that time.

Private Thomas Hogan, Co. A, 1st Maryland Cavalry, to be executed from the Military Academy until the 1st of September, inclusive, and by shot to death in that time.

The sentences in both cases approved and confirmed by Major-General Halleck, with respect to be carried into execution.

Captain Samuel M. Logan, Co. B, 1st Colorado Cavalry, to be cashiered for violation of the 9th and 83d articles of war.

Second Lieutenant Wm. S. Stewart, Co. G, 9th Maryland Vols, to be dismissed the service for absence without leave.

The sentences in the above cases have been approved by the proper reviewing authorities and the recommendations of the President, who, upon the recommendations of the commanding generals to executive clemency, has ordered that the sentences in each case be remitted, and the accused returned to duty.

Captain John Armstrong, Co. K, 7th Indiana Vols, to be dismissed the service for conduct to the prejudice of good order and military discipline, and unbecoming an officer and a gentleman.

First Lieutenant A. Milton Sharpe, 7th Indiana Vols, to be dismissed the service for conduct prejudicial to good order and military discipline and unbecoming an officer and a gentleman.

Sentence approved by the proper commanders, and ordered executed.

The action of Brigadier-General Wm. Sooy Smith in the sentence in the case of Captain Armstrong is commuted to forfeiture of one month's pay and allowances, and to be reduced to Adjutant Miller to be published as a gentleman.

First Lieutenant Alexander Hay, R. Q. M., 83 South Carolina Volunteers, to be dismissed the service, forfeiting all pay and allowances from January 1, 1864, for habitual drunkenness, scandalous conduct tending to the destruction of good morals, becoming an officer and a gentleman. Sentence approved and confirmed by Major-General Gillmore, commanding the Department of the South.

First Lieutenant T. Duffy, 20th Massachusetts Vols, to be dismissed the service, for conduct unbecoming an officer and a gentleman.

First Lieutenant Miles F. Ross, 139th Pennsylvania Vols, to be dismissed the service, for conduct unbecoming an officer and a gentleman and disrespect to his commanding officer.

First Lieutenant Alfred Hand, 139th Pennsylvania Vols, to be dismissed the service, for drunkenness on duty and conduct prejudicial to good order and military discipline.

Major Joseph Peach, 122d Ohio Vols, to be dismissed the service, for conduct unbecoming an officer.

Lieutenant Colonel Thomas Pennington, Maine Vols, to be dismissed the service, for disobedience of orders and conduct prejudicial to good order and military discipline.

The sentences in all of the above cases have been approved and confirmed by Major-General Meade, commanding Army of the Potomac.

Private Charles Audley, Co. F, 165th New York Vols, and Joseph Bubel, Co. I, 72d Pennsylvania Vols, to be shot for desertion. Sentences approved and confirmed by Major-General commanding the Army of the Potomac, and ordered to be carried into effect in presence of so much of the Second army corps as can conveniently be assembled for the division commander can properly assemble, on Friday, the 11th of March next.

Net increase during the year..... $1,116,211 41
DIVIDENDS to Members who have been insured, or on the same originally insured, on for Policies issued by this Company will, on surrender of such policies, be redeemed in cash, or, at the option of the holder, issue a paid-up policy for an equitable sum, subject to a deduction sufficient to cover the proportionate amount.
This plan obviates one of the greatest objections to life insurance; namely, the necessity of being able to continue the customary payments of premiums during the later years of life.
3d—ENDOWMENT ASSURANCE POLICIES.—These are issued to persons desirous of securing a provision for advanced life, or any other purpose, and are payable, in either sum insured or annuity, to the person or persons attaining a certain age, say 40, 45, 50, 55, 60, or 65, or at the death of the assured, if he should die before arriving at such age.
4th—ENDOWMENT POLICIES FOR CHILDREN.—These are payable when a child attains the age of 15, 21, or 25 years, or marriage, either with the whole of their share of the bonus premium paid, in case the party assured does not attain the specified age.
5th—SUVIVORSHIP ANNUITY POLICIES.—Rate of premium on the joint lives of a wife and husband or between a surviving sonness, whether wife, parent, child, or friend, the survivor to receive the annuity for life. PECUNIARY INCOME, free from the chances and expenses of investing money, and the disposition upon principal when may, perhaps, prove injudicious or adversely investments.
NOTE.—All Policies issued by this Company participate in the surplus, the whole of which is divided in the most equitable manner among the policy-holders.

PROPOSALS FOR MATERIALS FOR THE NAVY.

NAVY DEPARTMENT,
BUREAU OF STEAM ENGINEERING,
WASHINGTON, February 29, 1864.

SEALED PROPOSALS in English measurements will be received at this office until 12 o'clock M. on Tuesday, the 5th day of April next, for the delivery of Steam Engineering stores at the Navy Yard, Boston, Mass., and at which time the opening will be commenced.

Proposals must be endorsed "Proposals for materials for the Navy," and they are to specify the time of delivery, be numbered in items, and directed to the Chief of the Bureau of Steam Engineering.

The materials and articles mentioned in the classes named are particularly described in the printed schedules, any one of which will be furnished at this office, and a copy will be forwarded to the commandants of the navy yards at Boston, Brooklyn, Philadelphia, and Washington, on application. Any other information desired relative to the articles required for the consumption of dealers in such classes only will be furnished.

The contract will be awarded to the lowest bidder, who gives proper guarantees as required by the law of 30th June, 1861, and whose bid is considered most advantageous to the interests of the service. Bidders who have not had any previous contracts will have their bids considered only when accompanied by the guarantees required by law.

Bidders in the full amount will be required to sign the contract and give bonds immediately after the award is made, as directed judge. United States district attorney, or collector of the district in which the bidder resides, certifying that the sureties are worth double the amount of the contract. No contract shall have been completed; and eighty per centum of the amount of bills, when approved by the commandants of the respective yards, will be paid by the navy agents at the places of delivery. The bills must be certified by the inspectors of the respective yards, and by the navy agent, if the articles shall have been passed by the secretary of the treasury.

The following are the classes required at the respective navy yards:

KITTERY, MAINE.

Class No. 1, Boiler Iron, &c.; No. 8, Metallic Oil; No. 9, Engineer Stores; No. 10, Tools; No. 11, Miscellaneous.

BETWEEN 6TH AND 7TH STREETS,
WASHINGTON CITY,
A. R. POTTS, PROPRIETOR.

REVERE HOUSE,
BOWDOIN SQUARE,
TREMONT HOUSE,
cor. of Tremont and Bromfield, Boston.
The most centrally located First Class Hotels in the city. These hostelries are the favorites of the Army and Navy have been refitted in the most thorough manner, and for families comfort and complete dining are still unsurpassed in the country. Mr. Parker Stevens, late of the Revere House, Boston, they are now under the superintendence of
BINGHAM, WHEELEY & CO.

ASTOR HOUSE,
STETSON & CO.,
PROPRIETORS,
Broadway, NEW YORK.

TAYLOR'S SALOON
This elegant establishment, at the corner of Broadway and Franklin streets, is one of the out-doors of New York; and visitors to the city, who leave without witnessing its interior arrangements and appointments, cannot realize its success, will have left the Empire City without a just test. It has very appropriately received the name of "Saloon," for, we presume, there is scarcely a delicacy that the gratified epicure can desire, which is not to be found there, if it be possible to obtain it.

EUTAW HOUSE,
BALTIMORE, MD.
B. H. COLEMAN, Proprietor.

UNITED STATES HOTEL,
PENNSYLVANIA AVE., (near the Capitol),
WASHINGTON, D. C.

McCLELLAN'S REPORT.
By special arrangement with General McClellan, HARPER & BROTHERS, Publishers, 329 and 331 Broadway, New York, would announce that they have nearly ready Major-General McClellan's Report of his connection with the Army of the Potomac, from its first formation, to which will be added a most interesting Introductory Chapter, prepared by General McClellan, on the
CAMPAIGN IN WESTERN VIRGINIA,
which will contain an account of the condition of the Army, and the Military Prospects of the country at the time of the commencement of the campaign in that region, which does not appear in the Report as sent to the Government. One vol. 8vo. Illustrated with maps.

SAMUEL V. NILES,
(Late of the General Land Office,)
MILITARY, NAVAL, AND
GENERAL AGENCY,
(Established in 1855.)
OFFICE AND RESIDENCE, 202 F st., bet. 20th & 21st sts.,
Washington, D. C.
Having had the exclusive charge of the "*Revolutionary and War of 1812 Claims*" in the General Land Office, for several years, and being thoroughly conversant with the business of the Interior Department and of the Bureau of the "Second Auditor," I offer my services as an Agent to the Attorney and Solicitor in the adjustment and collection of
DEMANDS AND CLAIMS AGAINST THE GOVERNMENT,
in all departments, especially claims growing out of the late rebellion.
Particular attention will be paid to the due to Officers, Seamen, and Marines of the Army and Navy, Heirs, Executors, Administrators, and others of those who have been killed, or died in the service, and for the Bounty, Arrears of Pay, and Prize Money of Officers, Seamen and Seamen of the United States, or their heirs at law.
Any business before the *General Land Office, Indian Office, or Second Auditor's Office*, and the *Court of Claims*, requiring the services of an Attorney, will meet with prompt attention.
REFER TO
Hon. Thomas A. Hendricks, U.S. Senate, late Com. S. Com. Pensions; Hon. Wm. H. Wilson, Com. Pa. Claims; Hon. *O. L. D., Clinton, Ill.*; Hon. Joseph B. Wilson, late Com. Pa. Claims; Hon. Wm. Kellogg, Hon. Geo. T. Whiting, late Com. Pens., Washington City; Rear Admiral Charles Stewart, U. S. N.; Hon. Thomas Ewing, Jr. & Co., Bankers, Washington, D. C.

PATENT SOLICITORS.
Messrs. Munn & Co. are Patent Solicitors, Attorneys at Law, and respectable Agents from all sections of the Country. They have had over fifteen years' experience before the procedure of Military and other claims.
Detailed information in Law, Rules and Regulations, correspondence in relation to claims, together with the necessary blanks and such instructions as may be required to conform to any modifications of the law, or the requirements of the Departments in relation thereto.
References required.
All letters, to secure prompt attention, should be addressed as above.
Address SAMUEL V. NILES, Attorney,
Washington, D. C.

RADWAY'S READY RELIEF.
THE GREAT INTERNAL AND EXTERNAL REMEDY.
To be used on all occasions where there is Pain—Inflammation—Congestion—Chills—Fever—Headache—Cramps—Spasms—Sudden Stiffness—Colds—Coughs—Sore Throat—Influenza—Hysterics—Neuralgia—Lameness—Pains—Aches—and all Infirmities—
IN THE YOUNG OR OLD, MALE OR FEMALE.
It proves its efficacy in a few minutes. It will cure Colds, when all other means fail.
It Prevents Fevers.
It Stops Pains.
It Secures Sleep.
It Imparts Strength.
It Insures Health.
There are none so weak that it will not strengthen—none so sick that it will not help—none so well and sound—none so miserable it will not comfort—none so poor it will not enrich—none so rich it will not increase—none so cautious it will not relieve—none so prudent it will not prolong life.
Wounds of all kinds are healed by its application externally, or
Lumbago—Gout—The Dolores—Toothache—Rheumatism—Inflammation of the Stomach, Bowels or Kidneys—Inflammation of the Womb—Womb Complaint—Weakness—Burns—Scalds—Fright—Sickness—Sick Headache—Nervousness—Sleeplessness—Chilblains—Dentrace—Sun Stroke—Apoplexy—Epilepsy—Fits—Ailments of Children—Sores and Pains in the Legs—Face—Brain, &c. &c. Weakness in the Right Arm—Sensation of the Knees—Feet—Legs, &c., Sore Eyes, and in all cases where there is Pain or Inflammation, RADWAY'S RELIEF, if applied over the part or parts, will afford immediate ease, and will, in a few hours, cure the patient.

RADWAY'S READY RELIEF IS THE GREAT
ARMY AND NAVY MEDICINE.
NO SOLDIER OR SAILOR SHOULD BE WITHOUT IT.

We have the evidence of Army Surgeons and Officers in the Army and Navy, that it is used by its sufferers every twenty thousand lives. It is the only remedy that will cure the wounded, and, at the same time, if the medicine is used as a preventive, it will keep off fevers.
If the soldier or sailor will carry drink storage with him, a few drops of RADWAY'S READY RELIEF will give a delightful stimulating drink, and protect you from the deleterious effects of the impure water.
It Purifies the Stomach—It Neutralizes Malarious Poisons—It Checks Weakness or Debility—It Heals—Ballistics and Soothes—It Cures—Cleanses and Purifies.

FRIENDS OF SOLDIERS.
No gift will be appreciated by the Soldier so highly as Radway's Ready Relief. It is a substitute for opium, and the best medicine in the world.
RADWAY & CO.,
87 Maiden Lane, New York.

Appropriate Music, 32 cts. CAMP SONGS—A collection of National, Patriotic, and Social Songs for the Volunteers, 32 cts. The above books contain the Words and Music, and will be sent by mail, post-paid, on receipt of price. OLIVER DITSON & CO., Publishers, 277 Washington Street, Boston.

TREASURY DEPARTMENT.

Office of Lighthouse Board, Washington, D. C., March 15, 1864.

SEALED PROPOSALS will be received at this office until 12 o'clock M. on Monday, the 4th day of April next, for supplying the Lighthouse Establishment with coal, for delivery at each of the four yearly years Winter between April 30, and Thirty Thousand gallons of the best quality crude Petroleum Sperm oil, to be delivered in four lots, and to be delivered at the times and places, designated by the Government supply vessel, or at the warehouse or other place of deposit, to be designated by the Lighthouse Inspector of the respective districts. The lighthouse Board, is strong, tight, well-painted casks, containing as near as practicable the proper capacity each of from eighty to one hundred gallons.

The said oil will be delivered at Boston, Mass., for the whole quantity.

Any of the lots or sperm oil, or all of them, will be delivered at the Navy Yard, Brooklyn, New York, New Bedford, Edgartown, Newport, or Boston, at the option of the bidder. The time of delivery must be strictly stated in the bills, and will be embraced in the contract.

The quality of the oil will be determined by the test of No. 1.—Ten thousand (10,000) gallons sperm oil to the 15th day of January, 1865, or as soon thereafter as the same can be manufactured and completed.

No. 2.—Ten thousand (10,000) gallons sperm oil to the 1st day of March, 1865, or as soon thereafter as the same can be manufactured and completed.

No. 3.—Ten thousand (10,000) gallons sperm oil to the 15th day of April, 1865, or as soon thereafter as the same can be manufactured and completed.

No. 4.—Ten thousand (10,000) gallons sperm oil to the 1st day of August, 1865, or as soon thereafter as the same can be manufactured and completed.

Each of the lots of oil will be gauged, under the direction and personal supervision of the inspecting officer, by a Custom House or other legally authorized gauger, in accordance with the United States standard, and must be supplied and accepted in good, sound, and merchantable barrels, or other casks of the contractor. The temperature of the oil at the time of gauging must be ascertained, and reduced to the standard temperature of 60° Fahrenheit by scale prepared for the purpose.

Proposals will be received and considered for the whole quantity of oil, or for any part, at the option of the bidder; but no bid will be considered for less than Ten Thousand (10,000) gallons at one lot, to be delivered at one time and place. Each bid must be accompanied by a guarantee, in writing, the manner of the bid or bids bid for, and that the same will be given if the bid or bids are accepted.

The bid submitted by different members of the same firm or copartnership will not be considered.

The Lighthouse Board reserves the authority of the discretion, reserves the right to reject any bid, although it may be the lowest, and the lowest responsible bid, if it may prefer.

No bill will be considered for any other kinds or descriptions of oils than those specifically called for in this advertisement.

A bond, with security to the satisfaction of the department, in a penalty of Fifty Thousand Dollars, for the due and constant manner under these proposals, will be required of each successful contractor, for the faithful performance of the contract, to be executed within ten days after the acceptance of the bid.

Every offer must be accompanied by a written guarantee, signed by one or more responsible persons, known to the department as such, or certified by a United States District Judge, U. S. Navy Agent, or Collector of the Customs, to the effect that, if the bill or bids be accepted, the bidder or bidders will enter into a contract in good faith, according to the provisions and terms of this advertisement, and that the said bail or bail will become bound, in case the said party or parties refusing shall not enter into the contract as aforesaid, duly or duly comply to make good the difference between the offer of the said party or parties and the next lowest bidder. All bids must be sealed and endorsed "Proposals for Oil for Lighthouses," and addressed to the undersigned, and directed, prepaid, to the secretary of the Lighthouse Board, Washington, D. C.

All bids will be opened publicly, at the hour and on the day above named.

Proposals will be made for several lots of oil within thirty days after they shall have been received by the Lighthouse Board.

By order of the Lighthouse Board.

W. B. SHUBRICK, Chairman.

HUNTER'S PATENT ARMY DAY AND LIGHT POCKET COMPASSES—Can not be read the darkest night without the aid of an artificial light. Every officer and soldier in the army should have one of these Compasses. Approved by our most distinguished officers. Sent by following letter just received from Major-General Hooker, the hero of Lookout Mountain:

HEADQUARTERS, Lookout Valley Tenn., Dec. 28, 1863.

H. W. HUNTER, Esq.—Dear Sir: I am now in receipt of your favor of the 21st inst., and am pleased to learn that you have succeeded in getting up a Compass that will be worth to the service. It is an necessary a companion on the field as a sword or a bridle.

Yours truly, etc'y servant,
JOSEPH HOOKER, Maj. Gen. U. S. Army.

CAUTION TO THE AMERICAN

WATCH COMPANY.

It has come to our knowledge that imitations of the American Watch have been put upon the market in many manners, concluded, by their utter worthlessness, to injure the reputation of our genuine patent. To protect ourselves and the public from such imposition, we again publish the trade marks by which alone the genuine may be known.

We manufacture four styles of Watches—

The FIRST PRIZE,

AMERICAN WATCH CO., Waltham, Mass.," engraved on the inside plate.

The SECOND PRIZE,

"E. HOWARD & CO., Waltham, Mass.," engraved on the inside plate.

The THIRD PRIZE,

"P. S. BARTLETT, Waltham, Mass." engraved on the inside plate.

All the above styles have the name "American Watch Co. Waltham, Mass." on the outside case of every watch we make.

The FOURTH PRIZE,

"Waltham Watch Co., Waltham, Mass." engraved on the inside plate, and is not named on the dial.

All the above named Watches are made of various sizes, and are sold in gold or silver cases, as may be ordered.

It is hardly possible for us to accurately describe the various imitations which we have since alluded. They are usually inscribed with names so nearly resembling those of the genuine Watches as to be unaccustomed buyer. Some are represented as made by the "American Co., of Boston, Mass.," with such company existing. Some are named the "Waltham Watch," and the "Waltham Watch Co." in every style, usually known as the "Soldiers' Watch" others are named the "Appleton Watch Co." and others the "P. S. Bartley," instead of our P. S. Bartlett, and others appear to exist for the purpose of deceiving the less that they are the veritable productions of the American Watch Company.

A little attention on the part of buyers will protect them from imposition.

ROBBINS & APPLETON,
Agents for the American Watch Company,
182 Broadway, New York.

THE DERINGER PISTOL.

TIFFANY & CO.,

850 AND 852 BROADWAY, NEW YORK,

SOLE AGENTS FOR NEW YORK AND THE EASTERN STATES.

By a recent arrangement with Mr. Deringer, the subscribers have undertaken the exclusive agency for the sale of his Pistols. Now regulated, of the well-known pocket arm of which he is the inventor and only maker. They possess all the advantages of the pistols as first constructed, combining with it those improvements which long experience has suggested. The use of these little Guns has become necessary to the pay of Mr. Deringer, in order to protect the public from spurious articles assuming to be his make, and that purchaser only will obtain or retain, will be safe who appreciates the fact.

TIFFANY & CO.

Dec. 18, 1863.

SCRANTON & CO.,

No. 130 Atlantic street (cor. Henry),

FINE GROCERIES, WINES, LIQUORS AND CIGARS.

Also Officers' Mess Stores put up for the Navy, in the best style and at the lowest prices.

Manufacturers and Importers of Military Goods. Fatigue Caps, Presentation Swords, Sashes, Belts, Shoulder Straps, and Officers' Mackenzie constantly on hand.

CHICKERING & SONS,

MANUFACTURERS OF

GRAND, SQUARE, AND UPRIGHT

PIANO-FORTES,

Warerooms, 652 Broadway, New York.

The superiority of these Instruments is amply demonstrated by the great frequency of the use in concert artists of the day, who claim for them exclusive use of tone and workmanship unattained by any other makers. Mr. Gottschalk's constant use of the Chickering Grand, is the strongest and their most cogent question, and resulted in establishing the justice of the very flattering estimation in which they are held.

Messrs. C. & Sons have been awarded 50 PRIZE MEDALS, over all competitors, for the superiority of their manufactures, their claims resting upon the combined qualities of great power, brilliancy and purity of tone, delicacy of touch.

274

CLARKSON & CO.,

BANKERS

No. 121 South Third Street,

THE MILITARY SITUATION.

THOUGH the recent movements of the various Union armies preliminary to the opening of the spring campaign, have apparently ended in disappointment, so far as the grander operations of the war are concerned, they have accomplished important minor results, which were no doubt considered in planning them. The chief of these is the disturbance made in the Rebel preparations for taking the initiative in the spring. The Confederate military authorities judged, very plausibly, that the necessity of preparing the raw recruits we were adding to our armies, and the absence of so many furloughed soldiers rendered it improbable that any of the Northern armies would move in earnest: hence they were preparing to take advantage of our expected inaction, and open the spring campaign with one of their characteristic dashes upon some unexpected point. During January, it will be remembered, they were very active in Northwestern Virginia and Tennessee, raiding through our lines and picking up stores and supplies. FORREST and EARLY secured considerable valuable plunder by these expeditions. But the movement, or series of movements which commenced when General SHERMAN advanced east from Vicksburgh on the third of February, must have seriously disturbed the execution of their plans. General SHERMAN'S march was so bold, and had for its apparent object, one or two enterprises, which if successful, would have inflicted such a cruel blow upon the Confederacy, that the Rebels were forced to strengthen POLK'S army at Meridian and to dispatch all the troops they could spare against MOBILE. The movement of General THOMAS ruled against CLEBURNE, of General THOMAS against JOHNSTON, and of Generals SMITH and GRIERSON south, from the Tallahatchie, together with the opening of the bombardment against Mobile, all looked so serious, that they forced the Confederates to defend their own territory instead of preparing to attack ours, as they had intended. By menacing them in various quarters, we compelled them to scatter the troops they were gathering for their movement, and place them in positions where they were useless for offensive operations against our armies. The necessity of giving attention to other matters of administration, as well as the presence of our troops in their territory, must have seriously disturbed the Rebel government also, in the execution of their conscription law.

The result of the cavalry expedition, under General KILPATRICK, has not disappointed those who understand how much such movements are dependent upon fortuitous circumstances, which it is never safe to disregard in military operations. Though it has not justified itself by full success, it is hard to criticise so bold and dashing an attempt to accomplish so praiseworthy an object as the liberation of our soldiers pining in Richmond prisons. It was brilliant, it was gallant, and though a failure, so far as this, its main object, is concerned, it was not altogether barren in results. It might have accomplished still more could it have been made in cooperation with such a movement up the Peninsula as was undertaken by General BUTLER, a few weeks since: acting in concert, the two expeditions might have had an additional chance of success in the distraction they would occasion in the defensive movements of the enemy.

General KILPATRICK appears to have been unusually fortunate in securing secrecy in regard to his expedition, which was well on its way before its departure from our lines was discovered. His command left Stevensburgh, Va., on Sunday night, the 28th of February, and crossed the Rapidan at Ely's Ford. Immediately after crossing, Colonel DAHLGREN with a picked command, was detached from the main column on a special mission, of which some account will be given further on. The main body of the expedition pushed forward with rapidity on the road to Spottsylvania Court House, reaching that place late at night, and moving forward without a halt towards Beaver Dam, on the Virginia Central Railroad, where it arrived about 5 P. M., on Monday. Here the telegraph operator was captured before he had time to announce to the Rebel authorities the arrival of our forces. All the other lines had been cut, and Mr. DAVIS had been in constant communication with that office throughout the day. At this station, the freight-house, telegraph office, passenger depôt, and many other public buildings were destroyed, the railroad track for a long distance torn up, several bridges and culverts were destroyed and an immense quantity of wood was burned. An attempt was made to capture a train loaded with troops which approached from the direction of Richmond; but the greater part succeeded in making a different route. A detachment sent to destroy the railroad bridge over the South Anna, at Taylorsville, found the position too strongly guarded, and was obliged to relinquish the undertaking.

The main command moved forward, at nightfall, towards Richmond, and during the night crossed the South Anna near Taylorsville, where the advance encountered Rebel pickets, and dispersed them after a brief skirmish. After a short halt, to rest and feed, the march was resumed. Kilby Station, on the Fredericksburgh road, together with a stone bridge, the railroad track, and several culverts in the vicinity, was destroyed by our forces. At Guinea Station the track was torn up and the telegraph rendered unserviceable.

The command pushed on with as much rapidity as was consistent with safety, and by half-past ten on Tuesday morning was inside the outer defences of Richmond, on the Brook turnpike, within three and a half miles of the Rebel capital. Several men on picket duty were captured by the advance, without firing a shot. Inside of the second line of defences, forty-five were fired upon by the third line. Here a desultory firing was kept up on both sides, until about five in the afternoon, when, Colonel DAHLGREN not appearing, General KILPATRICK decided to fall back. The bridge over Brook Creek, in the rear of the command, having been destroyed by the enemy, our forces moved off upon the Meadow Road,—crossing the Fredericksburgh and Richmond Railroad, and destroying all the public property within reach. They encamped that night within six miles of Richmond, and two from the Chickahominy. During the night, the Rebels made an attack upon the camp, but, after a brief skirmish, were driven off. The next day, finding that the enemy had burned all the boats on the Pamunkey River, General KILPATRICK decided to move across the White House Railroad and down the peninsula. Captain MITCHELL, of the Second New York, rejoined the main column on Wednesday with the bulk of Colonel DAHLGREN'S command, of which no intelligence had been received since Sunday night. About nine o'clock in the morning, the enemy's cavalry made an attack, which was easily repulsed; but the column was more or less harassed throughout the day by cavalry demonstrations on the flank and rear. On Thursday, General KILPATRICK moved toward New-Kent Court House, and on the way fell in with Colonel SPEAR, in command of a cavalry corps, who had been sent to render him assistance.

The expedition of Colonel DAHLGREN, after leaving the main column, proceeded to Fredericksburgh, on the Virginia Central Railroad, with the intention of spiking a large number of guns, which were there in store. But, finding the position defended by a large body of infantry, and as his orders expressly prohibited fighting when it could be avoided, Colonel DAHLGREN contented himself with the capture of a few officers, and moved towards the James River canal, which he struck at a place eight miles east of Coochland Court House. In this vicinity an immense amount of property was destroyed, including six grist mills in full operation, a saw-mill, six canal boats loaded with grain, several locks of the canal, and the works at the coal-pits at Maniken's Bend. Colonel DAHLGREN, relying on the information of his guide—a white man, who is now supposed to have been a Rebel spy—expected at this point to find a bridge over the river, and was therefore unprovided with the means of crossing. The guide and a negro, who was associated with him, were immediately hanged to the nearest tree.

The command then resumed its march towards Richmond; and, late on Tuesday afternoon, about the time that General KILPATRICK withdrew, it reached a point within three miles of the Rebel capital, where it had a brisk skirmish with a body of Rebel infantry. Finding the enemy too strong for him, Colonel DAHLGREN determined to fall back, in search of the main column. The Colonel, with Major COOK and about 100 men, separated from his column, taking a different route. The main body of his command, as already stated, rejoined the forces under General KILPATRICK safely; while Colonel DAHLGREN'S little company, as we learn from Rebel newspapers, in attempting to make their way to Gloucester Point, fell into an ambush on Wednesday night, at a point on the Mattapony, between Mantua Ferry and King and Queen's Court House, where their gallant leader was killed, and the greater part of their number made prisoners.

General SHERMAN is reported by telegraph to be back at Vicksburgh. His command is said to have destroyed forage and provisions enough to subsist the Rebel army from three to six months. In one place he destroyed over $2,000,000 worth of property. In other places he destroyed immense stores. Thousands of bushels of corn and large quantities of wheat were set on fire and consumed. He brought in large droves of cattle, several thousand head of mules, 8,000 negroes, and over 500 prisoners, with but trifling loss in men and material.

ALL was quiet at Jacksonville, Florida, on the 20 inst. Reinforcements were rapidly arriving, and General SEYMOUR'S position was sufficiently strong to repel any attack. The fortifications in front of Jacksonville are extensive and formidable. The main body of the enemy was encamped between Ten Mile Run and Baldwin, with a considerable force at the former place. General GILLMORE arrived at Jacksonville on the 20th, ult. The enemy had refused to deliver up our wounded, who had fallen into his hands.

THE MILITARY SYSTEMS OF EUROPE.

THIRD PAPER.

In the two preceding papers we have given the permanent organization of the European systems. The methods of organization adopted for putting an army into the field will be given in this paper.

According to the principles now adopted, the proportion of different arms and special services in an army of 150,000 men will be as follows:

115,000 foot, 15,000 cavalry, 12,000 artillery, 3,000 sappers, 6,000 men in the administrative departments.

The artillery would have 300 cannon.

Before the French revolution, the organization was by regiments and brigades. The generals had no permanent commands, but were assigned by turns. At the time of the revolution divisions were created, comprising ten to twelve thousand men, distributed in two or three brigades of infantry, a regiment or brigade of cavalry, and two or three batteries. Under the French Empire, divisions composed exclusively of infantry or cavalry were created. The system of the Empereur was that of operation by masses of either of the three arms. The Empereur created the *corps d'armée*, comprising two, three, or four divisions of infantry, a division of light cavalry, and a reserve of artillery.

The division is now the grand unit of organization in the French army; but corps are created when the army is large —over 60,000, for instance.

A division of infantry usually comprises two brigades—the first, formed of a battalion of *chasseurs a pied*, and two regiments of infantry of two or three battalions; the second, of two regiments of infantry of two or three battalions,—the entire force being from 6,000 to 12,000 men. As accessories, there are attached two batteries, a company of engineers, a detachment of the train of equipages, a section of ambulances, a detachment of workmen in the administrative department, a small body of cavalry, and a body of *gendarmerie*.

The division is commanded by a general of division, who has a divisional état-major, and military sous-intendant, or adjunct, charged with the administrative service.

When corps are formed, the cavalry sometimes has a separate corps organization, from 4,000 to 10,000 strong. The reserve is constituted into a regular corps, comprising *élite* infantry, heavy cavalry, and a heavy body of artillery.

There are also in an army mixed brigades or divisions, for advanced guards and detachments, comprising a battalion of chasseurs or two regiments of light cavalry, a battery, and a company of sappers.

Five corps for an army of 150,000 men, thus organized, is considered the best arrangement—viz.: three for the centre and wings, the fourth a reserve for the most important point of the line, and the fifth as a general reserve; each corps to contain three divisions—two for the line, and one for the reserve. The effective of each corps would be from 25,000 to 30,000 men.

The "état-majors" of the divisions consist of a colonel, or lieutenant-colonel, chief of staff, a "chef d'escadrons," and two or three captains. The "état-major" of a corps is a general of brigade, chief of staff, a "chef d'escadrons," and four captains. The "état-major" of the headquarters of the army is a general of division, chief of staff, a general of brigade or colonel, assistant chief, a lieutenant-colonel, three "chefs d'escadrons," and six or eight captains. A topographical corps of five or six officers, commanded by colonel or lieutenant-colonel, is usually attached.

In each army there is a "chef d'escadrons" of artillery, commanding the two batteries; a company of engineers commanding the company, and a captain of the engineer staff. In each corps the artillery is commanded by a general of brigade (who has a staff of his own), and a superior officer of the reserve, who has also a number of subordinate officers. The artillery of the whole army is commanded by a general of division, who has two aides-de-camp, a colonel, director of the parks, a colonel as chief of his staff, and a number of other staff officers. The engineers are commanded by a general officer, and who has aides-de-camp and other officers similar to the commander of artillery.

For the administrative services there are in each division a sous-intendant or adjunct; for each corps an intendant or sous-intendant, with adjuncts; for the army there is an intendant-general, and who has a considerable staff. He is charged with the whole administrative service.

The medical department has an officer with the ambulances of each battalion. Each division has a number of officers and surgeons with its ambulances. In Italy each division had five health officers, four of the administrative officers of the department, and seventeen nurses. Each division has about four or five chests, containing each about 2,000 dressings. Each corps has an ambulance train, and sometimes the material for a hospital of 600 beds. At the headquarters of the army there are the chiefs of the department, with all the *personnel* and material necessary.

The pay department is organized in each corps. It is under the charge of agents of the minister of finances. The money is carried in fourgons.

There is also a postal service attached to the army—a telegraphic corps, &c. At each headquarters there is a commandant, and a wagon master to take care of the light wagons.

When an army is to be sent out of the country, battalions of war are formed in the regiments. For the Crimean war the regiments were formed in three battalions, of which two were sent out, comprising all the able-bodied men of the regiment, about 800 in number. The third battalion remained at the dépôt on recruiting service. For the Italian war three battalions of war of six companies each were formed, and the 6th and 6th companies of each battalion were taken for dépôt service. In the same way five or six squadrons of war are formed, of about 180 men and 150 horses each. Two squadrons are left at the dépôt. The artillery regiments put as many batteries on the war footing as are demanded.

All the articles which the army will consume are provided at the fortified places on the frontier, in three lines; on the first 15 days' supply ready for distribution; on the second 16 or 20 days' supply, of which the preparation is well advanced; and on the third a similar quantity not prepared.

From 100 to 120 cartridges per man, and 200 to 220 for guns are usually provided, and usually four or five full supplies in this proportion are prepared. The infantry carry 60 cartridges on their persons, and 40 in the caissons. The second supply follows the army. The others are in the strong places on the frontier in different stages of preparation.

In 1859 for the Italian campaign, the Department of Intendance provided 36 days' biscuits for 150,000 men, with a reserve of 100 days' for 50,000 men, and 50 days' for age for 30,000 horses. The artillery provided several rounds of cartridges at 120 per man, and 220 per piece. The engineers provided 10,000 tools. The Medical Department provided all the material for 20 temporary hospitals, each of 600 patients.

The troops carry from 4 to 8 days' provisions, and the wagons enough to fill the supply to 15 days. On going beyond this time a new base of operations must be created, unless supplies can be drawn from the country.

The transportation of the army consists of three classes of wagons: first, the light wagons of the headquarters and *staffs*, the regimental baggage wagons (one to the regimental *staff*, and one for a battalion or two squadrons), and ambulances; this class marches with the troops. The second class are those for the distribution of subsistence, materials of the engineers, bridge equipage, the money for paying the army, etc. These march a day or half a day behind the troops. The third class, general supply trains, made up from the wagons of the army, or drawn by requisition from the country marched over. They are called auxiliary trains.

FRENCH NAVAL PREPARATIONS.

We quoted last week from a letter of a correspondent in France of the London *Herald*, an account of the French ships and guns at Cherbourg. The same correspondent whose opportunities for observation, we are told, have been unusual, gives in a subsequent communication a particular account of a visit to the great naval construction ports of France, Brest and L'Orient. Though he found them both tranquil, with nothing stirring to excite any suspicion of hostile intentions against England, he did find Europe in the way of such preparations for maritime warfare, as make him fear that "the France of a by no means distant "period, is destined to command the sea," unless the British Admiralty bestir themselves to maintain their old position. We give below the main portion of the letter, feeling sure it will be of the greatest interest to our readers:

I presented myself too soon at the Prefecture of the Marine in Brest, and found my way higher up the town to the Marine Barracks to report to the Amiral en general. I was too early for him also, and found my way to the parade-ground in front. These men in dark coats are young officers of the French Navy, who are undergoing their drill before them more vigorously, and, let me add, as successfully, as I ever saw men drilled before. The sight is a novel one to an Englishman, but it is a very common one to the French. Every day the officers of the French Navy are drilled as common soldiers are. The Marine Barracks, I come to an equally large building—the barracks of the sailor boys from ten to fourteen years of age; the same boys that are to be met every day in Cherbourg. One boy was on duty with a musket and bayonet on his shoulder, and there is a box into which he may retire in case of inclement weather. He goes into active service at the age of seventeen or eighteen. I step inside the gateway, enter the guard-room, and behold the commander of the boys playing the part of men, and doing it extremely well. The guard-room is a fine room indeed, I may say in the Prefecture of the Marine, and another strong contrast to our own. There is a blue-jacket mounting guard with musket and bayonet, and another guard-room noisy with the voices of sailors. From the Prefecture of the Marine I cross Brest Roads and follow the navigation towards Chateaulin. Here is a three-decker under all sail, and with great difficulty I am put on board. It is the *Louis Quatorze*. On board this ship there are 600 gunners, and on board the *Montebello* in Toulon Roads there is a like number. The gunners of these two ships are sent outwearied only to fire at sea, and as frequently in stormy as in fine weather. As soon as these twice 600 gunners are perfect marksmen they make way for others, and thus the whole population of the French navy are being transformed into service gunners of precision. They are besides in process of transformation into soldiers, for ever since the Russian war the French marine brigades of seamen have been maintained, and in Mexico, China, Cochin China, and elsewhere, all the spare men and boys have been landed from the ships, and with muskets in their hands become soldiers.

Returning to what is calculated to excite uneasiness in England, here, in one of the ships in L'Orient, is an ironclad corvette about which the British Admiralty knows nothing. This corvette was begun only four months ago, and will probably have been launched and ready for despatch to sea armed and armed. Mr. Reed's sloop in Chatham dockyard is 1,000 tons smaller, and has been two years in hand. In the English private yards the first of the class there been an approach to the exposition with which the French are favoring the public. It is known to exist; and I am not sure but that, were the French dockyard system similarly put to it, they would produce an iron armor-clad in much less time than we require. It is, however, a fatal delusion to suppose that France has discarded iron ships. The truth, I rather think, is that France has discarded wood ships. The corvette now in the Chatham Dockyard, there are fine frigates on the stocks in forward states, on which not a single shipwright has been employed for many months, while from the window at which I am writing, I know not to raise my eyes toward the dockyard and behold a line of vessels transparent and distinct against the dispatch vessels. And I remember that I came across some iron boats in the dockyard while rambling round. Nay more, what did that naval officer mean during the time I was with the French generals, to inform me? He said that wood ships were now of no use, and that they were only built because, which in France as many more than speedy loading. I was not able to get the naval officer to explain. In his opinion the *Gassendi* and the *Magenta* were wood ships, and the *Solferino* and the *Marengo*, because the former are of iron and the latter are of wood. Those that think that France is still for wood, and has implicit confidence in wood ships, are in the wrong. I was very much behind in their information. But I am rather wondering from the point to which I desire to direct attention in this letter, and that is the extent to which France is now expeditiously as England can, and is constructing them in much less time than in the days of peace. I make that statement let me astonish the British Admiralty with a feat of iron that has just reached me from the highest quarter, and the truth of which I can vouch for. The *Normandie* is literally in a few days at Toulon. Six weeks ago, I am told, the Toulon dockyard authorities set to work to build an experimental armor-clad ship on a certain plan, and six weeks hence she has been kept going night and day, Sunday and Saturday, ever since. Now, by the cupola ship in six weeks hence. What a commentary on the statement that the *Warrior* is in Portsmouth dockyard. We are asleep, and France—wide awake. We are behindhand in the science of construction, and the French are actors. I have pondered over the forms of the French iron-clads, and, in my opinion, they are not the best. They are not sufficiently scientific. The genius of Mr. E. J. Reed looks extremely dim beside them, and I assure him that were he to see the small step that is contemplated in the French hull he will be ready for six within six months from the time of laying down, he could form something like a ship—that will draw only some eight feet of water although armored round the bottom at the water line, and will mount one gun to be fired behind double that of any French iron-clad erected hereafter. A more perfect and formidable small craft I have not yet seen; nor has one anywhere been built.

In my last from Cherbourg I said that I would refer to that dockyard. In doing so allow me to correct an inaccuracy, for which the error of my memory is to blame. I said that the *Couronne* was the largest ship in the basin. This is a mistake; for here in L'Orient Dockyard, where I have been over the *Couronne* to-day, and, indeed, where I have gone over the *Hercules*, the sister ship. The *Couronne* and the *Hercules* have wood behind their armor of such a thickness as to make them the largest. In Cherbourg dockyard I went over the *Flandres*, iron-clad, and the form and strength of that ship being much the same as those of the *Couronne*. I mention what both are, to correct the erroneous impression that exists in England. The form of the *Flandres* is that of a ship short in proportion to her breadth, the length proportioned to the breadth four, or at the most five times the breadth, and with the extremities as fine as possible. Such a form is necessary not only for that of midship section, and the midship section that there is forms a pivot on which the ship turns readily, and yields readily to the helm, but for the ship's speed and handiness. Besides, this absence of midship section gives you a ship of great strength, the weak part of all ships being the middle length, and the strength of the ship's middle being the very thing that our own, even although our ships may be the finest in the world, are deficient in—and that the French architects of the soundness of this model common-sense theory that they reject for iron-clad purposes the admirable wood forms that they have built by. They reject specially these ships possessing the great midship length that we very stupidly have given to all our iron-clads. But the French architects have not gone so far as to do so without great strength. The timbers are thick and well filled, while inside the ship there is diagonal planking, and outside the ship longitudinal planking. There is, in addition, there is an extra thickness of planking on the water line. On the whole, I am inclined to think that the finest piece of timber in the French iron-clads as in our own, particularly in the essential parts: and the French iron-clads are equal to the rubbish that is known as the "wood" of the sides of the *Flandres*, in Cherbourg, is in the main true of all the French iron-clads. Allow me to correct another erroneous impression. The *Normandie*'s lines were not put out during the late cruise.

LAST week General Casey's Board examined 59 applicants, of whom 31 were rejected and 28 accepted, with rank as follows: two majors, seven captains, seven first lieutenants and twelve second lieutenants. No person can be re-examined for any course whatever. The decision of the board is final. Those who do not pass, and those who may desire higher rank than that conferred at the time of examination

CORRESPONDENCE.

PROMOTIONS IN THE NAVY.

To the Editor of the Army and Navy Journal:

SIR—As you have undertaken the publication of a journal devoted to the Army and Navy, I take it for granted that you feel an interest in whatever concerns these two services; and as you are a human being, and of course not professionally omniscient, you will probably be disposed to hear the opinions of different persons, that you may compare them with your own, and possibly strike out a new idea which you can enlarge upon. I have seen some service in the Navy, and propose to give you some of my views on the subject of promotions.

From my entry into the Navy until within the last two years, promotion, with one exception, have been made by seniority. The systems of promotions in European navies have often been discussed by naval officers, and, generally speaking, of, so far as they were made for merit, so called, but in reality, by personal or political influence. It was not an uncommon thing to see a captain of an English man-of-war, having for his executive officer, a lieutenant under whom the captain had sailed as a midshipman. Such things we thought we could never stand, but we soon accustomed to, we were then educated to us, that we should see in our own Navy a system of promotion by favoritism, that would make all the favoritism in all the European navies put to shame. In all of the European navies I think a portion of the promotions are made by seniority, and a portion by selection, or for merit, or by influence; but in none can an officer be promoted, in either way, until he shall have performed a certain quantity of service at sea. Thus, in the British Navy, promotions to the grade of captain are made by seniority or selection; but from that grade to that of admiral, promotion is by seniority only. And although it has this rule been adhered to, that when the British Ministry wished to promote an officer by making a lord of him, they were obliged to promote a large number of captains who stood above him. It was left for the Congress of a republic to devise a new rule for making a lord of a man, promote by favoritism, for it is nothing else, officers two or three grades at a time, without requiring any fixed length of service in the grade from which they are taken or to.

For some years I have thought that our system of promotion by seniority, although very well adapted to a small navy, as ours was up to the year 1861, would not at all be suitable for a large navy, such as ours now is; and I have been ready to see any change that would remedy the evil, or rather, as that seems to be the only system, except by seniority; and however much we may be opposed to the principle, we find ourselves in practice. The only true question is, how shall it be done so as to be the least objectionable to our sensibilities.

Before adopting a plan for promotion we should repeal the present outrageous law creating the grade of admiral, and send all the present admirals to some place where they can associate for honorable officers. Then establish the grades of admiral, captain, commander (or captain of corvette), lieutenant, master (not in the line of promotion), ensign and midshipmen.

I propose that two-thirds of all grades below captains be promoted by seniority, and one-third by selection. Before promotion in either way, ensigns, who are passed midshipmen, should perform three years service at sea before promotion to the grade of lieutenant; masters should perform four years service at sea before promotion to the grade of commander; lieutenants, particular duty, three years service at sea before promotion to the grade of captain; and captains should perform two years service at sea in a second rank and two years service at sea in a first rate before promotion to the grade of admiral.

Captains should be promoted to the grade of admiral by seniority only, and no captain can rise to the rank of admiral, if the first captain on the list has not performed the requisite sea service, let him be promoted on the retired list of admirals, and so on down the captain's list until one shall be found who has performed the requisite service, and promote him to active list of admirals.

Let it be made the duty of all commandants of ships to make reports of all the officers under their command, on such points of merit as may be required, and a form for a uniform plan as shall be prescribed by the Navy Department: such reports to be filed at the Department for reference.

Once a year let a board of five admirals (no politicians) be appointed by the Secretary of the Navy to select the officers of all grades for promotion, who shall have reference in reference to the reports; and should any of these selected to be promoted, refuse to accept, let the next on the list be promoted in his place, subject to the action of the next retiring board. For very meritorious services in war, officers might be promoted by the board, without regard to their having filled the requisite sea service. If an officer, after performing some meritorious service, should refuse another promotion, he should not receive another promotion for such service.

Matters should not be promoted by grade. These duties are very important, and should be properly performed by ensigns, who, however intelligent and learned they may be, may not have the experience and practice necessary for the grade. Masters should be selected from the civil service; they should not be over twenty-five years of age when appointed, and should have had some years experience in seamanship and navigation. In lieu of promotion by grade, they should have their relative rank increased, until at the age of thirty-five they should be placed on a service with the rank of captain; and during their service they should have increased pay after the plan of staff officers.

I propose only one grade of admiral. In other navies there are generally three grades—admirals, vice-admirals and rear-admirals, and three colors of each grade, making nine flag grades. Our officers have always claimed that all commanders of squadrons, of whatever grade, should be equally equals. This has not been conceded by officers of foreign navies, where they claim the different ranks of admiral as the grades. If we, then, have but one grade of admiral, our fleets will always be commanded by an officer equal in grade and rank to the highest officer commanding a fleet that he may meet with, and if he meet with a commanding officer of lower grade than himself, he can carry out the principle that we contend for, and acknowledge his official equality.

SAM'L ERNEST.

McCALL'S DIVISION AT GLENDALE.

To the Editor of the Army and Navy Journal:

SIR:—"One who was there," in endeavoring to "set right" the question of McCALL's Division at the battle of Glendale or Nelson's Farm, in the absence of the JOURNAL, may picture correctly what took place in the *rear*, but certainly does not in the *front* as I took place in the *front*.

The stampede of cavalry, artillery, &c., in such vast numbers, is simply the fruit of an excited imagination. We have did this cavalry come from? It certainly did not belong to McCALL's Division, and was not in the fight. Again, the attack was made on both the *left* and *right*. The left was overpowered, and driven back, quick enough.

That there was some bad management, and some running and skulking, as there always is when a line is broken, is doubtless true; but the division of Pennsylvania Reserves, and we believe no other division, ever did harder fighting than was there shown and on that day.

The troops that came to the support of this division, both those of HOOKER's and RICHARDSON's divisions became mixed with the troops of the Reserves, but they can suffice no disparagement by allowing justice to those who sustained the first shock, and warded off from others the principal force of the enemy's fire, and who really did the principal part of the hard fighting, as the graves of the dead and dying divines left on the field near Nelson's house will forever show.

This is but one of a hundred other instances in this war, where troops have been thrown into action, and, as must study, born resistance, are overpowered and broken, but at the same time so cripple the enemy, that but little is left to be done by the supporting troops, but to gather trophies, receive or claim the praise of having done the whole.

We shall be glad to see this call a contingent to this day's battle where this same division was covered with glory for its *success*, while it really did not do one-fourth the fighting that it did on this 30th day of June, 1862, at Nelson's Farm.

It is idle to pretend now to decide fairly as to the real merits of the conduct of the troops engaged at this war, and why this instance should be singled out for so much fruitless discussion we are not able to understand.

J. W.

[The Editor must decline to suffer the further discussion of this question in the columns of the JOURNAL. Both sides of the controversy have now been presented, and any further discussion would be useless and detrimental.]

THE COMPARISON OF NAVAL FORCE.

To the Editor of the Army and Navy Journal:

SIR:—The prime case of the *Atlanta*, which has been decided by the Admiralty Court, would lead us to inquire into the principles of a true comparison of naval force.

The first question before the Court was, whether the *Atlanta* was equal or superior to the monitors, the *Weehawken* and the *Nahant*. To determine it, the Judge considered the points relating to the vessels, their armament, and the crews of the combatants. The vessels and the ordnance were examined by ordinary and experimental, and hence the old rules of naval science for the comparison of naval force were superseded in the case of these novel engines of war. The problem was solved by the fact that the vessel had greater aggregate tonnage, superior ordnance power, and more men. In the "means" for warfare, the two monitors were adjudged as not being equal to her.

This conclusion may be correct, but not because all of Judge SPRAGUE's premises were correctly established. In the first instance, the comparison of tonnage, armor, crews, or sea assumptions have been made. This fault is inherent in the law for ship admeasurement, and is delusive; and were it otherwise, the rules for tonnage were never intended for application to such *unique* types of naval architecture as those of the monitor class.

It is not true that the tonnage of vessels, as ascertained by our law, is exactly proportional to their principal dimensions. Two vessels of identical dimensions, unless of similar model, will have dissimilar *bulks*, and hence unequal units, or numbers, of magnitude. The opposite is true, that the *bulks* of dissimilar models equal tonnage; but the *Atlanta* being unlike them in dimensions and form, a true comparison cannot be instituted truly with them by the standard of tonnage. Under the law, one vessel may have the same principal dimensions with another, and yet differ in tonnage. The true tonnage, for the law prescribes a crude and erroneous method of survey for tonnage, and the result is arbitrary and fictitious.

The tonnage of the *Atlanta* cannot be fairly taken, even by the imperfect legal method, if we can rely upon their published principal dimensions—the extreme length is there stated at 204 feet, but the law directs us to strike past being given at 159 feet; the extreme breadth at 55 feet, but the breadth of hull is given at 50 feet; and depth from deck 12 feet. The tonnage by extreme dimensions, 844 tons; but by the interior or hull dimensions, it is about 650 tons. The tonnage of the *Atlanta* is less than the tonnage of the monitors, the rule being fairly applied, would, therefore, be about 1,200 tons. Now, if we include the casemate structure which was built upon the deck, and in the computation of the tonnage of that vessel, she, too, will reach about the same amount, 1,200 tons. But the difference in the tonnage engaged was probably not very material.

Let us now examine another mode of comparing the armed ships concerned in this action.

It is the observation of experienced naval architects, that the design of a ship-of-war is to be made wholly with reference to its *armament* and its *defense*, and that *speed is to preserve from the enemy*. Every thing done is to increase this vessel's power of offense and defense, as a fighting machine. If the battery is to be terrible, it must be borne by an invulnerable ship; offence and defence must be commensurate qualities. *Strength must be represented by weight.* If cannon are enlarged for delivering concentrated broadsides, armor plates must be adopted for avoiding their destructive effects. The limits of power and invulnerability, as qualities of armed ships, will be reached only when the ocean refuses to bear upon its bosom the destructive creations of human genius, but lets fall in rebuke to the bottom the monsters which Jove only might be able to destroy.

The comparative efficiency of the armed ship may be taken, therefore, as proportional to her *weight*, when ready for battle. The weight of a ship, and all on board, is found by computing the fluid displacement.

If we compare the *Atlanta* with the two monitors, by this standard, it will be found that little difference exists—that, practically, the tonnage of the *Atlanta* is at least equal that of the two monitors. If the displacement of the *Atlanta* was greater in proportion to armament, than that of the monitors, it was owing to their ample sea-qualities—a quality because she had a larger measure of propulsive power, of reserve buoyancy for ocean navigation, and better quarters for men; qualities compensating certain defects in her design, calculated to render her rifled armament terribly effective in the actual fight of monitors, though, perhaps, rendering her wanting in invulnerability to close quarter with the monitors. That they made her a prize in action was due to superior skill, and not to any real disparity existing between the vessels, for the *Weehawken* only was engaged in firing.

In this case shows the importance of having a true standard for comparing the naval forces of opposing ships-of-war; for it may be seen that were the *Atlanta* a trifle larger in displacement, or weight, if computing by tonnage, as legally computed, would have inflicted wrong upon the brave men who fought her guns. Let tonnage, at least until it shall be scientifically computed, be thrown aside; and adopt in its place a calculation of fluid displacement for the standard of naval force. It will most frequently indicate it in all respects.

WILLIAM W. BATES.

ASSIMILATED RANK IN THE NAVY.

To the Editor of the Army and Navy Journal:

SIR:—In determining the relation or assimilated rank between the line and staff officers of the Navy (a matter which has of late been brought to the table for consideration), the objects for which a Navy is created, as well as its organization.

The first purpose for which ravies are supported by nations is, to destroy by their means, the goods, ships, forts and lives of enemies in time of war. This is made evident by the organization of the Navy Department, and by this alone the Articles of War for the government of the Navy of the United States are sufficiently emphatic. They provide the penalty of death—

"For all commanders of fleets, squadrons or single ships, who shall, through cowardice, fail of an engagement, or any sight of any armed vessel of an enemy or rebel, neglect to prepare and clear his ship for action; or shall not, upon signal for battle, use his utmost endeavor to join the fleet; or shall fail to encourage in his own person his inferior officers and men to fight courageously; or shall not do his utmost to overtake and capture any armed vessels which it may be his duty to encounter, or shall not afford all practicable relief and assistance to any vessel belonging to the United States or to their allies when engaged in battle.

"Or shall strike, or attempt to strike the flag to an enemy or rebel without proper authority, or run away, or betray battle shall treacherously yield, or pusillanimously cry for quarter.

"Or shall, in time of battle, display cowardice, negligence, or disaffection, or withdraw from or keep out of danger to avoid it, or shall express himself, or shall desert his duty or station, or shall refuse or omit to do so; or shall not properly observe the orders of his commanding officer, and use his utmost exertions to carry them into execution, when ordered to prepare for, join in, or when actually engaged in battle, or while in sight of an enemy."

The Articles of War which follow cavies are used in time of war as well as of peace, is to make them the police of the high seas, and generally to serve as a protection to commerce in all quarters of the globe, and in semi-civilized and barbarous ports. In so doing, acts of violence have to be resisted by force.

The destructive agencies in use in navies are guns, and men on ship-board. The command of these ships devolves upon officers, who are styled, in our service, Admirals, Commodores, Captains, Commanders and Lieutenant-Commanders. Their subordinates, who drill, discipline and also exercise command of the men, are styled Lieutenants in manœuvers, are styled Lieutenants, Masters, Ensigns, Midshipmen and Boatswains, and with the former are gunners and Sailmakers.

To administer to the wants of these human destructives a corps of officers and men are supplied, as Surgeons, Paymasters and Chaplains, who are styled staff officers, and are known otherwise as non-combatants, and familiarly called, "Sky-blues" and "Shore." Of late, Engineers have been added to the staff.

As then a Navy is organized mainly for destructive objects, the destructive agents are necessarily of the most prominent place in such organizations.

These human destructive agents must, and do exercise, command over the non-combatant class.

A Navy is absolutely a military service.

The rank in a military service necessarily accompanies command.

Usage and equity coincide with necessity in assigning proper rank in a military service to officers of military service, that is, to the destructives or officers of the line.

Precedence among its members is or requisite in a Navy as in other bodies.

The custom of the world has assigned this precedence, in accordance with equity and the necessities of the case, to the destructive branch, or to the line.

The American Navy has been no exception to this rule until lately, when unjustifiable innovations have been introduced.

These innovations give undue precedence to the staff, at the expense of the line.

Stating the case nakedly, it is reduced to this: Are the de-

structive officers who wield command, and who bear its high responsibilities, to have the precedence over the non-combatants, or are these latter to have it over them? If the country wishes to maintain a Navy that will perform what is expected of it, the country must look to it that changes are not made in it which will destroy its usefulness. Such change is now being consummated.

Before this war, such a statement would not probably have met with the approval of our people, because long years of peace had had the natural effect of deadening their perceptions of danger in the case of a Navy, like any other organization. A false and foolish philanthropy, somewhat prevalent over the country, would have been shocked at the idea of supporting the rights of destruction, either in the Navy, or anywhere else, and the claims of the lice officers of the Navy would have been silenced with contempt. Nay, they were so silenced.

With the experience of to-day, it is otherwise. Every man, woman and child in the land now knows and feels what armies and navies are maintained for, and are not to be frightened from contributing to sustain them *properly*, because flaws and defects in their efficiency have been painfully hoped that the people at large are sufficiently interested on maintaining their Navy upon such a footing as to preserve its fighting or hardy element intact and preeminent as it should be.

AN EXPEDITION ON THE MISSISSIPPI.

To the Editor of the Army and Navy Journal:

SIR:—An expedition of 70 men, commanded by Lieutenant-Colonel Wilson, of the Seventh Iowa, left here on the 13th instant, and went in pursuit of a Rebel train reported to have crossed the river the night previous. After marching about 15 miles they came to a house, the same upon the party, commanded by Colonel TYLER, C. S. A., and took them all by surprise, without firing a gun or any opposition on their part. After sending the prisoners and booty in the vessel, we continued our expedition for a distance of seven miles from the river, when we discovered the advance of a party of Rebel cavalry guarding a lot of cotton belonging to the Confederate government; we attacked the guard, who immediately threw their arms down and fled, leaving us in full possession of the cotton and started for the vessel; was followed by a party of Rebel cavalry to within one mile of the vessel. The skirmishing was very severe, as the enemy numbered no better than; a great many shots were fired on both sides, but fortunately we had none killed on our side. We returned with thirty-two bales of cotton, twenty-five mules and horses, seven wagons, also Colonel TYLER, Major O'BRIEN, one lieutenant and six men, all C. S. A. This is the first expedition, like all others, commanded by Captain T. F. SERRADOS, was very successful. He deserves a great deal of credit for the perseverance, energy and coolness he has in executing the laws of government. The whole party were volunteers. Captain SERRADOS was ordered to send the boys out for a run, and swore the Rebs that *Blue Jackets* could take them hanging. The capture opened our eyes, and we kept a look out for rebel cavalry after that.

A few days afterwards we landed at the bank to parole some Texas cavalry who had given themselves up, and professed to be tired of the war. At this time about 200 men of thirty-three holes came into our hands. Two men skimming to the cotton, and professing the strongest Union sentiments, were found, after a close examination, to be Rebels in disguise; but we have learned to not believe all we hear in this country. South. In their boots we found concealed orders from all the officers on the Rebel General WALKER'S staff for supplies from New Orleans. The next day we shipped another party of Rebs same way with our bales, and found his orders the same as above. We *gobbled* up the cotton, prisoners, and all, and sent the Union gents to the Colonel to cool off. The last of the cotton and Captain SERRADOS attends to the duties of guarding the Mississippi River. T. A. D.

COL. CARROLL'S BRIGADE AT GETTYSBURGH.

To the Editor of the Army and Navy Journal:

SIR:—In your issue of February 20th, "Truth," in a letter on "Congress and General HOWARD," says, that "General HOWARD is not seeking promotion," but is to "report to General HOWARD." In this respect he is mistaken. Those regiments of this brigade, under Colonel CARROLL'S command, were first sent; and some time afterwards, two more from the 2d Division. The two latter did not come in the same part of the line as our brigade, which alone drove the enemy from Cemetery Hill, out of the battery, and held that portion of the line from which part of the 11th Corps had been driven. To substantiate my first statement, I enclose a letter from General GIBBON, who commanded the corps at that time.

Respectfully, your obedient servant,
ADJUTANT.

HEADQUARTERS 1ST BRIG., 3D DIV., 2D CORPS, }
MARCH 9TH, 1864. }

[The letter of Brigadier-General GIBBON to Colonel CARROLL, alluded to by our correspondent, is dated at Philadelphia, February 24th. After saying that he has learned that the brigade has not received full official acknowledgment for its services with the 11th Corps at Gettysburgh, on the night of the 1st, and the day and night of the 2d and 3d, General GIBBON says:—"As I happened to be in command of the 2d Corps, your brigade was, at the suggestion of Major-General HANCOCK, detached to the command of the 11th, I am of course cognizant of the circumstances attending the temporary separation; and I, therefore, upon me, as your then commanding officer, to do what I can to repair what I am led to believe is an act of injustice toward a portion of my command. I know nothing, of course, officially, of your services whilst detached from the 2d Corps; but I am not ignorant, in so much what, considering your reputation as a soldier, the character of your command and the reports which reached me at the time, and afterwards, of your fighting qualities, and general conduct, of a critical point, I suppose them to have been of the utmost importance in preventing the enemy from obtaining a foothold on the key to our position—Cemetery Hill. You are at liberty to make what use you deem proper of this communication; and I shall be much gratified if it aids you in any way in obtaining a just acknowledgment of the services of yourself and your command at the battle of Gettysburgh."]

GENERAL MCLELLAN'S REPORT.

To the Editor of the Army and Navy Journal:

SIR:—In your article in relation to the charge, made by the publishers of the private edition of General MCCLELLAN'S report, that important matter had been omitted in the Government edition, you say 'the only omission is the following:

"It will be seen, from what has preceded, that I lost no time that could be avoided in moving the Army of the Potomac from the Peninsula to the support of the Army of Virginia; that I reared no effort to hasten the embarkation at Fort Monroe, Newport News, York, and Yorktown, remaining at Fort Monroe myself until the rear guard of the Army had landed; and that after my arrival at Alexandria I left nothing in my power undone to forward supplies and reinforcements to General POPE, and that my whole force was moved on the earnest by I could get hold of; even my personal escort was sent to the front, and I was left with only my staff, the engineer and company guard at headquarters, retaining less than one hundred men, many of whom were sick. Finally, on the morning of the battle, all the headquarters' teams that arrived where sent out with supplies and ammunition, leaving myself without even the headquarters' escort. The squadron that habitually served as my personal escort was left at Falmouth with General BURNSIDE, and was ordered in the cavalry.

Now, had you read page 185 of the report, as printed at this office, you would have found this very paragraph, put in as the 'only omission.' The fact is that the only real omissions were made either by the War Department in furnishing copy or by this office in printing it.

JOHN, &c., Superintendent of Public Printing.

[We take great pleasure in publishing the above, and in acknowledging our error. The origin of the error was in the fact of the transposition in the private edition of the Report of the paragraph which in the official edition of the paragraph was put at the close of the Third Period, where it seemed in reality to belong, as the recapitulation of the events narrated in the chapter. In the Government edition the paragraph is inserted in a different place.—EDITOR.]

THE BALL OF THE SECOND CORPS.

To the Editor of the Army and Navy Journal:

SIR:—The ball given by the officers of the Second Army Corps at corps headquarters, on the 22d of February, proved to be a most brilliant affair. The hall had been built under the supervision of the committee of arrangements, 60 by 80, and a support upon adjoining, 20 by 80, constructed for the accommodation of the ladies' supper, in possession of the corps.

The decorations were tastefully arranged, and consisted chiefly of the various flags of all the regiments in the command, some of which were very conspicuous for their tattered and shot-riddled appearance. Flanks of arms and accoutrements and two light 12-pounders, brass, ornamented the platform at the end of the room, and attracted very considerable attention. The music for the occasion was the music, consisting of the band of the first division and 11th C. V. Headquarters, but the 2d Division, 2d Corps, leaders of the first division band. The company began to make their appearance at eight o'clock, and in the course of an hour the hall was completely filled with the elite of the metropolitan guests, military and civil, that ever graced a ball-room floor in the United States: Vice-President HAMLIN and daughter, Secretary STANTON, Secretary CHASE and daughter, and party of eight young ladies, Mrs. Senator HALE and daughter, Rev. Dr. PRENTISS, author of *Summers in Venice*, and daughter, Mrs. Chancellor WILLIAMSON, Mrs. Senator HARLAN, Miss BROWNBIGG, of New York city, Mr. C. A. ALVORD, of New York Tribune, and numerous other well-known distinguished generals and other officers serving in the Potomac Army.

Dancing commenced at nine o'clock, and was continued with great spirit until morning, when the supper-rooms were opened, and all found plenty and in the best of style, owing chiefly to the exertions of Lieutenant C. H. H. BROCK, staff of Brig. Gen. HUMPHREYS, who was charged with its entire arrangements. After supper dancing was renewed and protracted until the "wee sma' hours," when the ambulance trains of the corps reported to convey the guests to their respective quarters.

The toilets of the ladies were magnificent, and the officers of the corps proved they were as successful upon a ball-room floor as upon the field of battle.

ARMS AND TROPHIES FOR THE METROPOLITAN FAIR.

The Committee on Arms and Trophies of the Metropolitan Fair, in their circular, to which we recently referred, invite contributions of arms and trophies from the United States, corporations, and individuals; and relics of American wars from the early struggles of the Colonies to the present time. Rusters which have been through the battle-field and fort, carried by victorious hands, or stripped from the hand of the patriot flag-staff pierced with heroic blood, whose fading lustre is lighted up by the bright fire of battle; ensigns which have waved victory from the mast-head of gallant ships; swords of the commanders of the different armies and naval contributions, will draw the mind to a contemplation of the question for which the true soldier fights—the glory and honor of his country. Swords of Generals, Governors of States; early and celebrated commissions; swords won in battle; presentation swords, and arms of every kind, from the crowned and garlanded cannon of LOUIS XIV., to the plain DAHLGREN and PARROTT, which frown on modern batteries; and from the tomahawk of the Indian to the broken musket from the last battle-field, will have their appropriate place. All such articles, the committee promise, shall be taken charge of with watchful eye, and promptly returned to their owners.

The committee also propose to get from the chiefs of them gallant and devoted men who have laid down their lives in an holy war, such personal relics as they may be willing to unveil to the sympathizing interest of the world. Exposed together, and as a tribute of respect to the dead, these touching evidences of individual patriotism will make an interesting feature in the Exhibition.

The patriotic public are requested to send in to this committee such articles of the above named nature as they may be able to control, for sale, as well as for exhibition. Dealers in arms are especially invited to contribute largely of their stock for sale, for the benefit of the Fair. In this case does the committee apply with more hope, than to these dealers, who have been to profit by the sale of implements of war. Every object of interest, no matter by whom sold, which the soldiers in the field may send, will be received and cared for. All packages sent to WILLIAM T. HODGEN, chairman of the committee, No. 2 Great-Jones street, by any of the Express companies in the United States, will be free of charge.

MILITARY MATTERS IN CONGRESS.

SENATE.

THE Senate Committee on Military Affairs reported adversely upon the bill to prevent officers of the Army and Navy, and other persons engaged in the military and naval service of the United States, from interfering at elections in the several States. It came before the Senate on the 23d inst., and was warmly supported by Mr. POWELL. The first section of the bill provided that it shall not be lawful for persons in the military or naval service of the United States, except when ordered in any case by proclamation, use of soldiers, or otherwise, with the freedom of the polls at elections, or with the exercise of the right of suffrage in any State. The violation of the provisions of the bill is made a high crime and sentence before a United States Court, to a fine of not less than $200, and not exceeding $20,000, and to imprisonment in the penitentiary for not less than two nor more than twenty years, at the discretion of the court; and any person convicted is moreover to be disqualified from holding any office of honor, profit, or trust, under the Government of the United States. The bill is not, however, to be construed to prevent the use of any officer, soldier, or marine, from exercising the right of suffrage in any election district to which he may belong, if otherwise qualified, according to the laws of the State in which he shall offer to vote.

The subject of the disposition of confiscated lands, which would hereafter be left unclaimed, by reason of pardon has given the Government undisputed possession of the Rebel property, was under consideration by the Senate Congress, in one form or another. A petition was recently presented, signed by ELI THAYER and others, praying Congress to confiscate the property of rebels, and to give the negroes land and to give of the same, without other formality than occupation, 160 acres to each private in the naval service, and to such officers as have not been commissioned, and the estate of the Rebel army who will take the prescribed oath of allegiance to the United States; and that the lands thereafter remaining be open to settlement under the Homestead law.

An important bill to provide for the better organization of the Quartermaster's Department was introduced on the 8th inst. by Mr. WILSON, of Mass., and referred to the Committee on Military Affairs. This bill organizes divisions charged with the following duties: 1. Transportation. 2. Supervision of horses for the service. 2. Purchase and issue of clothing, knapsacks, camp and garrison equipage and quartermaster's stores. 4. Barracks and hospitals. 5. Western transportation and telegraphs. 5. Purchase of forage. 6. Erection of hospitals, barracks, storehouses, stables, bridges. 7. Purchase and charge of wagons, ambulances and forges. 8. Inspections and reports. 9. Claims—payment and record. Provision is made in case of urgency or in purchases at the seat of war, advertising for proposals is required. The bill provides also for the more economical disbursement of funds, and for the punishment of frauds or bribery in such purchases.

A warm debate was occasioned on the 8th by Mr. POWELL'S motion to discharge the committee from the resolution calling for the report and evidence of the Commission, which investigated the case of Major-General BANKS, charged in the investigate the conduct of certain officers in the West. The resolution was opposed by Mr. WILSON on the ground that the investigation was of a delicate nature in some respects, but had been sent out simply to seek information for the Government, much of which was to be used in the prosecution of the war, and that the contents in part had become implicated in unlawful transactions. Mr. GRIMES opposed the motion to discharge the committee from the resolution by striking out the word "Secretary of War," and inserting "President." Resolution sent of the United States to transmit to the Senate the proceedings of the Commission, and pages 6 and 7 in question "shedding light upon the subject." Mr. GRIMES considered the appointment of the Commission a gross violation of the articles of war, and that the President, the Secretary alone shall have power to appoint such commissions; and yet this one, which he considered nothing but a commission extorted from the President, composed of men not of high standing, had been formed entirely without the knowledge of the President. Mr. SUMNER referred to the case of General CURTIS, who was arrested in part testimony, without his presence. He had been informed that every particle of the testimony relating to General CURTIS was taken by the Commission, was disproved by testimony new in the possession of the PRESIDENT and the War Department. He considered that the PRESIDENT of the GOVERNMENT announced at once that General CURTIS was free from all blame. If the resolution passed it would be accompanied by a request for such testimony which should properly accompany it, that the country might have an opportunity to judge of the matter. He did not want any parte statement to go out to the detriment of a soldier when the records of the War Department entirely exonerated him. After further debate, in which Messrs. WILSON, SHERMAN, POWELL, JOHNSON and others took part, the subject was indefinitely postponed for the present day, when the resolution as amended was rejected.

HOUSE.

Mr. LOWE, of Indiana, reported on the 4th, from the Committee on Revolutionary Claims, the following resolution, which were unanimously adopted:—

Resolved, That the thanks of this House be, and are hereby, tendered, over the gallant surviving soldiers of the Revolution, twelve in number, now living in the city of Washington, the Commissioners of Pensions for their services in the Revolutionary war, by which the independence was achieved and our liberty obtained, and under whose policy in the decrees of Providence which have thus far crowned their lives beyond the allotted period of man, and enabled them in their declining years to receive from the Government a sum of money to provide, if not as large as desired by them, yet at least help to smooth the rugged path of life in their descent to the tomb.

Resolved, That copies of this resolution, when adopted by the House, be signed by the Speaker and attested by the Clerk, and a copy of the same be furnished to each of the revolutionary pensioners mentioned in the preamble and resolution of our sister Republic this day adopted.

The Deficiency bill was passed on the 8th. An amendment appropriating $35,000 for medicine and medical attendance for negro refugees was strongly opposed by Mr. Rollins, but was carried. The bill, with this addition to the larger number of the Senate's amendments, including $50,000,000 for Quartermaster's Department, $18,500,000 for regular expenses of the Quartermaster's Department; but owing to disagreement on several amendments, the bill was returned to the Senate.

A series of resolutions of the Iowa Legislature in favor of soldiers, who have been discharged in consequence of wounds and disabilities, and who are destitute in circumstance under the United States Government, and heartily endorsing the policy of paying colored soldiers and officers equally, and against the same as much as received by whites for similar service, were presented on the 8th by Mr. Harlan, of Iowa, and referred to the Committee on Military Affairs.

A substitute offered by Mr. Boutwell for the bill authorizing the Secretary of the Treasury to sell from time to time, at his discretion, any of the bonds held in trust for any State, and above the amount which, in his opinion, may be required by the Government for the payment of the interest on the public debt, was passed on the 8th, by a vote of 94 against 54. In its amended form the bill merely authorizes the Secretary of the Treasury to anticipate the payment of interest on the public debt, from time to time, with or without a retainment of interest upon the coupons, as he may deem expedient.

Mr. Schenck, from the Committee on Military Affairs, reported the following bill:—

Resolved, If in case the regular Regular and Volunteer officers are entirely unemployed or not upon duty corresponding to their rank, that such officers be retired from active service without reduction of rank and at the same time standing in the way of promotion and service of companies, regiments, brigades, divisions, corps, and armies; therefore,

Resolved, That all major-generals and brigadier-generals who on the 15th day of March shall not be in the performance of duty or active service corresponding to their rank, and who have not so regarded for three months next prior to this date, shall be dropped from the rolls of the army, and shall receive retirement pay from that day, and the vacancies be filled by promotions and appointments as in other cases; and that no officer shall receive pay or any officer accompanied in consequence of wounds received or disease contracted in the line of duty, or who is a prisoner of war in the hands of the enemy, or on parole.

The latter part of the bill provides for returning to the Regular Army the officers appointed therefrom to the colored regiments of service. They are to be returned to the rank they occupied before they were appointed on the 15th of May, 1861. After the scrutiny debate, the bill was made the order for Tuesday next.

A bill was passed providing that regular and volunteer captains shall not suffer diminution or loss of pay when absent on leave, or on account of sickness, or when held by the enemy as prisoners of war, or when absent on account of their position, in case of disabilities, at the rate of twenty dollars a month.

Mr. Farnsworth, of Illinois, reported back on the 8th from the Committee on Military Affairs, several memorials and resolutions of authorities of the clothing lost by those destroyed while on the march or in battle, and asked to be discharged from their consideration, on the ground that the law of July, 1862, authorized the Secretary of War to furnish clothing to sick, wounded and other soldiers, who have lost the same by the casualties of war, and therefore no further legislation is necessary. Mr. Thomas, of Ohio, from the same committee, reported back an amendment to the Senate's joint resolution of thanks to Major-General Thomas and the officers and men under him, for bravery and courage at Chickamauga, and requesting the President to communicate the same to the Army of the Cumberland.

General. The amendment provides for thanks jointly to Gen. Rosecrans and Thomas, and in that form the resolution was passed. A resolution, introduced by a bill, which was passed, authorizing the formation of a regiment of veteran volunteer engineers in the Army of the Cumberland, to serve three years or during the war, if not sooner discharged by the States or subdivision of States from which they are enlisted. A bill was reported from the Military Committee and passed, regulating the dismissal of officers from the military and naval service. Mr. Dunlap, of Conn., reported a bill which passed, to authorize the Middletown and Hartford Railroad Company to build and to be built, and the Raritan and Delaware Bay Railroad, public highways of the United States. A bill was reported from the Senate, to be known as the Camden and Philadelphia, and between Port Monmouth and New York City as a post military route, to secure the transportation of mails, troops and munitions of war, and for the transportation of goods and merchandise of foreign producers across the United States. Also, a bill to regulate granted by the Collectors of the ports of the United States, authorized to grant the same, and for commerce among and between the several States of the United States.

It appears from official data in possession of the War Department, that since Feb. 20, 1862, the Illinois Central Railroad has carried over the transportation troops and supplies $368,800, the Burlington and Missouri River road, $13,600, and the Mississippi and Missouri Railroad only $40, making a total of $311,600, the accounts of the Illinois Central, prior to March 3, 1862, were settled on the basis of the tariff of the road when such rates did not exceed those of the Scott tariff of 1861, and one-third deducted from the amount thus found due. Subsequent to March, 1862, the accounts accord with the rates of the tariff of 1862, made by the Commissioner-General in accordance with the suggestions of the railroad managers, convened in Washington by the Secretary of War.

COLONEL ELRIC DAHLGREN.

The death of this gallant young cavalry officer is the most unfortunate result of the expedition under General Kilpatrick against Richmond. From the Rebel papers we learn that he was killed as he was making his way through the woods on the south bank of the Mattaponi river, at midnight, on the 3d inst. He had cut his way through the Rebel cordons after the failure of his attempt to release our prisoners at Richmond, and while on the road to Gloucester Point, was shot down by an ambushed enemy. The report is accompanied in the Richmond papers, by the particulars of the indignities to which his dead body was subjected by those who dared not face his living presence. "Stripped," "robbed of every valuable," says the Richmond *Examiner*, "the fingers cut off for the sake of the diamond rings that "encircled them, when the body was found by those sent to "take charge of it, it was lying in a field, stark naked, with "the exception of the stockings. Some humane persons "had lifted the corpse from the pike and thrown it over into "the field, to save it from the hogs." "Yesterday afternoon," it adds, "the body was removed from the car that "brought it to the Fredericksburg Railroad depot and given to "the spot of earth selected to receive it. Where that spot "is, no one but those concerned in its burial know or care "to tell. It was a dog's burial, without coffin, winding-"sheet or service."

Colonel Dahlgren, though one of the youngest—being but twenty-two years of age—was one of the bravest and most energetic of our cavalry officers. He was a native of Pennsylvania, but for most of his life a resident of Washington, where his father, Rear-Admiral Dahlgren, was so long stationed. The young Army soldier an appointment as aide-de-camp, with the rank of captain, on the 28th of May, 1862. Reporting to General Fremont, he was assigned to the staff of General Sayton, commanding a division. With him he participated in the campaign of the Shenandoah Valley, which ended in placing himself at Cross Keys, Port Republic, and other battles. When General Fremont was relieved Captain Dahlgren was attached to the staff of General Sigel, and participated in the campaign under General Pope. Previous to the advance of the Army of the Potomac under Burnside, Captain Dahlgren, Captain Dahlgren led a brilliant cavalry dash with a handful of men into that city, capturing prisoners greater in number than his own command. During the Pennsylvania campaign he was wounded so severely that he lost a foot in consequence. He was appointed colonel for the raid in front of volunteers, to date back to the day of his wound, and his necessary intermission of service, were the consequences. As soon as it was possible for him to resume active duty, and before his wound had fairly healed, he refused his superior officers to permit him to participate in the raid Kilpatrick upon the late expedition, in which he lost his life.

Commanding public respect by his boldness and skill as an officer, Colonel Dahlgren possessed at the same time rare qualities of mind and heart, which gave him the strongest hold upon the affections of those who knew him personally. In his immediate command there is mourning as for a brother, and while his memory will be warmly cherished among his officers and soldiers, the circumstances attending his death will beget a new spirit of hostility toward those who are chargeable with the savage brutality exhibited in the treatment of the body of their dead comrade.

The second batch of iron-clads has been seriously delayed by experiments with a new machinery for working the guns, invented by Captain Ericsson. In the model the invention works admirably well, but it has not been found practicable in actual trial. It will be remembered that while the machinery heretofore in use worked very well in calm weather, it was difficult to manage the guns through the turrets in a rough sea. As the new Monitors are wanted to reinforce the squadrons off Charleston and Mobile before the first of April, it is necessary that they be put in readiness at once. Were it not for the trial of this new invention, at least six vessels would by this time have been sent to the South Atlantic ports and the Gulf. It is quite time that some of our new iron-clads were employed along the coast. There is danger from the Rebel privateers in the Nassau, Rosebud and Tar Rivers, which are reported to be formidable. Mobile is also said to have four very dangerous iron-clads to defend the harbors. There is doubtless much exaggeration in the stories we hear of Rebel mailed vessels, but in view of the large number of iron-clads which have been built in the Northern ports since last summer, it is quite time that some of them were put to work on the more dangerous coast of them.

The *Re d'Italie* has finally sailed for Europe.

We record this week the sad ending of an expedition intended to effect the release of the Union prisoners of war in Richmond. Undoubtedly, great damage was inflicted on the Rebel lines of communication, and an immense destruction of Rebel military stores was effected. But in its main purpose the expedition was a failure. It may well be doubted, considering that the chances were a hundred to one against its succeeding, whether it should have been undertaken; for, although, had it succeeded, the country would have rung with praises of its audacious and bold policy, it is questionable whether, with ample means at the disposal of the military authorities, for a marked and irresistible action upon the Rebel capital, the lives of our brave soldiers should be thrown away in enterprises so rash that success would be their only justification.

The English have named their target ship at Portsmouth the *American*; perhaps in the expectation that the practice of the British gunners will be improved by the stimulus received from an association of ideas, connecting their mock warfare with a possible contest between them and their old antagonists, the Yankee seamen. We cannot help cherishing the secret wish that the *American* may prove not to be rain and bring discomfiture upon British guns and British gunnery. If they should pierce her sides, it may be worth their while to borrow one of our iron-clads to try their bolts upon. We think we could guarantee her safe return after a reasonable amount of pelting from Armstrong guns and Whitworth ordnance.

Late advices from Hilton Head bring no confirmation of the story of the arrest of General Seymour, and we search in vain through long files of letters from newspaper and private correspondents, for the facts which would sustain the violent assaults made upon this officer by so many hasty journals. One of these newspaper censors attributes General Seymour's defeat to his refusal to take the advice and accept the information of negro fugitives; another to his credulous acceptance of the stories of Rebel deserters; and there are other theories. Meanwhile there is a partisan discussion of the question as to where the responsibility of the Florida Expedition is to be placed. The attacks which have been made upon General Smith for the failure of his cavalry expedition, in which we could not join in the absence of full authentic information—seem likely to prove as unjust as they were hasty. We are told that he had but 7,000 instead of 10,000 cavalry with him, and the brigade (Warner's), whose slow movements retarded his expedition, giving time for the enemy to concentrate, formed an important part of this limited force, not to be disposed with.

The Committee on the Conduct of the War, in investigating the battle of Gettysburgh, have succeeded in stirring up much ill feeling between some of the general officers who took part in that action. Generals Meade, Sickles, Doubleday and Howard, have appeared before the Committee, and we are told several other prominent officers have been called. We really cannot see how any substantial good can come out of the investigation at this time, and can but think it a very unwise thing that the Army is kept constantly vexed and irritated by these petty controversies. The trouble may arise out of the inquiry, however, we have every reason to believe that General Meade will not suffer by it in his military reputation, or that the confidence and respect of the army he has so ably commanded will be in any measure lost.

A new paper has been started in this city, having for one of its avowed objects the advocacy of the "reorganization "of the Army." So far as we are able to discover from the first number, this means the setting aside of all American officers, and replacing them by officers imported from Europe. The prominence given to his name would seem to indicate that the General-in-Chief to be advocated is a General Clusseret, who has undertaken the easy preliminary work of proving that General Grant is destitute of military ability, and has accomplished nothing; that General Halleck is not only a traitor, but a fool also; that, indeed, we have no supreme military genius, unless it be the imported General Clusseret

The Brooklyn Fair for the Sanitary Commission has realized the handsome sum of $400,000, with some twenty or thirty thousand dollars worth of stock on hand, to be sold off at auction. The Army Relief Bazaar at Albany, N. Y., has also closed, after having been kept open fifteen days. About $100,000 was received, of which sum $80,000 was profit. The soldiers need not fear that the people are forgetting them or growing indifferent to their welfare.

AN ENGLISH CRITICISM ON MCCLELLAN.

FROM the February number of the *United Service Magazine* of London, we extract the following comment on General McCLELLAN:—

General McCLELLAN was appointed to the command on the 1st of November, 1861, and he had made the best possible use of the interval between that and the 10th of March, 1862, to organize and prepare his army for the approaching campaign. The fact is manifest, however, of the enemy's army in Washington, the smallness of its numbers, and its apparently dilapidated condition, wrought upon the blustering progenitors of the Northerners, and excited amongst them such a storm of invective against the General, that he was obliged to plunge prematurely into the struggle. His plan of campaign was formed on the following considerations:

1st. The Federal army was distributed round Washington and its environs, which had been fortified so strongly as to be deemed impregnable.

2d. The Confederates were encamped in front of Manassas Junction—a position which they had occupied after the victory of Bull Run. They were thus about thirty miles distant from Washington, and one hundred and twenty from Richmond, their line of operations. The success at Bull Run had given them a moral superiority in the contest, and it might, therefore, be safely supposed, their attention was chiefly directed to Washington. If this supposition were correct, the chances were not small, that Richmond would be in a defenceless condition, and open to a bold advance.

3d. The Federal Government was in possession of the command of the sea; and it could easily, by water transport, service for the use of the troops.

Lastly, Fortress Monroe—founded at the extremity of the peninsula southeast of Richmond—was held by a garrison of Federal troops.

He resolved then to leave a detachment in the lines round Washington, and by means of the transport service at his disposal to convey his army to Fortress Monroe, from which place as a centre—the basis of operations—he could take advantage of interior lines with regard to the enemy, he designed to march upon Richmond. He concluded that that city would fall before the Confederate army could arrive for its resistance.

The success of this plan was conditional, that is to say, it depended on certain contingencies, and several minor combinations. The principal of which were—1st. In order that the portion of Manassas Junction, which was strongly fortified, it was of vital importance that the proposed operation should be concealed from the enemy; otherwise they would march to save Richmond.

2d. The lines at Yorktown, which would obstruct the march of the army, by the peninsula, from the land, united Fortress Monroe, were to be turned by a detached corps under the command of General McDOWELL; an operation that could be easily performed, as it was supposed, by means of the York River.

3d. It was indispensable to the provisioning of the army, that the communications with Fortress Monroe by water should be preserved from any attack on the part of the enemy.

Unfortunately for the success of McCLELLAN's design, secrecy is not a virtue that has been cultivated by the Yankees; and since he did the terms of his plan transpire, than fall and treachery in combination with the enemy conveyed to the Confederates, who immediately retreated towards Richmond. This occurred on the 9th of March. On the 10th, McCLELLAN crossed the Potomac in pursuit, finding it was impossible to overtake the enemy, he returned to Washington. On the 13th, the Government somewhat now thoroughly disgusted at the turn affairs were taking, issued an order reorganizing the army in four corps, under the command of SUMNER, HEINTZELMAN, KEYES and FRANKLIN. This arrangement, which was borrowed from the French, having been established by NAPOLEON in 1805, adds to the mobility of an army; but under a General who is invariably leads to a divided command; and in the present case, it was one of the principal causes of the disastrous termination of the campaign. Some other changes were also made, and finally, McCLELLAN perceiving that any longer delay would only be characterized as pusillanimous, resolved to carry out his original plan, notwithstanding that the retreat of the Confederates had altered the *situation* of the hostile parties on the theatre of war. Accordingly, he embarked his troops and steamed for Fortress Monroe, where he landed with the army on the 2d of April, and immediately advanced up the peninsula. On the 5th, he was stopped on the line of Yorktown, which were held by the Confederate General MAGRUDER, with 20,000 men. These lines appear to have been turned, as has been mentioned, by McDOWELL's corps; and with the army left Washington, he had remained behind for that purpose. Following these combinations, he should have landed on the northeastern shore of York river about the 5th of April. But at this moment, LINCOLN, whose previous occupations do not appear to have fitted him for presiding over the affairs of a great nation during time of war, becomes panic-stricken, and, while sitting on the roof of the White House, with his telescope in his hand, he sees a regiment after regiment decile through the Confederate lines, and, overcome by the fright, his waning attention, he had noted the various preparations for departure; the weighing of the anchors, and the angry whirr of the steam as it issues from the valves; his nerves have been alternately elevated and depressed by the cheers of the men, and the waving of the various flags; and finally, when he had beheld the huge fleet glide smoothly down the Potomac, until it was lost in the distant waters of the Chesapeake; when during the succeeding days the excitement and his cabinet occurred to his mind, and smote him to the earth with the force of a thunderbolt. McCLELLAN and the army were gone; Providence only knew whither; probably into the jaws of the lion. The seat of the government was left in charge of a trifling garrison of 20,000 men, who had "decidedlike" at Bull Run, and who would likely perform the same strategic operation on an emergency at Washington. The Confederates had their army divided, and had only as good use of their legs as of their arms. Might they not return and overwhelm him in his isolated position? Upon by the frightful nature of the ideas which were whirling through his head, President LINCOLN resolved to retain McDOWELL's corps as additional guard. He did so, and the result was decisive for the campaign, as it reduced McCLELLAN to the necessity of laying regular siege to Manassas. During the delay caused by this operation, the Confederates concentrated their troops round Richmond; and the same practical application of McCLELLAN's design failed in producing the results proposed.

An officer may have received a thorough military education, and have had the experience of many years of actual campaigning; but if he be deficient of certain qualities, and in which a want of success will become a positive general. An intimate acquaintance with the principles of war, will enable him to trace on the map the various lines of operation; the strategic points, and the defensive or offensive positions, which any army should occupy; he may clearly understand their value in relation to the distribution of the enemy's forces, and the circumstances, he may even arrange a plan which will appear infallible; but if he does not possess the strength of character necessary to overcome unforeseen obstacles, the result will be disastrous. A commander-in-chief, however, who thoroughly understands the question of affairs, and who is gifted with a powerful memory, to foresee, and provide for every exigency that may occur during the campaign. Nothing should be left to fortune, as we may be quite sure that they will follow him who puts the smoothest track for her chariot. General McCLELLAN, either did not understand the situation of affairs in 1862, or he did not foresee the full extent of complication of that state of affairs. His unavailable delay at the outstart had injured his chances of success, and the non-arrival of McDOWELL, a circumstance that reacted on the cabinet and deprived him of its confidence. Hence the reorganizing of the troops on the 13th March, 1862, by which they were divided into his command. He was still, however, in a moral sense, commander-in-chief, as his conduct during the previous six months' training, had endeared him to the soldiers. His operations might then have been characterized by a mixture of caution and boldness. Confederate deserters appear to have informed him, that when the war is at our own threshold, the first duty of the commander-in-chief is to preserve the stability of the capital, as it is the seat for the time of the first security of the government of the country, in order that it may act without prejudice, or precipitation; otherwise he will compromise the whole campaign. He understood the position in which he stood, with respect to the cabinet, rendered it an especially important matter that President LINCOLN should not have the excuse for quarreling with the divisional generals. If the theatre of war had been situated at a great distance from Washington, the retention of the troops, as in the case of NAPOLEON's first campaign in Italy, would have rendered his military authority absolute, and therefore the Government would have submitted to any arrangements less injurious. But the theatre of war was close at hand; his fixed basis of operations being actually the seat of the government, and the objects of pursuit conspicuous and dislike; consequently officious interference was a thing to be anticipated. Had the army, however, been properly equipped in such a manner, as would have enabled him through his influence with the troops, to oppose any intermeddling of the civil government with military operations, a thing in which no independent general will submit for an instant without resigning. But the terms of his scheme removed him to Fortress Monroe, from whence he only left by government to the tender mercies of the enemy. His plan of campaign was the attention of affairs. LINCOLN was terrified! He retained McDOWELL's corps! The result was decisive, as McCLELLAN's campaign really ended at York-town.

As regards the value of the plan, in a merely military point of view, there faults may be enumerated. 1st. It was too rash. It violated the principles of war. 3d. Its application was too timid.

1st. An army of 120,000 Americans, should not be moved about as if it were a single division.

2d. The choice of Fortress Monroe, as a secondary basis, involved the necessity of attacking Yorktown, or the fixed basis, to be threatened, morally at least, by the enemy. The communications also between these two places were open to an attack from the Confederate fleet, which might block up, at Norfolk, on the south side of Hampton Roads.

3d. The first movement to Fortress Monroe, was the step of a fool, for the second, it was impossible to remount, was that of a dwarf. When the army arrived in front of the lines of Yorktown, it numbered probably 100,000 men, and here, there was a necessity to intrench. Agreeing with the command; nevertheless McCLELLAN suffered himself to be stopped by the 20,000 men under the campaign by MAGRUDER and 12,000 men. His previous information, which was afterwards found to be incorrect, had stated this force to be 100,000 men, and with this idea of the Confederate position, as effectually completed the deception. But a general, who, as NAPOLEON used to say "knows his trade," will make his own intelligence, and will not be content to obtain the truth. Supposing, however, that his previous information had been correct, it did not have wanted his time, waiting for McDOWELL, when every moment of it was precious. But every hour's delay after he had heard of that general's arrival, increased the chances of defeat, and rendered his ultimate success. The hour of his arrival in front of the lines should have been the hour of his attack upon them. The reverse of this was the case. Life and energy had been communicated, should have been hurled on separate points. Nothing was not only defeated but destroyed! The morale of the Federal army was gone. The Confederate design, although it might not have been decisive, would have been more important.

The following theoretical plan, which is based on the same considerations as that of McCLELLAN, is given merely as the "*commencement*" to this paper.

The enemy had taken the offensive, and were approaching Washington. General McCLELLAN and his principal army should have occupied a position, at a certain distance from that city, on the line by which the enemy was advancing. He should have then concentrated his power, both to draw the attention of the Confederates to this point, and, to confirm them to believe that he intended to assail, drive them back, and march upon that line. In other words, these movements might have been made so as to confirm this intention.

The enemy would immediately have concentrated on his own front—every soldier and horse would have been drawn away from Richmond and its neighborhood.

In the meantime, 60,000 men of the best troops, should have been secretly assembled in Washington, and held in readiness for a particular service.

General McCLELLAN was now prepared to strike a great blow. He should suddenly have evinced signs of wavering, and presently have retreated towards Washington. The enemy would have followed in the confidence of victory, and the distance between him and his own basis, Richmond, would have been increased still more. But the commencement of McCLELLAN's retreat to Washington, should have been so as to take place and coincide with the landing of the secret expedition from the latter city on Fortress Monroe. Thence they would have marched to Richmond on its open road. Meanwhile, if he had been there at all, could not have failed to have been met in the vicinity of Yorktown, and according to the terms of McCLELLAN's own plan, 40,000 men might have attacked him in front, and the other 60,000 in his rear. The result would have been that, supposing the Confederate army had left Yorktown, and arrived in the course of his retreat at Washington, following up the original calculation of this plan, he would have sent a reinforcement of 40,000 men to Fortress Monroe, which would have joined the first army against Richmond. No reinforcements could have been dispatched by the Confederates to that city, as on the first intelligence of the landing at Fortress Monroe, they would have perceived the drift of the movement, and would have recalled every available attack from the side of Washington.

Should the Confederate would have had the Commander-in-Chief and his principal army in their front, and an army of 100,000 men in their rear, in possession of their capital and their communications, it is evident that the time for McCLELLAN to have fallen on boldly. Victory was in his hands!

Supposing this plan General McCLELLAN would have remained near Washington. He would have had the advantage of being always at hand, to counteract by his influence and his military knowledge any attempt of the enemy. In a military point of view, its combinations would have been of the simplest description. There was no room on which he proceeded. In effect, the defeat of any single operation would not have been of great consequence. If the Confederates were victorious and forced him to retreat, why it was a part of his plan to do so; and he could have retired to the lines round Washington, while the army dispatched to Fortress Monroe remained. If that army were stopped at Yorktown, still as it has been remarked before, the intelligence of its arrival there would have diminished the moral superiority of the enemy. In a military point of view, its combinations would have been of the simplest description. There was no room on which he could be surprised

on get of firing, pierces a detonating composition, the explosion of which ignites a piece of shrapnel, or hammer shell, and the dropping of the shell on the ground shakes out the central plug, and admits the powder of the charge to the burning finder, and explodes the shell. Owing to a defect in the construction of the fuze the trial was postponed.

We learn from the *Army and Navy Journal*, that the English Ordnance Committee are continuing the experiments for converting the old cast-iron gun into compound guns, on Captain Palliser's principle. Two old guns—a 32-pounder and a 10-inch shell gun—have been prepared and tested to destruction. The programme,' says the *Times*, 'for the 32-pounder was to fire the first round with 12 pounds, with service charges of powder and cast-iron projectiles, increasing every two rounds by one pound of powder, till the 32-pound shot took to a gun of the exact dimensions of the 68-pounder would be 16 lbs. of powder and a projectile of 32 lbs. The 10-inch gun was to be tried with 16 lbs. of powder and a cylinder of 136 lbs. weight, and so on, till the last ton would be 16 lbs. of powder and a cylinder of 272 lbs. weight, or the exact weight of the service shot. The first of the guns alluded to was converted into a 9-inch gun, designed to throw a round shot of 100 lbs. weight. This gun endured the whole programme without the only cast-iron gun, whether strengthened or not, that out of the original number of guns that were tested to destruction at Woolwich, has ever done so. The gun was, however, naturally very much injured by this severe test, and the Committee thought that doubling the charge of powder, in order to ascertain what its ultimate endurance might be; it burst at the seventh round, with 32 lbs. of powder and a cylinder of 136 lbs. weight. The second gun, an old worn-out 10-inch gun, which had been rejected as unserviceable, was converted into one of 68 inches, or slightly larger than that of the 32-pounder gun. When rifled, these guns would throw a shell of 84 lbs. weight. The whole gun was tested to the powder, and burst at the eighty-first round, with a cylinder nearly six feet long, weighing 642 lbs. This gun has like the 32-pounder, undergone a treatment than any strengthened or unstrengthened cast-iron gun previously tested, and has withstood a for severer strain than it would be subjected to in service.

The tube employed by Captain Palliser is composed of different qualities of wrought iron, and is made on Sir William Armstrong's coil principle. Captain Palliser maintains, says the *Gazette*, that this tube is strong enough to resist the strongest charges that can be used in guns, and that it is alone far stronger than any cast-iron gun of the same calibre, of any thickness whatever.

WHAT CONSTITUTES SIGNAL DISTANCE.

The following decision of Judge Sprague, of Boston, in the case of the prize steamer *Aries*, is important as discussing and settling what constitutes signal distance, within the meaning of the Act regulating the distribution of prize money, and especially how far guns and rockets come within the term signal distance. We take the decision in the Boston *Advertiser*. We hope Judge Sprague will soon collect in a volume the many valuable prize decisions which have added to the high reputation he sustains as a jurist. Such a work would be scarcely less a necessity to the lawyer than to the admiralty judge:

UNITED STATES DISTRICT COURT.

The Steamer Aries,—Prize.

What constitutes signal distance, within the meaning of the Act regulating the distribution of prize money, and herein of guns and rockets.

SPRAGUE, J.—This vessel and her cargo have been condemned. Having been captured by the steamer *Stettin*, a v. Lieutenant Devens. Certain vessels of the Navy claim to share in the proceeds with the *Stettin*. Their right to participate depends on the fact whether they, or only one of these vessels which claims to have been within signal distance in the *Memphis*. I will consider her that first.

The *Stettin* was the most northerly of the vessels comprising the blockading squadron, and was stationed at Bull's Bay, something like twenty miles to the northward of the flagship. A little after midnight, on the morning of the 4th of May, 1863, the officer of the deck saw the light of a steamer attempting to run in. The *Stettin* slipped immediately and stood outside of the chase, to cut her off from the land. She soon made her out to be a steamer, and threw up one or two rockets and fired two guns at the chase, but the fog setting in thick, lost sight of her. The *Stettin* remained on the look-out for her, when she saw the chase ashore in the bay, boarded her with boats and took possession. She proved to be the steamer *Aries*, bound from St. Thomas to Wilmington, with a valuable cargo. The *Stettin* fired no guns and made no signals after leaving.

The officers of the *Aries* having been brought in, have given their evidence. They say that no vessel was within sight of, so far as they knew, the *Aries* in the morning; on the tug they were seen until the capture, and that they heard no guns and saw no flashes except from the *Stettin*. The evidence of the commander and officers of the *Stettin* was to the same effect. The *Memphis* was stationed at Rattlesnake Shoals, about 12 miles to the southward of the *Stettin*. It is variously stated, the nearest being nine miles in an air line, and by the course of vessels, from twelve to eighteen miles. The *Aries* was captured by the *Stettin* when both of about one mile nearer than the *Memphis*, at least by the courses vessels must take. Neither of them heard guns or saw lights, or claims to have been within signal distance or to share in the prize. Mr. Curtis, the executive officer of the *Memphis*, has given his testimony before the commissioner here. He says that he was below and neither heard or saw anything, but was told, the next morning, that lights had been seen and guns fired by the *Stettin*. He adds that he did not consider the *Memphis* to be within signal distance, that the vessels could not be seen by day except when the masthead, and neither flags nor coston lights could be made out from her under the most favorable circumstances. Interrogatories have been sent to the *Memphis* and to her commander, Lieutenant Wyman, but no answers have been received. Lieutenant Watmough replied by letter to the U. S. Attorney that his recollections were not sufficiently distinct for answering the interrogatories, and adds that he saw the light of a rocket and the flash of a gun from the *Stettin*, but that fog obscured the hull of the vessel. That it was his duty to answer the interrogatories to the best of his recollection and belief, and his letter is not testimony; but as his officers and crew are interested, I will consider whether, if full testimony should result in putting the master where his letter puts it, it would avail the *Memphis*. If it would, a return to a commission will be proper. According to his letter the light of a rocket was seen and the flash of a gun, and the vessel was not seen. This does not appear that the direction of the rocket was observed, and probably, in the fog, only the glare or its light was seen. The *Memphis* could not attempt to cut off the chase, or otherwise, or to get under way. She could only have conjectured, at the time, from what vessel the lights proceeded, and learned the fact the next day on board the *Aries*, the circumstances of the capture.

The question then is reduced to this—the *Memphis* was too far distant to make our flags or coston lights, or to hear, in that state of the wind and weather, the report of guns of the calibre of those on board the *Stettin*, but was near enough to see the flash of a gun and the light of a rocket in the air. It is to be observed that the capture was made by daylight, that the vessels were in sight of each other at the time, and that the *Memphis* could see by her own pennant the number of the *Stettin*, and, of course, the name from the sighting of the *Aries* until the capture. Can the *Memphis* be considered as "within signal distance" in the meaning of the Act? The Act has been taken from the principal officers of the vessels off Charleston, and especially of Commodores Turner and Goldsborough, to whom the question of distance was referred on the subject of signals and signal distances. Some of them say that they do not consider guns and rockets to come within the term signal distance. Others say that they do come within a signal distance, unless guns and rockets be included. Others again, and perhaps the larger number, among them the two commodores, include guns and rockets, with positiveness. No system of signaling by guns and rockets has been adopted by the Navy Department, as a general one. What use has been made of guns and rockets for that purpose is by special order of the commander of each squadron. Each squadron has its own system, adapted to which it has been carried seems to be this,—single rockets were to be thrown up to attract the attention of vessels in sight. One witness says that three rockets indicated the approach of a ram. No one says that a signal gun has any special significance; but it is said that guns are heard in good or rapid succession, it is the duty of the vessel hearing them to go immediately and ascertain the cause of the firing. This is not set, in any case, down as one of the modes of signals by guns and rockets, of such a character as to satisfy the requirements of the statute regulating the distribution of prize money.

Whether such a system might not be established, I do not undertake to say. Whether a flash of a gun, or even hear a gun, but merely saw the glare of one gun and rocket as refracted through the fog. The claim, therefore, of the *Memphis*, must be disallowed.

The flagship *New Ironsides* and the *Powhatan*, *Canandaigua*, *Housatonic*, and other vessels of the blockading squadron, have also put in a claim to share in the proceeds. They place their claims on two grounds; first, that of cooperation; and secondly, distance. In making, they must contend, makes them captors of all vessels taken by any ship of the squadron in an attempted breach of the blockade, irrespective of the question of signal distance. This ground of claim was fully considered by this Court and disallowed in the case of the *Circe*. Their other ground of claim is, that, although they were not within signal distance to signal distance of the *Stettin*, yet if the *Memphis* was within signal distance of the *Stettin*, she could repeat the signals to the vessels named, and that they could pass through the fleet. It is sufficient to say that the first link in the chain fails, as the *Memphis* has decided not to have been within signal distance; and if she had been, I should very much doubt whether the ability to receive signals by repeating can be held to bring a vessel within the benefits of the statute. The decree must be, that no vessel of the Navy is entitled to share with the *Stettin* in the distribution of the proceeds.

No special counsel appeared for any of the contesting parties, though opportunity was given to the parties to be so represented. The whole cause was presented, by consent, by the United States Attorney.

ARMY AND NAVY PERSONAL.

Major-General Sheridan was at Cincinnati on the 8th, enjoying leave of absence.

Captain S. C. Peck, Jr., has been appointed Provost-Marshal of Hilton Head.

Major-General Banks reviewed the artillery and cavalry at Carrollton, La., on January 27th.

Major-General Burnside has made a short visit to Washington, returning to the North on the 9th.

Colonel C. C. Baker has received authority from the War Department to raise a cavalry brigade for special service.

Lieutenant-Colonel Slocum, of the 32d Indiana, wounded in the recent expedition beyond Tunnel Hill, died on the 6th.

Major John T. Hill, 12th New Jersey Volunteers, has been honorably discharged the service, on account of physical disability.

Lieutenant Collis, of Brigadier-General Grierson's staff, is among the missing of the late cavalry expedition under General Smith.

Lieutenant-Colonel J. P. Sanderson, 13th United States Infantry, has been appointed as Provost-Marshal-General of the Department of Missouri.

Colonel Arthur F. Devereux, of the Massachusetts 19th, has resigned his commission, it is said, with a view to engage in business in Baltimore.

Major-General Hancock visited Boston on the 9th, on business connected with the recruiting of men for the old regiment of the Second Army Corps.

Captain Robert Morrow has been relieved from court martial duty in Cincinnati, trying Major Caldwell, and ordered to Major-General Schofield, in Kansas City, Mo.

Major Bogle of the 1st North Carolina regiment, who was reported killed at the battle of Olustee, is still alive, although severely wounded and a prisoner in the hands of the enemy.

There is a rumor that Major-General D. N. Couch, now commander of the Department of the Susquehanna, will be called to take an important command in the Army of the Potomac.

Colonel Chickering, of the 3d Massachusetts Cavalry, has been appointed Assistant-Provost-Marshal-General of Louisiana. His duties will be to supervise and the labor system instituted in that State.

Lieutenant-Colonel A. Jacobson, 27th Missouri Volunteers, is announced as assistant to the Provost-Marshal-General, with the rank and duties of Inspector of the Provost-Marshal-General's Department.

Captain Paul Babcock, Jr., Signal Officer, U. S. A., has been announced as chief signal officer of the Department of the Cumberland *vice* Captain Jesse Merrill, Signal Officer, U. S. A., relieved, to date from January 6th, 1864.

Colonel A. H. Pierce, of the 13th Michigan Volunteers, has been appointed provost-marshal of the Department of the Cumberland, *vice* Lieutenant-Colonel William M. Wiley, 13th Indiana Volunteers, relieved at his own request.

Colonel Ziddock Pratt, of Prattsville, N. Y., has caused to be cut on the face of the high, bold rocks near that village a monument to the memory of Gen. Colonel Pratt, of the 26th New York State Militia, who died in Albany, N. Y., September 11, 1862.

Surgeon-General Hammond of general hospitals are positively instructed by the acting Surgeon-General, that when a soldier is discharged from service on account of *wounds received in action*, the fact must be entered both on the discharge and final statement of the soldier.

Lieutenant-Colonel Warner, of the 113th Ohio, has been relieved from temporary command of the 3d Ohio. Colonel John G. Mitchell, of the 113th Ohio, has returned and assumed the command of the brigade formerly commanded by Brigadier-General Daniel Dustin.

Brigadier-General William F. Barry, late Chief of Artillery, has left Washington, having been ordered to the military division of the Mississippi. Brigadier-General Alphio P. Howe, lately commanding a division of the Sixth Corps, has been transferred to the post of Chief of Artillery.

Major Alexander McCall, Assistant Adjutant-General of Volunteers, having reported, in obedience to orders from headquarters military division of the Mississippi, has been assigned to the Army of the Cumberland, and will proceed to report in person to Major-General Thomas, commanding the Department.

By order of Major-General Couch, Wallace M. Purcell, M. D., and acting assistant-surgeon, has been relieved from duty in the medical department of the Department of the Susquehanna, and directed to report to the medical officer, under charge of Surgeon H. Palmer, U. S. V., in charge of U. S. General Hospital, Cumberland, Maryland, to which he was receiving a salary from the Government for his services as a surgeon and physician.

George A. McCall, late Brigadier-General of Volunteers, writes to the Philadelphia *Journal*, A. G. O., requesting that in his report of the part taken by the Pennsylvania Reserves in the battle of Gaines' Mills, the name of Major Alfred E. Lovell, 1st Pennsylvania Artillery, acting A. D. C., be inserted in the paragraph commending his staff for gallant conduct on that day. That in the report of the battle of Farm, this he inserted:—"Great credit is likewise due to Captain George A. Woodward, of the Second Reserves, who was severely wounded while gallantly leading his company against fearful odds."

The President has prescribed the necessary regulations for enlisting seamen from the army into the navy, and the Secretary of War has designated the entire number—not exceeding five thousand—which may be drawn from the army at each of the naval stations fixed upon by him, as follows:—At Cairo, one thousand; Boston, two thousand; New York, two thousand; Philadelphia, three thousand; Baltimore, one thousand. The following quotas are assigned:—Department of the East, three thousand; Middle Department, one thousand; Ohio, two hundred; Department of Virginia and North Carolina, one thousand five hundred; Department of Washington, two thousand five hundred; Department of Susquehanna, two thousand; Department of the Monongahela, five hundred; Northern Department, one thousand. Commanding officers of each department are required to communicate with the Navy Department, and cause the men selected for transfer to be sent to the designated stations at such number as may be fixed by the Secretary of the Navy. Each commanding general of an army or department which has been required to furnish a quota for transfer to the navy, is required in case to designate one or more officers, as may be required to examine the applications, and determine the fitness and physical qualifications of the applicants, and the number to be furnished, and what men shall be transferred to the navy, care being taken that those transferred to the navy, are not organizations among the companies of each command that no regiment shall be reduced below the minimum organization.

Referring to the reenlistments of the three years' troops in his command, Maj.-Gen. Hooker, in a recent private letter, remarked, "It did my soul good to see those heroes step forward and pledge themselves anew during the continuance of the war. But I am sorry to say that some of them so many of us, no one event has filled me with so much satisfaction. It is gratifying to have the men who have so sworn' rounded with such companions."

NOTICES TO CORRESPONDENTS.

The Editor of this Journal will always be glad to receive from officers of the two services, communications and general communication of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of promotions among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in three columns, to enquiries in regard to technical and other matters.

From publication in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in Postal States Bonds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. CONANT.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers will please state the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is merely under a cent, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 102 BROADWAY, corner of JOHN STREET.

THE editorial and business offices of the ARMY AND NAVY JOURNAL will be removed on the 1st of April to **No. 39 Park Row, Times Building,** directly opposite the City Hall Park.

Subscribers who may have failed to receive any of the back numbers of the JOURNAL, are informed that there has been an unusual slide delay in reprinting some of them, which will account for the omission. Our files are now complete, and we shall this week supply all who have ordered. Number 5, among the others, is now reprinted and ready for delivery.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, MARCH 12, 1864.

THE TWO CAMPAIGNS—MILITARY AND POLITICAL.

DURING the three years in which we have waged this great war, the country has been fortunate in that its attention has not been distracted nor its energies wasted by one of those fierce political contests into which the Nation quadrennially plunges. But this year there will be a conflict military and sanguinary, raging between contending hosts upon a gigantic theatre, and also a conflict political and bloodless, but in which the issues will be pressed to an almost uncontrollable fury. There will be a struggle as to who shall rule in Richmond, and another struggle as to who shall rule in Washington.

If neither one of these inevitable campaigns of the year may be said to have yet fairly commenced, the preliminary work of both has been begun, and is now progressing. In both campaigns the leaders on all sides are active and anxious. In both, plans and counterplans, woodenful and inscrutable, are forming. Not only are the forces getting marshalled for the fray, but we hear from both fields of manœuvres actually in process of execution; we see even that skirmishing has begun, and we learn of flanking movements whose' results must speedily astound the country.

As the organ of the military arm of the Nation, it is with but one of these conflicts that we have to do. Our struggle is only with the Rebels in the field. And so deeply are we impressed with the tremendous importance of this struggle, and the infinite necessity of our success in it, that we are impelled to say a word upon what seems to us the critical and perilous aspect of the times.

This double conflict upon which the country is about to enter, may well induce serious thought, if not grave apprehension. This division of forces and of energies is weakness. It must diminish the power which the Nation requires for the one great essential work—for the defence of its menaced life. There is, perhaps, in the nature of things, no good cause why this division should be. There is no reason why a free people, even in time of war, should not express its will through the potent yet silent agency of the ballot without distraction or without any great expenditure of strength. But unfortunately our national political contests do not consist merely in the expression of choice by vote, after such reasonable discussion as might serve to elucidate the merits of the matter or men in dispute.

Our presidential struggles especially are carried on with such vehemence—the eagerness of competitors for the glittering prize is so intense—the strife between the partisans of each is so furious—the interests that come into collision are so gigantic—that the strain upon the Republic's power is about as great as it can bear. Patriotic men have hoped that the current presidential campaign would be exceptional in this respect,—that the excitement and frenzy of other years would not return this year,—but that there would be general acquiescence throughout the country in the election of some competent man, who should be designated by a national convention. But we are sorry to say that at this moment the signs in the political skies do not indicate any such calm and serene prospect. The intriguers are already engaged in their usual intrigues. Newspaper columns are filled with invective. Falsehood is playing its part. Rancorous appeals to the mass are in passion. And all the agencies, fair and foul, that were ever put in operation in the early part of a presidential election year, are in operation now.

We raise a note of warning to the country. We raise it in behalf of the cause, and of the Army and Navy battling for it. We raise it early because it will soon be too late. Already are these personal and partisan bickerings damaging the country; already are these scheming and selfish political knaves dividing the people; already are some of them attempting to corrupt, discourage and ruin the Army.

We appeal to the Administration and to all the functionaries of the Government in this matter. Let the Administration preserve a dignified, unselfish and dignified course while it is on trial before the people. Let its efforts be to moderate rather than inflame the public passions. Let not its members stigmatize the candidates of its opponents as traitors—unless traitors they undoubtedly be. Let it beware how it uses its authority to interfere with the Army, and let it beware how it uses the Army.

We appeal to the patriotism of Presidential aspirants. While their ambition for place may be an honorable one, let them beware what means they adopt or sanction to gratify it. Let them remember the words uttered by the Vice-President of the Rebel Confederacy, that the passions of the South were inflamed and this bloody war brought about, to gratify the ambition of politicians determined upon power and place. Let each of the aspirants—(we know not how many *aspirants* there may be, but the candidates who thus far have been announced or organized bodies of who are supported by powerful parties, are Messrs. LINCOLN and CHASE, and Generals MCCLELLAN and FREMONT)—let each of these gentlemen remember the prediction which we now venture to put forth—that among the candidates for the Presidency this year, the successful one will be he *who is adjudged by the people to have labored most earnestly, sagaciously and effectively to crush out this Rebellion, and to restore the national unity and sovereignty on a solid basis.*

In view of this, let the main rivalry of Presidential candidates be, not who shall gain the sharpest points on the other, or who shall be most successful in preying his opponent to be a fool, a knave, or a traitor; but who shall best serve the Nation's cause, do most to forward the Nation's triumph, and exhibit the most unselfish devotion to the country's weal.

While urging these considerations, we would certainly not have the political interests of the country ignored or contemned. We recognize the value of those policies and those rulers. We appreciate the importance of the constitutional provisions for carrying on the machinery of our free Government; and we believe there could be no more fatal sign of national decadence than the loss of public interest in our periodic elections, or the relinquishment of the free right of choice at the ballot box. We know that all the parties concerned the necessity of concentrating the national powers and energies upon the prosecution of this war. We show the danger of diversion from the main work. We forewarn of the fatal results that may follow relaxation of effort. Until the Rebellion is crushed, this Nation is in peril—in imminent and perpetual peril. While the Rebels can marshal hundreds of thousands of men against us—while in ten States they spurn the authority of the Government and defy its power, we can neither afford to indulge in idle repose, nor to waste our strength upon side issues. While a desperate foe, with drawn knife, is struggling to get at our jugular, let us neither rest nor trifle until his head is crushed.

One of the best signs of the times, as regards the Government, we take to be the calling of a purely military man like Lieutenant-General GRANT to Washington, to counsel or direct in the conduct of operations. No one will accuse the Government of carrying on the war for political ends, or using any part of the Army for political purposes, or trifling with the military interests of the country, if the eminent Western soldier be allowed the freedom of action to which he is entitled as the ranking officer of the national armies. Whether or not it be the purpose of the Government to retain the Lieutenant-General in Washington we are not aware. We greatly dislike to see him taken from his active work in the field. But we believe the military campaign would be carried on more successfully, if during the progress of the presidential and political campaign, the former were instructed exclusively to the guidance of a competent soldier.

LIEUT.-GEN. GRANT AT WASHINGTON.

LIEUTENANT-GENERAL GRANT arrived in Washington on Tuesday, the 8th. He was accompanied by General RAWLINS, Colonel COMSTOCK, and by his son, and his arrival was so unostentatious that it was some time before he was recognized. But, once it came to be known that he was in Washington, his reception was such as was due to his brilliant services and exalted military rank. The enthusiastic greeting he was modestly received by the Western boys, who bowed acknowledgments to cheers and serenades; but his only responsive speech was to say that he could not make one.

On the afternoon of Wednesday, the 9th, the PRESIDENT formally presented to him at the Cabinet Chamber, and in the presence of the entire Cabinet, General HALLECK, Representative LOVEJOY, General RAWLINS and Colonel COMSTOCK, of General GRANT's staff, the son of General GRANT, and Mr. NICOLAY, the Private Secretary of the PRESIDENT, his commission as Lieutenant-General. The PRESIDENT thus addressed him:—

General GRANT: The nation's appreciation of what you have done, and its reliance upon you for what remains to be done in the existing great struggle, are now presented with this commission constituting you Lieutenant-General in the Army of the United States. With this high honor devolves upon you also a correspondent responsibility. As the country herein trusts you, under God, it will sustain you. I scarcely need to add that with what I here speak for the nation goes my own hearty personal concurrence.

To which General GRANT replied as follows:

MR. PRESIDENT: I accept the commission with gratitude for the high honor conferred. With the aid of the noble armies that have fought so many fields for our common country, it will be my earnest endeavor not to disappoint your expectations. I feel the full weight of the responsibilities now devolving on me, and I know that if they are met, it will be due to those armies, and above all to the favor of that Providence which leads both nations and men.

He was then severally introduced to the Cabinet, and some time was spent in conversation.

On the same day, General GRANT had a long interview with General HALLECK, with reference to future plans and movements. Though there are many speculations as to the intentions of the Lieutenant-General, there is sufficient evidence to warrant the report that this visit to Washington means that his newly acquired rank is not to be worn as an empty honor, but is to be the title of the Captain who shall, in reality, command the armies of the Nation.

CONGRESS has been for some time discussing a measure which looks to the dropping from the rolls of the Army of all but the major and brigadier-generals who, on the 15th of March and for three months previous, were without commands. We hope the Honorable Representatives will consider much longer before they venture upon so sweeping a measure. Among the generals thus threatened are some of the most cultured, most experienced, and most distinguished soldiers of the Army; while there are few of the whole number who are not ready and anxious to be assigned to active commands. Meanwhile, we think no one will assert that we have any surplus of military talent or experience to throw away. We do not hesitate to say that the Army could very well spare some among the number, and we should be ready to advocate a judicious cutting down of the list of general officers. But there is no necessity for this wholesale way of doing the work. It may commend itself to the prejudices of some Congressmen, but it does not satisfy the requirements of justice. The only proper

nothed is for a Military Board to consider the cases separately and with something more of judicial calmness than is wont to prevail in a legislative chamber. Such a Board might possibly find that incompetency was not confined to the general officers at present employed; that it exists even among some of those now entrusted with active commands, and that, perhaps, an exchange of positions may not be undesirable. A Board like this might be an unfortunate institution at this time, yet it could not be so unfortunate as the wholesale method which Congress has stopped seriously to consider. We might add that the position and services of the officers whom it is contemplated to thus summarily dispose of, would seem to demand at least the delay and sober consideration of a more careful and impartial examination of their cases. Though the profession of arms may accustom one to danger, and the soldier must always feel his nearness to death, he can no more regard with complacency such a plan for quietly dropping his head into the basket of the Congressional guillotine, than he can esteem the fate a just reward for his services. We hope, therefore, that Congress will take occasion to think the whole subject over many times, and listen to the appeals of justice before it shall have become too late. Such an act, should it prevail, however, we fear the Nation, and not the victims, would suffer the most.

WE do not need to tell our naval readers that one of the most serious difficulties which meet the Navy Department in its work of creating a Navy of unsurpassed extent, is the scarcity of seamen to man its rapidly multiplying ships of war. Such a condition of things was an inevitable result of a long period of peace and of ultra peace notions, and of a popular aversion to military and naval establishments. We cannot hope to repair altogether this fault of the past, we must, indeed, expect to feel, during the whole of the war its evil consequences: but we can do something for the future. This journal has already discussed at length the necessity of training schools for seamen and petty officers, and the admirable systems of France and England have been frequently explained. With such good models before us, it ought to be a comparatively easy task to organize a system of training-ships, upon which boys of respectable parentage could be taught the principles of navigation, of gunnery, and all the duties of seamen and petty officers. We could satisfy an honorable ambition by holding up as the prize of distinguished merit, a place on the quarter deck. In the French service ten or twelve promotions of warrant officers to officers of the regular line are made every year, and as we have before mentioned, there are one or two naval officers of the highest rank who entered the service with a warrant and not a regular commission. We believe that a training school of this kind would find an abundance of pupils, not only among that large class of boys who have a natural taste for the sea, but also in other ambitious lads, to whose minds the livery of the nation is a badge of honor, and the military service the avenue to fame.

Here is the true line of preparation for the future. But, as we have in previous articles suggested, we need not wait for the establishment of these required training ships. The number of boys on each vessel in the service might be immediately and greatly increased, and their education commenced forthwith. A correspondent gave in the JOURNAL of last week an account of the formation of a class of boys on the steamer *Crusader*, and we are told the plan has proved entirely successful: the boys are better satisfied than they would be if left to their usual idleness, and the foundation of a body of good seamen is laid. This, of course, imposes some additional labor upon the officers; but we feel confident that any of them at all devoted to the service would hesitate to assume the additional burthen to secure so great an advantage.

DURING the Crimean war, the United States sent an able military commission to Europe to watch and gain information from the operations of the hostile armies. General MCCLELLAN, one of the commission, subsequently held an important command in this war, and doubtless was profited in his own experience of active military command by the observations he was permitted to make in Europe. Now the European Powers are claiming of us the same privilege our officers enjoyed in the Crimea, and our Government is responding to the courtesy by giving their military representatives far greater opportunities for profiting by our experience than the United States officers were permitted to enjoy in the Crimea. Though these European Powers are ostensibly our friends, and we are bound to treat their officers as the representatives of friendly Powers, there are possible European complications that may arise out of our war, the like of which the French and English Governments had no occasion to fear during the Russian war, from which our traditions and our uniform policy kept us entirely removed, and made us mere spectators of the conflict, without even a remote chance of interference. The case is different now. Though no European Power has yet ventured to interfere with us, there is a possibility of such an event, and that some day we shall meet in hostility some of these numerous foreign military and naval gentlemen whom we are now escorting through our camps and arsenals and dockyards. The thought might mar the propriety of our only treating these keen-eyed visitors with great courtesy and entire respect, but also of a little caution in opening up to them all of our affairs. We are sure, however, that they will learn one thing very conducive to peace; and that is, that we are not entirely unprepared for war; that whatever may be the talk of London clubs and Paris *cafés*, we are not yet exhausted of resources or of courage, and that we do not allow our sleep to be disturbed even by the thought of possible European interference. It is not for us to boast; we have in hand toe grave an undertaking to waste time in empty words; but we know our strength, and we are not wont to fear.

THE 20th Regiment United States colored troops embarked at NEW YORK last Saturday for NEW ORLEANS. Previous to their departure they were marched to Union Square, in front of the Union League Club House, where they were presented with a handsome stand of colors. President KING, of Columbia College, made them an eloquent and patriotic speech, at the conclusion of which he read an address to the regiment, signed by the ladies who presented the colors. The address was very brief, but, which had been provided for them in the square, and soon afterwards marched down to the dock, where they embarked on board the steamer *Ericsson*. They made a good appearance, and their marching was creditable to so fresh a body of troops. We notice that some persons are under the impression that this regiment is for superior to most others of the colored troops. Without intending in the least to detract from the credit due to these black warriors, whose appearance was certainly in the highest degree praiseworthy, we will assure all such that this regiment is but a fair sample of the great body of colored regiments. This fact may serve as a proper estimate of the value and character of this class of troops. We have seen twenty colored regiments—at Hilton Head, at New Orleans, at Newbern, at Port Hudson, at Memphis, and elsewhere—which would stand fully up with the 20th, in respect of general appearance, while many of them are their superiors in drill and discipline.

The march of these black soldiers through the streets of NEW YORK, undisturbed, except by the applause of the throngs, that lined the streets, witnessed to a remarkable change in the spirit of the people towards the colored troops.

A CORRESPONDENT writes to us, taking issue with the statements and conclusions of an article in a late number of the JOURNAL, entitled "Responsibilities of the Staff." It will be remembered that that article attached the blame of the partially disastrous battle of Chickamauga first to the *aide-de-camp*, who gave the incorrect information that a division was out of line, which was merely retired a little *en échelon*; and in the second place, to the *aide* who carried the order to close up a gap which did not exist,—thus causing the very thing the order was intended to prevent. Our correspondent avers that it was impossible for the *aide* who carried the information from General THOMAS to General ROSECRANS, riding through a very thickly wooded country, to observe whether or no the division was out of line; that he could do nothing more than obey his instructions, the responsibility for which was not with the messenger; that, in fact, the division had really been *ordered* out of line. In this last case, he avers that the order to close up the supposed gap, though it was written by an *aide*, by the direction of the Commanding General, was carried by an orderly. He therefore protests against our holding the staff responsible for the unfortunate result. Though we make this statement in justice to the gentlemen concerned, we cannot see that it alters the moral of the article alluded to,—which was, that a staff officer should be thoroughly experienced in military matters, and not a mere boy, fresh from college, with a taste for gold lace and equestrianism as his only accomplishment. And we are sure our correspondent will not dissent from the conclusion, or blame us for insisting that greater care should be exercised in the selection of staff officers, and that an *aide-de-camp* should be something more than a mounted orderly.

THE story is told that the author of "Marse Bozzaris" was met by a friend one day in Broadway, in those melancholy closing months of BUCHANAN'S administration. The poet saw the rising war-cloud, and presciently scented the approaching battles. "The soldiers are coming," said he; "and, thank "heaven, we shall be ruled by gentlemen!"

The compliment was a noble one. But only our small Regular Army then existed; and at that time Mr. FITZ-GREENE HALLECK forsaw neither the great magnitude our military establishment would soon attain, nor the vast sweep, and scope, and penetration of the war power of the Nation. Now, in the field of active war, but throughout the whole land, the Army is now a ruling power. In every State of the Union the military exists and acts alongside of the civil force. In some States, as the Border States, its action is more pervasive and vital than in some others; while in the vast region reclaimed to our arms in the Southwest, the military power is supreme. Thousands of officers exercise functions, mixed civil and military, and are constantly brought in contact with hundreds of thousands of citizens as the governing authorities. Both the exercise of this power and the submission to it are new things to American citizens. It can only be made tolerable and endurable by all our officers always and everywhere deserving the fine compliment which we have quoted.

THE Danish war correspondent of the London *Times* gives a graphic picture of the difficulties against which the Danes had to contend in their march to Flensburg. "It took us full nine hours," he exclaims, "to go over the first Danish mile and a half (less than "seven English) of ground." We "accomplished "the whole distance of twenty-two English miles in "eighteen hours." "We found a very heavy piece "of siege artillery forsaken on the road. The eight "horses which dragged it had become, owing to the "state of the roads, as powerless as so many new "littered kittens, and all the efforts of the men to share "the work with them had proved unavailing," etc., etc. We commend these statements to the consideration of those foreign military critics who have so much to say of the slow movements of our armies. At the rate of progress exhibited by this European army in its march over highways, trodden for centuries by European civilization, how long would it take us to march through Virginia to Richmond, or to advance by land upon Mobile by the coasts? We have the same difficulties to contend with of "snow, sleet, and muddy "ground," with the added disadvantage of a wilderness country such as would be hard to find in any part of Europe out of Russia.

THE popular ratification, on Tuesday last, of the proposed amendment to the constitution of the State of New York, by which the right of suffrage is henceforth secured to our brave soldiers in the field, was the triumph of sound principle over prejudice. The State had been guilty of injustice to itself and towards a class of citizens who deserve our highest gratitude, had it deprived them of the right to participate, while in service, in the forthcoming elections. A light vote was cast, but it was overwhelmingly in favor of the amendment.

THE letter which we publish this week from Mr. DEFREES, the Superintendent of Public Printing at Washington, shows that the paragraph we supposed to have been omitted from the Government edition of General MCCLELLAN'S Report was merely transposed. This sets at rest in the most conclusive manner the impudent story of "errors and omissions" circulated by the publishers from the British edition of the Report.

FOREIGN MILITARY AND NAVAL MATTERS.

THE Danish ships-of-war have received orders to capture shipping belonging to all the States of the German Confederation.

FIELD-MARSHAL VON WRANGEL has laid an embargo on twenty-four Danish merchant ships in the port of Flensburg, in addition to the seven government transports seized, which, with their cargoes, consisting principally of provisions for the troops and cats for the navalry horses, are valued at $100,000.

SEVEN hundred Danish prisoners of war arrived at Hamburg up to the 15th ult. They were immediately sent under Prussian escort to Magdeburg by railway, where they will be confined for the present. They were all natives of the Danish islands, and scarcely one of them could speak a word of German.

PRIVATE advices received in Berlin from Warsaw report that on the 10th ult. a squadron and a half of Russian cavalry, led by a single officer, entered the Polish cantonment with wild disorder. It was presumed that an engagement with the insurgents, ending unfavorably for the Russians, must have taken place in the neighborhood of Warsaw.

THE razing of the *Bannerede* has already begun. One hundred sappers and four hundred engineers are engaged in the work of demolition. The only present effect of this proceeding seems to be to add to the humiliation of the Danes, and therefore a new incitement to them to push resistance to the last point which desperation can reach.

THE number of Austrians that arrived at Hamburg in forty-eight special trains on the Berlin and Hamburg Railroad was 693 officers, 20,785 non-commissioned officers and privates, 1,200 horses, and 200 ammunition and baggage wagons. The sum paid to the company in Austria for these special trains amounted to 205,339 Prussian dollars.

INTENSE excitement was produced at Hamburg by the receipt of the telegram announcing that the Danish frigate *Jutland* was entering the Elbe Channel, with orders to take homeward bound German ships, as many valuable cargoes from China, South America, and other ports, are known to be at sea, bound to the above port, and may arrive at any day in the chops of the Channel.

ACCOUNTS received in Hamburg describe the Danes as having made some daring sallies from their entrenchments at Düppel upon the Prussians, who were front them. One telegram states that the 1st regiment of Rifles had won great distinction, and another dispatch of the same date, and from the same town, describes the Danes as having twice inflicted heavy damages upon the Prussians.

THE official paper of Copenhagen states that on armistice involving the evacuation of the mainland of Schleswig will be accepted by the Danish Government. The *Dagblad* goes a step further, and declares that unless the enemy evacuates Schleswig and reestablishes the government of the KING there, no proposal for an armistice would be listened to by the Danes. The *Standet* says, however, that no proposal for an armistice has been received by the Danish Government.

THE English navy estimates for the year 1864-65 amount to £10,432,610, which, as compared with the vote of last financial year, which amounted to £10,739,000, is a net decrease of £305,422. The principal items of decrease are wages to seamen and marines, £47,304; victuals and clothing for seamen and marines, £212,867; and naval stores, £365,988. The principal item of increase is in the wages to artificers, &c., employed in her Majesty's establishments at home, £102,438.

A VOLUMINOUS Parliamentary report has been issued by the commission appointed on 2d May last year to inquire into the complaints by officers of the line lieutenants that the parliamentary stipulations in their favor when that army was amalgamated with the home army had not been given effect to. The report enters into great minuteness into these complaints, and the commissioners, after dealing carefully with the observations made in the report, all sign it, one or two, however, expressing dissent on a few particular points.

THE first division of Prussian steam gunboats at Stralsund, on the Baltic, was on the 11th ult. declared ready for sea, and the Prussian Admiralty issued the great enthusiasm of the crews. The division consists of the *Comet*, steam gunboat of the first class, and the *Shark*, *Harpoon*, *Scorpion*, *Grasshopper*, and *Mosquito*, second class. The *Comet* carries three guns; the other five two guns each, one of which is a rifled 24-pounder, the other a 60-pound howitzer. The second and third divisions of the gunboat fleet and the fourth and fifth divisions, consisting of rowing boats, were also launched newly finished, and have since cruising eastward and westward of the island of Rugen.

DURING the stay of the CROWN PRINCE of Prussia at Flensburg he was waited upon by a deputation of the inhabitants, one of whom read an address to the feelings of the citizens regarding his Royal Highness. The Prince replied in very guarded language, stating that he was only there as a private individual and as a soldier in the Prussian army. He also stated that he was a sincere friend to the Prince of Augustenburg. The manner in which the Prussian Royal Highness stated to have highly delighted the inhabitants. He was able to be seen in the streets wearing a cap and a waterproof coat, and, whether riding or walking, was seldom without a short pipe of the kind generally used on a march.

A RECENT letter from Flensburg says that the villages near which the engagement of Oversee took place are entirely ruined. At Jagel, near Schleswig, not a window remains entire; the inhabitants have all fled, partly because the cannon balls reached them, and partly because the Austrians had taken all their provisions and forage. After the departure of the population their houses were ransacked by the soldiers under the pretext of finding linen and bedding, and the contents were left lying about. At Oversee, too, the inhabitants have neither food nor drink. They live with the Austrians, who boast their carts and agricultural implements are their own.

PRUSSIA and Austria have thus far acted in concert in the Danish war, chiefly from mutual jealousy and a desire to chest the people and humble the smaller States. But this concert has led to rather a new and amusing pen and ink war between the newspapers of the rival States. Those on either side try to prove that their compatriots ought to have a monopoly of the palms won in Schleswig. Had it not been, say the Prussians, for the furious impetuosity of our troops the crossing of the Danes would never have retired in the haste they did. And had it not been, protest the Austrians, for the mettle and the hard work of our soldiers the Danes would have another story to tell; without our heroes at their back the Danes would have made short work of them.

THE Italian army, which six months ago consisted of 500,000 men, now numbers only 400,000. The moveable National Guard is being organized in hot haste to replace in the South regular troops, of whom a considerable number are required in the North. The Minister of War is pressing for the delivery of the 80,000 rifles which have been contracted for in St. Etienne and Liege. The Italian Admiralty, on the other hand, assure the country of their means of transport for an expeditionary corps of 15,000 men to any point of the coast with a strong escort. The various gun foundries of the State display no activity at white lead, having received orders to turn out another number of cannon. Naples, Turin, Piacenza, Bologna, and Ancona receive daily convoys of ammunition and provisions of every kind.

A GERMAN officer gives the following description of the Danish intrenchments at Düppel: "The fortifications at Düppel consists of ten "works." The right wing of the works, which are on the crest of a range of hills, is flanked by the batteries on Alsen. The left wing to Beoningbo. The ramparts are 20 feet high, the moats 12 feet in depth and 20 feet in breadth. Behind the ramparts are guns, which command the whole country up to Vandern. Batteries on the island of Alsen, and gunboats in the firth or sound, protect the left flank of the position. The bridges between the mainland and the island of Alsen have double *chevaux-de-frise*. The position at Düppel, which is about two miles long, forces the Danes to make an advantageous attack on the flank of a body of troops moving towards the north, and seriously to endanger its line of retreat. It must, therefore, either be taken or invested by a powerful corps.

THE *Conférences Littéraries* held in Paris for the benefit of the wounded Polish patriots have been very successful. M. MARC GIRARDIN and LEGOUVÉ a short time since addressed a large and, as they would say, highly sympathetic audience. There were more than 2,500 persons present, a greater portion of whom belonged to the working classes. The speakers, before they could obtain an authorization thus to speak, were obliged to promise that they would make few political allusions, and abstain from exciting the passions of their hearers. The letter of this promise was adhered to in the most scrupulous broken. M. ST. MARC GIRARDIN probably had that morning been reading ANTHONY'S oration over CESAR'S body, for his audience in Rue de Rivoli seeming the very quintessence of *bonhomie*, were as deaf to appeals as man has ever received. The subject he selected was "L'Influence de la Foi sur de la Littérature."

AT a recent military encampment given at London in aid of the Soldiers' Daughters' Home, the Corporal Major Sir. JOHN clearly and cleverly severed a sustained shout, a single blow, and easily missed with a single flourish of his weapon. Several soldiers' attributes successively wound round it. Corporal-Major WAITE, with equal precision, cut through a suspended bar of lead, a bolt, a covering of a target, and a sheep, in familiar. A less familiar and more sensational feat was added. His sword raised over an apple lying in a comrade's outstretched hand, he clearly severed the apple by a downward blow, which, with the slightest additional impetus, would sever the hand that held it. Such is the SHILLY-SHALLY tendency of not more hazardous. A boy's head and a comrade's hand in a case, are not equally valuable; but both are infinitely better worth the pains and more respectful concern than is the sensation of risking either. Corporal-Major WAITE must have held men in his troop to practice upon.

THE Danish General DE MEZA, who was removed from his command in consequence of the evacuation of the Dannewerke, has addressed to his government a report on the military operations in which the troops of the army was under his orders. In this document he censures the order which he received from Copenhagen to be evacuated because he had not sufficient men to defend the Schlei, which river, between Schleswig and the sea, might be crossed at three different points. The general adds that events justified the measures he had adopted, as if the Danish army had not had a start of fourteen hours it would have been cut off by the Prussian corps which crossed the Schlei at Arnis. General DE MEZA concludes by declaring that his movement saved the Danish army, and that history will render him justice. A letter from Copenhagen states that General DE MEZA will in all probability be shortly restored to the command-in-chief of the Danish troops. His report has been well received both by the government and the people.

FROM the official returns of the English Navy, showing the number of steam ships afloat and building, together with the number of effective sailing vessels, it appears that during the whole year there is carried on by means of steamers. The number of paddle-wheel steamers is also small in comparison with the screw steamers now employed. As they must eventually give place, none but screw steamers being suited to the requirements of naval warfare. The number of iron-plated ships with batteries now afloat appears from this return to be eighteen, and the number building to be twelve, making a total of thirty. There are also in all eighty-six effective sailing vessels in the navy, sixty-five of which are mortar vessels and floats; fifty-six screw ships of the line; thirty-seven screw frigates; fifteen paddle frigates; one armed forty-three screw gunboats; twenty-six screw corvettes; thirty-five screw sloops, besides a large number of other vessels, making a grand total of six hundred and thirty vessels.

THE Austrian papers are very severe upon the conduct of Prince FREDERICK CHARLES of Prussia in assuming a command in which, by his own account, for the Prussians all the glory of the recent successes in Denmark. The *Ost Deutsche Post* affects to disbelieve the statement, but says that, if true, it is only "ful surprise which has been caused by the pretended "order of the day of Prince CHARLES of Prussia "undoubtedly to be one of a numerous series." This "document must be apocryphal. The awkward imi"tation of the celebrated bulletins of NAPOLEON I. "already betrays its author in the absence of a grand conqueror wrote thus when he was at the height of "his glory, on the day after his most splendid victories. A true conqueror would not express himself "thus after a few days' campaign, and under circumstances joint his played. Prince FREDERICK CHARLES "has evil taste in thus publishing this proclamation. A general who acts in concert with allied corps would not write thus. One has only to recall "the bulletins of the Duke of Wellington and Marshals in the Crimea and in Italy, and the esteem, the cordiality, and the brotherhood of arms which they displayed in relation to their colleagues, or their fellow-monarchs, to be convinced that the tone and mode of the order of the day would rank, if it were authentic, with the most extraordinary curiosities in the history of wars."

THE estimates for the British army during the years 1864-5 show a decrease of £215,549. The total sum required is £10,739,000. The decrease in the clothing establishment and supplies amounts to £23,616. There is a decrease in the charge for barrack establishments of £24,472; and £16,000 of this amount is said to be due to "a more economical use of fuel and a reduction in the price of fuel." A slight diminution in the force, from 147,118 to 145,654 men, causes a reduction under the head of pay of £31,000. But the largest item of decrease is £255,000 in the charge of military stores. It is stated in explanation that "the diminished expenses arise partly from the contracts for the supply of small arms having been completed, partly from the termination of the contract with the Enfield Company," a most unfair way to put it, "partly from the reserve proportion of camp equipage, &c., being nearly complete." An increase of £33,000 is for the necessary "renewal of ammunition" meets in ordnance and projectiles of larger natures." The only other important reductions are of £60,01 on works and buildings, and of £30,000 by which the necessary cavalry not being assembled for permanent duty during the ensuing year. These reductions, however, are counter by a very heavy increase caused by the war in New Zealand. That island figures as the most considerable cause in the heaviest items of increase. Under the head of clothing and supplies the supplies alone amounts to more than £200,000. The same source of increase appears under the head of militia staff and serves to the extent of more than £10,000, and the working pay for men in the field in New Zealand causes an increase under the head of militia pay of £30,000. Transport and freight caused by the war in New Zealand. That island figures as the most considerable cause in the heaviest items of increase. Under the head of clothing and supplies the supplies alone amounts to more than £200,000. The same source of increase appears under the head of militia staff and serves to the extent of more than £10,000, and the working pay for men in the field in New Zealand causes an increase under the head of militia pay of £30,000. Transport and freight caused by the war in New Zealand has caused an increase of more than £1,000 in the amount required for good shooting pay, and the volunteer staff pay exceeds that of last year by more than it was anticipated last year that there is an increase of £6,376 under the head of their capitation allowance.

THE United States armed transport *Burnside* left this port a few days since for Newbern, where she is to be attached to the Second Brigade of the 19th Army Corps, General GRAHAM commanding. She is armed with six of WILLIAMS' steel guns, and has six launches capable of carrying twenty-five men each, her complement being 130 men. The officers of the *Burnside* are Acting Master and Commander and Executive Officer S. J. DOWNLEY, Lieutenants H. F. WELLS, H. MCGOVERAN, V. H. VOGELSEE. The *Burnside* is one of seven vessels now under the supervision of Colonel HOWARD, of the 13th H. A. N. Y. V.

THE WAR IN DENMARK.

Up to the date of the last advices from Europe, the 23th ult., no serious fighting appears to have taken place in Denmark since the Danes retreated to their fortifications at Duppel and Alsen. A *reconnoissance in force* towards Duppel was made at 7 A. M., on the 22d, by the Prussians, who drove in the Danish outposts, and occupied the village, from which they were soon expelled by a cannonade from the fortifications. The action lasted about four hours, and according to a dispatch to the London *Times*, the Danes lost two hundred killed and wounded, including many officers. The loss of the Prussians is also said to have been very severe. The Prussian official account is less favorable to the Danes. It puts the loss of the former at three killed and twenty wounded, and claims several officers and two hundred of the rank and file as prisoners. Several Danish flags were also captured by the Prussians.

The report that the allies had entered Jutland is confirmed, though it does not appear that they have advanced farther than the village of Kalding, just over the line, and southwest of the strongly fortified town of Fredericia. As the invasion of Denmark proper was not to be carried out on an unfavorable impression in England and France, as if the allies, not content with having driven the Danes out of Schleswig, were about to engage in a war of conquest, the ambassadors of Prussia and Austria, at London and Paris, have given explanations tending to show that the occupation of certain positions in Jutland was necessary for strategic purposes in reference to Schleswig alone.

A dcet of twelve Austrian men-of-war has been ordered to sea, for the ostensible purpose of protecting German merchant vessels against privateers, but the real object, it was in circulation that the city of Copenhagen was to be attacked by this fleet, in combination with Prussian ships. The Danish frigate *Niels Juel* was cruising in the English Channel, on the lookout for German vessels, and had overhauled numerous ships, including an American bark.

At the eleventh hour, the Danes having been effectually expelled from Schleswig, the English government proposed an armistice, and a conference for the peaceful settlement of the question. Austria and Prussia, flushed with victory, and well acquainted with the value of time, accepted the conference, but refused the armistice. Hostilities against the Danes at Duppel and Alsen were to continue, but no further advance was to be made into Jutland until after the conference. This decision was variously received in England. The London *Times* applauded the "moderation" of the allies, and declared that their "concessions" proved that the influence of England was not on the decline. But the *Daily News* took a different view, and saw no reason for English statesmen to boast of their success in prevailing upon Austria and Prussia to send two diplomatists to talk over the Danish matters, while their unjust invasion is still maintained, and the butchery in Schleswig still goes on. "The can," it says, "is a very simple one. The burglars are in possession of every room in the house except the garret. 'We have been busily crying out 'thieves' and 'police,' 'when suddenly it is announced with rapturous delight, as 'an immediate triumph, that at our earnest request the 'robbers have consented to detach one of their gang to talk 'over the little affair with us. The burglary is to go on 'in the meanwhile."

The partial concession of the two powers had, however, awakened hopes that the war might be terminated without further bloodshed, and without the infliction of greater humiliations on the Danes.

THE MILITARY COMMISSION SENT BY ENGLAND TO AMERICA.

The following extract from the debate in the British House of Lords, on the 23d ult., will be of interest to military readers in this country:—

Lord STRATHEDEN asked the Secretary of State for War, whether her Majesty's Government propose to send commissioners to report upon the military operations of the Confederacy, as well as to send commissioners to report upon the military operations of the United States. The Northern army, he said, was composed of different elements; it comprised Germans and Irish, as well as native Americans; while the Southern army was composed mainly, if not entirely, of natives of the Confederate States. Prussia had already sent commissions to the Southern States.

Earl ON GREY AND RYON—The noble Lord is not quite accurate in stating that her Majesty's Government have proposed to send commissioners to report on the military operations in the Northern States of America. We do not propose to send any officers to the Northern States to fill the position of commissioners in the proper sense of that word. We have from time to time sought information with respect especially to the manufacture of guns and ammunition, and the building of iron vessels, from Lord Lyons, her Majesty's minister at Washington; and from time to time he has forwarded as much information as he has obtained on these points. But, as the subject became more extended, and the information which it was desirable to obtain more minute and technical, Lord Lyons felt that he had no means at his disposal to enable him to supply such information accurately to her Majesty's Government, and he recommended that some military officer should be sent to collect it, with the full advantage of professional knowledge. In consequence of that recommendation, and with the view of obtaining information with regard to the materials of war, and the application of iron to vessels like the *Monitor* and other classes of ships in that country, her Majesty's Government have sent to the Northern States of America an artillery and an engineer officer, and an officer of the navy; but they will not act in the capacity of commissioners with the Northern States Army, and are not sent so much for the purpose of going about and reporting on military operations, as for collecting special information with respect to the materials of war and building in those States. Of course, in the Southern States of America, the information to be acquired on those points is more important and extended than that to be obtained in the Southern States, because of the great resources which the former have at their command, and the inventions and new systems which they are adopting. On the other hand, for other general and very diverse reasons—one especially being that to which the noble Lord has alluded, as to the difficulty of the route by which officers would have to find their way to the Southern States—her Majesty's Government did not consider it advisable to send any officers to make similar inquiries in the Southern States.

ARMY GAZETTE.

APPOINTMENTS BY THE PRESIDENT,

BY AND WITH THE ADVICE AND CONSENT OF THE SENATE.

QUARTERMASTER'S DEPARTMENT.

TO BE ASSISTANT QUARTERMASTERS, WITH RANK OF CAPTAIN.

George F. Wilkey, of Illinois.
Captain Thomas J. Williams, of the United States Army
Lieutenant-Colonel J. Donnell, Regimental Quartermaster of the 83d Ohio Volunteers.
Robert B. Starr, of Wisconsin.
First Lieutenant S. N. Brooks, of the Ohio Artillery.
D. C. Shepherd, of Illinois.
Lieutenant-Colonel A. Hesser, Regimental Quartermaster of the 67th Ohio Volunteers.
Lieutenant A. J. Lawrence, of the 10th New York Volunteers.
Second Lieutenant Charles S. McIntire, of the 6th New York Volunteers.
Lieutenant Henry L. Arnold, of the 10th Minnesota Volunteers.
Julius Gregoire, of the District of Columbia.
Second Lieutenant Charles Hall, of the 5th Maine Volunteers.
Willis Gaylord, of Michigan.
Hirsch S. Lowe, of New York.
Henry Brownrigg, of Vermont.
A. P. Hunt, of Vermont.
George J. Lane, of Massachusetts.
Lieutenant-Colonel F. Wolcott, of the 12th Illinois Volunteers.
Nathaniel S. Hill, of New Hampshire.
Reuben A. McCormick, of Ohio.
Lieutenant John Bolton, of the 38th Indiana Volunteers.
Henry Pierce, of Massachusetts.
J. N. Cornish, of Iowa.
Lieutenant Samuel Harringer, Commissary of Subsistence of Volunteers, August 3, 1861.
Joseph F. Boyd, of Kentucky.
Charles A. Arnold, of New York.
Arthur G. Beer, of Illinois.
Thomas Hamilton, of Minnesota.
Benjamin H. Thomas, of New York.
Jesse Pingrey, of New York.
Albert Fellows, of Ohio.
William M. Kimball, of Minnesota.
Captain L. Parker, of Massachusetts.
George W. Rutherford, of Illinois.
Captain Thomas Hall, of Pennsylvania.
James Gregory, of Pennsylvania.
Edward J. Strong, of New York.
Frank W. Oakley, of Wisconsin.
Frederick H. Wheeler, of North Carolina.
Lieutenant Charles Hall, of New Jersey.
William H. Lockwood, of Pennsylvania.
Ephraim M. Jost, of Missouri.
Francis Fuller, of Illinois.
Theodore Neger, of Ohio.
Thomas Hall, of Ohio.
Thomas J. Pickett, of Indiana.
Lieutenant Joseph Lee, of New York.
Captain A. Bethel, of New York.
R. C. Richardson, of Ohio.
Albert Brown, of Ohio.
Henry Bishop, of Ohio.
Jacob Hoffman, of Ohio.
E. F. Fillis, of Ohio.
Patrick Finnigan, of Missouri.
Lieutenant Ferguson, of Ohio.
Nathaniel Eastlay, of Pennsylvania.
J. M. Fewing, of Ohio.
Herman Guttman, of Missouri
Lieutenant Hall, of Ohio.
Henry Harding, of New York.
Hall C. Sengior, of Ohio.
Henry C. Noble, of Illinois.
George B. Cadwalader, of Pennsylvania.
Captain Thomas Hall, of Pennsylvania.
Isaac Adams, of Maine.
David G. De Wolf, of New York.
Samuel B. Beery, of Pennsylvania.
Albert N. Bradshaw, of New York.
Lieutenant Hall, of Illinois.
Benjamin F. Rice, of New York.
Thomas B. Gallagher, of New York.
T. S. Nelson, of Western Virginia.
Richard A. Lone, of New York.
Arthur L. Ingalls, of New Hampshire.
George W. Cushing, of Rhode Island.
Captain Thomas Hall, of Illinois.
John F. Lansing, of New York.
John L. Bunn, of New York.
Lieutenant Hall, of Pennsylvania.
Wm. A. Rankin, of Kansas.
Captain Thomas Hall, of Illinois.
James L. Conkling, of Wisconsin.
Thomas J. Kerr, of Ohio.
Albert A. Abercrombie, of Pennsylvania.
F. V. Hewell, of Pennsylvania.
George Lincoln Barnes, of Massachusetts.
Lieutenant Hall, of Pennsylvania.
Samuel B. Lemley, of Pennsylvania.
John M. Barney, of Massachusetts.
Marquis L. Smith, of Indiana.
George S. Rowley, of Massachusetts.
Thomas C. Dudley, of Indiana.
Lieutenant Hall, of Ohio.
Orlando Brown, of Massachusetts.
G. Gaston, of Massachusetts.
Stanford G. Lytle, of Ohio.
Lieutenant Hall, of Ohio.
Daniel L. Smith, of Illinois.
A. C. Van Duzer.
J. C. Clausey, of Missouri.
J. C. Sheldon, of Illinois.
Hall, of Ohio.
Robert Ould, of Virginia.
Lieutenant G. Wright, of Massachusetts.
Lieutenant Hall, of Pennsylvania.
B. L. Westbrook, of California.
R. B. Hitchcock, of Illinois.
A. N. Runyon, of Illinois.
Lieutenant Hall, of Indiana.
James T. Cox, of Kentucky.
G. Edwin Dunbar, of Massachusetts.
Edward S. Lester, of Ohio.
R. B. Rice, of Ohio.
Hall, of Illinois.
C. Stewart, of Ohio.
D. P. Wilder, of Ohio.
Medad Hall, of Ohio.
A. Gaiser, of Ohio.
Lieutenant J. Bonnell, of Missouri.
J. P. Hall, of Ohio.
H. D. Wilder, of Ohio.
William A. Wainwright, of Indiana.
John R. Brooks, of Pennsylvania.
Andrew Sheridan, of Illinois.
Curtis Barnes, of Massachusetts.
Benjamin Burton, of Illinois.
Edward S. Sims, of District of Columbia.
D. B. Cornwell, of Ohio.
Hall, of Illinois.
George H. Dodson, of Kentucky.
Captain John F. Hunt, of the 96th New York Volunteers
John F. Culley, of Iowa.
Alexander Hall, of New York.
Lieutenant Hall, of Pennsylvania.
Lieutenant C. V. Tolles, of the 1st Wisconsin Cavalry.
Lieutenant F. M. Norcross, of the 4th Massachusetts Volunteers.
Lieutenant Hall, of Vermont, late of the 5th Ohio Volunteers.
E. J. Smith, of Iowa.
Captain Thomas Hall, of Illinois, of the 88th New York Volunteers
Isaac M. Gaff, of Illinois.
Lieutenant William B. Mowbray, of the 8th Minnesota Volunteers
Lieutenant Hall, of Missouri.
Lieutenant Isaac E. Scott, of the 5th Indiana Volunteers.
Captain Hall, of Pennsylvania.
Lieutenant Samuel Hall, of the 13th New Hampshire Volunteers.
Alexander Sedgwick, of Illinois.
Lieutenant Hall, of the 2d Kansas Volunteers.
Samuel Batchelor, of Iowa.
Jos. P. Hall, of Illinois.
Lieutenant Emanuel Hall, of the 83d Ohio Volunteers.

COMMISSARY OF SUBSISTENCE DEPARTMENT.

TO BE ASSISTANT SUBSISTANCE, WITH THE RANK OF MAJOR.

Lieutenant-Colonel A. Commager, of Illinois, with Major General McPherson.
Captain H. E. Freeman, 2d New York Volunteers, with Major General Sherman.

Charles A. Wheeler, of Massachusetts, with Major General Schofield.
Captain A. H. Symmonds, of Maine, with Major General Hooker.
Samuel Anderson, of Massachusetts, with Major General Foster.
Lieutenant-Colonel Thomas Wilson, 44th Pennsylvania Volunteers, with Major-General Meade.
Captain Thomas B. Brooke, of the New York Volunteer Engineers, with Major-General Grant.
Captain Gamwell E. Schauss, with Major-General Hunterdon.
Captain Thomas Hall, of the 88th New York Volunteers.
First Lieutenant Vincent S. Hall, of Iowa Cavalry, with Major-General Granger.
Peter Hagerty, of Massachusetts, with Major General Butler.

PAYMASTER'S DEPARTMENT.

PAYMASTERS IN THE ARMY OF THE UNITED STATES, WITH THE RANK OF MAJOR

Edward Wyllid, of Illinois.
Captain Thomas J. Peters, 19th Regt. of Mass., of the United States Army.
Rodney Smith, of Kentucky.

ASSISTANT PAYMASTERS IN THE ARMY OF THE UNITED STATES

George B. Dudley, of New York.
Captain Hall, of Missouri, of Ohio.
George W. Condon, of Illinois.
Francis C. Barlow, of New York.
Robert Swain, of Ohio.
Lieutenant Thomas Hall, of Pennsylvania
J. H. Thomas, of Maryland.
Zachariah Voorhees, of Kansas.
George and Hall, of Illinois.
James Whitehill, of Pennsylvania.
Samuel Hall, of Ohio.
Samuel R. Lee, of Illinois.
Thomas A. Hubbard, of Massachusetts.
John S. Hall, of Illinois.
George B. Regal, of Iowa.
Hall, of Ohio.
Captain Hall, of Ohio.
William H. Hall, of Pennsylvania
Joseph Hurst, of Wisconsin.
Warren C. Sherman, of Ohio.
Hall, of Ohio, Founder, of Ohio.
George Cunningham, of Maryland.
Lieutenant Hall, of Pennsylvania
H. H. Anderson, of Pennsylvania
William J. Gardner, of New York.
D. F. Forret, of New York.
M. S. Goodell, of Ohio.
Lieutenant Hall, of Wisconsin.
R. S. Hudson, of New Jersey.
W. G. Hale, of New York.
Rufus Prescott, of New York.
S. V. Hollday, of Pennsylvania.
Hall, of Ohio, Founder, of Ohio.
S. Lonsdorf, of Connecticut.
Henry Lunn, of Wisconsin.
T. W. Lunn, of Indiana.
Allen M. Scott, of Pennsylvania.
Joseph Hall, of Ohio.
Lieutenant Hall, of Massachusetts
Peter Northrop, of Connecticut.
J. H. Nelson, of Michigan.
William V. Turner, of New York
H. H. Bingham, of Pennsylvania.
Walter S. Hall, of Indiana.
Captain Thomas Hall, of Wisconsin
W. N. Sabin, of Indiana.
Albert P. Barrow, of Ohio.
H. W. Pryor, of Pennsylvania.
F. C. Tarr, of Maryland.
Lieutenant Hall, of Pennsylvania.
Thomas E. Whitaker, of Missouri.
Charles S. Warner, of Minnesota.
Charles Wilcox, of Massachusetts.
John S. Walker, of Maine.
Captain Thomas Hall, of Minnesota.
Hawley Campbell, of Indiana.
William Jones, of Ohio.
J. Edwin Hyer, of New York.
Allen A. Craig, of Pennsylvania.
Burton A. King, of Michigan.
Elijahah Rosevit, of Maine.
Lieutenant Thomas Hall, of Illinois.
Amos Kendall, of Ohio.
Willard Mickey, of Ohio.
D. D. Bingham, of Vermont.
Fenton F. Stevens, of Wisconsin.
Samuel Hall, of Ohio.
Levi Sturtevant, of Wisconsin.

ADDITIONAL PAYMASTERS IN THE VOLUNTEER FORCE

Hedley W. Rhodes, of Ohio, April 16, 1861.
Lieutenant-Colonel Thomas Wilson, Indiana, April 22, 1863.
Captain Charles F. Hunt, of Wisconsin, May 6, 1863.
George B. Congdon, of Wisconsin, May 14, 1863.
Josiah Bonner, of Illinois, May 27, 1863.
Marshall Gracey, of Indiana, June 17, 1863.
Lieutenant-Colonel Thomas Wilson, July 2, 1863.
Henry C. Gresham, of Iowa, July 25, 1863.
Benjamin S. Hammond, of Rhode Island, July 28, 1863.
George F. Sanderson, of Massachusetts, July 24, 1863.
John S. Hedrick, of Ohio, July 29, 1863.
Josiah Bonner, of Illinois, August 4, 1863.
William G. Lapsley, of Indiana, August 4, 1863.
Lieutenant-Colonel Thomas Wilson, August 10, 1863.
Amos H. Bliss, of New York, August 10, 1863.
Robert D. Clark, of Pennsylvania, August 12, 1863.
Samuel B. Beery, of Pennsylvania, August 12, 1863.
Edward G. Fallenbach, of Pennsylvania, August 14, 1863.
Lieutenant-Colonel Thomas Wilson, August 14, 1863.
Lewis Cheney, of Ohio, August 14, 1863.
Chauncey Bolles, of Ohio, August 17, 1863.
John W. Wilson, of Pennsylvania, August 19, 1863.
Selden R. Martin, of New York, August 21, 1863.
Lieutenant-Colonel Thomas Wilson, August 31, 1863.
Charles L. Hubbell, of New York, September 1, 1863.
Simon S. Reynolds, of Indiana, September 4, 1863.
Benjamin Wilson, of Indiana, September 15, 1863.
Benjamin Gregory, of New Jersey, September 19, 1863.
Lieutenant-Colonel Thomas Wilson, October 1, 1863.
Edward Wyllid, of Illinois, November 27, 1863.
Henry T. Dickson, of Illinois, October 3, 1863.
Edward Wyllid, of Massachusetts, October 7, 1863.
Peter P. G. Hall, of Pennsylvania, November 6, 1863.
George Bowers, of Pennsylvania, November 6, 1863.
Elias Cooper, of Illinois, November 16, 1863.
Joseph Hurst, of Wisconsin, December 8, 1863.

ADDITIONAL PAYMASTERS IN THE REGULAR ARMY, MAY 31, 1862.

Edward Wyllid, of Illinois, January, April 1, 1863.
Henry Gresham, of New York, April 2, 1863.
S. M. Beatty, of Ohio, April 17, 1863.
John H. Nelson, of Michigan, April 22, 1863.
Rodney Gant, of Maryland, April 22, 1863.
Lieutenant-Colonel Thomas Wilson, April 22, 1863.
Henry Bowers, of Pennsylvania, April 22, 1863.
James B. Cooper, of Pennsylvania, April 22, 1863.
Thomas D. W. Stevenson, of Pennsylvania, April 22, 1863.
Jacob Forrest, of Pennsylvania, April 22, 1863.
Lieutenant-Colonel Thomas Wilson, April 22, 1863.
Edward Sturgeon, of New York, April 22, 1863.
Griffith Owen, of Maryland, April 22, 1863.
Lieutenant-Colonel Thomas Wilson, April 22, 1863.
D. D. McKee, of Delaware, April 22, 1863.
Wm. H. Smith, of Delaware, April 22, 1863.
Wm. C. Smith, of Kentucky, April 22, 1863.
Wm. K. Talbot, of Kentucky, April 22, 1863.
Lieutenant-Colonel Thomas Wilson, April 22, 1863.
Wm. E. Mosher, of Massachusetts, April 22, 1863.
Wm. Burnham, of Pennsylvania, April 22, 1863.

Franklin W. Olmsted, of Vermont, April 26, 1863.
Aaron A. Reed, of Connecticut, May 26, 1863.
Thomas Welch, of New York, May 26, 1863.
William H. Foster, of Connecticut, June 16, 1863.
Wallace Bruce, of New Jersey, August 1, 1863.
C. Annie Granbery, of Pennsylvania, August 3, 1863.
Robert Day, of New York, August 12, 1863.
Thomas J. Potter, of Massachusetts, September 30, 1863.
Patrick McCarthy, of District of Columbia, October 2, 1863.
Wm. Wilson, of Ohio, October 14, 1863.
Margaret Saunders, of Pennsylvania, October 14, 1863.
Alexander Shiras, of Pennsylvania, October 19, 1863.
Philip Miller, of Illinois, October 19, 1863.
Charles Carmody, of Pennsylvania.
Thomas Hall, of Pennsylvania.
James Sendall, of Pennsylvania, 1863.
Obsorney W. Fitch, of Indiana, October 25, 1863.
John Sidney Hall, Illinois, November 2, 1863.
B. B. Van Antwerp, of North Carolina, November 10, 1863.
Alfred Hall, of Pennsylvania, November 14, 1863.
Alfred Smith, of Pennsylvania, November 14, 1863.
Hermann Gerz, of Wisconsin, December 2, 1863.

THE BATTLE OF CHICKAMAUGA.

APPENDIX TO MAJOR-GENERAL ROSECRANS' REPORT.

MAJ.-GEN. ROSECRANS has sent to Washington the following appendix to his Report of the battle of Chicksmaugo:

HEADQUARTERS, OHIO, January 12, 1864.

GENERAL:—The report of the General-in-Chief shows that a letter from one of my divisions commanders on the battle of Chickamauga, commenting on the report of his commanding General, has been received at the War Department and subsequently published by its authority. The General-in-Chief refers to that letter as a rival authority to my own, and as ranking in point of the accuracy of a point in my report. The letter, dated October 3d inst., four days after I left the command, is not a communication in any official report, by which evidently the writer was not at that time confined, and which, therefore—even were it now unexplained—is excluded. It has been received and publicly used as a document disparaging my report, without having been referred to or explained by through my hands or regulated by military courtesy and army regulations.

The War Department is therefore respectfully requested, as an act of justice, to cause the above and following observations to be filed and published as an appendix to and explanation of the battle of Chickamauga.

NOTE BY REFERENCE TO GENERAL WOOD'S LETTER.

Brigadier-General T. J. Wood, Commanding Division, &c.:

The General-in-Chief's letter, in accordance with the literature drawn in my report, that he did right under an order to "close up on General Reynolds' right," and that the left of your division and of the line of battle and in rear of Brannan's division to a reserve position in rear of Reynolds. By report, dictated with four and twenty hours' general remarks, shows that general Reynolds sent me word by Captain Kellogg, A. D. C., to be cautious, that there were no troops on his immediate right, and that he wanted support there; that, supposing that I, his left, was in close support, I was not able to send General Wood an order to close up on Reynolds and support him, but to close up on me.

Respectfully, your obedient servant, W. S. ROSECRANS, M. G. U. S. A.

Brigadier-General T. W. Wood, Commanding Division, &c.:

The General-in-Chief's letter, in accordance with the literature drawn in my report, that he did right under an order to "close up on General Reynolds' right," and that the left of your division and of the line of battle and in rear of Brannan's division to a reserve position in rear of Reynolds. By report, dictated with four and twenty hours' general remarks, shows that general Reynolds sent me word by Captain Kellogg, A. D. C., to be cautious, that there were no troops on his immediate right, and that he wanted support there; that, supposing that I, his left, was in close support, I was not able to send General Wood an order to close up on Reynolds and support him, but to close up on me.

Respectfully, your obedient servant, W. S. ROSECRANS, M. G. U. S. A.

FROM A DIVISION COMMANDER.

Brigadier-General T. J. Wood, Commanding Division, &c.:

GENERAL:—The report of the General-in-Chief shows that a letter from one of my division commanders on the battle of Chickamauga, commenting on the report of his commanding General, has been received at the War Department and subsequently published by its authority. The General-in-Chief refers to that letter as a rival authority to my own, and as ranking in point of the accuracy of a point in my report. The letter, dated October 3d inst., four days after I left the command, is not a communication in any official report, by which evidently the writer was not at that time confined, and which, therefore—even were it now unexplained—is excluded. It has been received and publicly used as a document disparaging my report, without having been referred to or explained by through my hands or regulated by military courtesy and army regulations.

The War Department is therefore respectfully requested, as an act of justice, to cause the above and following observations to be filed and published as an appendix to and explanation of the battle of Chickamauga.

Respectfully, your obedient servant, W. S. ROSECRANS, M. G. U. S. A.

Brigadier-General T. W. Wood, Commanding Division, &c.:

GENERAL:—

NAVY YARDS.

BROOKLYN NAVY YARD.

The schooner *Rachel Seamen* arrived at this Yard February 29.

The steam gunboat *Octorara*, Acting Master Robert Tarr, commanding, sailed March 4, from the coast of Texas, via New Orleans, Ship Island and Pensacola, making the passage from the latter port to this Yard in 36 hours.

It is reported that she may be sent to Boston. The *Iuka* arrived March 4. On the same day the *Saxonlop* was brought from Bailey's Wharf, and the *Augusta* from Greenpoint, where they both are undergoing repairs. The *Shamrock*, which was undergoing repairs, getting in new bulkes, &c., at the foot of Delancey street, was sent to the Yard March 5. She is commanded by Acting Master Nash, for the North Atlantic Squadron. The *Niagara* dropped down the river March 9, and is now opposite the Battery. The *Susquehanna* still remains in nearly ready to go into commission. The prize steamer *Isaiah, J. M. G. Revell*, Acting Ensign, commanding, arrived at the Yard from Wilmington, Del., via Hampton Roads. She is a side-wheel steamer, 61 tons burthen, and has a cargo of 100 bales cotton. She was captured on the 1st instant, by the boats of *Niagara*, by the U. S. gunboat *Connecticut*, while attempting to run the blockade. She was bound to Nassau. She was built on the Clyde, and was purchased and sent out from Glasgow in the summer of 1863. She is commanded by a prize crew of four.

She has a straight stem, two masts, and one funnel, and belonged to the same company who sent out the *Princess Royal*.

The prize steamer *Lucy Anne Cumberland*, Acting Master E. H. Partridge, commanding, arrived March 9, from Key West 7th inst., and sailed on Wednesday, at 12 M., being short of coal, for Port Royal: on the 6th, was supplied, and sailed on Sunday, 6th, for New York. She was captured by the *Ethan Allen* on the 20th ult., in the Gulf of Mexico, 20 miles from Cedar Keys, and 90 miles south by the U. S. steamer *De Soto*. She has proved herself to be a splendid seaboat, as she is a substantial, well-built vessel in every respect, and has been fitted up in a manner combining use and comfort. Her cabin skylights are emblazoned with the name of the fair of fighter, whose crest also adorns the cabin windows of the prize steamer *Rosita*, also captured by the *Ethan Allen*. Handsome mirrors of the *Cumb erland* are fitted up in the most luxurious manner. Her machinery is pronounced faultless; the boilers are new, and the working of her engines is the admiration of all who see them. Her orders are exceedingly stiff in a sea way. She could be easily transformed into a gunboat. She was used as a transport in the Crimean War, has been in the Mediterranean and London trade, and once ran in the Galway and New York line. She is the finest steamer captured during the war. Acting Master Partridge reports that he was relieved for rest in a few days by the U. S. Marshal of Florida, James H. Clapp, who is on board. She left at Beaufort, N. C., 9th inst., U. S. steamer *Ethan Allen*, Acting Master Charles Scribner in charge, for Port Royal. She is now lying at the Atlantic Dock.

The iron-clad *Re d Rabin* left the Navy-ard March 3, on her way to Boston. The ship was towed down the river and out to sea by steamers eight 24 pounders. Mr. Robert Robinson goes out in her as Chief Engineer, the ship arrives at Genoa. The *Re d'Italia* carries 24 guns of coal, and 300 tons of coal.

Paymaster Gibson has returned from Washington. Rear-Admirals Gregory and Paulding, Captain Baldwin and several other officers have been ordered to Washington, to attend the Court-Martial upon Admiral Wilkes. The Naval Committee of Congress was expected at the Yard on Thursday afternoon. Nearly all the workmen in the Yard have remained a vigorous movement for increased pay. The employes of the Yard and the prominent ship-builders of New York and the vicinity contributed $1,000 to the fund, and $1,425.50 was thrown in by the U. S. Pelaza, Jr., of which amount $1,484.20 was raised in the Yard.

PRIZE CASES.

THE following is a list of prize cases sent to the Fourth Auditor's Office for adjudication, and which will soon be ready for payment:

Prize schooner *Ericsson*, captured by the U. S. steamer *Curonia* and corvette, 1862, 1863. Amount for distribution is $10,000. Wm. A. Harwood, Esq. officer.

Prize schooner *Lucy Maria*, captured by the U. S. steamer *Fort Henry*, June 28, 1863. Amount for distribution is $4,339.01. T. Bailey, Esq. officer.

Prize schooner *Charleston*, captured by the U. S. steamer *Seminole*, July 13, 1863. Amount for distribution is $2,223.15. Judge Phillip Francis Thomas having reported to Admiral Farragut before the date of the seizure.

Prize bark *Stella Louise*, captured by the U. S. steamer *Saxonlop*, August 16, 1863. Amount for distribution is $1,484.20. T. Bailey, Esq. officer.

Prize bark *Stella Maples* captured by the U. S. steamer *Quaker City*, June 26, 1863. Amount for distribution $2,317.62. S. H. Stump Esq. flag officer.

Prize sloop *Bright*, captured April 15, 1863, by the U. S. steamer *Rosita*. Amount for distribution is $2,040.70. T. Bailey, flag officer.

Prize steamer *Spaulding*, captured October 13, 1863, by the U. S. steamer *Somers*. Amount for distribution is $75,194.20. No flag officer.

Prize *Ascension*, captured April 14, 1863, by the U. S. steamer *Gertrude*. Amount for distribution is $4,040.74. Charles Wilkes, flag officer.

Prize schooner *Avon*, captured February 14, 1863, by the U. S. steamer *Tioga*. Amount for distribution is $3,400.76. Charles Wilkes, flag officer.

Prize schooner *Louisa*, captured August 23, 1862, by the U. S. steamer *Kanawha*. Amount for distribution is $1,000. T. Bailey, flag officer.

Prize schooner *Wanderer*, captured May 3, 1863, by the U. S. steamer *Sacramento*. Amount for distribution is $750.54. S. P. Lee, flag officer.

Prize schooner *Ned*, captured August 8, 1863, by the U. S. steamer *Penguin*. Amount for distribution is $3,400.76. T. Bailey, flag officer.

Prize schooner *Surprise*, captured March 13, 1863, by the U. S. steamer *Hartford*. Amount for distribution is $10,040.77. T. Bailey, flag officer.

Prize schooner *Gipsey*, captured March 30, 1863, by the C. S. steamer *Estes Allen*. Amount for distribution is $674.14. T. Bailey, flag officer.

Prize sugar, &c., captured June 24, 1863, by the U. S. steamer *Tahoma*. Amount for distribution is $17,643. T. Bailey, flag officer.

Prize schooner *Flasher*, captured June 15, 1863, by the U. S. steamer *Lackawanna*. Amount for distribution is $11,484.68. D. G. Farragut, flag officer.

Prize sloop *D. Sargent*, captured March 12, 1863, by the U. S. steamer *Kittatinny*. Amount for distribution is $4,293.60. D. G. Farragut, flag officer.

Prize sloop *Angelina*, captured February 24, 1863, by the U. S. steamer *Sun of Georgia*. Amount for distribution is $1,836.05. S. P. Lee, flag officer.

Prize schooner *Kent*, captured May 1, 1863, by the U. S. steamer *Tahoma*. Amount for distribution is $1,000. D. G. Farragut, flag officer.

Prize sloop *O. L. Brockenbrough*, captured October 15, 1863, by the U. S. steamers *Sagamore* and *Fort Henry*. Amount for distribution is $1,016.40. J. P. Lanthorn, flag officer.

Prize steamer *Caroline*, captured September 26, 1862, by the U. S. steamer *Montgomery*. Amount for distribution is $99,154.3. D. G. Farragut, flag officer.

Prize sloop *Clotilde*, captured April 16, 1863, by the U. S. steamer *McClellan*. Amount for distribution is $6,771.49. No flag officer.

Prize sloop *Kalmazoo*, captured by the U. S. steamer *Sassacus*. Amount for distribution is $2,713.56. T. Bailey, flag officer.

Prize steamer *Ann*, captured June 23, 1862, by the U. S. steamers *Kanawha* and *Penguin*. Amount for distribution is $1,000. T. Bailey, flag officer.

Prize schooner *Mary Jane*, captured June 18, 1863, by the U. S. steamer *Tahoma*. Amount for distribution is $1,000. T. Bailey, flag officer.

Prize schooner *Arctic*, captured 15, 1863, by the U. S. steamer *Lodona*. Amount for distribution is $2,226.66. No flag officer.

Prize schooner *Lizzie*, captured June 15, 1863, by the U. S. steamer *J. S. Chambers*. Amount for distribution is $1,452.01. T. Bailey, flag officer.

Prize schooner *Hatteman*, captured by the U. S. steamers *Ottawa*, *Sagamore* and *Flambeau*. Amount for distribution is $14,467.56. S. P. Dupont, flag officer.

Prize schooner *Montrose*, captured May 16, 1863, by the U. S. steamer *De Soto*. Amount for distribution is $12,840.67. T. Bailey, flag officer.

Prize schooner *St. George*, captured April 22, 1863, by the U. S. steamer *Grand Gulf*. Amount for distribution is $2,587.80. S. P. Lee, flag officer.

Prize schooners *Lydia and Mary*, captured March 29, 1863, by the U. S. steamer *Rosita*. Amount for distribution is $3,800.80. S. P. Lee, flag officer.

Prize schooner *Ann Maria*, captured May 1, 1863, by the U. S. steamer *Conor de Leon*. Amount for distribution is $1,344.87. A. A. Harwood, flag officer.

Prize schooner *Fairies*, captured May 27, 1863, by the U. S. steamer *Tahoma*. Amount for distribution is $1,000. S. P. Dupont, flag officer.

Prize sloop *No Name*, captured by the U. S. steamer *Estrella*, 1862. Amount for distribution is $21.91.

Prize steamer *Caleb*, captured January 23, 1863, by the U. S. steamers *Samuel Rotan*, *Octorara* and *Rachel Seamen*. Amount for distribution is $23,340.86. W. W. McKean, flag officer.

HOW TO SEND SUPPLIES TO UNION PRISONERS.

THE following communication furnishes important information:

To the Friends of Union Prisoners now in the Southern States:

The undersigned, members of the "Union Prisoners' Relief Society," lately confined in Libby Prison, feel that the greatest favor they can confer upon their fellow-prisoners is to relieve the anxiety of their friends, relatives and families in the North to the following suggestions:

1st. Boxes should not exceed twenty pounds, and only or two first express and three first long.

2d. They should invariably be stoutly and securely bound with iron hoops.

3d. Coffee, tea, sugar, flour, tobacco and articles of like character should be put in stout paper or canvas bags.

4th. All perishable articles should be excluded as tending to injure the remaining contents of the boxes.

5th. Under no circumstances should articles of a combustible nature, such as matches, be sent, as the prisoner's clothes are to rent. The prohibition is imperative, and the scrutiny most thorough. Every box will be opened by the rebel authorities at Richmond.

To the friends of the enlisted man we would most emphatically say, send him nothing else.

In making this recommendation we would not be understood as asking the Union people throughout the country to relax or desperation to carry out their pledges, but owing to the scarcity of transportation, and the consequent delays in the delivery of the prizes addressed, it is almost an impossibility to ensure the proper delivery of any goods.

JAMES S. SANDERSON, Lieut.-Col. and C. S. 1st A. C.
JOHN A. BOWMAN, Lieut.-Col. and C. S. 3d Div. 3d A. C.
S. M. ANDREWS, Lieut.-Col. 17th Iowa Infantry.

THE screw steamer *Kearsarge*, 8, arrived at Brest from Cadiz on the 22d inst.

THE body of Acting Master Westervelt, of the *Underwriter*, was found in the Neuse River with a shot-bag through the head, which had evidently been fired from a musket. He had been killed by a desperate mutiner, with revolver in hand.

THE gunboat *Iuka* arrived at the Navy-yard on Saturday last from Cherrystone Bay by a band of about thirty rebels.

THE steamer *Sumpter*, which was captured after she had run the blockade, was sold by the British Admiral on the station, and when the purchaser went to take possession of her, he found that the rebels had set her on fire. He was informed that the vessel would be handed over to the Admiralty; but Lord Palmerston disapproves of that decision, and has ordered the vessel to be released.

COLONEL J. H. Baker, commanding the post of St. Louis, has issued an order calling attention to a previous order prohibiting the wearing by citizens of the uniform of the United States army, and announcing that the removal of the regulation buttons from a coat does not relieve the wearer from the charge of violating the above-named order. Citizens who may have obtained soldiers' clothing by purchase or otherwise and discharged soldiers are required to dye their clothing another color. Hereafter, any citizen found wearing soldiers' clothing, or any part thereof, will be arrested, the clothing confiscated and turned over to the Quartermaster's Department for transfer to officers in charge of contraband camps for issue to destitute negroes. The wearing on their hats, by citizens or enlisted men, of the regulation cord for officers' hats is also prohibited, and it will be at once confiscated when found worn by any one not entitled to wear it.

A PRIVATE letter from Havana, dated March 1st, states that the U. S. gunboat *De Soto* was in the dry dock there. The blockade runners and secessionists in Havana had threatened to burn the vessel, and also threatened the officers with violence. The Spanish authorities, however, had given the officers of the *De Soto* permission to wear their side arms, and they now visit the city fully armed.

CAPTAIN C. Meyers, 16th Michigan Volunteers, has been honorably discharged the service on account of physical disability.

A NAVAL court-martial will assemble in Washington this week, to try Commodore Charles Wilkes on the following charges:—

First. Disobedience of a lawful order of his superior officer while in the execution of the duties of his office. Specification—That he took the *Vanderbilt* as his flag-ship while Lieutenant Baldwin was on a cruise after the *Alabama* by order of the Secretary of the Navy.

Second. Inexcusable conduct and negligence or carelessness in obeying orders. Specification—That he went himself to Lagoyara to attend to duty that he had been ordered to send a single vessel upon.

Third. Disrespect and disrespectful language to his superior officer whilst in the execution of his office. Specification—In writing a disrespectful and insubordinate letter to the Secretary of the Navy.

Fourth. Refusal of obedience to a lawful order or regulation issued by the Secretary of the Navy. Specification—In allowing a copy of a letter to the Secretary of the Navy to fall into the hands of a Washington correspondent of the New York *Times*, twenty-four hours before it reached the Navy Department.

Fifth. Conduct unbecoming an officer and constituting an offence made punishable by article eighth of articles adopted and put in force for the government of the Navy of the United States. Specification—In refusing, on January 24, 1864, to fill up a blank with the day, month and year of his birth.

IT is a rumor, prevalent among military men at Washington, that General GRANT will not remain in the city of Washington, but have his headquarters in the field; and that General HALLECK's position will therefore remain substantially as at present, he holding the position of Chief of Staff to the General, issuing orders, as Commander-in-Chief of the Army, will be transmitted through him to the Lieutenant-General. This would obviate all difficulties arising out of conflicting rank.

A LETTER from on board the new United States gunboat *Metacomet* (double-ender), dated February 22d, at New Orleans, states that on the passage from Key West to that port she rolled tremendously, so much so, indeed, that she was momentarily expected to go down. Her boilers and furnaces were swept away, and two or three of the guns were shifted. When she reached the Mississippi she was so crippled as to be unfit for active service until thoroughly overhauled on the dry dock.

THERE seems little doubt that the work of re-organizing the Army of the Potomac will soon commence. We are told that the plan looks to the transfer of the First and Third Army Corps to the Second, Fifth and Sixth, under the command of Generals SEDGWICK, HANCOCK and WARREN, respectively. The whole subject is likely to come before the new Lieutenant-General for consideration and decision.

AT an enthusiastic war meeting for the purpose of encouraging enlistments in the Second Corps, held in Tammany Hall, New York, on Monday, eloquent speeches were made by General HANCOCK, SCHURZ, MEAGHER, and VIELE. We are glad to report that the work of filling up of the corps is proceeding very satisfactorily.

THE Home Military Committee have unanimously reported a recommendation that the Raritan and Delaware Bay line of steamboat and railroad communication between New York and Philadelphia be declared a National Military and Post-Road, with the privilege secured by Act of Congress to carry through passengers and freight.

WE conclude this week a valuable series of articles on the military resources of Europe, based upon the thorough work of M. VIAL. The articles are contributed to the JOURNAL by Lieutenant-Colonel TOLLES, of the Sixth Army Corps.

MAJOR-GENERAL W. F. SMITH, from the military division of the Mississippi, has arrived in Washington, and there is no question that he will take reference to his assignment to an important command at the East; but we can give the story no confirmation.

BRIG.-GEN. William Birney's camp of United States colored troops, in Charles county, Maryland, was broken up on the 3d and 4th inst., and the troops have embarked for the seat of war.

IT appears from a report of the late Admiral FOOTE, just made public, that after an examination by several sides of the West, he recommended Carondelet for a naval depôt, with an auxiliary depôt at Cairo. The subject is now before Congress.

WE are told that the findings of the Court of Inquiry, exonerating Major-General BUELL from the charges brought against him will soon be published.

CAPTAIN A. GAGE, C. S., has been appointed Inspector Commissary of the Department of Virginia and North Carolina, by command of Major-General BUTLER.

MARRIED.

[Announcements of marriages and deaths should be paid for at the rate of 50c per copy each.]

BALTIMORE AND OHIO RAILROAD

RE-OPENED!

This great National thoroughfare is again open for FREIGHT AND PASSENGER. The route and machinery destroyed are being replaced by new running stock, with all recent improvements; and as the Company's own track are again in substantial condition, the well-earned reputation of this line for SPEED, SAFETY AND COMFORT, will be more than sustained under the reorganization of the Company. In addition to the unequalled attractions of natural scenery heretofore conceded to this route, the following troubles upon the border have associated numerous points on the line, which, for years, have been the scenes of sad and painful but instructive interest.

JUNCTION AND DIRECTIONS

At the Ohio River, with Cleveland and Pittsburgh; Chicago, Cincinnati, and Parkersburg Railroad Lines; and through them with the Great Lakes and Northern Ohio, Indiana, Central West and Southwest. At Baltimore, with Philadelphia, Wilmington, Boston, for Washington City and the Lower Potomac. At Washington, with Alexandria, Orange and Alexandria, and New York.

THREE DOLLARS additional on Through Tickets to Baltimore or the Northern Cities, give the privilege of visiting the WASHINGTON CITY route.

This is the ONLY ROUTE by which passengers can procure through tickets to Washington office to WASHINGTON CITY.

J. H. SULLIVAN,

Box 6816, New York. 259 Broadway.

THE NATIONAL MILITARY JOURNAL,

OF THE

UNITED STATES

ARMY AND NAVY JOURNAL,

AND

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

Officers of the Army and Navy will find in this Journal the only paper in the United States exclusively devoted to Military and Naval affairs, and the only one in their interest which has ever ventured to attain circulation, influence and tolerance in this country to enable it to exist, except so long fett, of an organ which should eloquently express opinions in the Press. Starting under the most favorable auspices, enjoying the encouragement and aid of the best professional talent in the country, studying politics and partisanship of all kinds, and devoting but with eagleness of purpose to the impartial discussion of military interests, and to the dissemination of correct information, it has, in less than six months, established its position as the authoritative organ of military discussion and criticism in the United States, a position with which it has entered a circulation, hardly reached by that of any paper of its class in the world, and the importance of which it has been greatest to the Army and Navy, and by the more intelligent of civilians, who desire to be informed upon a question of the most glorying evidence that the effort to establish a paper that should stand side by side in ability and completeness with the best of the military journals of Europe and France, has not been in vain. As a Gazette of Military and Naval matters, it is proving itself indispensable to every soldier and sailor; and to every regiment afloat or service of the war it must be invaluable for its accurate history of military operations, and for its judicious suppression and exposure of the false reports on the part of the ablest military writers, and its special professional information, which is not to be found in the columns that of any periodical ever issued in this country.

Of the numerous notices of the newspaper press we have room only for the following:

From Major-General George G. Meade.

"I have received several numbers of the ARMY AND NAVY JOURNAL, and have much pleasure in stating that I consider it a valuable addition to our military literature. It affords me much pleasure to subscribe myself as a well-wisher."

From Major-General W. H. French.

"To say that the ARMY AND NAVY JOURNAL is a conspicuous well-wisher should be a representative of our general interests in a manner, I hope, to be a fitted journal."

From Major-General George Stone.

"Your JOURNAL is a valuable addition to this army. I cordially recommend it to the notice of the members of the Army and Navy, and wish you success in your efforts to increase the yearly subscription."

From Major-General J. C. Long, U.S.N.

"Your JOURNAL is not only the best, but the only paper in the United States that ever has been, or is, valuable to the sailor."

From Major-General G. H. Thomas.

"It will afford me much pleasure to recommend the ARMY AND NAVY JOURNAL to officers in the army, and I take this opportunity to express my gratification that the journal has been started."

From Prof. H. Coppee, University of Pennsylvania.

"A good paper, well edited and well conducted. Every former editor within my knowledge has been a failure; but your success is certain. The JOURNAL is very valuable to every intelligent and educated officer."—*Extract from letter.*

"I have read the ARMY AND NAVY JOURNAL with great pleasure, and regard it as a valuable addition to the press, and expect to subscribe and take your military experience will be of great value to the JOURNAL, and consequently to our service."—*From the New York Times.*

The ARMY AND NAVY JOURNAL is an honor indeed in a literary point of view, and is to be prized as an important auxiliary to the military profession. Its able articles, reports and military effects, who spoke from their knowledge of the subject, and not merely as those who look for soldier's bread. It should be taken by every army officer in the field, and by every officer in the service. It is the only paper that gives the army and navy news in full, and in the general public, who now take such a deep interest in all military matters, will find the columns of the highest value and interest.—*From the Boston Post.*

The ARMY AND NAVY JOURNAL has proved a success from the start. It is a large paper, well filled, well edited, and liberally conducted, this paper leaves little to be desired. It is the only publication of the kind extant, and has already entered to a very respectable number of subscribers. Its circulation is rapidly increasing, to a degree of prosperity equal to its merits. Among the contributors to the JOURNAL are Military and Naval officers of high rank, and the following and Naval incidents and dispatches have made the national heart beat quickly, and the JOURNAL will be found a valuable repository for years to come when we look back upon the present.—*From the Boston Post.*

Springfield (Mass.) Republican.

"It is a very creditable enterprise. Apparently it is all we could wish. It is a large, handsome sheet, well filled with matter of interest to the military profession, and to the general public, who now take such a deep interest in all military matters. Indeed, the columns of the highest value and interest.

From the Boston Post.

The ARMY AND NAVY JOURNAL has proved a success from the start. It is a large, handsome sheet, well filled, well edited, and liberally conducted, this paper leaves little to be desired. It is the only publication of the kind extant, and has already entered to a very respectable number of subscribers. Its circulation is rapidly increasing, to a degree of prosperity equal to its merits. Among the contributors to the JOURNAL are Military and Naval officers of high rank, and the following and Naval incidents and dispatches have made the national heart beat quickly, and the JOURNAL will be found a valuable repository for years to come when we look back upon the present.

From the Boston Post.

"It is rare now-a-days to see such capital evidences of true literary enterprise as the ARMY AND NAVY JOURNAL presents. It is a beautiful weekly publication, and is conducted in a manner that will be appreciated, we feel confident, by the whole military profession."—*From the Springfield (Mass.) Republican.*

"It is a large, handsome sheet, well filled with matter of interest to the military profession, and to the general public, who now take such a deep interest in all military matters. Indeed, the columns of the highest value and interest.

From various Journals.

"The best military journal now published."—*New Haven Palladium.*

"It is the only thing worthy to be called a military journal."—*Boston Transcript.*

"It is published in nothing portion or political should, and is faithfully a pronounced broad question by our leading writers."—*Boston Commonwealth.*

"Contains an nice review of the situation, and every week a comprehensive and interesting summary of the movements of matter valuable for readers, preservation, and information."—*Boston Traveller.*

"The best military journal now published, and no home of it should be without."—*Boston Courier.*

TERMS.

The terms of the paper are FIVE DOLLARS A YEAR, INVARIABLE IN ADVANCE. THREE DOLLARS FOR SIX MONTHS. SINGLE COPIES TEN CENTS. For sale by all newsdealers. It is published weekly in a large-sized quarto sheet of 16 pages, convenient for binding, and printed in the best manner on fine book paper.

AMERICAN NEWS CO., 121 Nassau-st., New York, General Agents.

Subscriptions and communications should be addressed to the

UNITED STATES ARMY AND NAVY JOURNAL,
182 Broadway, New York.

TREASURY DEPARTMENT.

LIGHT-HOUSE BOARD, FEB. 10, 1864.

SEALED PROPOSALS will be received at this office until TWELVE O'CLOCK, M., on SATURDAY, the 19th of March, 1864, for supplying the Lighthouse Establishments with one thousand gallons of the best quality pure Winter Strained Lard Oil, and Thirty Thousand gallons of the best quality pure Winter Strained Sperm Oil, to be delivered in such quantities and at such times as the Superintendent of the Lighthouse Establishment may require, at the warehouse of the Government supply contractor at the city of New York, or at such other place as may be designated by the Inspecting Officer or other authorized agent of the Lighthouse Board, in good and sufficient casks, suitable for shipping, in good order, of an average capacity not less than sixty nor more than seventy gallons.

The Lard oil will be delivered at Boston, Mass., for the inspection.

Any part or the bid of sperm oil, or all of them, may be rejected at New York, New London, Sag Harbor, Cape May, New Bedford, Nantucket, Boston, or any other of the bidders. The prices of delivery must be entirely distinct at the several places embraced in the bid.

The bids will be delivered as follows:

No. 1.—Ten thousand (10,000) gallons sperm oil on the 15th day of April, 1864, or as soon thereafter as the proper tests and gauging can be completed.

No. 2.—Ten thousand (10,000) gallons lard oil on the 1st day of May, 1864, or as soon thereafter as the proper tests and gauging can be completed.

No. 3.—Twenty thousand (20,000) gallons sperm oil on the 1st day of August, 1864, or as soon thereafter as the proper tests and gauging can be completed.

No. 4.—Twenty thousand (20,000) gallons sperm oil on the 1st day of August, 1864, or as soon thereafter as the proper tests and gauging can be completed.

No part of the proposed contract will be entered into with any party indebted as collector, surety, principal, receiver, or agent of the Government, or with any person or persons charged with embezzlement, fraud, or delinquency, nor with any party who is engaged directly or indirectly in the whaling business.

Proposals will be considered for each bid separately, or for all of the bids, at the option of the Board; but bids will be considered only from those who propose that the oil specified in each bid, to be delivered at one time or place for that bid only, shall be entirely of the best quality, in writing, the number of the bid or bids bid for, and the time and place of delivery, conforming to the advertisement.

The contracts will be entered into with the same form of agreement as that now in use with the Lighthouse Board.

The Lighthouse Board reserves the authority of the Superintendent to reject any bid, although it may be the lowest, if the price is considered unreasonably high.

Bids will be considered for any other kinds or descriptions of oils than those specifically called for in this advertisement.

A bond, with sureties, in a penalty equal to the amount of the contract, and in a penalty equal to one-fourth of the amount of the contract when the latter exceeds $10,000, will be required of each contractor, conditioned for the faithful performance of the contract, to be executed within ten days after the acceptance of the bid.

Every offer must be accompanied by a written guarantee, signed by one or more responsible persons, and known to the department as such, stating the names of the persons in such guarantee, within ten days after acceptance; and that the bond and guarantee will be given in case the bid is accepted, the bidder or bidders will duly execute the contract in accordance with the terms of this advertisement

Dealers in

FIRE ARMS and AMMUNITION of all kinds.

CAUTION FROM THE AMERICAN WATCH COMPANY.

It having come to our knowledge that imitations of the American Watch have been put upon the market in great numbers, calculated, by their utter worthlessness, to injure the reputation of our genuine Watches, so to protect our own interests and the public from imposition, we unite publicly in the trade marks by which our Watches may invariably be known.

We manufacture the styles of Watches as follows:

The FIRST has the name

"AMERICAN WATCH CO., Waltham, Mass."

engraved on the inside plate.

The SECOND has the name

"APPLETON, TRACY & CO., Waltham, Mass."

engraved on the inside plate.

The THIRD has the name

"E. HOWARD & CO., Waltham, Mass."

engraved on the inside plate.

All the above styles have the name "American Watch Co." printed on the dial, and are warranted in every respect.

The FOURTH has the name

"WM. ELLERY, Boston, Mass."

engraved on the inside plate, and on the dial.

All the above described Watches are made of various sizes, and in the most perfect manner as can be required.

It is only possible for us to accurately describe the numerous imitations to which we have alluded. They are made with the same name on the watch, approaching our own as to escape the observation of the unaccustomed eye, and are sometimes sold as made by the Union Watch Co., of Boston, Mass.—or, another, with the name of the "Boston Watch Co." in Roman Watch, to be sold as our Fourth or Wm. Ellery Watch, and in addition to the "Appleton, Tracy & Co." above mentioned the "Appleton Watch Co." Others the "P. S. Bartlett" and the "P. S. Bartlett, Jr." besides many other names in such a manner as to convey the idea that they are the veritable productions of the American Watch Company.

A little attention on the part of buyers will protect them from such impositions.

ROBBINS & APPLETON,

The editorial and business offices of the ARMY AND NAVY JOURNAL will be removed about the 25th of April to No. 39 Park Row, Times Building, directly opposite the City Hall Park.

Subscribers who may have failed to receive any of the back numbers of the JOURNAL, are informed that there has been an unavoidable delay in reprinting some of them, which will account for the omission. Our files are now complete, and we shall this week supply all who have ordered. Number 4, among the others, is now reprinted and ready for delivery.

THE MILITARY SITUATION.

NO military operations of importance have taken place during the past week. The startling raid of General KILPATRICK into the very suburbs of the Rebel capital, and the bold movement of General SHERMAN on the Mississippi, have been succeeded by a period of comparative inaction, which embraces the armies of both the South and the North. In Virginia, the Rebel and Union forces still occupy their winter quarters. General JOHNSTON remains quiet at Dalton; General LONGSTREET appears to be still encamped in East Tennessee, and the latest Rebel papers inform us that General POLK, whose forces were apparently too weak to give battle to General SHERMAN's expeditionary army, was resting securely at Demopolis, on the east side of the Tombigbee. There are many indications, however, that the present lull in active operations is but the calm which precedes the storm; and that the preparations for an early opening of the spring campaigns are being hastened to a conclusion.

We learn from New Orleans, by advices to the 9th inst., that an important military expedition was on foot in the Department of General BANKS; but all the arrangements for the movement had been conducted with so much secresy that its destination remains a matter of conjecture. It is not improper to say that there are two prominent points in General BANKS' Department, against one of which this expedition is probably designed to operate. These are Mobile and the position held by General MAGRUDER in Texas; but against which of these the Union forces will be directed, are matters which have not yet been made known to the public. It is understood that General BANKS intends to command the expedition in person.

The intelligence from Mobile is meagre and somewhat obscure. We learn through Rebel as well as Union sources that the bombardment of Fort Powell, at Grant's Pass, which is regarded as the key to Mobile, was commenced by Admiral FARRAGUT's mortar fleet and gunboats on the 23d of February, and continued steadily up to the date of our last advices, the 29th. It is not known what effect was produced on the Fort, but the injury inflicted was apparently inconsiderable. There was a rumor in the fleet that Admiral FARRAGUT, satisfied that the fort could not be reduced by a bombardment from the water, was about to withdraw from the attack, and await the cooperation of a land force.

The Rebel mutiny at Fort Morgan, of which we gave an account some time ago, appears to have been a very serious affair, which came very near placing in our hands one of the chief defences of Mobile. It is now an acknowledged fact that forty of the garrison, among them the officer second in command, had conspired to surrender the Fort to the Union forces, and arrangements were quietly progressing to carry the plot into execution, when one of the mutineers betrayed the design to the Rebel General MAURY, who at once ordered a force to be sent down from Mobile to arrest the garrison. The mutineers were discovered, placed under arrest, tried by court-martial, and thirty of their number were condemned to death, the second officer in command being one of these unfortunates.

The Rebel account of the bombardment says, that on the 26th our gunboats fired four hundred and seventy shells at Fort Powell, but inflicted no damage whatever. According to the same authority one of our gunboats suffered severely, as after one of the return shots from the fort two launches were lowered for the purpose of plugging up the shot-holes in the gunboat, which soon afterward moved out of range. The people of the city were notified through the press that supplies of cooked provisions, bread, meats, poultry, or anything most convenient, furnished for the Rebel garrison, would be sent down daily to the fort.

Commander SELFRIDGE, of the gunboat *Conestoga*, in a letter addressed to Admiral PORTER, says that learning there was a large amount of cotton belonging to the Rebel Government under a small guard of soldiers, near where Old River intersects the main levee, he landed on the 13th of February, with forty-five seamen and a few negroes for the purpose of securing the cotton. After a march of six miles he found the cotton, and but for the accidental discharge of a musket would have captured the entire guard. After securing thirty-two bales of cotton, and making prisoners of Colonel C. H. TYLER, and Major J. R. O'BRIEN, of the Rebel army, he returned, considerably annoyed on his way back by TEXAN cavalry. Commander SELFRIDGE also states that a detachment of negro troops, numbering about 200, stationed at Water Proof, LA., was attacked on the 14th of February, by a force of about 800 cavalry, which drove in the pickets and pressed our troops very hard. By the timely assistance of the gunboats *Forest Rose* and *Rattler*, the Rebel cavalry were defeated both on that day and in a subsequent attack on the day following. Our loss was three killed and twelve wounded.

The expedition recently sent up the YAZOO River, returned to Vicksburg on the 8th inst. It was composed of the 11th Illinois, Colonel COATES, and a negro regiment. The expedition reached Fort Pemberton, and returned to YAZOO City, whence Colonel COATES sent his boats to Vicksburgh loaded with cotton. While awaiting the return of his boats he was attacked by two brigades of Rebel cavalry. A desperate fight ensued in the streets, which lasted several hours with varying success; but the Rebels were finally repulsed and driven out of the city.

An officer from Admiral PORTER's fleet gives the following particulars of the late expedition up the Ouchita River:—The expedition consisted of the gunboats *Ouchita*, *Ouage*, *Conestoga*, *Lexington*, *Bladman*, and *Cricket*. No signs of the enemy were discovered until Trinity was approached, which was found to be strongly fortified. The iron-clad *Ouage* was in advance, and was allowed to pass without any opposition on the part of the Rebel batteries. The flagship *Bladman*, "tin-clad," followed, and the Rebels, supposing her to be a transport, opened on her with a heavy and destructive fire, before which she was soon compelled to retire, with two men killed and eight wounded. The *Ouchita* finally silenced the batteries, and drove the Rebels from the town. Our force then landed and destroyed a large amount of property, including three thirty-two pounders. The fleet then steamed up to Harrisenburgh, drove the Rebels from their batteries and destroyed the town.

Affairs at Jacksonville, Florida, have undergone but little change since the concentration of our forces at that place. On the night of the 9th instant, an expedition left Jacksonville, proceeded up the St. John's River, and captured the town of Pilatka, a distance of sixty miles from Jacksonville. Pilatka is a village which formerly numbered about 500 inhabitants, but which has become reduced to about half a dozen families. It is to be fortified and held by our troops.

A detachment of one hundred men from General CUSTER's cavalry command started on Friday evening, the 11th inst., on a scouting expedition towards Blair Mountain, in Madison County, Virginia, a well-known resort of Rebel guerrillas. Sometime during the night they made a dash into a guerrilla camp on the stream know as Conway River, west of the above named mountain, drove about fifty of the guerrillas across the river, and captured twenty others with their horses. The command returned to camp the next morning in good order, not having lost a man or horse.

Two spies were captured by General AVERILL on the 9th near Martinsburgh, Virginia, as they were attempting to make their way southward through our lines. One of them had papers on his person, revealing the position and strength of our military forces in Baltimore and elsewhere. These men were sent to the military prison in Wheeling, where they will be tried by a military commission.

Waldron, a small town in Arkansas, about sixty miles south of Fort Smith, was burned about the 8th inst. by a band of guerrillas.

The Rebels have been quite active, in a small but annoying manner, in General BUTLER's Department. An attack on our cavalry near Suffolk was made on the 9th, and our forces were overpowered and driven back. The Rebels were subsequently forced to retire.

Newbern is still threatened by the enemy; but with the exception of an unimportant skirmish on the Chowan River between the gunboat *Bombshell* and a Rebel battery on the bank, in which the enemy were dispersed, no active hostilities have as yet occurred.

We rejoice in the PRESIDENT's call for two hundred thousand more men, because we believe it recognizes a manifest necessity, and promises the organization of what the Nation has all along needed—a strong Reserve Corps upon which to fall back in case of unforeseen disaster to the main armies. It was the sad error of our people, and equally of their Government, in the early days of the war, that they failed to appreciate the magnitude of the contest and the strength and ability of the enemy. We had feared that the third year of the war might find us clinging to a delusion not less fatal—this, that we were contending with an easily-won foe; and that we might relax our energies, and cultivate the sole of returning peace, while this happy crowning of our labor would be further from us than before. But we have increasing confidence in the triumphant result which we never doubted, now that we see people and Government rising to a proper appreciation of their task, and to a recognition of the fact that there is an immense work yet to be prepared for.

THE FRENCH STAFF SYSTEM.

THE "Etat-Major" of the French army, is not a staff system, as understood in the organization of our service. The Department, which with us are classed in the staff, are in France separately organized, and have "état-majors" of their own. But the regular corps of "état-major" is the head of the entire organization, the supervising and directing body of the whole system. Its present constitution is the result of many modifications and changes, but the chief features were finally fixed in 1833 by Marshal SOULT, who adopted most of the system previously arranged by Marshal GOUVION ST. CYR. Its number, 560 officers, viz: 35 colonels, 70 lieutenant-colonels, 110 chefs of squadrons, 300 captains and 100 lieutenants. The officers are taken from the school of the "état-major." It comprises 50 pupils (four-lieutenants), 25 of whom come by promotion from the active service, from the school of St. Cyr, and from the Polytechnic school. After having the school of the "état-major" and becoming lieutenants in the organization, the officers pass two years in the cavalry and two in the infantry. The first year is spent in company or squadron service, performing all the ordinary duties, but in addition supervising the police and administration of these two arms. At the end of the year they are examined by the inspector and if favorably reported upon, are designated to fill the functions of "adjutant-major." They then perform similar duties with the regiment of the other arm, where active military exercises occur, the position of aide-de-camp to a general of brigade or of division, or a marshal, and the position of an attaché to the dépôt of war. There are other positions of a particular kind which they can fill, such as in the military household of the Emperor, with the Minister of War, in the school of the "état-major," one connected with the military administration of Paris, or with embassies, &c.

France is divided into six great commands, which are called "arrondissements" or corps d'armée. Their head quarters are at Paris, Lille, Nancy, Lyons, Toulouse and Tours; there is also a separate command for Algiers. Each of these great commands includes several military divisions, these several subdivisions, and these several departments. But each is intended for the distribution of the troops, their organization and influence, and to take care of the conscription, &c. A marshal is at the head of the great command with generals of divisions and of brigades in the subordinate positions. Each commander has his état-major, with secretaries. The état-major of an "arrondissement" usually comprises a general of brigade as his chief, a colonel or a lieutenant-colonel, assistants a chief of squadron and three or four captains. A divisional état-major comprises usually a colonel or lieutenant-colonel as chief, a chief of squadron, and two or three captains. The chief of the état-major is in France an important position, as he really directs all the details of the service; he confers with the commander, and gives orders to the other officers; he organizes the staff and assigns their labors. The usual bureau organization is as follows:

1st. The bureau of general correspondence, of operations, and movements.

2d. Of military justice.

3d. Of recruiting.

4th. Of the infantry.

5th. Of the cavalry and remounts.

6th. Of the artillery.

7th. Of the engineers.

8th. Of the gendarmerie.

9th. Of the administrative department.

These bureaus are grouped, so that each officer will have two or three. The chief will, for example, take the 1st, the chief of squadron the 2d and 8th, one of the captains the 4th, another the 5th and 6th, another the 3d, 7th and 8th, etc. The chief organizes and directs all the labors, and everything is sent down through his hands. The correspondence, reports, registries, &c., are organized in the same manner.

"Active" divisions have already been alluded to. There are, for instance, in the army of Paris three or four divisions of infantry, and one of cavalry; in the army of Lyons three of infantry and one of cavalry; a division of cavalry at Versailles, another at Luneville, and temporarily each year two or three of infantry with one of cavalry at the camp of Chalons. These divisions are not connected with the territorial organization. They have état-majors similar to those above noticed, but their bureau labor is much less extended, while on the contrary they have much to do with military exercises, manœuvres, &c. The relations between these active troops and the territorial commands are thus regulated: An active brigade in a territorial division receives orders from the territorial commander; an active division in a territorial division receives orders in the same way for all that relates to the general affairs of his command, but corresponds directly with the Minister in relation to the *personnel* and the instruction of his command; if the head quarters of an active division are established in the same place as those of a territorial subdivision (brigade), the latter is ordered by the former. The marshal in command all the divisions of both kinds within their "arrondissements."

All the organizations of which we have spoken relate only to the standing army, and its distribution within the limits of the empire. When an army is organized for active service, the état-majors are formed as follows:—

At the headquarters of the army, a general of division, chief, a general of brigade or colonel, assistant, one or two lieutenant-colonels, two or three chiefs of squadron, six or eight captains.

At the headquarters of a corps d'armée, a general of brigade, chief, a lieutenant-colonel, assistant, a chief of squadron, three or four captains.

At the headquarters of divisions, a colonel, or lieutenant-colonel, chief, one or two chiefs of squadron, three captains.

It must be recollected that these do not form the entire staff; but to these various organizations are added officers connected with the artillery, the engineers, the administrative and health departments, &c., some of whom have various assistants and subordinates.

The duties of the officers of the état-major proper are, to guide the columns, to see that guide posts or other indications are put on the roads, to oversee the trains, &c.; they are charged also with reconnoissances, making topographical sketches, selecting camps, going with flags of truce, keeping up communications between the different columns, and in fact assisting the general in every way, and transmitting his orders. Much responsibility and reliance are placed upon them. When the army has reached the field of battle, the general commanding-in-chief gives the orders to the état-major, and the latter rides over the ground rapidly with the chiefs of the état-major of corps, and assigns the stations; the chiefs of the corps of état-major perform the same duty for the divisions. During the engagement they perform the same duty, and acquaint the general-in-chief of the retreat, as the case may require. They have bureau duties adapted to the requirements of the campaign, and distributed so far as needed in the manner we have seen above. The duties of aides-de-camp are more extensive than in our service. They are employed in the counsels of the generals, and attend to much of their correspondence. In their chief duty—that of transmitting orders—much reliance is placed on their sagacity and judgment.

The dépôt of war, to which officers of the état-major can be attached, is a great institution, which has undergone many changes of organization. In its present state as fixed in 1856, containing two sections. The chiefs of each of the sections are taken from the colonels or lieutenant-colonels of the corps of état-major, and they direct especially the first subdivision of their section. Other officers of the état-major are attached to the various labors in progress.

The *particular positions* which each class of état-major may fill, have been mentioned above, and the duties are indicated by the stations. They can serve as aides-de-camp and orderly officers to the Emperor and princes, can assist the minister of war, can be attached to the school as instructors, can serve as staff of the military division of Paris, and finally, can accompany embassies. This is a peculiar service, authorized in 1833, and is designed to permit the officers to become acquainted with foreign military systems. They can also act on courts-martial and military commissions, and various other services.

SUBMARINE ENGINES.

THE destruction of the sloop-of-war *Housatonic*, off Charleston harbor, demonstrates very conclusively that the Rebels have anticipated us in the practical application of engines of submarine warfare. The fact is a mortifying one, but it should invite our inventors to perfect more speedily the appliances which have already been partially developed, especially as other nations seem to be turning their attention to this important subject. By our foreign files we observe that experiments were made a few days ago in the port of Rochelle, to test a submarine vessel of war, the invention of Captain ROCHARLE, of the French Navy. It was stated that the vessel was so constructed that it might be submerged almost instantly by means of compressed air and a peculiar apparatus with which it was provided. When ready for action, the only part of the craft which remains visible is a small tower whence the commander may observe the position of the vessel to be attacked, and direct the course which way to steer, in order to strike her fair with the formidable spur which is of chief means of attack of the new contrivance. But the offensive capacity of the craft is not limited to its power as a ram. The spur which discharges this duty is formed like a tube, and an ordinary shell may be placed in it. After striking and crushing in the side of a hostile vessel, the *Plongeur*,—for that is the name of this naval submarine engine,—is supposed to retire backwards at the same time a wire connected with an electric battery, by means of which the shell is made to explode at the proper moment. The engine of the craft is 80-horse-power, and her crew consists of 12 men, who are, of course, supposed to be completely protected from all external danger.

As is generally the case in preliminary trials of this character, the experiment at Rochelle was far from satisfactory. An hour was consumed in getting the craft submerged, and she then went down with an indolent see-saw motion. When under action she went at very low speed, and her steering apparatus proved to be so imperfect that she scarcely escaped testing the power of her spur upon a merchantman in the harbor. The French journal which gives us these facts, states that the spectators were very indulgent under the partial disappointment, inasmuch as all present were satisfied that, with proper improvements, the new contrivance might become a terrible engine of war.

Our inventive reputation is at stake in this matter, and it will power do to let either the Rebels or the Frenchmen get the start of us in perfecting and utilizing these submarine engines. If we had them at our disposal, they might do inestimable service in removing the obstructions in Mobile and Charleston harbors; and, in case of a foreign war, their defensive powers might prove to be invaluable. It is to be hoped that the premature death of the lamented Major R. B. HOWE, of the engineers, who was fully alive to experimenting with a submarine battery of his own invention, has not deterred others from further attempts in the same direction.

CAPTAIN COLES vs. CAPTAIN ERICSSON.

THE official reports of the commandere of the monitors, setting forth the reasons of their failure to destroy Fort Sumter when Admiral DUPONT made his first attack upon that stronghold, have, very naturally, attracted wide attention in England, and Captain COLES—the sole competitor of Captain ERICSSON in the matter of turrets—has issued a pamphlet, laboring to demonstrate that his system of cupolas guards effectually against the very defects which were discovered in our monitors.

Captain COLES calls our attention to the fact that his turret does not work upon a pivot, as does Captain ERICSSON's, but upon rollers at the periphery, by which he claims greater stability is secured. The pilot-house on the ERICSSON turret, he asserts, is an additional cause of weakness, as it frequently has been brought upon the pivot, and gives greater leverage when struck by a shot. These, he attributes also to the fact that the entire surface of Captain ERICSSON's turret (9 feet high), including the pilot-house (13 feet 6 inches), is above the deck and exposed to the fire, while according to his arrangement the four feet six inches, less than one-half, is so exposed. To these causes, he thinks, the jamming of the turret, of which all the commanders complain, is chiefly attributable. Captain COLES also alludes to the fact that our turrets are built of laminated plates (entailing the necessity of getting them out in the number of bolts), instead of being constructed upon the English system of solid plates, with thick wooden backing, which, he says, greatly increases the power of resistance. And, again, he claims for his arrangement a great advantage, inasmuch as he has four embrasures instead of one upon which he may rely to receive his cupola. Upon this point, and the free access between the lower deck and the platform of his shields and the rollers upon which they work, the Captain lays great stress.

Then, taking up first the jamming of the turret by injury to the composition backing, Captain COLES asserts that this cannot happen to his cupolas, since they have no such arrangement. Should one be struck by a ram ring, but a clear space of four inches through the deck, protected by a wrought-iron glacis, from which a shot would be deflected. Another cause of the jamming of the ERICSSON turret is reported to have been the breakage of bolts, the fragments dropping inside. Captain COLES states that bolts fitted upon the system adopted in the English iron-clads do not fly out, and that in his cupola there are only fifty-nine exposed to fire, whereas in our turrets they are small and numerous, and have no supporting backing. Should one be broken in the COLES' cupola bruise, it is claimed that they would be caught by the half-inch plate fitted over them; and the opinion is farther expressed that in the English turrets nuts might oc-

chiefly be done away with by clinching the upper bolts, or by using the screw bolts.

Captain COLES claims that the port-stopper cannot be jammed in his cupola, since he uses in lieu of them thick rope mantlets, similar to those used in the Crimea, and a cable grummet worked round the gun inside the port, which would be sufficient to keep out all splinters of grape or canister. He also relies upon good breeching, the inclined plane, and great friction for his gun carriages, and only calls the compressors into action in a heavy sea-way, so that he avoids the chance of the carriage breaking down on service — reports show that they did in one or two instances, when the compressors were the sole attachment.

The disarrangement of the communication with the engine room of the steering gear, and the disabling of the helmsman, all of which would have been incidents of the bombardment of Fort Sumter, Captain COLES claims cannot occur in his system of cupolas, inasmuch as his pilot-house is more advantageously situated, being totally independent of the turret and having direct connection with the lower deck. In the *Royal Sovereign*, both the helmsman and pilot-house are on the lower deck, and are therefore effectually protected.

As regards "scope of vision," Captain COLES asserts that he has a great advantage over Captain ERICSSON, inasmuch as in the *Monitor* the pilot-house is a clear view of the horizon with the exception of right astern, where the funnel interposes; by means of an opening at the top of the pilot-house and also by a bridge round the pilot-house and funnel. Directions may also be given from any one of the turrets, or else in action communication between the officers in one and the lower deck is not necessarily confined to any one locality.

Captain COLES frankly acknowledges that the casualties on our monitors when in action were surprisingly small, and to his great steam power he attributes the fact that the enemy's fire from concussion, which had been insisted upon as a fatal objection to turreted iron-clads, proved to be in reality very trifling.

We have sketched briefly the points presented in this pamphlet by Captain COLES, and have only to say in addition that the time may come when Captain ERICSSON will be able to reply in a similar manner, showing that his system has advantages over that upon which the English are building some of their iron-clads. It is by no means probable that the *Royal Sovereign* could pass through or beyond from the fame General HOWARD won at Gettysburgh, and to find fault with Congress for having associated his name with those of General MEADE in the resolution of Congress. This reply is not intended to defend Congress, which is capable of answering for itself, and is alone responsible for its measures, nor to sustain the General's reputation of General HOWARD, who undoubtedly prefers now as heretofore to dedicate himself on the field of battle to the service of his country rather than enter into any word-controversy about his merits in the past. Nor is there any design to disparage General HANCOCK, whose brilliant services on the field have elicited the kindest relations exist; the opinion of the former having been more than once publicly quoted as giving precise credit to General HANCOCK for the success of the day in the battle of Gettysburgh.

But the high-sounding signature, "Truth," and the authoritative style adopted by the writer of the article alluded to, as well as his publication in a journal already having so high a reputation for correctness, has led many to infer that from reliable information of the errors and misstatements which appear in that article. A publication of the official report of General HOWARD would be the best possible refutation of this misconceived article; but as that would be against orders, I will quote some of the most glaringly erroneous statements in the article of "Truth," giving the facts as officially recorded.

"Truth" says "General HOWARD's corps arrived at Gettysburgh in support of the 1st corps about one o'clock on the 1st of July. General REYNOLDS, that brilliant soldier, had already fallen, and DOUBLEDAY was engaged in fighting, was nearly overpowered. STEINWEHR's division of the 11th corps was placed in position on Cemetery Hill, while the other divisions of that corps were posted on the Emmasburgh road. General HOWARD, who had preceded his corps, took command of this corps and of what was left of the 1st corps of superior rank. The fighting that took place after the arrival of the 11th corps was not like that which preceded, as the report of the casualties in the two corps will show."

This extract seems to me to convey three distinct erroneous impressions to the reader. First, that the 1st corps was "nearly overpowered" on the arrival of the 11th; whereas the fact is that it fully held its own till 3:45 P. M. Second, that General HOWARD was present at the battle-field and command about 1 P. M.; whereas it was 11:30 A. M. And third, that the fighting participated in by the 11th corps was not equal in severity to that which preceded its arrival; whereas, on its arrival, the 11th corps met EWELL's command of fresh troops, and both the 1st and 11th corps held out till 4 P. M., fighting long and well against superior numbers. The difference in the time the two corps were engaged is sufficient explanation for any difference in casualties.

When General HOWARD decided to establish STEINWEHR's division and three batteries of artillery upon Cemetery Hill, he directed Major-General SLOCUM to join the corps at once and place his entire force there; but the difficulty of withdrawing with safety determined him to send two divisions of his 12th corps by the Baltimore road, to move hurriedly forward the moment when it was ascertained that EWELL's corps was approaching from the north. General HOWARD did not expect to find a defensive position unless the two corps of General SLOCUM and SICKLES should arrive, which had been sent for as soon as the battle began.

He finally, therefore, at about 4 P. M., sent word to General DOUBLEDAY, commanding 1st corps, that if he could hold out a little longer, which he thought he could, Cemetery Hill and on the left of the Baltimore Pike; also a request to General BUFORD to make a show of force opposite the enemy's right, which he understood he did. This request was then sent to General STOCUM, who was at that time about a mile and a half in rear, to order his corps into position on the left of Gettysburgh, which was promptly ordered; but the troops did not arrive in time to be engaged that day. At 4:10 P. M., General HOWARD sent a written order to the commanders of the 1st and 11th corps to "fall back gradually, disputing every inch of ground," and to form on Cemetery Hill, which they did in good order, and the 1st "*corps on the left of the Baltimore Pike.*" It was not until the heads of columns of the two corps had taken new position that General HANCOCK arrived, about 4:30 P. M. "Truth" is under the impression that he "arrived on the field about 2 P. M."

General HANCOCK made no assumption of command; in fact is too good a student of Army Regulations to have attempted it. General HOWARD, in his report, which states that the officer senior in rank will command, "unless otherwise specially directed by the PRESIDENT of the United States." Major-General HOOKER was aftewards that night apologized for sending the order he did putting General HANCOCK in command, and the transfer of WADSWORTH's veteran division to Culp Hill. The two Generals (HOWARD and HANCOCK) consulted, and decided to relocate this division as stated.

From what has been given, every one will observe that General HOWARD was present at the battle of Gettysburgh. He afterwards wrote to General MEADE that it was a strong position. How "Truth" can assert that General HOWARD "fell back precipitately from the field," and thought the battle of "Gettysburgh," I cannot easily conceive, unless it be through some strange misinformation.

At 1 P. M. General MEADE ordered up the remainder of the Army "on his (HANCOCK's) representations," as "Truth" states, and subsequently, from the same account also the representation of his own honored staff officer, General WARREN, then Chief of Engineers, who was also present at Cemetery Hill and General HOWARD. These officers, I am made first in writing and afterwards communicated in person, I cannot determine. General MEADE consulted freely with his corps commanders on the arrival on the ground, and rode round the entire lines with him.

I cannot pass by the statement of "Truth," viz — "that to the death of the 2d, General HOWARD was attacked by a part of EWELL's corps, and the truth demands the plain statement, that what was left of General HANCOCK the 2d's touch would have been successful in all probability, and the 11th corps driven from the key-point to the position of the battle of the 3d, and not the 1st and HANCOCK as represented. CARROLL's brigade on hearing the heavy firing.

The facts are that, General HOWARD sent a staff officer to General HANCOCK, whose duty it was to connect his right with the left of WADSWORTH. The staff officer was referred by General MEADE to General HANCOCK, who commanded the 2d corps, and who promptly sent Colonel CARROLL to the point required. All honor to the brigade, part of which at least, General HANCOCK reported as having been "overpowered," but its position was *on the right* of the 11th corps. The latter vigorously repulsed the enemy in its own front. SICKLES' corps, on the right of HOWARD's division, was moved to the support of the 1st division (ADAMS'), upon which the attack was made. "Truth" does not seem to have noticed the incontestable fact that General HANCOCK sent a brigade from the 2d corps, when just before he has stated that General HANCOCK had taken General SICKLES' corps in command of all the troops.

I have already extended the article too long to touch upon the other erroneous points in "Truth" has fallen into, the statement that the Army gives to General HANCOCK the credit Congress has given to General HOWARD is not the subject to be considered; but its weight will be greatly lessened by the consideration of the mistakes either from judgment, memory, or information, to which the author has been shown to be liable.

ONE WHO KNOWS.

LETTERS from Mr. J. ROSS BROWNE, dated Tachan, Arizona, February 6, say that KIT CARSON arrived at Santa Fe after a very successful campaign against the Navajo Indians. He brought over two hundred and eighty prisoners, leaving over five hundred with Colonel Canby, to be removed as soon as their families could be gathered. The Navajoes are virtually subjected, and their principal chief killed. Governor Goodman had temporally established his headquarters near Fort Canby, but was to leave for Santa Fe where he was engaged in organizing a civil government for Arizona. Nearly every white man in the Territory was a candidate for Congress.

THE UNITED STATES MARINE CORPS.

To the Editor of the Army and Navy Journal:

SIR:—"The men of a public armed ship," says COOPER in his Naval History of the United States, "are divided into two distinct bodies; the portion of the people that do the ordinary duty of the vessels, which includes the petty officers, seamen, ordinary seamen, landsmen and boys, and the marines. The former pass under the general name of sailors, while the latter are always known by their own distinctive appellation." The marines are *strictly speaking* soldiers, who are trained to serve afloat; and their discipline, equipments, drill, character and *esprit de corps*, are altogether those of an army. The marines impart to a "ship of war, in a great degree, its high military character. "They furnish a force both good and serviceable; in battle they repel, or cover the assaults of boarders; and, at all times, "they sustain and protect the stern and necessary discipline of a ship of war." A proper subordination, distinctive character, training, and we might add, nature." In short, all *soldierly* duties should and fall to the marine's lot. If a shore battery is to be silenced, they are landed for that purpose. If the colors are to be protected, it is their duty to furnish the guard. If sailors always have a marine guard assigned to them, and fight them, too, better than sailors, they must be said to be at once the artillerists, infantrists, and police of the ship.

Early impressed with the importance of such a corps, Congress, on the 9th of November, 1775, already, and before one navy existed, ordered and got to sea, passed a law establishing it; said corps to consist of two battalions of the usual size, to be commanded by a colonel.

This was the nucleus of the present marine corps of the United States, a corps which has ever since its establishment marched, if not at the head of, where it which have ever (?) carried fame upon our Navy.

It is not our purpose here, however, to attempt the enumeration of the many brilliant exploits of this corps; volumes would scarce suffice for that. Their services during the Revolutionary war, and their gallant fight with Admiral DE GRASSE are recorded by the historian—preserving to their country, as they often did, the vessels on which they were, by their coolness, courage, and confidence in their disciplined crews; and presenting, in short, a thousand incidents alike "singularly creditable to their steadiness and discipline." We have been, we have contented from the high standard of military heroism and gallantry which the corps then established for itself. On the contrary, new laurels were to be won by their *present successors*. Their deeds have been written in words of fire in every gallant achievement of our Navy, until the late struggle, under the name Admiral, they are so truly said, in the expressive words of the great NAPOLEON, to have actually made a "litter of glory."

We have said that it is not our purpose either to write the history of this honored corps, nor to pronounce a panegyric upon its virtues. It is enough for the Americans, that we call attention to are its abuses. These, unfortunately, are nothing new.

Even as early as the Revolution, we had occasion to speak in terms of the injustice shown to this corps. "The history of the Navy," he says, "even at that early day, is full of the most glaring scandals and instances of the ingratitude of the country to the body of soldiers, and seamen of which it is composed." And we add, that "we should be unfaithful to our trust, were we to be silent in the face of the wrongs of many proud of the forgetfulness of its merits by the country. The marine incurs the same risks from disease and foreign climates, undergoes the same privations, follows the same hardships, and sheds his blood in the same battles as the seaman, and society owes him the same gratitude."

Time has but added to these wrongs, until at present, they not only derogate the respectability of the corps, but disturb, also, its discipline.

Among these, and, perhaps, one of the most crying ones, is the matter of rank—a sore subject with most officers of the service, and one which we have to every high-toned officer. Thus, a chaplain, by a late law, is made to rank as a major or lieutenant-colonel, while engineers, paymasters, and even what are termed *ex officers*, outrip shamefully the marine service, in rank as well as in pay. Even the assistant surgeon, assistant engineer, which custom and propriety have vested for years, and the self-respect and comfort of the officers of this corps demand should give way to the latter, is made to give way to the unjust whims of parties whose ignorance can form but a poor excuse for the slight thus put upon one of the oldest and most honored of the service.

For instance, on flag ships, over since the marine corps has been formed, the command of which on the part of the marine has been awarded to the commanding officer of that corps, then on board; whereas, by a recent enactment, a change in command of the ship, or even a visit of a superior officer of the old est ward-room officers of a right which he has always appertained to his rank and experience, is now assigned to the junior officer of the ship, as derogatory to the self-respect of the marine, as is the case of a midshipman, who enters the service, a mere boy, in 1864, to that of a man of the service, a mere boy, when he ranks a captain of marines; *one perhaps of thirty years standing.*

Many other abuses might be obviated, we think, by investing the commanding marine officer of a flag ship with the temporary rank of colonel, which, as it has with the temporary rank of colonel, which, as it has jurisdiction, for the time being, over all the officers and men of his own corps, embraced in the entire squadron. For the want of some such arrangement, except in the case where the last evil we know of no remedy, except in the change of corps in a subordinate degree with the duties and services of the marine corps, as well as the gratitude due to them, demanded of it, as well as the gratitude due to them.

Whatever be the fate of the marine corps into no favors, but only, that common justice be awarded; that justice which for years past has been and is still denied.

It desires, too, that certain rules be established for its government, defining its duties and protecting its interests; and these Congress should at an early day enact. As it is, the present absence of all such rules paves the way for continual jarring between the officers of the corps and the executive officer of the vessel upon which they chance to be.

Such rules, and to get the rooms alongside, does not properly appertain to the duties of the marine, they are demanded by the spirit of the age, and of many of our national vessels.

Also, to wash down decks, and keep such portions of the

duty is being performed, is a palpable imposition upon the time, comfort and patience of both the officers and men of a military corps, such as are our marines, and a thing unheard of in any other similar service in the world.

If these abuses occur on board vessels where a marine office is present to protect his men, how much more rife must they be when there is no one but a non-commissioned officer to look after their interests!

Who shall tell of the manifest impositions which occur in such cases, alike subservient of all discipline and *esprit de corps!* And why the only cases that it is necessary to receive upon complaining of these abuses is, "that the duties of marines on board ships are quite different from those under "various different vessels"—and strange as it may seem, some of the old officers of this corps, and those the very ones who should be the most interested in and upon the branch of the service to which they belong, by their supineness and horror of all change, do more harm than good.

What is needed, is plain, and must be acknowledged by even the enemies of the corps, supposing it to have any. It is, that government should frame the duties of the marine are defined—plainly and reasonably, so that there may be neither bitterness of feeling nor doubt as to what is demanded of him.

This will cover all the ground—obviating the unpleasant jarring which is now almost inevitable, and making satisfactory to every part of the executive officer an impossibility as far as the marines are concerned. This, in eminent service and remarkable assistance would seem to demand of every honest thinking man, ashore or afloat, and this, as their right, Congress ought to see that they have, and that quickly.

Let the friends of the corps, then, demand that justice be done it; that, first of all, the corps be enlarged—made, say, into a brigade.

Let the commanding marine officer of a squadron be endowed with the rank of a captain of the navy.

Lastly, let such rules be framed at once, as will forever so at rest all questions of duty, and never give another use to that enormous evil, as perplexing as it is unjust, of Marder—that "*the duties of marines are not defined.*" If they are not defined, it is high time that they should be, and when they are, it will be found that the duties of both officers and men, will be the very last to shirk one iota of that duty, as only it be legally and definitely decided to be theirs properly; and that left to the discretion or caprice of any one.

When this is done, then, and then only, may we expect to see justice done this, one of our best and most useful corps; and behold those abuses vanish, which at present not only detract from the popularity of the service, but take from its efficiency.

BATTLE MEMORIES OF THE MISSISSIPPI

A VOYAGE up the Mississippi River, from the Delta to Cairo, is by no means so dull an affair, now-days, as dull people used to complain of its being. War, from which has sprung nearly all the interest and romance that appertain to the historic rivers of the world, has laid its terrible charm upon it, as it has upon Venice, and there is about it a hanseforth and forever. On its banks we have had famous battles, wonderful sieges, thrilling exploits, romantic adventures.

Just at the head of the Passes, as you enter the river, you naturally recall the marvellous tale of HOLLIS's ram, or "turtle," that, with its crew of horse-marines, made its first appearance in those days of a nautical ram, that terrible power capable of such terrible deeds,—and whose exploits stirred up so many enemy thoughts in the heads of all who were connected with our NAVY, or interested in its existence. Pass up the stream, and there are the ruins of Fort St. Philip, and the scene of FARRAGUT's glory. Lo! here also lies the *Varuna*, which so suddenly made Captain BOGGE famous all over the land, one spring morning, two years since, and which may still be seen near the river bank, lying very much as her valiant commander left her, after the fight—with only her top-gallant forecastle out of "water." Here is the Crescent City itself, which will long remember the 1st of May, 1862. Here is Donaldsonville, which, with its earthworks on the river, shows the marks of the vengeance which it paid for the fall of Baton Rouge, with its battle memories. Here is Fort Hudson. Here is Natchez, notable in that—though, from its high bluffs, it has such fine advantages for defence—it never required either defence or attack. Here is Fort Gibson, near which General GRANT's army landed after it had crossed the river; while off there to the right, and to the north, inland, are the scenes of the five brave fights which immediately preceded the great siege. Here, at last, is Vicksburgh, whose memories will but as long as its hills, which will be visited by travellers and military students for ages, and will be read of by our children's children for many long generations to come. Let us stop here a moment, and from the hill on which stands the Court House, or from some other hill, let us first survey the curious windings of the river in front, which gives this location its power to command over any naval foe that may approach. Let us then ride back half a mile, or a mile, to the prodigious line of earthworks which have been thrown up by our troops since we captured the city. Let us note these innumerable low hills, these defiles, this broken ground, extending in all directions for miles, and which offer such admirable facilities for defence. Let us ride back of the town, to the Rebel line of works—let us ride around them (armed, of course, with a permit from the provost-marshal)—and examine the ground illustrated by so many feats of arms and deeds of genius. And so, returning to our steamboat from our hasty survey, we pass by the grave-yard, where, near the surface of the ground, are buried the Rebel dead who died during the *siege*—where our own dead sleep,—where citizens, slaves, and negro soldiers are all buried; and, as we pass along through the town, and observe the hundreds of caves in which the Rebels sheltered themselves from GRANT's missiles,—let us hold our noses, for surely the odor of Vicksburgh is awful!

Here, again, on the other side of the river, is Young's Point, where General GRANT's army was stationed this time last year, and from which he patiently planned and operated against the impregnable fortress above. Near by lay Admiral FOOTE's gunboat fleet; and we here recall the story of young ELLET's dashing deeds,—the story of the great sham monitor, which so racked with terror the souls of the Rebels,—the story of the running of the Vicksburgh batteries by our gunboats and transports, under that hot and furious fire, and many another true tale, which, we hope, will be fully chronicled for the entertainment of future days. Here is the wonderful "canal," from which such wonderful results were anticipated. Further up, we behold the deep, placid, turbid current of the Yazoo, the red man's "River of Death," which now also has its stories of white men's struggles and adventures. Here is Lake Providence; and higher up is Helena, where, as well as at Port Hudson, our negro soldiers were baptized in blood. Here is Memphis; and we inspect, as we pass, the strong earthwork, lying just on the southerly outskirt of the city, and known as Fort Pickering. We recall also that next naval fight, fought in June, 1862, which the citizens of Memphis watched from their levee, in which our gunboats put to flight the fleet of the Rebels; but in which we lost the elder ELLET. Here, as we push on upward, we come to New Madrid,—we come to Island No. 10, whose marvellous tale cannot be forgotten; and where Colonel BISSELL, acting under General POPE, made that notable feature which circumvented the Rebels at Island No. 10 and Columbus, the most northerly point on the Mississippi over fortified by the Rebels, and of whose "frowning battlements" we once heard so much. Here is Belmont, where Lieutenant-General GRANT fought his maiden battle. And here, at last, is Cairo,—which the Rebels did not reach, at the inception of the war, and which formed such an admirable base for our operations on the Mississippi. We have travelled a thousand miles from the point at which we started, and in the course of it we have passed a thousand points and scenes of interest, only a very few of which are mentioned in these brief notes.

THE ARMY OF THE POTOMAC.

THE question is constantly asked in private circles—"Why is it that the Army of the Potomac makes such "small progress?" In Congress, also, the movements of this Army have excited severe comments. The general opinion seems to be that some remarkable deficiency has existed in the management at Washington, or rarely manifestable incapacity for command at the headquarters of the Army itself. Unfavorable comparisons are frequently instituted between its achievements and those of the Western armies. In fact, its career seems to be almost universally regarded as a failure.

Even at the first view it would seem incredible that the want of success—so far as relates to the conquest of Virginia—of the Army of the Potomac, so well organized as it is, comparing some of its corps as to size and force as any others in the country, and numbering among its officers as many whose abilities are indisputable, it would seem incredible that the failure of this Army should be attributable to causes existing within itself. It is even questionable if the word "failure" can properly be applied to its career. Although it has not captured Richmond, and thus realized the sanguine hopes of the country, it has been the bulwark of the North against aggression; it has kept large Rebel armies afoot in defensive where the resources of the South were overwhelmingly taxed to support them; it has really kept Richmond in the condition of a partially besieged city, and it has fought battles equal to the greatest and most fiercely contested of those recorded in history,—making the most terrific havoc in the ranks of the enemy.

We do not intend, however, at present to discuss the past history of the Potomac Army, or to attempt the settlement of the causes of the failure of the Peninsula campaign, and the repulses at Fredericksburgh and Chancellorsville. Nor will we attempt to investigate the reasons why more positive results were not reaped from the victories of Antietam and Gettysburgh. Nor yet is it necessary for us to defend the heroes of Fair Oaks, and Antietam and Gettysburgh, and a hundred stoutly-contested battles and skirmishes. We refer simply to give some military reasons why the Army of the Potomac, the position which it has occupied, since last summer, upon the Rappahannock, finds its progress toward Richmond impeded. Indeed, many officers of high standing believe that beyond the Rappahannock, or at farthest the Rapidan, further progress is impossible. That it will become possible, with an adequate force, is, however, to be expected, and all appearances now indicate that the Government intends during the coming season, with the increased resources at its command, and profiting by the sad experiences of the past, to make such provision as will secure a final success.

Two armies of equal numbers, commanded with equal ability, being opposed to each other, their movements and achievements must be entirely determined by the nature of the theatre of operations. Perhaps never in the history of warfare has the character of the ground exerted more influence on campaigns than that of the northern Virginia which lies between Washington and Richmond. On the right of our Army are chains of mountains which enable the Rebels to conceal any flanking movement they may undertake, while the numerous affluents of the rivers afford an easy and uninterrupted passage to the Potomac above Washington, and one almost entirely secure from attacks in their rear. On our front is a succession of rivers, presenting great natural obstacles to our advance, and at the same time easily defensible; to make flanking movements by crossing the rivers is to open our rear to attacks from Fredericksburgh, and to cross below the Rebel army, leaves the railroad a prey to guerrillas. The country is, moreover, masked in every direction by dense forests, rendering anything like a surprise in force impossible. A few Rebel cavalry can, at all times, easily detect and thwart such a movement. Such are the natural features of the country.

It is a well-known rule of military operation that a "base" should neither be too extended nor too limited, and that it should be changed only by several lines. The base of the Army of the Potomac is just the width of a railroad track, and that railroad furnishes really the only practicable route of communication. With a limited base an army is always exposed to be cut in the rear. This is what happens to the Army of the Potomac at every advance. Guerilla bands infest the whole country between the Rappahannock and Alexandria (some sixty miles), and it is impossible to protect entirely in a hostile country, such an extent of territory. For every mile of advance beyond Fairfax Court House, 6 or 8 men must be employed to protect the rear. An entire corps is now occupied in doing this from the Rappahannock to Manassas, and the troops of the Department of Washington protect the track from that locality to Alexandria. How great is the drain of an army for such a service may be estimated from the fact that, in pressing the Rapidan, if railroad communication is to be relied on for supplies, a strong force must be constantly kept in the rear; every train will even then be exposed to capture by bands sweeping down from the mountains.

The tactics of the Rebels, of course, fully understand all these circumstances, and are always ready to take advantage of them. They are fully aware that they can hold in check, with three-fifths of its force, the Army of the Potomac meantime. They pursue the Fabian policy—the policy of Washington himself—between the Rapidan River. They are not foolish enough to stake everything on the work of a battle, except where invulnerably fortified. They will not attack, nor will they accept a battle in the field. Their own rear needs no protection; they have two railroad routes, besides all the country roads. Thus they have all the advantage of position on their side.

But are we in view of these difficulties to expect nothing from the Army of the Potomac? No, it may overcome them in two or three ways. First, with a sufficient force to overlap the enemy, it may compel the enemy to retreat and Richmond to be abandoned. Second, it may be able to bring on an engagement, which will prove decisive. Third, by cutting it loose from Washington and making it a movable column, it may get at any time to the rear of the Rebel army and compel it to base for itself on the Pamunkey or York Rivers, or by the railroad to Fredericksburgh. We ask nothing in saying that the Army can at any time go to Richmond, if relieved from the necessity of protecting its rear. This could have been done last fall, when General Meade turned the Rapidan and was stopped by the Rebel works on Mine Run. The Army can transport fifteen days' subsistence and forage, and with this it can be moved to Hanover Court House, where it can operate on a new base; or, if successful in forcing the Rebel lines, can even enter Richmond at once.

Fifteen days is the period usually assigned in Europe as the length of a march from one base of operations to another, except the country traversed be able to support the army. In Virginia, our Army can derive no advantages from the country. It could not subsist itself for the most limited period. The portion of the State which has been the scene of war, is exhausted. Even among the fertile farms of the Peninsula it was difficult to obtain small supplies of forage; of subsistence for the men there was absolutely nothing. The necessity of a "base" is, therefore, evident. The Southwest our armies have had the advantage of operating along navigable rivers, so that their supplies could proceed with

them. Such an expedition as that of SHERMAN's would be impossible in Virginia; it would starve before it could accomplish anything.

With its competent leaders, its brave and well-disciplined troops, its superior organization, we are confident the Army of the Potomac, supported as it generally expected it will be, by the full force of the Government, will achieve worthy success during the coming season. The importance of capturing Richmond has been underrated in some quarters, but we believe the people are far from concurring in such a view, and that they would consider as the most important achievement of the coming campaign the occupation of the Rebel capital by the Army of the Potomac.

MILITARY MATTERS IN CONGRESS.

SENATE.

THE amendment of Mr. DAVIS to the bill to equalize the pay of substitutes and commutation men was then appointed by the District Courts to value and award fair compensation to loyal masters for their slaves taken into the service, was rejected on the 10th inst., after a long debate, by a vote of 21 to 6, and the original bill was then passed by the same vote. An abstract of this bill has already been given in the JOURNAL. The report of the committee of conference on the Deficiency bill was agreed to by the Senate on Friday, the 11th inst., and by the House on Monday, the 14th. The Senate adopted an amendment to the bill making appropriations for the support of the Military Academy, giving military cadets the same pay as officers in the Naval Academy, and rejected an amendment, offered by Mr. ANTHONY, of Rhode Island, providing for a competitive examination, under the direction of the Secretary of War. An amendment offered by Mr. HALE, providing that no cadet shall receive any part of the appropriation unless appointed according to the law of December 24, 1861, opposed by Mr. DOOLITTLE, of Wisconsin, providing that until the suppression of the rebellion, Mr. Lincoln be authorized to appoint cadets from unrepresented districts when deserving young soldiers in the armies of the United States as he may select, were adopted, and that the bill as amended be passed.

A bill relating to Naval supplies was introduced on the 14th by Mr. GRIMES, and referred to the Naval Committee. It provides in the 1st section that no person shall be detailed for service at each Navy-yard one naval officer who shall act as "disbursing and purchasing agent" for that yard; one naval officer who shall act as "inspector of provisions" for that yard, and one naval officer who shall be inspector and receiver of the yard. The bill then provides that no person of the foregoing duties of each officer, and affixes penalties, as follows: That if any contractor shall defraud or attempt to defraud by false measurement, weight, weighing, or quality of an article, or shall directly or indirectly give or offer to give to any officer, employee, or servant of the Navy Department charged with the duty of inspecting, receiving, or paying for naval supplies, or to any member of the family of any such officer, employee, or servant, any bribe or present of any kind whatever, or shall offer or promise or threaten to procure the removal, transfer, or promotion of any such officer, employee, or servant, or to procure additional work for a naval court-martial, be imprisoned in some penitentiary of the United States for a period not exceeding five years, and fined in a sum not exceeding ten thousand dollars, and to be forever debarred. The penalty, upon conviction, is a fine of not exceeding ten thousand dollars, imprisonment not exceeding ten years. Section 11 recites that if any officer, agent, master-workman, inspector, storekeeper, or other person in the employ of the Navy Department, shall make a false report or estimate of the amount of supplies on hand or needed, with a view to defraud the Government to the benefit of any person, and to the injury of the Government, he shall, upon conviction by court-martial, be liable to a fine of not exceeding five thousand dollars, and to imprisonment not exceeding three years, and shall forfeit his office of Navy Agent and Naval Storekeeper.

A bill was introduced on the 14th by Mr. WILSON, and referred to the Judiciary Committee, to promote the efficiency of the artillery arm of the service. The bill consolidates the five regiments now authorized by law, under the name the title of the Corps of Artillery, composed of one Chief of Artillery, with the rank of General; five Colonels, five Lieutenant-Colonels, five Majors, and sixty Brevet Majors. The batteries are to consist of one Captain, two First and two Second Lieutenants, and one hundred and forty-two noncommissioned officers and privates. The bill makes the Chief of Artillery a member of the Ordnance Board, and gives him, with the Inspector-General and Engineer-in-Chief, the direction of the volunteer artillery when mustered into the service.

Mr. HALE, on the 18th, offered the following resolution, which was agreed to: That the Committee on Naval Affairs be instructed to inquire if the same promotions in the volunteer navy, similar or analogous to the regular navy, may not be established by law, so as to reward meritorious conduct in that branch of service.

Mr. HOWARD, of Michigan, introduced a bill to reorganize the Invalid Corps, which was referred to the Military Committee. It provides that the Invalid Corps shall be organized on an infantry basis; that the officers shall be appointed by the President, and that enlisted men now on the list disabled for actual service, with the same pay as infantry officers of the same grade; that the corps shall consist of four battalions of infantry, and that no person in the military service who are shown on examination to be unfit for active duty but capable of garrison, whose character and military history will entitle them to such reorganization, may be transferred to this corps, and that soldiers honorably discharged after two years of service, and who are unfit for active service, may enlist in it. For drunkenness or other misdemeanor the invalid soldier is to be punished by the deprivation of the pension which he may become due.

A bill in relation to deserters from the military service of the United States was introduced by Mr. WILSON, which was also referred to the same Committee. It is as follows: qualifies for voting or holding offices all deserters who are beyond the limits of the United States, but directs the President to issue a proclamation of amnesty dependent on their return to the service, with no punishment but loss of pay during their absence or their reenlistment in new regiments. Deserters in the enemy's lines are deprived of the above-mentioned rights of citizenship.

HOUSE.

A bill was introduced on the 10th by Mr. LAW, of Indiana, and unanimously passed, giving to the Revolutionary pensioners each $100 annually, to commence from the 1st of March, 1864, and to continue during their natural lives, in addition to the pensions to which they are entitled under former acts of Congress. The House also passed the Senate bill placing the name of JOHN L. BURNS, of Pennsylvania, on the pension rolls for his patriotic services in the battle of Gettysburgh, where he was wounded. The pension dates from July 1st, 1863. A bill was introduced by Mr. SPALDING, of Ohio, granting pensions to the surviving soldiers of the war of 1812, who have served sixty days and have been called in the regular army, or navy, or in the militia for a term of two months. A pension bill, supplementary to that of 1862, was introduced, on the 11th inst., by Mr. WARNER, of West Virginia. It provides that biennial examination of pensioners may be made by one surgeon only, if a duly commissioned surgeon can not be had in any surgeon. That all bills paid for specially ordered or biennial examinations shall be certified by the District Agent for paying pensions. Chaplains are allowed the benefit of this act with the pension of a captain. Persons who have lost both eyes are also entitled to pensions as those who have lost both hands or eyes $25. All persons who have done duty in military organizations, but not regularly mustered in, when Hon. A. L. DANIELS, Solicitor of the Bureau of the pension act, and in case of the death of a person entitled to an invalid pension, his widow may receive full pension from the date of grant of the original pension.

Mr. JULIAN, of Indiana, reported a bill amendatory of the Homestead law, on the 10th inst. The first section is the preliminary steps, such as taking the oath, may be taken before the Clerk of the County in which the applicant resides, and not requiring him to go to the land office. Second: Received make the affidavit. Also, soldiers desirous of preempting, may take the oath from their military commander, and transmit the same to the Register of Official. At present some soldiers would have to travel four or five hundred miles, through Rebel territory, before preliminary measures.

A resolution was adopted on Monday the 14th, on motion of Mr. PENDLETON, of Ohio, instructing the Judiciary Committee to report whether legislation is necessary to enable the civil courts to revise the proceedings of military commissions and courts-martial, in order to secure to persons tried before them the protection of the Constitution, which provides for trial by jury or indictment. A resolution was adopted to print 10,000 copies of General MEADE's report of the battle of Gettysburgh, together with the accompanying reports, for the use of the House, and also 10,000 copies of the report of the Secretary of War. On motion of Mr. MILLIKEN, of New York, the Committee on Military Affairs was instructed to inquire into the expediency and necessity of increasing the number of our army by immediately raising fifty thousand volunteers for that arm of the service, and that the committee have leave to report by bill or otherwise.

Mr. FARNSWORTH, of Illinois, introduced on the 16th, a bill to promote the efficiency of the United States artillery. The bill consolidates the five regiments now authorized by law into a corps of artillery, to be commanded by a Chief with the rank of Brigadier-General, which shall have authority five colonels, five lieutenant-colonels, fifteen majors, and sixty batteries; each battery to consist of one captain, two first lieutenants, one second lieutenant, one first sergeant, one quartermaster's sergeants, six sergeants, twelve corporals, two musicians, two artificers, and 122 privates. When the field forces shall be taken from artillery, and four artificers. There shall be allowed to the corps a band of musicians of one for each regiment, and the field officers now belonging to the five regiments, and to be paid as brigade bands. The chief shall receive the pay and allowances of the officers of all officers of the corps, and enlisted men of the corps shall receive the same pay and allowances as officers and enlisted men of like grades in the cavalry, provided that no officer shall be allowed to keep horses at private, and no allowance shall be made for forage to officers not required to keep horses.

The House took up the resolution reported by the Military Committee dismissing unemployed general officers from the service, which was debated at considerable length. The bill was discussed at considerable length by Messrs. COX, KERNAN, FARNSWORTH, and GARFIELD, and a substitute was presented providing for a commission of five to investigate the cases of such officers, instead of summarily dismissing them, as is provided by the resolution. The matter was finally by general consent postponed for three weeks.

THE astronomical and meteorological observations made at the United States Naval Observatory during the year 1863, have just been published, by authority of the Secretary of the Navy, under the direction of Captain J. M. GILLISS, U. S. N., superintendent of the Observatory. The work, which forms a square quarto of some 693 pages, is issued in a style reflecting great credit upon the Government printing office, and in keeping with its permanent value. The plates are excellent and the tables clearly and accurately printed. It is encouraging to receive such evidence as is contained in this report that the disturbance and excitement of these years of war are not leading our Government to neglect the works of permanent scientific value carried on under its direction. The routine of astronomical observations has varied very little at the Observatory, we are told, from that of preceding years. Special attention was given during 1863, to measurements for the determination of the parallel of the planet Mars, which presented unusually favorable conditions for observation. Besides the special scientific labors of the officers at the Observatory, unusual attention to naval duties proper have been required of them since the reorganization of the Bureaus of the Navy Department in July, 1862, by which the Observatory was transferred from the Bureau of Ordnance to that of Navigation, of which Rear-Admiral C. H. DAVIS is chief.

A well-merited compliment is paid by Captain GILLISS in his introduction to our American mechanicians, among whom he reports some of marked genius, "who have been prompt to appreciate suggestions and to experiment for the attainment of advantages, even more to acquire fame than for the pecuniary advantages expected to result therefrom." By their aid important improvements have been made in nautical instruments, and it is found that the sextants, liquid compasses, and barometers, now made for the Navy, are not only better instruments than any hitherto imported, but they are supplied to the Government on more favorable terms than foreign articles of the same general finish. In the way of books and charts furnished to cruising vessels, more than 20,000 sheets have been sent during 1862 from the Observatory. By the last biennial number of Issues, 19,189, were received from the United States Coast Survey, where superintendent promptly meets the extraordinary demands made upon that office. In addition to the report of the Observatory for 1863, we are soon to have all the astronomical observations made prior to 1861, ready for the press, with the exception of the Zones, which will be ready as soon as the pressure upon the Government printing office will admit of taking the work in hand.

THERE is prospect that justice may be meted out at last to one of that class of scoundrels, known as "bounty soldiers," who fatten on the spoils of luckless volunteers. One of their number has been found guilty, in the New York Court of Sessions, of defrauding a volunteer out of his bounty: his punishment is not yet sure, however, as efforts are making to obtain a writ of error in his behalf.

This is the first case in which one of this class of scoundrels has been ever brought to trial in a New York court, though a number charged with evidently complicity are now safely sheltered at Fort Lafayette, and others have been compelled to pay back the money they had stolen from soldiers.

THE failure of Captain ERICSSON's new machinery for elevating the guns on board of the second lot of iron-clads, to which we referred last week, is ascribed to a mistake made in the calculation of the power to be used by Rebel fire in the invention itself. No delay has been occasioned by this cause, and in order to avoid any, the guns will be mounted in the old style, and Captain ERICSSON's invention laid aside for trial at another time. He still claims that with a proper adjustment the machinery will answer its purpose, but all that has been expected of it. As this lot of iron-clads are not being built under his direction, Captain ERICSSON should not be held responsible for this failure.

THE EXAMINATION OF MIDSHIPMEN.

THE examination of the midshipmen in the Naval Academy at Newport has lately taken place, and it has resulted in the dismissal of twenty-two out of four hundred and forty-eight, the whole number. About twenty others, not having made sufficient proficiency in their studies, were put back for the next lower class. This is a regular annual examination commences on the first of June.

THE court-martial for the trial of Commodore Wilkes, now in session in Washington, is composed of the following members: Rear-Admirals Gregory, Stringham, Paulding, and Goldsborough; Coms. Marston, Hoff, Bell, and Thatcher; and Captains Lardner, Craven, Alden, and Worden. Coms. Rowan, Esq. Counsel for Commodore Wilkes, Brittan A. Hill and O. H. Browning, Esqs. After the preliminary proceedings, and after the reading of the order to convene an order compelling the Secretary of the Navy to produce the proceedings of a court of inquiry, held in the city of Washington, in January last, to inquire into the circumstances of the publication of the letter of the accused to the Secretary of December 1st, 1861, and the publication of the letter of explanation by the accused, that he had nothing to do with the publication, was satisfactory, the first witness for the prosecution was called—Commodore Charles Wilkes. His testimony was unanimous, the examination occupying all the sessions of the court up to the time of our going to press.

FROM Colonel J. H. Taggart, Preceptor of the Philadelphia "Free School for Applicants for the Command of Colored Troops," we have received a neat pamphlet of the U. S. of Corps's Infantry Tactics has been thus amended by General Casey. Every company organized will be paid the Colonel and rear ranks, on the right and left of platoons, according to height." When the Tactics were published, the law allowed but four corporals; hence the above-mentioned paragraph disposed of but four. General Casey also announces the following rule for the division of a company into platoons:—"The first platoon should contain an even number of files, but not necessarily the largest number. A company of eighty-four files should have twelve to each, and fourteen in second platoons. One of twenty-six files should have fourteen in first and twelve in second, and one of twenty-four files should have fourteen in first and thirteen in second platoons."

GENERAL SHERMAN'S EXPEDITION.

THE expedition under General SHERMAN, which has just returned to Vicksburgh, after inflicting an almost incalculable amount of damage on the enemy, consisted of the Sixteenth and Seventeenth Army Corps, under Generals HURLBUT and MCPHERSON. It comprised 21,000 infantry, 1,200 cavalry, about 40 pieces of artillery, and a train of 600 wagons. The troops left their camps at Vicksburgh on the 3d of February, and crossed Black River in two columns, the 16th Corps, forming the left wing, at Messenger's Ferry, and the 17th, forming the right wing, at the railroad bridge about eight miles below. No tents were taken with the expedition, and the generals as well as the common soldiers bivouacked by camp fires in the open air.

On the 4th, the advance cavalry guard was met at Champion Hill by a superior force of Rebel cavalry and driven back with a loss of seven prisoners. The Rebel cavalry were soon afterwards compelled to retreat in turn, before an advance of Union cavalry under Captain FOSTER. The Rebel force was estimated at 7,000 men, commanded by Generals ADAMS, ROSS and FERGUSON, the whole under the command of General S. D. LEE. They fell back to a commanding position on the west side of Baker's Creek, from which they were driven about sundown. The next morning a heavy skirmish took place between the 2d brigade of the 2d division, 17th Army Corps, and the Rebel cavalry, at the headquarters of a mile beyond Baker's Creek. It resulted in the defeat of the enemy, and their retreat towards Jackson. They were driven back twenty-three miles, losing 150 killed and wounded; the Union loss was 30. On the evening of the 6th, our forces entered Jackson in pursuit of the retreating foe, who were driven across Pearl River with such precipitancy that they had no time to complete the destruction of the pontoon bridge by which they made their escape, and which was therefore secured by our troops. The next day was occupied in destroying a large amount of public stores and arms, the track of the Mississippi Central Railroad, and in repairing the pontoon bridge. Several Rebel couriers were captured during the day, and from dispatches found on the person of one it was ascertained that the Rebel loss so far, was 260 killed and wounded. On the 7th, the march towards Meridian was resumed. A small Rebel cavalry force annoyed our march during the day, but inflicted no damage. At Brandon, a village twelve miles from Jackson, a large quantity of rebel subsistence was found and destroyed. The country continued to skirmish with our forces during the 8th, but no serious opposition was encountered. A large number of prisoners and deserters were brought in during the day, all of whom told the same story of demoralization and dissolution prevailing in the Rebel army.

At Morton, about thirty-six miles from Jackson, the enemy were discovered drawn up in line of battle; but, on the approach of our advance, they fell back. It was ascertained from prisoners, of whom 150 were captured at this place, that they were under the command of GENERAL POLK. Great numbers of dead horses and mules, and immense quantities of abandoned stores, were lying along the road, presenting conclusive evidence of a precipitate and disorderly retreat. On the 10th the little village of Hillsboro was passed. During the 11th, Captain FOSTER's command arrived at Lake's Station, on the Southern Railroad, where they destroyed three steam mills, two locomotives, thirty-five cars, the depôt and machine shop. About two of the following day our forces encountered a force of the enemy, but they destroyed a large tannery. At this point the supply train of the 16th Army Corps was attacked by some of ADAMS' cavalry, and twenty-six mules were shot. The Rebels were driven off with the loss of two men.

The expedition reached Meridian on the morning of the 14th, General POLK having evacuated the place about half an hour before the arrival of General SHERMAN's advance. Meridian, which is a hundred and fifty miles from Vicksburgh, and a hundred and thirty-five from Mobile, is a place of only three or four hundred inhabitants. The supply and railroad depôts, storehouses, hospitals, offices and quite a large amount of commissary stores, and a manufactory of arms, were all burned. General SHERMAN remained at Meridian five days. During this time detachments were sent out in all directions, towards Selma, Enterprise and Columbus, to destroy bridges and the railroad track. Here the unnecessary supplies for the army were obtained, with the exception of bread. The mills were set in running order, and ground corn enough to furnish three days' rations for the troops.

On the 20th the expedition left Meridian on its return to Vicksburgh. As far as Hillsboro they pursued the route on which they had advanced. They then took a more northern route as far as Canton, where they arrived on the 26th, and where they remained several days, in the expectation of hearing from General SMITH's cavalry expedition. Colonel WINSLOW skirmished on the 27th with ADAMS' cavalry, and the next day a large train of sixteen wagons, sent out by the 16th Corps, was attacked and captured by the same Rebel force. Twenty-one locomotives, a large number of cars, and other public property, were destroyed at Canton.

General SHERMAN left his forces at Canton on the 27th for Vicksburgh, where he arrived on the 28th, and sailed the same morning for New Orleans. The expedition remained, under command of General HURLBUT, until the 24 of March, when the route for Vicksburgh was resumed. The route was resumed until it crossed Escherbee Creek, twenty-three miles from Black River. The expedition arrived at Vicksburgh on the 4th inst., having sustained only the trifling losses which we have mentioned above.

The amount of injury inflicted on the enemy by this expedition is enormous. Two railroads with 100 miles of railway were rendered useless, thirty mills and ten thousand bales of Confederate cotton were burned, 2,000,000 bushels of corn, twenty locomotives, twenty-eight cars, sixty-seven bridges, and 7,000 feet of trestle were destroyed. Our forces also captured about two hundred horses, liberated nearly eight thousand negroes, and brought back several thousand horses and mules and three hundred wagons. The expedition subsisted on the country. A great many houses were burned in all the towns through which it passed, as the troops were fired upon in every place which they entered except Canton. Our total loss in killed, wounded and missing was only 170.

ADVICE TO YOUNG NAVAL OFFICERS.*

CAPTAIN INGERSOLL is certainly in every way qualified to give advice to young officers entering the service. A distinguished career of more than thirty years in the British navy gives weight to his words. The volume before us was written for the guidance of the naval students on board the training-ship *Britannia*. But the principles it sets forth deserve to have and should have a wider application. The book is also replete with technical information of great value to every sailor; while the moral questions discussed are treated in a style and manner every way commendable. He thus speaks of the bearing a young officer should show to the men under him:

You must remember that many of the older seamen to whom you may be ordered to address yourself, have served their country long and faithfully, perhaps in the main, and certainly in many a tempest; and that a true British seaman is of unblemished conduct, though undecorated by the external appendages of rank. He is the very life and soul of invisible characters among his countrymen. He bears with patience and even with chivalrous pride, peril, privation and hardship, which few but himself could endure, and should with dismay. Amid painful watchings, disease, toil, hunger and thirst, he has stood on the midnight surges which echo upon his ear from the breakers upon the shore, or the wasted odors of an Indian gale. His duty is hercule object. Patient, obedient, persevering, he is the right arm of power with the elements; and after long years of his elemental strife, which has battered his manly form, wrinkled his countenance, bleached his hair, and bowed his back, perhaps into silent oblivion, unknown to that country which he has striven to defend from dishonor. His body is committed to the deep, and unfathomable tomb; but his name, his deeds, merits are recorded elsewhere. Never, then, approach such an old veteran, without feeling it due to him, conveying your orders in an affable and friendly tone. He has turned his account and respect you, and will feel a pride and a pleasure in affording you information, which personal service, and many other minor sailor-like accomplishments, which no class can more thoroughly instill into your hitherto untaught minds. They are ever ready to give themselves for a good officer; to protect his person, shield his honor, and exalt his name in the estimation of his country's glory. Nor must you be led away with the idea that this is universally the case of extravagant or dissolute habits. You will find many of them discreet, steady, and decorous in their conduct, and exemplary in their conduct, and who would scorn to transgress their duty with as much firmness as the most high-minded in the wardroom. Nevertheless, there are many instances of fatal piety in allotting great part of their pay to their parents, should afford you a high opinion of their generosity and filial affection and duty. Never, then, address them with contemptuous epithets, nor to any who show such a worthy over them.

Captain INGERSOLL draws the distinction between bold and admirable contrast between true and false valor:—

True valor reserves itself to be exercised in the hour of peril, in the presence of the enemy, in the fury of the tempest, and in the face of death. Then it is calm, patient, forbearing and temperate; and though it may sometimes involuntarily flash forth in momentary sparks of indignation at instances of meanness, falsehood, duplicity, and treachery, it must be highly provoked, indeed, to become a settled aggressor. Then it is cool, circumspective, liberal, kind and conciliating; the friend of the weak, the irresolute and the oppressed; ever cautious of giving wilful offence to any, and slowly suffering itself to be provoked, except by wantons with the feelings of others, nor offers provocation to the most insignificant of mankind. Courteous, gay, pure, and will die to defend a comrade or succor a fallen foe. But valor is quarrelsome, boisterous, boastful, overbearing, and inflated with vanity; makes an exhibition in trifles, treats a mess, bullies the timid, tries to irritate the patient and placid, and is insolent to the humble and unprotected; but in the moment of real and imminent danger cracks like the flash of a pistol, and shrinking beneath the blaze of collected fortitude, disappears in smoke. Stupefied by the actual presence of real danger, it stands astounded on the brink of destruction, incapable of any effort to avert the impending calamity. While accumulation of peril only serves to rouse the intrepid breast to an energetic exercise of its inexhaustible resources, and to command all surrounding

* WORDS OF ADVICE TO YOUNG NAVAL OFFICERS, by Captain E. A. INGERSOLL, F. R. S., Royal Navy. Author of Summer Search for Wild Flowers, Fairy Money and the Source of Terrestrial Magnetism, Maritime Warfare, etc.

tumult and disaster, the full dignity of manhood then asserts its sway in the fulness of heroic magnanimity, and only by umphs over its bestoring adversary; and the danger overcome again within its own original tranquility of soul.

These are a few of the wholesome directions with which the book abounds, and, better than anything else, they indicate its scope and value.

EDWARD EVERETT ON THE NAVY.

THE Naval Committee of the House of Representatives visited Boston last week, and were honored with a complimentary dinner on Saturday evening. Hon. EDWARD EVERETT presided, and welcomed the guests in an eloquent speech, from which we make a few extracts:—

The outbreak of the rebellion, however, found our Navy on a peace establishment. The vessels afloat of the country even in time of peace,—many of the vessels old and worn out,—were, for the most part, sloops-of-war and steamers,—no iron-clads—the force greatly scattered,—200 vessels only in all the Navy Yards of the United States, to protect the Government, to guard our commerce, to show the flag in every important position to the number and quality of the vessels. With these wretchedly inadequate means, a Herculean task was to be performed. Active naval operations was to be allotted to the Army, wherever the localities permitted; strong fortresses were to be battered down; the Mississippi opened and kept open, and a vigorous blockade of a sea board line of nearly three thousand miles established. The recent improved constructions, many of portentous calibre and range. Every ship-yard, public and private, has been tasked to its utmost capacity. Gunboats on the Western waters have been kept at white heat night and day, and no amount of work has been performed, on the coast and rivers, and a series of combats extending from Hatteras Inlet, to Galveston, where the disadvantages are considered under which the Navy labored at the commencement in naval history. Let Norfolk, Hatteras, Roanoke Island, Port Royal, Tybee, Fort Pulaski, Fort Pulaski, Fort Pulaski

ARMY AND NAVY PERSONAL.

MAJOR-General Sickles has started for the West.

LIEUTENANT Paul Quirk, 24 U. S. cavalry, has been ordered before the Retiring Board at Wilmington, Delaware.

LIEUTENANT-Colonel Wm. Wooster has been appointed Inspector of the twenty-ninth Infantry, colored.

MAJOR-General Meade returned to the Army of the Potomac on the 14th.

MAJOR-General Lewis Wallace has been assigned to the command of the Middle Department, headquarters at Baltimore.

MAJOR-General Sigel has been handsomely received in the Department of Western Virginia, and Brigadier-General Kelly has a furlough of thirty days.

LIEUTENANT J. P. King, of the Sixth Connecticut, has been announced as assistant provost-marshal at Port Royal.

MAJOR-General S. W. Crawford was one of the invited guests at the celebration of the National Union Club, at the Philadelphia Academy of Music this week.

COLONEL N. W. Tupper, 116th Illinois, was buried at Decatur, Ill., on the 11th. He died of disease contracted in the service.

COLONEL John Wesley, of Indiana, from the Army of the Cumberland, has been appointed Provost Marshal, with headquarters at Baltimore.

REAR-Admiral Dahlgren has returned to Washington from Fort Monroe, after having made an unsuccessful attempt to recover the body of his son, the late Colonel Ulric Dahlgren.

LIEUTENANT-Colonel James M. Sanderson, one of the badly wounded officers of the Fifty-seventh regiment, Washington on a charge of Colonel Streight that he disclosed to the rebel authorities a plot of our prisoners to escape.

REV. C. C. Townsend, chaplain of the Twenty-second Massachusetts regiment, has been appointed to fill the vacancy in the pulpit of the Presbyterian church in Norfolk, Va., caused by the deposition of its late pastor, Rev. Dr. Armstrong.

LIEUTENANT-Colonel Carter Van Vleck to be Colonel of the 38th infantry, vice Loomis, assigned, and Andrew C. Morris to be assistant-surgeon of the 122d Infantry, vice Matthers, resigned, are among late promotions in Illinois regiments.

UP to the 12th day of March Major-General Casey's Board had examined 1,748 applicants, of whom 931 were recommended for commission, and 744 rejected. During the week ending on the 12th 7 were rejected, and 42 recommended for positions—five captains, 11 first lieutenants, and 26 second lieutenants.

BRIGADIER-General O. S. Ferry and staff have left Philadelphia for the Lehigh Military District in Pennsylvania, to muster and organize the militia ordered by Governor Geary. Sigel, assigned to the Department of Western Virginia. His headquarters will be at Reading.

AT the recent annual election of the Massachusetts Medical College, Governor Andrew paid a just tribute to the services rendered by the medical profession during the war. Brigadier-General Wadsworth, Surgeon-General Dalton, Generals Dale, Dix, George Hammond and John L. Dalton.

COLONEL Frank Wolford has been arrested by order of Brigadier-General Burnside, for making disloyal speech ments in a speech at Lexington, Ky. It is alleged that in accepting a sword presented to him by some of the citizens, he denounced the President as a tyrant and tyrant, and advised Kentucky to forcibly resist the drafting of negroes, if necessary.

IT is authoritatively announced that General Doubleday did not prefer charges against General Meade to the Committee on the Conduct of the War; that he did not request the recall of General Meade's conduct, nor that he did he said to be summoned before the committee as a witness; and that General Doubleday never claimed to have received any order to retreat at Gettysburgh, P. A.

LIEUTENANT-Colonel Spaulding, of the 18th Michigan, having been appointed to the colonelcy of the 12th Tennessee, Major Ball has been promoted to the lieutenant-colonelcy of the Illinois regiment, Captain Hulburd to the majority, and Lieutenant Hewitt to be promoted to be captain, and 2d lieutenant Hewitt to be 1st lieutenant.

THE Royal Society of Northern Antiquaries, which has its headquarters at Copenhagen, and of which Christian IX., King of Denmark, is President, has elected Lieutenant-Colonel A. C. Hamlin, Medical Inspector of the Department of the Gulf, and author of "Bull Run and the Battle of Fredericksburgh," to correct the statement, and to say that he is the only individual of the name of Braine who ever was in the United States Navy, or graduated at the Naval Academy.

A COURT-martial, ordered by the President to try Brigadier-General Gordon Granger, and such other officers as has met at Hilton Head. The court consists of Brigadier-General A. H. Terry, Brigadier-General Israel Vodges, Brigadier-General R. S. Foster, Brigadier-General Rufus Saxton, Colonel Alford, Lieutenant-Colonel Morgan, Lieutenant-Colonel Jackson, and Major Hall, Captain Henshaw. The trial will probably consume some time.

COLONEL G. Mihalotzi, of the 24th Illinois, recently died at Chattanooga from the effects of a wound received at Buzzard's Roost. He was buried on the 13th by his own request, in the National Cemetery at Chattanooga. Colonel Mihalotzi was a native of Hungary, a gallant soldier, indefatigable and thoroughly penetrated with a sense of the justice of our cause. He was a Hungarian by birth, and knew his sword for liberty. In 1848, as a captain in the Hungarian army. His wife came to him a few days after he was wounded at Buzzard's Roost, and attended his remains to the grave.

A GENERAL court-martial, for which the following detail was made, assembled at Nowbern, N. C., on the 1st inst.:—Colonel J. W. Savage, 11th New York Cavalry; Lieutenant-Colonel S. Tobie, 15th Connecticut Volunteers; Lieutenant-Colonel R. M. Stone, 10th Wisconsin Volunteers; Captain G. W. Keaney, 17th Massachusetts Volunteers; Captain C. E. Boswell, 92d New York Volunteers; Captain W. B. Mercer, 3d New York Cavalry; Captain W. O. Bradley, 15th Connecticut Volunteers; 1st Lieutenant C. D. Willard, 10th Wisconsin Volunteers; 1st Lieutenant F. A. Dyer, 24 Massachusetts Heavy Artillery; Major E. E. Jenney, Judge Advocate.

ON the 1st inst., Brigadier-General J. W. Davidson announced command of Cavalry Depot at St. Louis, relieving Brigadier-General Sturgis. The following officers are announced on duty: Lieutenant-Colonel R. L. Hadduck, 5th Kentucky Cavalry, Commander of Depot Camp of Instruction; Inspectors of Cavalry Horses—Major W. H. Brewster, 7th Missouri cavalry; Major P. Matthews, 9th Iowa cavalry; 1st Lieutenant Thomas A. Bruton, 6th Tennessee cavalry; 1st Lieut. Wm. Dow, O'Connell, 4th United States cavalry; 1st Lieutenant C. F. Martin, 2d Iowa cavalry, Inspector of Department of Equipment and Repair; Major John W. Noble, 3d Iowa cavalry, Chief of Department; 1st Lieutenant Jas. R. Gray, 7th Mo. cavalry, Aide-de-Camp, Assistant Adjutant General; Captain Reginald Coryell, Quartermaster Department; 1st Lieutenant A. S. Montgomery, 7th Missouri cavalry, Aide-de-Camp in charge of Depot Office, in the room of Lieutenant Colonel A. McKinstry, 1st Wisconsin cavalry, in charge of Cavalry Depot. The following are the posts for instruction and reception of cavalry horses are for the present established: St. Louis, Mo.; Springfield, Illinois, Indianapolis, Indiana; Evansville, Indiana.

THE following officers were reported as under treatment in the Officers' Hospital, at Chattanooga, on the 4th:—Edward Ewing, 1st Lieutenant, Company A, 30th Illinois, gun-shot wound of left hip; Alfred Redburg, 2d Lieutenant, G, 15th U. S. I., remittent fever: T. L. Simpson, 2d Lieutenant, 15th U. S. I., contusion of upper lip; Wm. Pierce, 2d Lieutenant, F, 16th Ind., gun-shot wound of right leg; C. F. Dandelin, Captain, F, 92d Ill., compound fracture of left leg; Lester Taylor, 1st Lieutenant, C, 92d Ill., gun-shot of right thigh; J. I. Brady, 1st Lieutenant, B, 97th O. V. I., gun-shot wound of left thigh; Caleb B. Coz, Major 84th Ill., remittent fever; Geo Mahaffey, Colonel 44th Ill., gun-shot wound in right arm, same ball entering right side, between ribs and clavicle; James A. Waters, 2d Lieutenant, 84th Ill., slightly in the head; Henry Hooker, 2d Lieutenant, F, 24th Ky., grazing bone; Matthew I. Huette, Captain, H, 31st Ind., gun-shot wound of right thigh; Adam Bush, 2d Lieutenant, A, 35th Ind., V. V., pneumonia; Douglass Edwards, 1st Lieutenant, H, U. S. I., hemorrhoids; J. O. Havens, 2d Lieutenant, G, 96th Ill., gun-shot wound of left shoulder (flesh); James Longhorn, Captain, I, 10th Ill., amputation of left arm; William A. Arnold, 2d Lieutenant, 18th U. S. I., hæmoptysis.

MAJOR-General Peck announces with satisfaction the success of an expedition sent to Windsor by General H. W. Wessels, on the 29th of January, which resulted in breaking up the notorious band of guerrilla company of Colonel Some prisoners were taken, and a large number of dangerous persons arrested. Arms, horses, mules, wagons, clothing and ammunition were captured. Lieutenant-Colonel Tolles was in command. He had detachments of the 103d and 141st New York, 14th and 15th Connecticut, and 16th Connecticut Volunteers. A small party of the 2d North Carolina Volunteers co-operated, as well as Lieutenant Commander Flusser, U. S. N., and fifty sailors and marines. The expedition was followed by another in the same quarter, consisting of detachments of the 15th and 16th Connecticut, 1st Connecticut Heavy Artillery, of the 103d, 141st, 179th, and 194th and 203d Pennsylvania under Lieutenant-Colonel Gale, and a part of the command of Lieutenant-Colonel Maxwell. The success of this enterprise is shown in the list of property taken or destroyed; 11 bales of cotton, 20 horses, 10 wagons, 1 ambulance, 1 forge, 1 quantity of hard, 25 casks of salt, 25 barrels of meal, 50 barrels of corn, and many oxen, wagons, carts, &c. This example of Colonel Wessels will be appreciated and emulated by the whole command.

THE *Jewish Record*, of New York, attacks General Butler for the alleged indignity cast upon the character of the Israelites, by the order issuing Sheppard Mallory's name. Though General Butler has already disclaimed any intentional discourtesy in the premises, over his own name, the disclaimer does not appear to have satisfied the editorship of the *Record* which, having appealed to General McClellan, publishes the following letter:—

GENERAL,—In the September 28th, 1861, order, A. S. Cohen, New Orleans, Lieutenant-Colonel and Assistant Adjutant General, and one only party to the order, was appointed to the command of the 1st Louisiana regiment of Jewish soldiers, when I was in command; but this I never had any chance to organize, as I was ordered to the front—and I am a Jew myself and resign me, or to their decidedly belligerent aggression. I am very truly yours, &c.

THE Tallahassee *Floridian* says that two hundred "Yankee" wounded have been conveyed to that city since the battle of Olustee, mostly foreigners and negroes; and "that the hospitals are filled with sick, whites and negroes laid side by side, in order to give the whites a taste of the equality they are fighting for." The number of more than one thousand (!) dead bodies of Union soldiers have already been buried on the battle-field, and that the rebel dead only numbered one hundred and thirty-five, exclusive of thirty who afterwards died of their wounds.

MASSACHUSETTS FRUIT.—The War Department has directed that the forts at Salem, Mass., shall be called Forts Glover and Conant—the first in honor of General John Glover, of Marblehead, and the latter in honor of Roger Conant, the founder of the first plantation in Massachusetts Bay.

QUALIFICATIONS OF A GENERAL COMMANDING.

WE translate and condense a portion of an interesting article in the last number of the *Journal des Armes Spéciales*, on the Profession of Arms.

A good general should not only be a perfect master of military science; it is also necessary that he should be an able and discreet statesman, a shrewd and skilful administrator, and a good economist. What diverse attributes should not that man possess, whose mission is not in the cabinet as on the field of battle! A general of division, who would never lose the favorable moment in which victory may be secured, in need of much knowledge and experience. The critical instant appears but once in a battle; it flashes like an inspiration in the eye of military genius. It is for the general to await its coming with patience, and then to hurl his troops upon the enemy, overwhelming every obstacle that stands between him and assured victory. Upon his tact, his experience, his character and his science depend the safety of the State and the honor of the army which has been confided to his charge.

Victory does not always belong to numbers. It depends much more upon the quality of the soldiers, and is moreover always more certain when a small army is well commanded, than with a numerous army led by indifferent generals. The bravery, instruction and discipline of the best military men have been lost, unless directed by the genius of a good general.

Consider, says the historian THIERS,—after researching that the vast machinery of an army is set in motion by the mere thought of the general—how FREDERIC and NAPOLEON, in the midst of great armies, were able to combine their plans and combinations as calmly as NEWTON and DESCARTES could pursue their investigation in the silence of the closet. Then will you comprehend the genius that can truly be acquired, though in an inferior degree, in connection with other military qualities which a general should possess.

It is the opinion of many writers on military science, that to be perfect, a general should unite in himself the quality of conception and execution displayed by CÆSAR in his campaigns; like MONTECUCULLI, should be master of science of marches and combinations, and understand the art of attack and fortification like VAUBAN; should be able to inhabit immense armies in sterile and desolated countries in extreme Russia, as well as in the fertile plains of Italy, or the opportune moment to exact the spirit and intimate the secrecy of his soldiers, like *coup d'œil subitaire* to decide, like the great CONDE, the success of battle; like CHARLES the Twelfth to make soldiers insensible to hunger, cold and fatigue; TURENNE to command armies more by the lives of the warriors under his command; should be as sagacious and subtle in deceiving his enemy as was FREDERIC the Great; like EUGENE, should possess a genius more by his electric glance, his intelligence and his resolution. Besides these qualities, he should be the faithful mirror, transmitting his own energy to his army, and should be in fact, as it were, the image of all the united virtues of the true warrior—courtship, prudence, activity, prudence, resolution, constancy, cheerfulness, economy, &c. It is not to be presumed that he should enjoy the reputation of being successful in his enterprises.

The attention of the General-in-Chief should embrace the whole field of his labors, but only in its grand features, without descending to the consideration of the petty details and elevated mission. The general, who, too much occupied with the minute details of his position, allows his attention to be taken from the important duties confided to his subordinates, is not the man for his place. Impatience, conflicting impressions and irresolution mark such a general, and should be so constituted that a single moment would suffice for him to sketch the general outline of the proper plan to be adopted in the most pressing circumstances, to comprehend the results of movements, and to make a prompt and correct decision.

For a general in command, who commands under the immediate orders of his general-in-chief, it is not, indeed, indispensable that he should have the same amount of military talent as the latter, but he should upon a grand scale; but he should unite clear intelligence, bravery, activity, resolution, and a spirit of judgment and penetration in battle, calmness in the midst of danger, and should be loved and trusted by his subordinates, to such a degree that they would execute his orders with blind and unwavering confidence.

A CORRESPONDENT gives us some interesting facts of the history of the late Captain T. M. SAUNDERS, U. S. A., who died at St. Paul's, Minnesota, Jan. 20, 1864:—

He was a Virginian and a staunch Unionist, and a bright example of fidelity to his government and unswerving loyalty in the midst of temptation. At the breaking out of the rebellion he received a letter from his family in Virginia urging him to resign, which he positively refused to do when they wrote him again saying that they would be glad to see him home, even though it was in the coat of a soldier of tar and feathers, which they promised him if he should ever show his face among them. He also received an autograph letter from Jefferson Davis enclosing him a commission as a brigadier-general in the Confederate army, which he indignantly returned.

Among the kind of projectiles which are now used in modern warfare, besides cannon shot, shell, grape, and case, we find a rifle ball weighing 1 oz. 2 dr. 1 sc. 2 gr. 2 sc. 1 gr. weight. The French Minié ball, 1 oz. 2 dr. 2 scr. 10 gr. The large rifle ball used by the Russians, with a conical flat base, has rings, and two raised ribs to fit grooves in the barrel, is 1 oz. 2 dr. 2 gr.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and personal communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels of consulates among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to military and other matters.

From gentlemen in the medical service we shall be glad to receive communications on climatology, hygiene, practical surgery, and reports of notable operations and rural forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or FIVE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other Drafts. Such should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 102 BROADWAY, CORNER OF JOHN STREET.

ANSWERS TO CORRESPONDENTS.

HITE NEW YORK RIFLEMAN.—It has been a long established custom at service for a soldier coming into the presence of an officer, in doors or without, unless he be in full or undress uniform, with his sash or belt on, to salute such officer. In these exceptional cases, he would either salute at once or by touching his cap.

CHEMELER.—1. If a member of a court-martial has been absent during the examination of a witness, he should not sit on the court again in the case; proceeding during his absence. The manner in which evidence is given is an important guide by which to judge of the truthfulness of the witness, and justice requires that the testimony upon which the court's decision should be based be heard by each of the members thereof. II. There seems to be no good reason now for a distinction being made between daily and extra duty-men. Formerly, men employed on extra duty received extra pay, and for this extra executive duty, received extra compensation, which caused them to be rated as extra duty-men, in contra-distinction to men employed for less periods, or on special service, for which extra compensation was not allowed.

VOLUNTEER ENGINEER.—You have no right to expect your discharge until the expiration of your term of service, or the close of such man's case from his muster into the service of the United States.

THE NEW ARTICLE OF WAR gives an inferior officer or soldier, who thinks himself wronged by his superior officer, the right to complain thereof to his regimental commander. But, at the same time, a soldier making a complaint must comply with paragraph No. 88 Army Regulations, which requires all communications from an inferior to a superior to pass through the intermediate commanders. These intermediate commanders are obliged to forward all such papers, when written in a respectful manner.

ENLISTED.—Soldiers can only be transferred from one regiment to another by the War Department, and this is only done for special and urgent reasons.

ARMY CORPS are organized by direction of and at the discretion of the President of the United States. They usually consist of three divisions of troops of the line, each having a proportion of artillery. The amount of artillery and of cavalry (when the latter is assigned to a corps, which is rarely done), is more variable. There is, however, no established rule, for the good reason

IDEM.—Officers of the Invalid Corps rank as volunteer officers. Whether or not men can be enlisted in that corps, will depend upon the decision of the proper authorities.

CORPS.—The badges adopted by the different corps in the Army of the Potomac are as follows:—The first corps is distinguished by a circular badge of scarlet, the second by a clover leaf, the third by a lozenge or diamond, the fifth by a Maltese cross, the sixth by a crescent cross, the eleventh by a crescent moon, the twelfth by a star. The colors usually adopted to designate the first, second and third divisions respectively in every corps, are red, white and blue. Brigades are distinguished on the field by the shape and color of the flags.

FORT HUDSON.—A recruiting officer complains to us of what he considers a bit of sharp practice, of which he has been made the victim. In one or two instances all arrangements are supposed to become applicants for positions as officers of the Corps d'Afrique, and, confident of their ability to pass the necessary examination, have enlisted, obtained the three days' furlough offered to recruits, and, apparently, secured an order to appear before the board, returning as officer to claim their discharge from the ranks; thus getting the better of the Government for the value of their bounty, and leaving the officer in recruit on whom he had confidently counted. This is hard, to be sure; but the only real remedy there is for it under the existing orders of the War Department, is that the case would seem to be too exceptional to call for any special order on the subject.

TRAINED.—Officers for the Signal Corps are appointed upon an examination before a board appointed for that purpose. Application to appear before the board, or for appointment in the Signal Corps, should be made to the "Signal Officer of the Army," Washington, or to the General-in-Chief.

WILL.—The arrears of pay or prize money of an officer dying intestate follows the ordinary rule of law, going to his wife, if he has one; next to the children, if he has no wife; if no wife or children, then to his father; if no father, to his mother; if no mother, to his brothers and sisters. The bounty granted by the act of July 22, 1861, is in the nature of a gratuity to the relatives mentioned in the act, and cannot be bequeathed to others until the soldier has acquired a title to it by two years' service.

A. R. S.—You will find your questions in regard to courts-martial answered in a full view of the constitution, functions, &c., of those bodies, which we publish in another part of this paper. Exactly what constitutes "unbecoming conduct" on the part of a gentleman is not defined; but it is for the body of officers and gentlemen composing a court-martial to determine in each particular case.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, MARCH 19, 1864.

THE LIEUTENANT-GENERAL.

IF any opposition has been made to the elevation of General GRANT to the Lieutenant-Generalship, it has been prompted by the anticipation that, as this grade would make him General-in-Chief of all the armies of the United States, it would likewise necessitate his leaving the field; and however unanimous has been the desire to see the command of the triple star as a mark of honor for great services rendered to the Republic, there have been those who would prefer that he should *not* receive it, than that it should restrict his talent to the functions of a bureau officer in Washington. The order of the Executive assigning General GRANT to the Lieutenant-Generalship, has sought to reconcile this double desire. "The headquarters of the Army," it provides, "will be in "Washington, *and also with Lieutenant-General "GRANT in the field*"—and we take it that, if he follows his own best, it will be much more frequently in the latter than the former place. A man who has within him the truly martial spirit *cannot* be confined to a bureau when great operations are on foot. NAPOLEON was still at Paris when the Austrian army crossed the Inn at Braunau with the intention of invading Bavaria, and breaking through his line of communications. Informed in twenty-four hours of what was passing at distance of seven hundred miles, he threw himself into his travelling-carriage, and a week later he had gained two victories under the walls of Ratisbon. This was his constant habit, and we conceive General GRANT will be disposed to emulate that great captain in this respect.

The elevation of General GRANT to the office of General-in-Chief, we may hope, will give to our military counsels that quality, the want of which has so much impeded the success of our arms—that is, it will give unity of direction. We took occasion, some weeks ago, in reviewing the Report of General HALLECK, to show how thoroughly incoherent had been the exercise of the central military power—operations being under the control now of the PRESIDENT, and then of General HALLECK; at one time of the Secretary of War, and at another of the general in the field. It is to be hoped this confusion of all things will cease with the appointment of General GRANT to the supreme *command*; and that, being so appointed, he shall really "*command* the "armies of the United States." It is a happy circumstance, too, that General GRANT's own experience in the field has given him a perfect appreciation of what a Lieutenant-General can do, and what he cannot safely do—has put him in the way for the central authority can interfere in distant operations, and how much must necessarily be left to the commander in the field.

We presume that General GRANT's energies, during the summer campaign, will be mainly devoted to the personal direction of one or the other of the only two grand armies in the field—that in Virginia or that in Tennessee. It will, of course, depend on the exigencies of the occasion to which one of these he shall for the time being give himself up; but we can most truly say that it would electrify the Nation should the hero of Vicksburg and Chattanooga deal the Rebellion such a blow in Virginia as he has more than once inflicted upon it. This distribution of power by which General GRANT, while directing the general scope of military operations over the whole theatre of war, shall assume the personal command of one or the other of our great armies, will resemble perfectly the system pursued by NAPOLEON who, as circumstances required, placed himself at the head either of the army in Germany or the army in Italy.

We trust now that we will not be considered as actuated by any other motive than the best wishes towards the country, should we plead at the head of the Army, and the most ardent desire that his future services to the country shall be as splendid and substantial as they have hitherto been, should we whisper into the ear of the public a word of caution. General GRANT's late series of successes has inspired many with undue expectations of what it is possible for him to do; and has even given many a false standard of judgment respecting what it is possible for *any* man to do. It is not fair for General GRANT to expect that he will *always* be successful. Alternations of victory and defeat are the fortune of war, and form a law to which the greatest captains have been subject.

It is a remark of Marshal TURENNE, which it will to ponder, that "when a general has committed "no faults in war he can only have been engaged in "it but a short time." It is enough if the grasp and scope of his action shall be such as to forward the cause he serves—if, through bright and rough days, he at least brings out victory and snatches the way. We sincerely hope that General GRANT will hereinafter do as much as he has hitherto done to crush the Rebellion, and we trust he is destined by Providence to give it its *coup de grace*; but the country can best aid him in doing this, by in the first place putting into his hand the means to do it, and in the next place, and always, by not embarrassing him by the childish expectation of a uniform success, which it has never fallen to the lot of any man to win.

MR. LINCOLN'S order, appointing Lieutenant-General GRANT to the command of the armies in the field, and naming as his subordinates HALLECK, SHERMAN, and PHILIP SHERIDAN, is a curious commentary upon the reliability of the estimate of it which the daily press and the public is likely to put upon our military acts. After the battle of Belmont, and more particularly subsequent to the fearful struggle at Pittsburgh Landing, charges against the private character of General GRANT were freely broited about, which would now blister the tongue of the man who might have the hardihood to repeat them. The lapse of two years has not only branded these idle stories as the basest libels, but has brought unsolicited to the one regarding whom they were uttered the highest military honors it is in the power of Congress to confer. So with General SHERMAN, who at one time was positively and repeatedly declared to be insane not much more than two years ago, and was temporarily without a command because he frankly declared his conviction that at least 200,000 men would be needed to clear the Rebels out of Kentucky and Tennessee. To-day he controls the movements of more than that number in the Division of the Mississippi. General HALLECK is daily sending him reinforcements by hundreds. Both these officers have acted on the true military principle of allowing their deeds to speak for them, and now they have their reward in the gratitude and admiration of their countrymen and the official endorsement of their President. General SHERIDAN, fortunately for himself, has thus far managed to escape libellous attacks, but the Rebels have given their testimony to his ability, and General GRANT takes so much pride in rewarding those who have assisted him in achieving his greatest successes that he has promptly advanced this officer to the position which he believes his brilliant talents qualify him to fill. This time he has yet come for the complete silencing of those who have objected to General HALLECK the object of unjust criticism and virulent abuse, but the cordial endorsement which the PRESIDENT bestowed upon him in his recent order, should satisfy the carpers that he has performed his duties to the complete satisfaction of the one best qualified to appreciate how laborious and important they have been. General W. F. SMITH has also lived down the outrageous slanders which reckless newspaper correspondents and even United States Senators uttered against him while the seige of Yorktown was progressing; and here, at General GRANT's solicitation, he has been nominated for promotion to the next highest grade in the Army; but these notable illustrations, and very many more which might be mentioned, should certainly make these who have the power of so seriously damaging the reputation and influence of our officers, more cautious about exercising it.

WE are always ready to give place in these columns to just criticism of military movements and military men. But we would ask correspondents—and, if it be not over-bold, our brethren of the press generally—to stop to consider a few things before they undertake such criticism. 1. Are they competent to the task? 2. Are they supplied with the requisite facts? 3. Is their criticism free from personal animosity, and is it without partisan purpose? 4. Is it undertaken with a view to accomplishing some good result, and is it likely to have such a result?

If these four very simple conditions be satisfied, we are glad to listen to criticism, and to be the

means of its publication. Otherwise we must decline to have anything to do with it, lest its fruits be nothing better than division and animosity among good men, who have need to be united to accomplish the great work they have in hand. As a military gazette, we must also always set our face against the pernicious habit which leads subordinate officers to employ the newspaper press to criticize their superiors. Experience approves the justice of the regulation which makes this a grave military offence.

If we were merely playing at war in the United States, and there were no great issues to be decided, we might take pleasure in allowing the columns of the JOURNAL to be used as a kind of drilling ground for acquiring proficiency in sharp criticism of military men. We might be able in that case to feel a degree of honest pride in the increasing skill of our band of servitors, and be as ready to pardon their faulty manœuvres as to applaud their advances to perfection. But war is to us so terrible a reality; the responsibilities resting upon the actors, and especially the leaders in it, are so awful; the subjects it is assumed to discuss are so grand; the means of obtaining sufficient facts upon which to base criticism are so rare; and the danger of injustice and prejudice so great, that we cannot believe it to be either judicious or patriotic to assist in encouraging these crude critical diversions. The subjects are ones to demand the most cautious and unbiassed judgments, and the most careful research.

If one wishes to learn caution, and some diffidence as to his own hasty conclusions, let him take the pains to look over the files of even our discreetest newspapers for two or three years back. A recent turning over of the pages of these bulky volumes, we confess, has taught us such a lesson. One can look at them now in the light of subsequent events, of developed facts, of official statements, and with something of the calmness of judgment which the historian will bring to their examination. And to one so looking, we do not think we go too far in promising, as one of the results of this investigation, a very decided opinion that the speculations about military movements, and the criticisms of military men, during this period, the most absurd and utterly worthless intellectual efforts of the periodical press during the last three years.

Now, all this tends to make every honest and patriotic man severely critical of the critic. He demands a thorough knowledge of the subject criticised, and that there be a careful examination of evidence before judgment is pronounced. He is also ready to make delay in coming to conclusions, if it be to gain time to fortify the argument, and to avoid the danger of injustice.

THE eminent Spanish officer, General PRIM (Count DE RENS), who commanded the contingent of Spain in the tripartite expedition against Mexico at the close of 1861, and who, when on his return to Spain after the dissolution of the coalition early in 1862, made a visit to this country, and to the Army of the Potomac, then on the Peninsula, has just given to his countrymen, through the press of Madrid, his views of military and civil officers in the United States. The information given by the general concerning public matters of the latter is as we all necessarily quite familiar with; but we may say that his statements are imbued with a spirit of truthfulness and justice which it gives us great pleasure to signalize and commend. Thus the statement widely circulated and credited in Europe that "no man in the United "States ever leaves his house unless armed with a "six-barreled revolver," he emphatically contradicts, and he rectifies not a few other European misapprehensions, equally entertaining. Our Army was on the Chickahominy, and pushing close up to Richmond, when General PRIM reached the Peninsula. His was received with great honors by General MCCLELLAN, who sent two of his aids, the Count DE PARIS (born, says General PRIM, on the steps of a throne) and the Duke DE CHARTRES, accompanied by a squadron of cavalry, to receive him; and next day he "had the honor to review thirty thousand "men and four hundred pieces of artillery, which re"ceived us in open parade, saluting with their bay"nets—an extraordinary honor, which I received in "the name of my QUEEN and my country; and this "I proclaim with a loud voice, because I could not "and would not accept it as a tribute of honor to my "own person." The General is very complimentary in remarks upon our Army—its warlike and military spirit, its fine discipline and superb equipment; and he also says that "from the moment he arrived at "the White House, while traversing those immense "forests and lagoons, he began to comprehend the "difficulties with which the Army had to struggle." General PRIM closes his observations by a reference to the Mexican Question and to the French intervention in Mexico, and prejudices "more than those who "shall dare to contend" with the American Republic —adding, as the result of his observation in this country, "that if the importance of nations is to be "measured by the number of soldiers they can put "into the field, then those are well fed, armed and "equipped—the United States is the first Nation of "the world."

A BEAUFORT correspondent of a daily newspaper says that,

Among the curiosities of our late military experience in Florida may be mentioned the following, which is deliberately told as a fact, but which may call forth an official contradiction: The 48th N. Y., in the battle of Olustee, last Saturday, were ordered to fire over one of the field batteries in front of them. Obeying the order several guns-ful were seen to fall wounded. Getting a hint from a friendly soldier to get out of the way of the active men in the rear, by ceasing to work their guns, a brave fellow remarked that they might as well die by the bullets of their comrades as by the concussion of their guns. The moral justified the plea. The gunners and horses were killed, and the piece was left on the field.

Though the above may not be sustained by the facts, it is far from improbable. The disposition described has been of frequent occurrence during the war, and has resulted in the loss to us of many guns. It simply means that the support of the battery was posted *behind* it, where it could be of no possible use, and where the attempt to use it would be more destructive to the battery than to the enemy. The supports of batteries should be posted in their rear, but all the ways on the flanks, either on the prolongation of the line of the battery, or, if it is possible to secure cover, in the advances or rear of that prolongation. They should always be within easy supporting distance, but no closer, that the fire on the battery may not injure in the supporting line. Such will be found, generally, as a rule, take care of its front; what it especially needs is this flank protection. If the attack from the front is made by a heavy force, and with great persistence, the troops acting as supports should, during a previously-arranged suspension of fire on the part of the artillery, wheel forward on the flanks, so that their cross-fire may sweep the ground in front of the battery, and then charge vigorously with the bayonet until the enemy is driven off, whereupon the supports should at once fall back towards the flanks, so as to unmask the fire of the battery. A disregard of this principle of support has been, as we have said, the occasion of the loss of many guns. There is an equally mischievous habit of positioning batteries within rifle-range of a wood or other cover, not held by our troops, but open to the occupancy of the enemy, who may occupy the cover with sharpshooters, if with nothing more, and pick off the horses and men of the battery. Such mistakes as this has lost us not a few good guns and good men. Brigadier-General HUNT, Chief of Artillery of the Army of the Potomac, calls especial attention to this subject in the General Order, wherein he gives instructions and regulations for the artillery of that army. This order was first published a week before the battle, and was enforced in that battle, where we lost no guns, because our supports could be used with real advantage to the batteries.

THE English papers are finding great cause for self-gratulation in a comparison of their war budget for 1864 with our present enormous expenditure for military purposes. "We can no longer be twitted "with Republican economy," exclaims the *Army and Navy Gazette*. "In the amount of their Army, and "in the extravagant expense with which it has been "recruited and is maintained, the Federal Govern"ment have gone to such a gigantic length that our "own estimates look quite small and modest beside "theirs. The estimated expense of their Army for "the coming year is about £105,900,000, or about "eight times as much as our own. The Federal "Navy is equally vast in its cost." In instituting such comparisons as this, the *Gazette* should not lose sight of the fact that our expenditures are upon the basis of paper money, and theirs upon a specie basis. Making due allowance for this, our war expenses alone down to something like five times those of Great Britain, which will not be found so extravagant as many suppose, when we consider the relative strength of the two armies, the differences in the cost between a peace establishment and one on a war footing and the special expense we are under for such material as has been for years accumulating in the British arsenals. Perhaps it would be as well, too, for our English friends to pause in their pharisaical thanksgivings until the Danish question has received its final settlement.

THE telegraphers have been giving us much shilly-shallying information concerning our general officers for some time past. The treasonable interview of General MCCLELLAN with LEE; the despair of General MEADE of crushing out the Rebellion; the refusal of General GRANT to dine with the PRESIDENT—these are but a few of the things that have been chronicled of late. It made no difference that the first was the meandering of a man laboring under *mania à potu*, or that the second and the third and the most of the other accusations were simply spun from idle brains to make fools gape; they were telegraphed and printed all over the country, and read if not believed by millions. Independent of the injustice often done to devoted officers by such statements, the continual publication of malevolent and silly fabrications of this kind must work a grievous debauchery of the public mind. They tend to destroy popular faith in all the foremost men engaged in upholding our cause, and consequently undermine our faith in the merits of the cause itself. They are the inventions of the enemy.

WE desire to call the attention of Secretary STANTON to a remarkable fact regarding General Order No. 98, defining the changes consequent upon the promotion of General GRANT. This document bears date March 12, and first appeared in the New York daily papers on March 15. The Cincinnati morning journals of Saturday last,—the day upon which the order in question was dated—contain dispatches of March 11 from Washington, which not only stated correctly the changes in contemplation, but did it nearly in the precise phraseology of the order itself. We have no fault to find with the enterprise displayed by the Cincinnati papers; on the contrary, we are happy to state that its fulness, accuracy and freshness of war and general intelligence have frequently surpass all their contemporaries, not excepting those of the metropolitan press; but it strikes us that it would be well for Secretary STANTON to ascertain how the document to which we have referred was thus permaturely published. Fortunately it so happened that the contents of this paper were such as were designed to afford any great amount of comfort to the Rebels, but unless the leak by which it was thus singularly given to the public is promptly stopped we may have cause to regret it in the future.

IT will probably be as pleasing news to the West Point cadets to hear that the Senate has agreed to increase their pay from thirty to fifty dollars a month, as it will be discouraging to hundreds of ambitious youths, who have no influence to procure an appointment to the Academy from a Representative, to know that the amendment establishing the principle of competitive examinations was lost after a sharp debate.

THE Hospital Examining Board, of which Lieutenant Colonel S. H. LATHROP, Assistant Inspector General is President, Surgeon GEORGE SUCKLEY, U. S. V., and Captain J. BENHARD, A. D. C., members, returned from the West to Washington, on the 11th inst. Since the organization of the Board it has examined over one hundred hospitals, and sent several thousand men to duty. It is quite probable the Board will be sent South. The beds in the U. S. General Hospitals North and West are not half filled.

WE inadvertently did the Hon. JAMES BROOKS, member of Congress from this city, injustice, in our Congressional Record last week, in stating that that gentleman opposed the $35,000 appropriation for medicine and medical attendance for negro refugees. The statement should have been that Mr. BROOKS opposed the appropriation of $30,000,000 for transportation &c. We take pleasure in correcting the error.

FROM the report of Adjutant-General MAURAN, of Rhode Island, we learn that that State has furnished during the war, exclusive of those drafted, about eighteen thousand for the Navy. The militia of the State is in good condition.

FOREIGN MILITARY AND NAVAL MATTERS.

A POWDER magazine recently exploded in Morocco, causing a loss of life estimated at 900 persons.

THE French Ambassador at the Holy See is at present making respectful representations to the Papal Government on the propriety of dissolving the corps of Pontifical Zouaves.

THE latest military news from Italy reports a body of 10,000 men, under the orders of General Pettiti, lying between the Po and the Mincio, and acting as a corps of observation against Austria.

ACCORDING to the *Correspondencia* of Madrid the total losses of the insurgents in Santo Domingo are 4,000 men. The month of April is approaching, when the vomito makes its ravages. The Spanish army is now 27,000 strong.

UPWARDS of 100 Mexican officers made prisoners by the French, and now residing in various parts of France, are said to have given in their adhesion to the government of the Archduke MAXIMILIAN, and will probably return to their country at the same time as their new EMPEROR.

LETTERS from Vienna say that the French Government will agree to leave its expeditionary army in Mexico for three years after the Archduke MAXIMILIAN is established there, and will recall it a third at a time. During this period it will assist in organizing a native army, to be provisionally fixed at twelve thousand men. The French Government has no unwillingness to give offence to England, from which country they meet so much sympathy.

An officer of the *Alabama*, who left the ship in consequence of a quarrel with Captain SEMMES, states that the *Alabama* has the very best telescopes on board. A look-out man is always kept at the masthead. As soon as the former sights a vessel, as he has described, SEMMES goes to the masthead himself, and if there is the slightest probability that the stranger is a man-of-war, the *Alabama* is put under full steam on out of sight, and, if possible, in a totally opposite direction to that of the strange sail.

A PRUSSIAN Commission has been charged with the task of drawing up a plan for the works of defence which Prussia proposes to construct to protect the roadstead and town of Kiel. It is composed of a general of engineers, a general of artillery, and a captain of the Prussian navy. Proposals have been frequently made to convert Kiel into a military port. The undertaking will be a hard task without a pension on this project, which would have the effect of changing the nature of their town, and of converting it from a commercial port into a naval arsenal. If the present idea is realized, the Prussians would make the fortress and outworks of Friedrichsort, which place is situated at the mouth of the harbor, on the maritime frontier of Schleswig, enter into the series of defences of Kiel.

SEVERAL of the posts on the quay at Peel, used for the mooring of vessels in the harbor, were old iron guns, which had at one time formed a portion of the guns formerly mounted on Peel Castle. It appears that in consequence of persons having sent to some visitors to Peel, inquiries were set on foot, at the instance of the authorities at the War office, relative to these guns, the result of which was that they were inspected by competent persons, and reported as being the earliest specimens of rifled cannon known to exist. A correspondence took place on the matter between the Secretary of State, and the Lieutenant-Governor ensued, which resulted in the determination of her Majesty's Government to cause the guns to be taken from their position on Peel Quay, and to be forwarded to and placed in the Royal Arsenal at Woolwich, as among the most rare and early specimens of rifled ordnance known.

IT was stated some time ago in the French papers that Prince Frederick Charles of Prussia was charged with the invading army in Schleswig, was the author of a work entitled "L'Art de Battre les Français" (the art of beating the French), and that the profits of the expensive have been made in consequence, and French journalists very naturally criticised with an unfavorable bias the managing of an army by a general who was supposed to be trying his hand in Denmark with the view of subsequently using his matured skill against France. It is now, however, that the French journals attributed to the Prince is based upon a ridiculous mistake. He wrote a military pamphlet upon French strategy, the real title of which was "L'Art de Combattre les Français" (the art of war as practiced by the French). The suppression of the syllable "com" and the substitution of "les" for "ies" formed a very annoying libel of which the Prince has been the victim.

A PARLIAMENTARY return shows the number of men flogged in the British Army and Militia during the year 1863. It appears that in the army 126 men were sentenced to 6,259 lashes, but only 5,999 were inflicted, being an average of nearly 48 lashes for each man. The highest number of lashes inflicted in any single instance was 50, in forty-four. In the cavalry regiments 15 men were flogged during the year, 16 in the Royal Artillery, 7 in the Military Train, 4 in the Guards, 3 in the Rifle Brigade, and 81 in foot regiments. In the militia there was no case of the infliction of this species of punishment. In examining the nature of the offences on account of which the use of the lash was thus administered, it appears that 39 men were flogged for insubordination, 33 for desertion, 21 for disgraceful conduct, 12 for violence to superiors, 10 for absence without leave, 4 for theft, 1 for not for other breaches of regulations, insubordination in language or conduct, &c.

THE Prince Consort, England, bound for Ancona, put into Malaga to coal, and the master reported her in ballast. She was detained a day or two while the master obtained permission to ship from his own employers in England a credit to enable him to purchase the requisite supply of coal. When the arrangement was completed the usual search of the vessel took place, the officers of the port took place to verify the description the master had given of her lading. By a mere accident it was discovered that she had a false hold on which the ballast was deposited, and that beneath this, in the true hold, were stowed a quantity of arms and military stores. The latter are said to comprise the following: 2,000 rifled muskets for mountain artillery, 3 guns of heavy calibre, 4,000 sabres, 1,000 Minie rifles, a number of pikes, and 400 uniforms. The master of the vessel declares that he was ill-advised that the steamer and her cargo are liable to confiscation for the violation of law.

THE official *Berlingske Tidende* of Copenhagen publishes a series of Danish regulations for the blockade of the German ports. According to these regulations a provincial embargo is to be laid until the 1st of February next on all vessels in the enemy's flag anchored in the ports or bays of Denmark. After that date such ships may withdraw with safe conduct to the blockading squadron on condition that the States to which they belong will exercise reciprocity. Orders relating to the capture of hostile or suspected vessels, and the conditions of a blockade itself it is said:—"The blockade is to be held to have commenced when one or several vessels blockade a port in such manner as to render it dangerous to enter or leave without running evident risk of capture. Commandants of ships charged with the blockade are forbidden to allow any neutral vessels anchored in hostile ports to state when they will leave the blockaded ports."

ACCORDING to the Paris *Pays*, it is the core trade, carried on to a considerable extent on the coast of the Baltic, which will suffer most from the blockade of the German ports by Denmark. In order to form an idea of that fact, it is sufficient to know that corn farms are let at the present time in the place from the Prussian ports. To speak of Koenigsberg alone, out of forty millions' worth of merchandise which leaves that port every year, wheat and rye alone amount to fifteen millions. Almost all the cargoes of corn which are shipped at that port and at Dantzic, Stolpe, and Memel, go to Belgium, England, and Holland; but England alone takes more than one-half. It is only in years when the harvest is bad in France that one sees large cargoes go into the French markets. If, therefore, the blockade with which Denmark threatens the Prussian ports becomes effective, France will be the only country herself to be the matter on her own account. Such will not, however, be the case with England.

In the year that ended December 31, 1862, the number of rifles exported from England amounted to 454,674. Of these 340,922 were sent to the Northern ports of the United States, 3,406 to Spain, 1,367 to Portugal, 2,500 to France, 1,249 to South America, 633 to British India, 13,854 to Australia, 17,540 to Denmark, 36,110 to Bahamas, and 5,033 to the other West Indian islands. Except for the Bermudas and Bahamas were, doubtless, intended ultimately to find their way to Confederate ports; but, as many of the Prussian rifles have been captured, large quantities have been diverted and fallen into Federal hands. The aggregate value of the year's shipments to and from all parts was £1,249 to South Africa

Medway, Portsmouth Harbor, and the Hamoaze—the sole occupants of many of our ships being troops of rats, while in most cases months would necessarily elapse before a penny could be bolstered. To the fine transport Best of France I beg your attention, and also to the very considerable employment of her well-fashioned, inexpensive sailing ships in the public service.

The correspondent then proceeds to describe the condition of the dockyards of Rochefort and Toulon. Of the former he says:

In Rochefort dockyard there is nothing doing beyond the bringing forward of the transports for examination and the construction of the mortar-boat. Where I saw what I have ventured to name the barrier between the two, the gracious structure, the great feature of it being an adaptation of the state-ship Napoleon, I found the jointed sliding caisson that was exhibited last summer at Hungerford Bridge, and which was visited by Mr. E. J. Reed and the Lords of the Admiralty. Upon the plans I saw there, the floating portion of a ship that may be made long enough to reach across any seaboard, each separate portion being a perfect ship, and each any ship's size, and which, when united to form the idea, in my opinion, is a good one, and might be advantageously employed by the Admiralty for the defence of dockyard approaches and commercial roadsteads. Possessing the proportions and strength of the greatest iron-clads afloat, three barrier fabrics would necessarily be able to give a good account of anything that approached them; although no doubt they might fall a prey to fire ships or dashing boarders. The iron-clad state by the imagination in Rochefort dockyard is in a condition really painful. All planked when the days of wood ships seemed numbered, and the important mandate of the Minister of Marine, that all ships stopping all work, unless in iron, the line-of-battle ship seems on the verge of ruin. Her lofty sides, unprotected by the copious rain and scorching sunshine of the western coast, the plank butts are stanted, the seam oakum has oozed out, and everything in the shape of wood is rotting away, where on the shipwright and wood purveyor. To avert total shipwreck on the ship a dozen shipwrights drive bolts here and there into the planks and timbers together; but it would be wiser to blot the name from the French navy list and sell the hull for what it is worth to the poor. By the way, the reminds me of a practice common to all the French dockyards of selling ships and refuse wood outside the gates; while as the Government pays the carriage, it is to sure them. Why not adopt the French practice, and, while helping the poor of our dockyard towns, contribute something handsome to the revenue?

Of the Toulon Dockyard, he says:

The admiral very kindly showed me the plans for the extension of Toulon Dockyard. Suffice it here to state that when the work is finished, the present area of the dockyard bedyard will be rather more than twice as large as that of Cherbourg. The basin, so as it in fact already is, the first arsenal and port of France. There the whole dockyard frame may congregate and rest, but L'Orient will be continued as the chief station for the fleet. At Toulon are three new iron-clads are approaching completion in Toulon Dockyard, and a third is receiving machinery and armor-plates. Since the first of the month the steamers have left for the Levant, and pushed forward day and night, so as to be at sea by the 1st of May, and since the 7th of February a second squin corvette has been launched, and a third is nearly so at the same date. This how dockyard masters are carried on in France, and I must say that the rapidity with which their frame may congregate and rest, but L'Orient will be continued as the chief station for the fleet. At Toulon are three two

A proper apartment for the court, with the necessary guards and orderlies, to be provided by Judge Advocate.

The court a quorum from day to day. Each day's proceedings are kept separate in the record. If the adjournment be for a term less, the Judge Advocate reports the fact to the appointing authority.

PROCEEDINGS AND RECORD.

Hour of meeting arrived.—Members take place at table according to rank, and the Presidents calls court to order. Copy of charges on the table to be carefully examined by court and Judge Advocate, and if any sign of defect in the proceedings be discovered, the proceedings thereon, if desired for deliberation on the charges, if necessary.

Time of meeting.—Usually from 10 A. M. to 3 P. M.

Sense of members of court, and the charges read by Judge Advocate, who then reports as to the form and regularity of charges.

Accused makes request for the privilege of introducing counsel. Counsel introduced.

Objection by prisoner to jurisdiction of court, or to relevancy of charges, or to the competency of the court, or to any one of its members, with sound decree on either or all of these objections before being sworn.

It must be expressly noted the prisoner if he has any objection to any member of the court. His reply must be promptly thereon, if any must be recorded.

Such new objection, in process of prisoner, to members called directly by Judge Advocate, and to Judge Advocate by President, and are recorded in proceedings.

Delay on account of absent witnesses. The prosecutor is entitled to a delay of 24 hours for the appearance of witnesses, and 72 hours diligence has been used to procure attendance, if he cannot appear sooner; and the accused is entitled to the same for other applications for delay or postponement not to be granted by court.

Charges read by Judge Advocate to court, and he is *arraigned.* Charges read in silence or omitted, but no additional charges after arraignment.

Pleading of guilty or not guilty, or incidences of the charges or plea of exemption, or of inevitable necessity, or of former acquittal or conviction. Plea of guilty recorded, and the finding proceeded into to be recorded and submitted to the officer appointing court.

Prisoner pleading not guilty or not guilty to any charge, to be tried first, and then in the charge next to it, and so they are read to him by Judge Advocate, in the order in which they appear as having pleaded not guilty.

Witnesses for prosecution are examined first. Witness sworn by Judge Advocate. He is examined, cross-examined, and re-examined. The court may also put such questions as they deem necessary.

During examination of witnesses every member of the court must be present, and no one should be absent from the room temporary or being taken, he ceases to be a member of court in that particular case.

If the number of members fall below five, a general court-martial cannot legally proceed, and must be dissolved.

Should objections from any member of the court arise, they must be stated to the Judge Advocate and the majority determines. Questions to a witness, who considers his answer may criminate him, are sometimes objected, "by a member." Questions rejected are not expunged from the record, but remain as objected to.

Evidence must be recorded in due order and in words of witness, and should be read to him, that he may know that it is correctly understand. The witness can then correct or explain, and such corrections and explanations are recorded, without, however, erasing or expunging of any part of his previous testimony.

Deposition of witness taken in the line or staff of the Army may be taken in case not capital before a justice of the peace, provided prosecutor and witness are notified.

All the evidence against prisoner should be produced before the prosecution closes, when the witnesses for the defence are called and examined. Witnesses may be recalled.

Defence.—Prisoner or counsel for accused in defence, or his defence be read by Judge Advocate, counsel, or friend. The Judge Advocate can make no comment on the defence. A short recess the court will grant a reasonable time for preparation. A surrejoinder or rebuttal by prosecution is admissible in the discretion of the court.

The defence, or counsel, may address the court. A short recess to-day this agreed, or not, by Judge Advocate. The court can sit such a number of hours, or for any time or intervals, as they deem only in presence of prisoner.

The facts being considered evidence, and every member being ready to give his opinion, the Judge Advocate reads the first specification to the first charge, addressing each member, beginning with the lowest in rank. Each member, as his name is called, writes upon a slip of paper, or not guilty, with such explanations as he thinks just and right, and hands it to the Judge Advocate, who arranges slips according to rank, the members can correct or explain to the other specifications, and then the charge, and so on, through the entire list.

Every member must vote on every question. Equality of votes is negatived. Findings to be found, clearly set forth and signed of all present.

A majority of votes determines the conviction or acquittal of prisoner, except in the case of a spy, or of a person forcing a safe-guard. In these two cases a unanimous vote is necessary. A conviction is equivalent to a sentence of death, and therefore the conviction must be by a two-thirds vote and the case must be so recorded in the finding.

A sentence must be expressed in clear and unembiguous language, and, when necessary, refer to the date of the article or law.

In the case of a prisoner convicted of being a spy, or of having forced a safeguard, he must be to the sentence.

The death penalty in every case requires a two-thirds vote for its infliction, and the finding and sentence must be recorded in every case in connection with the sentence. It should never be recorded that the court was unanimous.

In all other decisions the will of the majority binds the minority. Every member must vote, and no abstention can be recorded.

Any person in the military service of the United States who shall be convicted before a court-martial of a crime or offence not enumerated or otherwise provided for in the Articles of War or Statutes of the United States, shall be subjected to such punishment, not greater than that inflicted by the laws of the State, territory, or district in which the crime or offence may have been committed.

So soon as the sentence has been passed and entered, the President of the court will call the court to order, and announce it.

A dozen considerations in Army may then follow, to be addressed to the reviewing authority, or to be signed by the members present in the court while proceedings are read.

The *Appendix* contains all official orders and reports, or other papers in relation to the case, and which have been already proved, or by the Judge Advocate, such paper to be numbered or lettered in the order in which they are referred to in the proceedings.

RECORD FORWARDED.

The record should be forwarded by Judge Advocate without delay to the officer appointing the court. If the President of the United States is the appointing officer, the record must be sent direct to the Adjutant-General's office at Washington.

MODIFICATION OF SENTENCE BY COURT.

The court can, at any time before its final adjournment, recall the record, and modify or change the sentence already passed, provided the court be constituted at the same number and of the same members as when first sentence was recorded and signed.

REVIEWING AND CONFIRMING.

Should the officer appointing the court be under the command of a general commanding-in-chief, in any field, fortress, or department, he can pardon, and mitigate the sentence, provided such sentence does not refer to a general officer, or to the case of a person who has been tried by a commissioned officer, or to imprisonment in a penitentiary. In these four cases the record is referred for action to the next superior in command, and forward it without delay to the general commanding the Army. In all other cases the officer appointing the court can act upon the record, and forward it, with the order promulgating the proceedings, to the Judge Advocate-General at Washington.

Should the general commanding an army, or the colonel commanding a separate department, be the appointing officer, he may in this, as in other cases sent up to him by a subordinate for approval, confirm and execute the sentence rendered.

1. In time of peace:
2. Of a person sentenced to imprisonment in the penitentiary.
3. Of a person sentenced by a court-martial to suffer death for being a spy, or deserter, or for mutiny or murder.

In these three cases the approval of the President of the United States is necessary before the sentence can be carried into execution. The proceedings are then submitted to the officer appointing the court, he endorses on the record, and the record sent as promptly as possible to the Adjutant-General of the Army. The record in all other cases, with the opinion and action of the appointing officer endorsed thereon, must be forwarded, together with the order promulgating the proceedings, to the Judge Advocate-General.

The general commanding-in-chief in the field may carry into execution the sentence of any court-martial against any person convicted as a spy, or deserter, or mutiny or murder.

Such appointing officer may also pardon and mitigate the punishment in all cases of the above-named crimes, except in the case of sentence into execution—except the sentence of death, or of confinement in a penitentiary. In these cases the record, after the action of the appointing officer, is forwarded for the action of the President of the United States as he may direct.

PROCEEDINGS IN REVISION.

In the Articles of War referring to the organization and procedings of a General Court-Martial rules and regulations are prescribed, the non-observance of which may affect the legality of the proceedings.

1. When the court is appointed by an officer not having the command of an army in the field.

2. When the number of members is less than five.

3. When the number of members is more than five, and when the court, or the Judge Advocate, or the witnesses were not sworn.

4. When the court has sentenced to death *unanimously* when *two-thirds of the members concurred in such sentence.*

5. When the trial was carried on before 8, 9, 10, or after 3, 3½, 4 o'clock, unless the appointing officer has given his order to that effect without respect to hours.

6. When no sentence is death, and the record does not state that "two-thirds of the members concurred therein" also, by inference, when the record does not show that two-thirds of the members present, and not the whole number of members present, concurred in the finding.

In the 1st, 2d, and 4th cases, the proceedings cannot be remitted back for revision. They are considered null and void. The prisoner is free; nor can he be tried a second time for the same offence by any court-martial. In the 3d, 5th, and 6th cases, the proceedings can be remitted, and the court, with the same members as when first sentenced, can be ordered to revise its proceedings, and, if necessary, to alter its sentence.

REVISION.

Whenever the confirming officer discovers errors or irregularities in the proceedings of a General Court-Martial, he may *pro conveni* return the record to the court for revision. The court will then be dissolved until fresh action has been taken on all the cases that may have been before it.

Three errors and irregularities consist generally of a misconception of the evidence, of the law, or of inaccurate or false finding contrary to the record of testimony, and then again the punishment is either illegal, or excessive, or entirely out of proportion.

When the proceedings are remitted for revision, the court should be constituted of the same members as when first sentenced; but must confine its action to the orders or suggestions given by the confirming officer. The proceedings must be made part of the entire separate and distinct, and appended to and returned with the original record.

PROMULGATION OF SENTENCE.

When final action on the proceedings and decisions are announced in orders, and the court is dissolved. R. D. C.

ARMY GAZETTE.

APPOINTMENTS BY THE PRESIDENT,

BY AND WITH THE ADVICE AND CONSENT OF THE SENATE.

TO BE ASSISTANT ADJUTANT-GENERALS, WITH THE RANK OF MAJOR.

Francis J. Lippitt, of Rhode Island.

IMPORTANT MILITARY ORDER.

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE, }
WASHINGTON, March 12, 1864. }

General Orders, No. 98.

The President of the United States orders as follows:—

First—Major-General Ulysses S. Grant is assigned to the command of the armies of the United States, and, relieved from duty as General-in-Chief of the Army, and Lieutenant-General S. Jones, is assigned to the command of the armies of the United States, Headquarters of the Army will be in Washington, and also with the Headquarters of Lieutenant-General Grant.

Second—Major-General Halleck is assigned to duty in Washington as Chief of Staff of the Army, under the direction of the Secretary of War, and all communications and orders issued by the officers will be obeyed and respected accordingly.

Third—Major-General W. T. Sherman is assigned to the command of the military division of the Mississippi, composed of the Departments of the Ohio, Cumberland, Tennessee, and the Arkansas.

Fourth—Major-General J. B. McPherson is assigned to the command of the Army of the Tennessee, vice Sherman.

Fifth—In relieving Major-General Halleck from duty as General-in-Chief, the President desires to express his approbation and thanks for the able and zealous manner in which the arduous and responsible duties of that position have been performed.

By order of the
E. D. TOWNSEND, A. A. G.

ADDITIONAL DRAFT OF TWO HUNDRED THOUSAND MEN.

EXECUTIVE MANSION, WASHINGTON, March 14, 1864.

General Orders, No. 110.

In order to supply the force required to be drafted for the Navy, and to provide an adequate reserve force for all contingencies, it is decided to call for two hundred thousand men by draft. Accordingly the call is hereby made and a draft ordered for two hundred thousand men for the military service of the Army, Navy and marine corps of the United States.

The proportional quotas for the different wards, towns, townships, precincts, districts, counties or localities will be made known through the Provost-Marshal-General's Bureau, and action will be had in the premises under the direction of forever quotas.

The 15th day of April, 1864, is designated as the time up to which the number required from each ward of a city, town, &c., may be raised by voluntary enlistment, and drafts will be made to supply any wards of a city, town, township, or any town filled the quota assigned to it within the time designated for the number required to volunteer.

The drafts will be commenced as soon after the 15th of April as practicable.

The Government bounties, as now paid, continue until April 1, 1864, when the following bounties will become due. On and after that date, one hundred dollars only will be paid, as provided by the act approved July 4, 1863.

ABRAHAM LINCOLN.
Official: E. D. TOWNSEND, A. A. G.

DISMISSAL.

For the week ending March 12, 1864.

Major E. M. Croxy, 12th Ohio Vols., to date March 7, 1864, for misdemeanor.

Captain Richard Stout, 6th Minnesota Vols., to date March 9, 1864, for making false returns to the Quartermaster's Department in relation to the management of the Quartermaster's Department in the State of Minnesota.

Captain Samuel S. Troy, 4th Iowa cavalry, to date March 9, 1864, with rank of 1st Lieutenant, for unlawfully taking Government horses, thereby defrauding the United States.

Captain John Wilson, 1st Missouri cavalry, Robert Stockel and James A. Orr, 23d Indiana Vols., to date March 9, 1864, for drunkenness, conduct unbecoming officers, and unofficer-like conduct.

First Lieutenant Marcus Sterling, 1st Connecticut cavalry, to date March 9, 1864, for absence without leave.

Second Lieutenant D. A. Harrison, 12th regiment Invalid Corps, to date March 9, 1864, for drunkenness, and conduct unbecoming an officer and gentleman.

Captain Edward Wells, 20th Massachusetts Vols., to date February 19, 1864, for absence without leave and conduct prejudicial to good order.

March 8, 1864, as Captain G. E. Davis' 25th Massachusetts Vols.

The following officers have been dismissed the service from not proper authority, having been published officially and failed to report within the time limited:

Captain William H. Floyd, 42d Ohio Vols.

Captain James Gardner, 7th New Hampshire Vols.

Captain Granville P. Mason, 7th New Hampshire Vols.

First Lieutenant Charles H. Hall, 2d New York Cavalry.

Second Lieutenant Henry Sterling, 2d New York Vols.

Second Lieutenant Wm. Wheeler, 2d New York Vols.

Second Lieutenant A. Heron, 26 South Carolina Vols.

NOTICE TO DELINQUENTS.

The following officers have reported at the headquarters of the Army for the officers hereinafter specified, are hereby notified that they will be honorably dismissed from the service of the United States unless within fifteen (15) days from March 14 they appear before the Military Commission, convened by Special Orders No. 77, Brigadier-General Holcomb, U. S. V., is President, and make satisfactory defence to the charges against them:

Absence without leave.

Second Lieutenant Wilhelm Zeigler, 43d Illinois Vols.

First Lieutenant Wm. A. Warburton, 5th Kentucky Vols.

First Lieutenant Isaac A. Nesbit, 1st Pennsylvania Artillery

Second Lieutenant Wm. Wheeler, 2d New York Vols.

Second Lieutenant James A. Smith, 72d New York Vols.

For absence without proper authority.

Second Lieutenant Wm. M. Whaling, 46th Illinois Vols.

For giving fugitives discharges to enlisted men in violation of proper authority from the War Department.

Lieutenant-Colonel August Otto, 45th New York Vols.

Colonel Nelson Greer, 67th New York Vols.

Captain Jas. W. Ely, 5th New York Independent Battery.

Captain W. A. Hart, 8th New York Independent Battery.

Colonel Gustavus Sniffen, 1st New York Mounted Rifles.

DISMISSAL APPROVED.

The order of dismissal promulgated in the following case has been approved:—

Lieutenant-Colonel G. G. Martin, 1st regiment U. S. Colored Troops, to date December 31, 1863, for appearing as a charitable fair in a state of intoxication.

DISMISSAL REVOKED.

The order confirming the dismissal of Captain S. K. Williams, 81st Ohio cavalry has been revoked, and he honorably discharged as of the date of dismissal.

RESTORED TO COMMISSION.

The following officers, heretofore dismissed, are restored, provided the vacancies have not been filled by the Governors of their respective States:—

Captain E. J. Riser, 5th Maryland Vols., and First Lieutenant E. Parker, 4th Maryland Vols., to take rank in the case at which they obtain their regimental rank.

First Lieutenant W. W. Gibson, 78th Pennsylvania Vols.

NAVY GAZETTE.

CIRCULAR TO PAY OFFICERS.

NAVY DEPARTMENT,
WASHINGTON, February 12, 1864.

Pay officers of the Navy will render their final accounts and returns to the Bureau of Provisions and Clothing, and those of the Bureau of Provisions and Clothing, as soon as practicable after the expiration of their cruise, but not exceeding the following time after the crew shall have been paid off or transferred:

For vessels of the first rate.....sixty days.
" " second rate.....sixty "
" " third rate.....forty "
" " all other rates.....thirty "

Pay officers will be allowed further duty" by paymasters and their clerks for their services employed in the settlement of their accounts, and remaining the periods above specified.

Returns and accounts intended for the Fourth Auditor's Office, or for the Bureau of Provisions and Clothing, will be addressed and sent directly to those offices respectively.

GIDEON WELLES,
Secretary of the Navy.

REGULAR NAVAL SERVICE.

DETACHED.

DISMISSED.

Acting Master's Mate C. F. Way, of the *New London*.

Acting Master H. F. Coffin, of the *Princeton*.

The steamer *Isolation*, from Port au Prince, which arrived at Baltimore on the 15th inst., reports that the United States steamer *Tuscarora*, spoken off Mosquetos.

Rear-Admiral Farragut's flag-ship, collided with the gun *General Price* on the Mississippi on the 10th inst., a short distance below Natchez. The former vessel sank with her cargo, ammunition, etc.

MEDICAL DEPARTMENT.

ORDERED.

Surgeon E. Peace, U. S. Vols., has been relieved from temporary duty in charge of Branch No. 2 Smallpox Hospital at Louisville, Ky., and ordered to report at once to Cincinnati, Ohio, and ordered to report in person to Surgeon John T. Hand, U. S. A., medical director of the board convened by special orders No. 385 of 1863, from the Adjutant-General's office, Washington.

Medical Inspector Joseph Beaver, U. S. A., now on duty at Carver Hospital, Washington, D. C., has been ordered to proceed with Colonel G. H. Lyman, Medical Inspector, U. S. A.

NAVY YARDS.

BROOKLYN NAVY YARD.

The prize steamer *Scotia*, which arrived at this Yard March 9, sailed the same day for Boston. On March 10 the small steamers *Hetzinger* and *Aster*, which had been undergoing repairs at Tolley's ship-yard, were towed to this Yard. The *Governor* left the Yard March 13, and returned March 15. The *Monitor* was brought from foot of 22d street, E. R., to the Yard March 15. On the same day the *Tallahassee* went to New York. The supply steamer *Admiral* arrived March 17 from the East and West Gulf Squadron. She has two steamer stacks, No. 2, *The Octorara*, 14, is awaiting orders from the Navy Department. Many changes have taken place in the Yard, material, both in officers as well as battery. The battery, as it now is, is the most formidable of any ship afloat.

BOSTON NAVY YARD.

The pay roll of the Yard for the month of February is completed The whole amount paid was $174,583 40. The maximum number of men employed in the Yard during the month was 1,500, and the minimum 1,000. About 150 aliens were discharged. The side-wheel steamer *Santiago de Cuba*, 14, is still in the dry dock, and will be ready for sea in a few days. Preparations are being made for the ships, steamers *Canada*, 9, and *Monmouth*, 9, are in the steam, and, together with the steamers *Chewsbee*, 9, *Chewbee*, and *Sumpter*, 4, are ready for sea, and will be ordered to the Gulf. The steamer *Robert E. Lee* and *Ella*, have been given new names, and are now called respectively the *Fort Sumpter* and the *Philippi*.

WASHINGTON NAVY YARD.

The Ordnance Bureau, in order to accommodate the extensive receipt of powder at the branch magazines of the Yard, have established a powder depot on Goose Creek—a point favorable for the handling of barrels, &c. The guard of the magazine has been increased in order to insure security. The *Cœur de Lion*, Acting Master's Mate Wm. Bates, from the Master Yard, sailed on the 15th for the repairs, the boiler of the *Cœur* having been burnt out and the machinery of the *Dragon* being out of order. The *Mosquito* Pleasure-boat left for the *Potomac*, and the *Yankee* for the lower Potomac.

PORTSMOUTH NAVY YARD.

The *Colorado*, which arrived at this port about five weeks ago, has gone out of commission. She has been stripped, and has gone into the dry dock, and is to be thoroughly repaired. The steamer *Sabine* sailed on Wednesday, the 9th inst. Everything on board is in admirable order, and, although her complement of men is small, she will prove a very efficient vessel. The steamer *Argonautica* is progressing rather slowly, but will be ready to launch before long. The steam tugs *Powhatan* and *Muskingum* are undergoing repairs, and will be ready at the end of the month for repairs. The receiving ship *Vandalia* has but a few men on board at this time, although recruits are coming in every day in small numbers. The steamer *Saugus* sailed on the 15th inst. for Hampton Roads. The steamer *Monadnock*, the two latter lately begun, but progressing very rapidly, and the *New Hampshire*, store ship, which it is thought will be ready for sea by the middle of April. She will not be ready for sea under a month or two. The Yard is full of workmen, who are as busy as bees, and everything seems to progress rapidly.

PENSACOLA NAVY YARD.

The Navy Yard at Pensacola, which was destroyed by fire by the rebels in May, 1862, is now being improved by the erection of an immense building, which covers the dimensions of fourteen acres. Commander Turner, the officers' quarters—the out-buildings of the former residences—have also been altered and are now rendered very pleasant. Four large steamers are now on the stocks, of which two launch the ways has been roofed in, and contains the Commandant's and Paymaster's offices, together with large quantities of supplies for the West Gulf Squadron. Flag-officer Farragut, Commander S. Ludlow, the flag-officer of the Yard as guard-ship. The following officers are attached to the station: Commodore Wm. Mervine; Commander Commander T. M. Brasher; Paymaster R. J. Turner; Paymaster H. H. Clark, Paymaster of Station and Naval Storekeeper; Major Wm. L. Shuttleworth, commanding Marines.

Steam-sloop-of-war *Sacramento*, 11, Commander Walker, was at Fayal February 15th, having made the passage from Boston in eight days. Sloop-of-war *Jamestown*, Commander Parker, sailed from Fayal February 16th, for Madeira.

Steam-sloop-of-war *Penchaff*, 4, was sunk off Wilmington on the 5th inst., by a collision with screw steamer *Modoc*ing, 9. Her officers and crew were saved, and all the guns but two.

Side-wheel steamer *Sir Colin*, 6, has captured nineteen blockade runners since February, 1863. The *Cumberland*, 24, is the latest prize.

Letters received from on board the *Jamestown*, under date of December 5th, state that the officers and crew all well. The ship was on her way to Madeira, where she was to remain for a few weeks or about sailing from Funchalmen, and that she was to sail for China and join the squadron of Admiral Bell.

The Navy Department has received information of the following prizes to the blockade: Steamer *Hattie Austin*, 2, Acting Master's Mate Sanford, captured; February 25, by the gunboat *Victoria*, off Mobile Bay; steamer *Ella*, 2, Acting Master Bryant, the British sloop-boat *Two Brothers*, from Nassau, bound to Mobile, with a cargo consisting of 1,000 bags of salt, 1,000 bales, and one keg rifle. On the 27th she captured, from the British sloop *Wren*, from Nassau, bound to Mobile, 1,000 bags of salt and boxes with liquors, coffee, boxes sundries. On the 28th she captured, also, the steamer *Isabel*, cargo consisting of the latter, boxes sundries and one bale cotton. March 1st, she captured the British steamer *Lucerne*, 500 tons, laden with 52 bags and two miles from the entrance of Indian River. These prizes were captured by the boats of the steamer *Victoria*, Acting Ensign Wm. Hopper, commanding the H. B. steamer *Clyde*, off Key West, writes that on the 10th inst. he captured the British steamer *Ella*, off Indian River Inlet, Florida, with a cargo of 1,000 bags of salt, 1,000 bales cotton, and one keg rifle. On the 11th he captured the British sloop-boat *Two Brothers*, with 1,000 bags of salt, 1,000 bales cotton, and one keg rifle. On the 27th she captured the British steamer *Hattie Austin*, with a cargo of 1,000 bags of salt, 1,000 bales cotton, and one keg rifle. On the 28th she captured the British steamer *Isabel*, with a cargo consisting of 1,000 bags of salt, 1,000 bales cotton, and one keg rifle. On the 28th

Announcements of marriages should be paid for at the rate of fifty cents each.

BALTIMORE AND OHIO RAIL ROAD

RE-OPENED

TO THE WEST.

This great National thoroughfare is again open for FREIGHT AND TRAVEL. The cars and machinery destroyed are being replaced by new running stock, with all recent improvements, and as the bridges and track are again in substantial condition, the well-earned reputation of this line for SPEED, SAFETY AND COMFORT, will be more than sustained under its accustomed management. In addition to the unequalled attractions of natural scenery heretofore conceded to this route by the numerous tourists upon the Border have associated numerous points of interest connected with the WAR, which will repay visit, with painful but instructive INTEREST.

TIME AND CONNECTIONS

Between Washington, Baltimore and Pittsburgh, Central Ohio, and Northern and Cincinnati Railroads; and through Cars to Chicago, Cincinnati, and all points in the Northwest, Central West and Southwest. At Washington Junction, for Washington Branch; and for Washington City and the Lower Potomac. At Baltimore with Boats for Fortress Monroe, Norfolk and New York.

TWO DOLLARS additional on Through Tickets to Baltimore or the Southern Cities, give the privilege of visiting WASHINGTON CITY en route.

This is the ONLY ROUTE by which passengers can procure tickets reading via Harper's Ferry to WASHINGTON CITY.

CLOTHING AND CLOTHING MATERIALS.

NAVY DEPARTMENT,

BUREAU OF PROVISIONS AND CLOTHING,

March 12, 1864.

SEPARATE PROPOSALS, sealed and endorsed Proposals for Navy Clothing and Clothing Material, will be opened at this office on the 1st day of April, and on the 12th day of April next, for furnishing and delivering at the Navy Yard, Brooklyn, New York, the United States navy yards at Charlestown, Massachusetts, and Portsmouth, New Hampshire, the following articles, quantities, and at such times as may be specified by the Chief of the Bureau of Provisions and Clothing, after the said navy yards, respectively, during the remainder of the fiscal year ending on the 30th day of June, 1864, the manners and quantities of the different articles to be for places specified in the following schedule:

	BOSTON.	N. YORK.
Blue cloth trousers, pairs	7,500	5,000
Coat cutting trousers, pairs	1,000	1,000
Cassimere trousers, pairs	1,000	1,000
Blue flannel shirts, pairs	2,000	2,000
Blue cotton, yards	2,000	10,000
Blue flannel, yards	10,000	10,000
Barsetty shearing, yards		15,000
Canton flannel, yards		5,000
Blue cassimere, yards	15,000	25,000
Mattresses (with two covers for each)	500	1,000
Blankets	20,000	5,000
Hammocks		2,000

Offers may be made for one or more articles, at the option of the bidder, but the whole number and quantity is considered in the offer, the Chief of the Bureau will accept or reject the whole offer, and not any of the articles contained in such offer, and reject the remainder. *Each proposal must be accompanied by a guarantee that if any one or more articles delivered at all the stations* For the descriptions of articles in the above list, bidders are referred to the samples at the said navy yards, and the time for delivery will be from the first July, 1863, and for information as to the time and manner of delivering the articles, bidders are referred to the officers of the several commandants of navy yards mentioned above.

Blank forms of proposals may be obtained on application at this office or at the navy yards at Boston, Brooklyn, New York, Philadelphia, Baltimore, and the Mare Island.

32 Broadway.

THE NATIONAL MILITARY JOURNAL

OF

THE UNITED STATES

ARMY AND NAVY JOURNAL,

AND

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

Officers of the Army and Navy will find in this Journal the only paper in the United States exclusively devoted to Military and Naval affairs, and the only one in their interest which has ever secured a national circulation and influence in this country to enable it to meet the means to long life, or as a gun which should adequately represent them in the Press. Starting under the most favorable auspices, enjoying the encouragement and aid of the best professional talent in the country, wielding politics and partisanship of all kinds, and devoting but with singleness of purpose to the impartial discussion of military questions, and to the dissemination of correct information, it has, in less than six months, established its position as the authoritative organ of military opinion and criticism in the United States. The paper, with which it has secured a circulation, hardly exceeds by that of any paper of its class in the world, and the eagerness with which it has been greeted in the Army and Navy, and by the more intelligent of civilians, as the most trustworthy and able journal, is the most gratifying evidence that the effort to establish a paper which should stand side by side in ability and completeness with the best of the military Journals of England and France, has not been in vain. As a Gazette of Military and Naval Affairs, it is a growing favorite among every soldier and sailor; while to every intelligent observer of the war it must be invaluable for its accurate history of military operations, and its able and impartial criticisms and discussions. Its articles are from the pens of the ablest military writers, and its special professional correspondence is of a character and value such that that of any professional ever issued in this country.

TERMS.

The terms of the paper are THREE DOLLARS A YEAR, PAYABLE IN ADVANCE: THREE DOLLARS AND SIX MONTHS, IN ONE CLUB OR TWO CLUBS. For sale by all newsdealers. It is published weekly in a large sized quarto sheet of 32 columns, printed on fine white paper, and in the most convenient form for binding.

D. APPLETON & CO.,

Nos. 443 and 445 Broadway,

Have just published

PRACTICE IN THE SEVERAL DEPARTMENT OF THE GOVERNMENT.

Fifth Edition.

Revised and Corrected, and the Prize Laws of the United States.

BY ROBERT SEWELL.

1 vol. 8vo. law sheep, $3 50.

From the U. S. Pension Office.

"A careful examination of the rules and decisions relates to Pension Laws and Regulations, and to the instructions issued, for the guidance of officers and claimants before this Office, so many changes have been made in the former, that the consolidation in the manner, and the attempt to meet all questions of doubt and practice under the act of Congress at which now has my great interest, is a decided improvement, and will be found of much service. The clear style, the careful index, and the full manner in which the subject is treated within your pages should also commend your work to the favorable consideration of those interested in the various matters of which it treats."

Sent free by mail to any address on receipt of the price.

TREASURY DEPARTMENT.

OFFICE LIGHTHOUSE BOARD, Feb. 15, 1864.

SEALED PROPOSALS will be received at this office until 12 o'clock, P. M., on Saturday, the 19th day of March, 1864, for supplying the Lighthouse Establishment with one thousand gallons of the best quality pure Winter Strained Lard Oil, and Thirty Thousand gallons of the best quality pure Winter Strained Sperm Oil, to be delivered in such lots and at such times as the Board may direct, alongside of the Government supply vessel at New York, or at the nearest wharf to the depot, to be designated by the Inspecting Officer or other authorized agent of the Lighthouse Board. The oils must be of the best grades, suitable for shipping, in good order, of an approved quality, and will be subject to the usual inspection and tests.

No part of oil will be delivered at Boston, Mass., for which the bids of sperm oil, or all of them, may be delivered at New York. Now Lard Oil, Spring Pressed, Extra Refined, Edgestown, or Nantucket, at the option of the Board, will be received, and must be delivered in the bids, and will be embraced in the contract.

Lard oil will be delivered as follows:

No. 1.—Five hundred (500) gallons sperm oil on the 15th day of April, 1864, or as soon thereafter as the Inspector may have said oil ready for delivery.

No. 2.—Five thousand (5,000) gallons lard oil on the 1st day of May, 1864, or as soon thereafter as the same may be ready for delivery.

No. 3.—Five thousand (5,000) gallons sperm oil on the 1st day of June, 1864, or as soon thereafter as the same may be ready for delivery.

No. 4.—Two thousand (10,000) gallons sperm oil on the 1st day of July, 1864, or as soon thereafter as the same may be ready for delivery.

No. 5.—Two thousand (10,000) gallons sperm oil on the 1st day of August, 1864, or as soon thereafter as the same may be ready for delivery.

No. 6.—Two thousand (10,000) gallons sperm oil on the 1st day of September, 1864, or as soon thereafter as the same may be ready for delivery.

The oil must be delivered in the packages embraced in the contracts under this advertisement will be accepted, received, or paid for, at the Treasury, unless the most entire satisfaction of the person or persons charged to examine and test, and inspect, the same, that the quality pure Winter strained or unaged oil, and free from mixture with other or inferior oils and adulterations.

The usual means for determining the character and value of the oil, such as the specific grav., viz.: gravity, freezing the amount of residuum, and any other proof deemed to afford a correct conclusion that may be necessary.

The decision of the Board of Lighthouse Engineers, and supervision of the inspecting officer, by a Committee or other legally authorized agent of the Government, according to the United States standard, and must be accurate and satisfactory. Any oil rejected will be at the risk and expense of the contractor. The temperature of oil must be no lower than 40° Fahrenheit, and not above the standard temperature of 60° Fahrenheit when received by the inspector.

Proposals will be received and considered for each in quantity, or for all of the oils, as the Board may elect; but no bid will be considered for a less quantity than specified in the bids for the several lots of sperm oil. Each bid must state explicitly the rate per gallon in writing, the number of the lot or lots, and the time and places of delivery, conforming to this advertisement.

Bids submitted by different members of the same firm or partnership will be rejected.

The Lighthouse Board, under the authority of the department, reserves the right to reject any bid considered too high to be the lowest, for other considerations than the price.

No bill will be considered for any other kinds or descriptions of oil than those specified in this public advertisement.

A bond, with security to the satisfaction of the department, in a penalty equal to one-fourth of the amount of the contract, must be executed immediately after the signing of such contractor, conditioned for the faithful performance of the contract, to be executed by the contractor and the sureties.

Each bid must be accompanied by a written guaranty, signed by one or more responsible persons, and known to the Department, residing in the city of New York, in the United States Legation, Attorney, Navy Agent, or Collector of the Customs, to the effect that if the bid of the bidder is accepted, the guarantor will duly execute a good faith, according to the provisions of this advertisement, and that he will become bound with the bidder, and that, in case the said party or parties of the bid shall fail to enter into a contract, the guarantor will pay the guaranty to make good the difference between the bid of the said party or parties and the next lowest bid. All bids must be sealed and endorsed "Proposals for supplying Lighthouses," and addressed to the undersigned, and directed, prepaid, to the Secretary of the Lighthouse Board, Washington, D. C.

All bids will be opened publicly, at the hour and on the day specified.

Persons will be made for the several lots of oil within forty days after bids have been received by the United States.

By order of the Lighthouse Board.

W. B. SHUBRICK, Chairman.

PROPOSALS FOR MATERIALS FOR THE NAVY.

NAVY DEPARTMENT,
BUREAU OF STEAM ENGINEERING,
February 11, 1864.

SEALED PROPOSALS to furnish materials for the Navy for the four years ending June 30, 1868, will be received at this Bureau until 12 o'clock, M., on the 15th day of April next, at which time they will be publicly opened and examined.

Proposals must be endorsed "Proposals for materials for the Navy," that they may be distinguished from other communications, and addressed to the Bureau of Steam Engineering.

The materials and articles embraced in the classes named are particularly described in the specifications, a copy of which will be furnished to such as desire to offer, on application to the Commandant of the Navy Yard, New York, or to the Navy Agent, Boston, Philadelphia, or Baltimore, or to the undersigned at Washington. The decision into classes is made for convenience in preparing the specifications, and proposals will be furnished as are actually required for bids. The class numbers are given to each article, and bidders will refer to the class number for any article they may have a copy of the ordering of the other Navy Yards, and the Navy Agents, and the Bureau will not be responsible for any omission in application for any of the classes of those yards. All other articles, except those named in the list, will be purchased at Annapolis and Baltimore.

Bidders will be responsible for the whole of the class at any one of the yards, and will not be allowed to bid for a portion only; otherwise, or they will not be considered.

Bidders will be required to state the commandant of any yard, or to any navy agent, the form of offer, or guaranty, and the bond required in each case, before their proposals will be considered.

The contract will be awarded to the lowest bidder, who gives good security for the faithful fulfillment of the same, on August 31st.—the Navy Department reserving the right to reject any bid which may be considered too high.

Bidders will be required to state the day the ordination is given, and deliveries can be demanded.

Bidders will be required to state the place of manufacture, and their responsibility certified to by a United States officer, Navy Agent, United States district attorney, or navy agent. As additional securities, twenty per centum will be withheld from the amount of each bill presented for payment, and bills will have been passed and paid for each bill, approved in triplicate by the commandants at the navy yards, navy agents, or by the officer in charge of receiving or delivery, in bonds or certificates, at the option of the Government, which will be held as a guaranty for the faithful performance of the contract, and for the security of the sureties.

The following are the classes of articles required:

KITTERY, MAINE.

Class No 1. Roller Iron and Steam. 2. Straits Oil: No. 19, Engineer Stores; No. 18, Tubing, &c.; No. 16, Steel; No. 19, Zinc.

PORTSMOUTH, N. H.

Class No 1. Roller Iron and Steam. No. 2, Pig Iron: No. 3, Bar Iron, Round and Square. No. 4, Bar Iron, Flat and Sheet. No. 5, Edward Oil and Turpentine. Comprising everything pertaining to the Personal and Camp Furniture of the Soldier. Officers study-ing the necessities of active service, or the principles of uniform and economy, will find with us the most complete collection of Foreign and Domestic Arms, Uniforms and Military Supplies.

CAUTION FROM THE AMERICAN WATCH COMPANY.

It having come to our knowledge that imitations of the American Watch have been put upon the market, a great number, and of the most worthless class, to injure the reputation of the genuine article, we would caution the public and the trade against the base counterfeits. The genuine movements are made by the Waltham Watch Company exclusively, and have been for many years.

The finest has the name

"AMERICAN WATCH CO., Waltham, Mass." engraved on the inside plate.

The second has the name

"APPLETON, TRACY & CO., Waltham, Mass." engraved on the inside plate.

The third has the name

"E. HOWARD & CO., Waltham, Mass." engraved on the inside plate.

All the above styles have the name "American Watch Co." painted on the dial, and are warranted to keep correct time.

The fourth has the name

"E. HOWARD & CO., Boston, Mass." engraved on the inside plate, and is not named on the dial.

It is the only watch in which the case is made of tarnish-proof gold, and are sold in gold or silver cases, as may be preferred.

It is the only watch made for us in accordance with the numerous imitations to which we have alluded. We have purchased the entire stock on hand at the engraving our firm as to compel the observation of the counterfeiters. Purchasers should see that the name of the "Union Watch Co., of Boston, Mass."—or only watch bearing genuine, has not been put on the "Bogus Watch," to be sold as our Fourth or Wm. Ellery watch, usually known as the "Howard." Such watches are named the "Appleton Watch Co" others as the "P. L. Harley," "Howard & Co." E. Burrill, besides many varieties named in such a manner as to convey the idea that they are the veritable productions of the American Watch Company.

We have confidence that the part of buyers will protect them from grow imposition.

APPLETON, TRACY & CO.,

Agents for the American Watch Company,

212 Broadway, New York.

STEINWAY & SONS,

Manufacturers of

The editorial and business offices of the ARMY AND NAVY JOURNAL will be removed about the 10th of April to **No. 39 Park Row, Times** building, directly opposite the City Hall Park.

Subscribers who may have failed to receive any of the back numbers of the JOURNAL, are informed that there has been an unavoidable delay in reprinting some of them, which will account for the omission. Our files are now complete, and we shall this week supply all who have ordered. Number 4, among the others, is now reprinted and ready for delivery.

THE MILITARY SITUATION

THE theatre of war in Virginia has been undisturbed during the week by hostile demonstrations. There have been stories of the crossing of the Rappahannock near Fredericksburgh by a strong body of Rebel cavalry under General STUART, and of encounters, in which a considerable number of them were taken prisoners. But the stories lack the essential merit of truth. Meantime both armies are busy with preparations for the approaching conflict; and though there is apparent quietude, there is no lack of activity. From all parts of the Confederacy conscripts are hurried forward with the greatest rapidity to swell the forces under General LEE; and deserters from LONGSTREET's army say that that General is also moving to form a junction with the Rebel forces on the Rapidan. It seems to be conceded on both sides that Virginia will be the scene of the grand opening of the approaching campaign. Both parties are making gigantic preparations for the encounter, which cannot long be delayed.

The military news from other portions of the vast theatre of war is also devoid of present interest. From the Southwest we learn that the Rebel General MORGAN with his command is encamped near Decatur, endeavoring to pick up a sufficient number of horses to mount his cavalry for his threatened raid through Kentucky. He is said to find it a difficult task, as Union raids and the severe exigencies of the Rebel cavalry service have left very much on the supplies of horses in the South. Decatur was captured by General DODGE with but little resistance on the part of the enemy. The Rebel force in the town was estimated at from four to six hundred, about equal to the number that drove them out. Our forces still hold the place, and it is said will occupy it as a permanent post. Guerrilla bands are still active in the Southwest. On the night of the 16th inst. a roving party captured and burned a freight train from Nashville near Estelle Springs. Captain BEARDSLEY, of the One Hundred and Twenty-third New York, and seven men, who were in the train, were paroled, and after being relieved of their clothing, money, and other valuables, were sent back on a hand car.

A dispatch from Chattanooga says that the Rebel strength in front of our position may be safely estimated at between 27,000 and 30,000 men. GENERAL HINDMAN has resigned the command of his corps, and has been succeeded by General HOOD.

General PRICE has again assumed command of the Confederate forces in Arkansas, with the avowed object of chasing the Union Army from that State. He has issued a grandiloquent address to his army, in which he tells them that he will soon lead them against their "cowardly, boasting foes," and that they must retrieve their reverses, re-occupy the territory they have lost, and establish the perpetuity of their government. General PRICE has a difficult task before him, if he attempts to accomplish all these objects.

Rumors are afloat of an intended Rebel raid into Kentucky. The story is, that the Rebels, 20,000 strong, have occupied Bull Gap, preparatory to this movement, which will be made as soon as General MORGAN succeeds in remounting his men. The Rebels, it is said, will enter Kentucky prepared, if not to occupy the State permanently, "to ransack" the country through her whole extent, sweeping "away everything of value, and leaving a desert "behind them." They will probably find a sufficient Union force prepared to interfere with the execution of their kind intentions.

The latest news from the Red River Expedition comes to us by telegraph, and records the capture of Fort De Russey by the expedition, which left Vicksburgh on the 10th. Our forces were under command of General A. J. SMITH. The story is that we took eleven guns and 200 prisoners. The capture of the Fort is an important advantage, and will do much to assure the successful occupation of Shreveport. We hope to receive confirmation of the news.

Admiral PORTER's gunboat fleet has been detained by the Rebels between that city and the mouth of the Red River, reliance is placed on the iron-clads which accompany the fleet. The little town of Madisonville, on Lake Pouchartrain, opposite New Orleans, has been evacuated by our forces. It will be remembered that this place was occupied on the 13th of January by General GROVER, and extensively fortified on the land side. The works were left undisturbed when our forces withdrew. They add nothing to the strength of the place for the Rebels, as it is easily approached from the water side. General GROVER's whole force was ordered to concentrate at Baton Rouge.

A DETACHMENT of Rebels, said to be GILLMORE's men, on the 19th, made a dash into Bath, a village of Morgan County, West Virginia, and captured two West Virginia Legislators. The band was immediately pursued by our cavalry, and a number of the men were captured.

An expedition, under command of General GRAHAM, set out from Fort Monroe, on the 17th inst., for the purpose of relieving Matthews and Gloucester counties of the presence of a dangerous and troublesome band of guerillas, as well as to capture and destroy whatever public property could be found. The expedition was heard from on the 21st, at which date it had inflicted a considerable amount of damage on the enemy, and General GRAHAM have decided to extend his operations to a field, the locality of which was not disclosed.

The situation before Newbern, N. C., remains unchanged. The Rebel force in our front has been somewhat reduced within a few weeks, and our forces have employed the season of inactivity in the field in repairing and strengthening their defences. A little skirmish between a detachment of the Third New York cavalry and a party of Rebel infantry, took place on the 13th inst. Only one of our party was wounded.

The 14th was the anniversary of the capture of the city by our forces; and as the Rebels had always threatened that the day should never pass without an attack, the necessary arrangements were made to receive them. But no attack was made. It is surmised that the raids on Richmond, caused a serious diversion of Rebel forces from North Carolina to the Confederate capital, leaving General PICKETT too weak to commence operations against a force so strongly fortified as Newbern now is.

We learn from Port Royal, that a night attack on Seabrook Island was made by the Rebels on the 17th. They came down the Chickhasaw River in boats, and approached Seabrook about three o'clock in the morning. Their advance was immediately detected by the Union pickets, who opened a sharp fire upon them, forcing them to retreat without accomplishing their object.

The Rebels are said to have mounted six rifle guns in Fort Sumter, bearing on the channel. The garrison of that stubborn heap of ruins is reported to consist of about two hundred and fifty men. A lofty Rebel watch tower has been recently erected at Secessionville, on James Island, from the top of which the enemy can observe the operations within our lines. Another Rebel iron-clad, named the *Ashley*, has been successfully launched at Charleston. This increases the iron-clad fleet at Charleston to seven vessels. Unless immediate measures are taken to prevent the completion of these vessels, our blockading fleet may some day find itself confronted by an enemy powerful enough to put its strength to a severe test.

A rumor, not confirmed from any other quarter, was brought to Folly Island by Rebel deserters, that Admiral FARRAGUT had captured Fort Powell, below Mobile, with a garrison of 1,000 men. These deserters probably thought that so good a story would increase their welcome in our lines.

We have received some interesting particulars in regard to the movements of the pirate *Alabama*, from a correspondent who writes to us from the U. S. ship *St. Louis*, off Funchal, Madeira, 29th February, 1864. The letter of condolence referred to by our correspondent in his introduction, we publish elsewhere:

SIR—I herewith enclose a letter of condolence, which I beg you will insert in the JOURNAL. It relates to the sad and unexpected death of our Consul at this place, MR. GEORGE TRUE, who was taken with small-pox, the only case known on the island. He had many friends in the naval service, who will read the enclosed with a sad interest, but at the same time be gratified that we were here in time to pay a proper honor to his memory. We still continue our cruising, although our two years from the United States has elapsed some time since. The Rebel *Florida* entered this port the night before last, and now lies within a short distance of us, with the Rebel ensign and jack flying. She comes from Brest for coals, water and men, all of which the Governor has refused her. There are plenty of the gray uniforms parading on shore, but they do not appear to be very enthusiastic received. The *Florida* has 113 men, *one* of which number is an American. I understand she has plenty of money in English bank-notes and sovereigns, and American gold. She has a spare engine in case of accident. I hear that Captain MORRIS publicly states that he will not come to an encounter with us, as it is not for his interest. We have an enthusiastic company of officers and a splendid crew, all of whom are over anxious to meet the pirate, even at great odds, but we have the same old sailing sloop in modern days, so in case she pleases, she will wave an impudent adieu and leave us helpless and mortified. All hands are praying to see one of our steamers come in, but I fear such fortune will not be ours.

THE STAFF.

RE-ORGANIZATION OF THE QUARTERMASTER'S AND COMMISSARY DEPARTMENTS.

AMONG the questions of practical moment to which the interior workings of our Army organization have given importance, are some which relate to the reconstruction of the departmental staff organization—more particularly those of the quartermaster's and commissary departments. These departments are undoubtedly working very efficiently and with great activity, skill and economy; but in their operation there are many incidental matters of difficulty, which would, perhaps, disappear under a new system. We propose to mention some of the existing inconveniences.

The first is, that two departments exist, engaged substantially in one branch of service, viz., supplies, which are consistently connected in all their operations, and which, by the absence of a single authority to determine in practice the details of their relations, frequently come into collision. The theory of their action is, of course, that both take their directions from the commanding officer; but in reality they settle their affairs best they can—by friendly agreement, if so disposed, but often with bickering and feelings of animosity. We are speaking of officers of the two departments in the field. For example: a certain number of wagons are allowed for the transportation of supplies, and orders direct the quantity of each class that is to be carried. The wagons are under the control of the quartermasters, and to them the commissaries make application for transportation. In a vast majority of cases the officers of both departments claim that the others encroach on them. Both are desirous of carrying a full supply—in fact, a surplus if possible—and the consequence is that teams are overloaded and overworked. Take the same matter on a larger scale. When an army reaches a depôt after a march which has exhausted its supplies, a multitude of quartermasters and commissaries throng to the depôt for forage and provisions. The question of transportation by railroad or water, and precedence of opportunities for unloading, are usually given to the latter. It frequently happens that as much as ten days' rations will be accumulated, while the animals are suffering for grain, because our commanding officer for both departments has not designated the exact proportion of facilities to be allowed to each. In connection with this matter the question arises, why should not all matters of supply be regulated by a single authoritative department?

Second. By the present system quartermasters and commissaries are made directly responsible to their immediate commanders, and are supervised by the superiors of their own department, to whom they are responsible for all matters of administration and accounts. This duplicate responsibility produces constant difficulties, which are instead of being devoted only to their duties, become subject to the caprices of their commanders. We have frequently seen the movement of a whole army train and the march of artillery and troops greatly embarrassed by conflicting orders concerning the movement of trains. Some one system, which would fix exactly the comparative relations of quartermasters and commissaries to their commanders and to their departmental superiors, is greatly needed. The old system of responsibility to commanders having been proved in its full intention inapplicable to a large army in the field, orders were issued in the Army of the Potomac which permitted direct correspondence between inferiors and superiors of the same department. This immediately existed objection among commanding officers, who have themselves on the old and impracticable regulations, the theory of which is that all communications must go through the Adjutant-General's department. Several additional orders have been issued in the Army of the Potomac, but the matter is as far from settlement as ever. The success of these operations will depend for their character on the individual peculiarities of commanders. Some of them say it is the business of my staff to take care of their departments, and as long as they do their duty they will care about the formalities. Others, on the contrary, say I command my staff, and will not permit them to receive any directions except such as I give them.

In our present system of operations, the *corps d'armée* has become the chief unit of responsibility and command. Brigades—as relates to the quartermaster's, commissary, ordnance and medical departments—are almost entirely absorbed in the divisions; the latter have in many respects an independent organization, but a full organization in all departments is not reached until we arrive at the corps. It is, therefore, a question for consideration if the routine of departmental operation should not be divided immediately and exclusively from corps headquarters, thus securing uniformity and concurrence of action. Should not some authority at headquarters of corps be entrusted with the entire control of both the great departments of supply?

A third practical question relates to the organization of trains. The persons now in the employ of the quartermaster's and commissary's departments are either hired citizens or detailed soldiers. The former have no permanent organization, and the latter should mostly be in the ranks. An organization similar to that of the French train of equipages is greatly needed. The present system lacks discipline, it is destructive to the animals, and is unreliable in cases of danger. The question of a reorganization in this matter has been often discussed, and some attempts to accomplish it have been made. A commission now exists, we believe, authorized to enlist negroes in Kentucky and Tennessee for the quartermaster's department. Our own attention we suggest is much more extensive. Materials now exist in our Army for the formation of a most excellent administrative system, of both officers and men. Should such a system, with full details, be enacted by Congress, a corps of capable officers, selected from those now on the administrative departments of the regular and volunteer forces, could soon be created, with a sufficient number of enlisted men selected from the hired employés and detailed soldiers; these last, on reorganization, should be enlisted, should be entirely separated from their regimental obligations.

The last practical question to which we shall now refer relates to the system of accounts. This, to the quartermaster's and ordnance departments particularly, is very onerous to the officers responsible for property. In the commissary department it is much more simple, and the results are much more rapid. Taking the quartermaster's department for an example, an officer submits his accounts, say for the month of January. Part of them go to the Quartermaster-General's office, and part to the Treasury Department. It is perhaps a year or eighteen months before he hears of the decision upon them. By this time the opportunities for correcting informalities have perhaps passed away; if he submits new accounts, another long period elapses before he again hears. Officers complain of receiving "statements of differences" upon accounts for which proper papers have been sent up, but have not been reached by the revising functionaries. Immense piles of papers accumulate in the departments at Washington, and officers in the field, besides being compelled to keep copies on the march, several bushels of papers running through two years' business, are continually oppressed with a sense of undetermined responsibility. Why cannot accounting bureaus be organized at the headquarters of *corps d'armée* and armies? The quartermasters of corps and armies are to revise accounts; but they have no final action on them—merely permitted then to correct obvious errors of form, to see that all responsible officers account regularly, and to detect any malversation or culpable neglect.

RIFLED ORDNANCE.*

THE introduction of Rifled Ordnance has so generally attracted the attention of military men, that we seek no apology for all information on this important subject, and watch with intense interest the many experiments which are being made with a weapon which can hardly yet be considered as having attained to a desirable degree of perfection.

To the EMPEROR of France is ascribed the merit of having *first* successfully attempted the use of rifled cannon; his first efforts were limited to guns of small calibre, but with the knowledge that his results were satisfactory, a host of inventors sprung into existence, and a great variety of rifled guns have been offered to the public.

The English, always regarding with jealous rivalry every move of their French neighbors, became alarmed by the appearance of the formidable NAPOLEON gun, and the ingenuity of their countrymen, WHITWORTH and ARMSTRONG, produced a gun which should compete with that of their *friendly allies*. Many were the experiments made, until in 1854, Mr. WM. ARMSTRONG manufactured a three-pounder, which appeared to fulfill all of their wishes. Various trials were made with the new gun, and in 1855, under the patronage of the British Government, the system of Mr. ARMSTRONG was received with great favor, and his gun adopted as the model gun. In their enthusiasm, Mr. ARMSTRONG became SIR WILLIAM ARMSTRONG; was appointed Engineer of Rifled Ordnance, at a salary of £2,000 per annum, with travelling expenses, and various perquisites; his salary to date back from 1st April, 1856, and continue ten years; and it was at the same time stipulated, that "Sir WM. ARMSTRONG shall "retain at liberty to carry on his present business or any "other in which he may think proper to engage."

A great furore seems now to have seized the mind of the British Government, and without regard to expense, an establishment "capable of turning out 100 guns a year," was at once put in operation, and every effort was made to manufacture the guns as rapidly as possible and of every calibre. Thus the work proceeded, until in the beginning of 1863, when the vast expenditures incurred, together with unsatisfactory rumors which had obtained circulation and gained the attention of Parliament, induced the appointment of a committee "to inquire into the expenditure incurred since "the beginning of 1858 on various natures of improved "ordnance, whether obtained by contract, or manufactured "in the Public Departments, and into the results obtained "by such expenditure."

The Report of this committee was made in July last, and is before us. It is very voluminous, but embraces so much of valuable information that we will devote a portion of our pages to a digest of the testimony, believing we cannot offer to our readers a subject of more general interest.

The Report, before giving a sketch of the history of the Armstrong gun, admits "that the experiments with the "Whitworth gun were not of as extended a nature as those "with the Armstrong gun," but in the laying aside of the one without full trial, and then taking up the other with still an experiment the Report finds justification. "Your Committee are of opinion that the adoption of the "Armstrong gun by the Secretary of State for War, for "special service in the field was fully justified." This language appears to us to be somewhat equivocal, for the terms "special service in the field," do not seem to meet the full merits of the case. After a calm review of the evidence taken before the Committee, it is difficult to arrive at anything approaching to an entire and absolute approval of the guns in question. We here quote some interesting statements:

"The whole supply of Armstrong guns and projectiles has been obtained from the Royal Arsenal at Woolwich and the Elswick Ordnance Factory.

"3d. The sum of £965,117 9s. 7d. has been paid to the Elswick Ordnance Company for articles supplied.

"4th. After giving credit for the value of old iron and stores received from the Company, a sum of £65,534 4s. has been paid to the Elswick Ordnance Company, as compensation for maintaining the establishment.

"3d. The outstanding liabilities of the war office to the Elswick Ordnance Company, for articles ordered, amounted on the 31st March, 1863, to a sum of £1,471,753 1s. 3d. The whole of these payments and liabilities amounts to the sum of £2,502,404 14s. 10d.

"4th. The sum of £1,471,753 1s. 3d. has been expended in the three manufacturing departments of Woolwich on the Armstrong system of construction, making altogether a grand total of £2,629,547 17s. 8d."

This, it must be confessed, is a startling sum of money to have been expended on what appears to have been an experimental gun.

"Your committee have received various and most conflicting evidence with regard to the results of this large expenditure. * * * * * * *

"The 12-pounders, although stated by some of the witnesses to be too complicated a weapon for service, are generally approved of. * * * * * * *

"It appears to your Committee that the Armstrong field-gun is the best known for field purposes. His Royal Highness the Field-Marshal Commanding-in-Chief states that, in his opinion, SIR W. ARMSTRONG'S system surpasses in completeness any other, and his conviction is that England in this respect is ahead of all other countries." Major DUNCAN, Adjutant-General of Artillery, states that he is prepared to say that the Armstrong field-gun is the best he has ever known, and that this is the general opinion of officers of artillery of all classes. At the same time some of the most distinguished witnesses state that, in their opinion, we ought not entirely to rely (for field artillery) on muzzle-loading guns, as being complicated and liable to injuries from breech-loaders, and various accidents, and are inclined to retain a proportion of muzzle-loading guns for horse artillery."

The testimony of the Duke of Cambridge falls to support this part of the Report, for in reply to question 1,220 he says:—"That of course depends entirely on whether they "are lined guns or not. The committee reported that the "guns were defective, because they had been used; and it "appears that they had." The guns were not lined. Therefore, if the conclusion arrived at in the Report be "correct, that the lining of the guns was the cause of their "being defective, it results that half the artillery guns (if "lined) are defective." It appears also that this witness was not of the opinion entertained at the time of the gun, and by his concurrence that the gun was introduced into the service. We must not therefore expect of him a too ready admission that there was any failure of result for the two and half millions of pounds sterling expended; but his evidence in fact is very unsatisfactory, for he merely expresses "opinions" and "convictions" without seeming to have had any practical knowledge of the gun; and we should not have adverted to his testimony but that it constitutes the gist of the Report, and must of necessity come within the range of our analysis.

In explanation of the complaints as to the "failure of "some of the guns," the committee report that "this appears to have arisen from faulty manufacture." Now, if it be possible that in Government workshops, under the supervision of the Executive himself, a class of faulty manufacture," or "patched up guns," can be so managed as to deceive the inspector, there must be something wrong in the system; but to the Report:—

"As to the 110-pounders, it is on all hands admitted that although useful as chase guns, they ought not to be introduced into the naval service as broad side guns. They were originally required for use against wooden ships, and, whilst not sufficiently powerful for penetrating iron-plated ships, are as yet imperfect for general naval service, owing to the difficulty of manufacturing the wrought-iron piece. Nevertheless, the 110-pounder is considered by naval men of eminence in the profession, as a most valuable weapon in its present proportion to the armament of a

* Report from the Select Committee on Ordnance ordered by the House of Commons. Imported by D. VAN NOSTRAND, New York.

ship, and the Duke of Somerset is of opinion that the Navy can not get too many of them.

The Duke of Somerset states that

"We have nothing better now for close quarters than the 68-pounder, and concurs with all the naval witnesses in considering that, in the armament of her Majesty's ships, a small proportion of 100-pounders should be introduced. His Grace further adds that it was not till we had a 100-pounder and a 68-pounder against Captain Inglefield's squadron that he became aware that the 68-pounder was much better than the 100-pounder at short range. It should be observed that this comparison was made when the charge of the 100-pounder was 14 lbs.; it has now been raised to 17 lbs. The Duke of Somerset, however, further stated that many experiments had recently been made with that weight of charge, and that he had found no advantage in going with the old 68-pounder charge of powder; and that had helped to correct an error. It was imagined that a smaller charge of powder would answer for the 68-pounder. That was an error which we have corrected entirely with increased experience. These experiments are founded on the principle of low tension.

"The Duke of Somerset also further informed your committee that the Admiralty had a project that the Armstrong gun had the greatest range and the greatest power of penetration of any gun tried; when they came to try it themselves, that was not confirmed by facts; but experience led us to a great distance may have had greater power of penetration, but for naval purposes at 200 yards, it certainly had not the penetrating power of the 68-pounder or a more powerful gun than the 100-pounder Armstrong gun.

"The old 68-pounder is therefore the most effective gun in the service against iron-plates.

* * * * * * *

"As to the various details involved in the Armstrong system, your committee can only refer to the scientific evidence given before them, and to the opinion of engineers soon to be against any breech-loading system for larger guns.

"No sufficient experiments have been brought to show whether mechanical-fitting projectiles are liable to the objections made against them, that they must tend to destroy the grip from the bore of the gun."

In concluding this Report, the committee recommend that the different systems be fairly experimented upon; we are therefore led to the conclusion that after all the "large expenditure" above stated, the British officials still regard the Armstrong system as a failure, and consider the report here as involved in doubt as to the limits of calibre suitable for the gun which has been so extolled. It is presumed, however, that the 12-pounder field gun is the heaviest for which they claim success.

Having finished the Report, and given notice of their report, we note this article with the design of continuing our review of the proceedings of the committee until we have given the substance of the investigation to our readers.

CORRESPONDENCE.

ARMY TRANSPORTATION IN THE FIELD.

To the Editor of the Army and Navy Journal:

SIR:—The movements of an army are, except in mere rails, limited to the rapidity of its means of transportation in the field. Notwithstanding this fact, and that vast improvements are in every way being made in the details of army wagon, horses and mules remain the same as when the war commenced. Many changes in the form of wagons and rapid movements over bad roads, appears to be formed to retard rather than assist the movements of the army. What has led to the present defective form of wagons and the ordinary mud roads of the country south of MASON and DIXON'S line, but has noticed that the empty wagon is loud enough for a team to draw on a good road, and is, in fact, so much as such a team can make sure progress with, especially when the road is badly broken up and passes through a country abounding in swamps, marshes and creeks. The result is, that a teamster, if he makes progress during a day's march, is so worn out by the severe labor, and by the stimulus of the whip and spur, generally accompanied, report to say, in our army, with an amount of oaths and ejaculations fearful to the ears of humanity.

A rapid destruction of horses and mules, and what is still more, the exposure of our brave men to night air and its consequent sickness and mortality, are natural results. It is not the long march so much as the night exposure which usually follows it that causes so much sickness and death in the army. If our men were able to keep up at all times with the army, division or corps to which they belong, or be afford ample time for rest at night to introduce the great an improvement would be effected, and delays so frequently occasioned by the slowness of trains avoided. If it was made always to depend upon the speed of the men marching, the capture of a train by the enemy could seldom occur.

A whole train of fifty or a hundred wagons and teams, is not unfrequently delayed for hours by a break down of one in its wagons in crossing a stream or ravine, or even in a road, the customary nature of the wagon rendering it, by some slight accident, beyond the control of the teamsters.

The liability to delay in the transportation of supplies is one of the most serious drawbacks of an army when marching into an enemy's country, and must be taken into account in all the calculations incident to a campaign. The bad roads have always been the great impediment to the movements of our armies in Virginia and elsewhere for the greater part of the year, and it is mainly because vehicles suitable only for good roads are used for army transportation.

Indeed, it is impossible to enumerate all the evil results from delays in the transportation of supplies, equipage, &c., of an army. Many of the disasters which befell the Rebellion sustained, and the fruits of victories have only been half gathered, in consequence of the slow movements of our army wagons.

With the exception of heavy artillery, the freight required by an army on its march is not necessarily of extraordinary weight; and certainly need not be packed in boxes or parcels of great bulk; why then should a large four-wheel carriage of great strength and capacity be used for a service when rapidity of movement is of such vast importance? I admit that for bad roads, great strength is required in a vehicle. Also that broad tires and iron are desirable to prevent sinking into mud, but it by no means follows that the four-wheeled wagon with all its heavy machinery is essential to any movement. It is found to be very awkward for loading and unloading, especially when the facilities for handling are not abundant.

When short of army wagons, I have sometimes hired draymen, with their two-wheel drays, with one or two mules, and have found them to do well, with two mules, owing to its more rapid movements over mud, and the rapidity and ease with which the work of loading and unloading was performed. The mules were heavy, in a dray, and sometimes more, than a six-mule team attached to an army wagon, and consequently more serviceable.

In loading an army wagon, the teamster, if the six mules are sufficiently broken to stand without him, has to get into the wagon, and there, with considerable labor, move him lift up the various packages, be placing them in the wagon according to his judgment. With a dray the operation of loading is very simple, and the driver with some assistance can get loaded up ready to start in the time frequently taken by a six-mule team to hitch up, and get placed in position. All the movements of any team can be done necessarily slow, while the management of four or six mules requires much experience and decision. Many of the wheel-mules are generally do the work, the lead mules, except under the management of the most experienced and diligent drivers, are very little better than "dead weight."

The improvement I would suggest is this: that instead of the army wagon, the army in the field, wherever rapidity of movement is desirable, be provided with two-wheel dray or cart, constructed so as to secure the greatest strength, but of such moderate dimensions, and the lightest possible, iron &c., as will secure lightness as well as strength. The best plan would be to offer a premium for the best model and adopt the one considered the most advantageous. Our Yankee mechanics would, if their attention were once directed to the subject, produce *a dray for army purposes* such as would greatly facilitate the movements of our army in the field, and in doing so, would hasten the end so ardently desired by all patriots, the end of the rebellion.

LOUISVILLE, KY., March 16, 1864. A. Q. M.

SUBMARINE ORDNANCE.

To the Editor of the Army and Navy Journal:

SIR:—In your paper of the 5th inst. you correctly mention the fact that some experiments in submarine ordnance were made by myself in this city in the spring of 1863. These experiments were made for three consecutive days, April 13th, 14th, and 15th, 1863, and were conducted substantially according to the plans and specifications attached to my American Patent, entitled "An Improvement in Arming War Vessels," dated May 5th, 1863, and numbered 35,193, to which I wish to call your particular attention.

In your paper of the 5th inst. you say that, "In England, where more attention seems to be given to important subject than in this country, five or six patents for firing under water have been taken out, the earliest of which, that of Mr. PAGE, C. E., bears date June 15, 1861." the second, that of ROBERT BURLEY, of Glasgow, was dated July 11th, 1861, and the third, that of Lieutenant ——, of English patent was dated March 31st, 1862, and numbered 893, having been granted prior to that of ROBERT BURLEY. You will find in the Patent Office Specification and Drawings in the Astor Library, in New York. I have also received patents for this method of arming war vessels from Austria, Italy, and other countries where they have a navy.

It is not correct that they have given more attention to this method of firing under water in England than here. The first *practical* plan for firing guns under water was invented by myself, and the first practical test of the plan was upon my filing a full specification, March 28, 1863. Very soon after that time the attention of the British Admiralty was directed to it, and I received a request from me, through my agent in England, for them to try it, which they did in the manner described in your paper, with good success. I am aware that firing guns from the sides of vessels under water is my invention, and not an English invention.

The plan of Mr. PAGE was filed in England before my patent was applied for, but not until long after I had made the invention. Mr. PAGE'S method of firing gun was over fired, or over will be fired, on Mr. PAGE'S plan, it being quite impossible to fire guns in the manner described by him. You will observe that I propose to fire the guns under water by allowing the water to flow into the muzzle of the gun, and exerting its pressure upon the face of the projectile. The account in your paper of February 27, 1864, says:—"The resistance of the water broke up the projectile, and rendered it impossible to use the submarine guns with any practical effect, unless the water is excluded from the bore of the gun in front of the projectile." This is a mistake, and shows that you are unacquainted with the principle of the invention. It will then cut its way through the water at quite a long range, considering the element through which it passes. The gases from the gun will follow the shot its entire flight through the hole in the water made by the projectile, and hole opening as a vacuum to rid the gun of the gas. The recoil of the gun, for the reason, is less than when it is fired into the air above the water. This may appear astonishing, but it has, nevertheless, been proved to be true by actual experiment, which is, after all, the only true test. The plan of firing guns under water is one that gave may be fired on my plan within the hull of the vessel without causing any powder gas in the vessel at all, and with so little concussion or recoil as to make them both comfortable and manageable. The projectiles are much smaller than guns that are fired in the ordinary manner from the deck of a vessel, above water. I propose to arm vessels on my plan with guns made of the best material, and in the best manner, weighing about 25 tons, with a bore about 7 inches diameter, carrying a shell 7 inches diameter and about six feet long, containing a bursting charge of powder of at least 75 pounds, having a pointed or conical head, and a percussion or time fuse, as desired. A vessel armed with guns of this description—say one on each side, and one at the bow—would be truly formidable, as one shell would sink any vessel now afloat, at a distance of a mile or two hundred. Another important feature of my invention is, that the muzzle of the gun is run out into the water through a hole in the side of the vessel, and into the water some 6 feet, leaving a body of water between the muzzle and side of the vessel, the *sole service of which* is to prevent the water from the vessel from injury by the great pressure of the gas as it flows from the muzzle of the gun at the instant of discharge. I will now give you a brief history of my discovery, trials, and making part of my American patent, as above stated:

First. My invention consisted of a gun or guns constructed and operated substantially as described, in a ship so constructed and defended with armor-plates, or their equivalent, that the ship may be protected from enemy with comparative safety, substantially in the manner and for the purpose described.

Second. Combining a gun constructed and employed in a vessel as described, with an appropriate gun carriages to support the breech, a socket and stuffing box in the side of the hull to support the muzzle of the gun, and a port or shutter, or other services equivalent thereto, to enable the gun to be worked substantially as described.

Third. Supporting the muzzle of a gun from the bore of the gun between the change and muzzle, by means of an air-tight displacing case, or its equivalent, substantially as described.

Very respectfully yours,

JOSEPH P. WOODBURY.

BOSTON, MASS., March 15th, 1864.

ABUSE OF THE STAFF UNIFORM.

To the Editor of the Army and Navy Journal:

SIR:—Permit me to call the attention to the frequent and improper wearing of the uniform, by those in the temporary staff duty, and in many cases by those who have not even this shallow pretext for doing so. I am persuaded that many officers wear the badge or part of the uniform, unconscious of any impropriety, and that if their attention were to be called thee to, would discontinue its use. I cannot see why an officer should not wear the "black strap" or dark blue pants at any time, whether temporary on staff duty or not, any more than he should make use of the designating colors of the corps to which he is becoming a brevet. Indeed I think that it is the abuse of the staff uniform, that gives the impression to many that the wearers of the blue class of officers have little to do, except to adorn metal sides. Is it right that the faithful and brave working officers of the staff should be confounded with

NEW YORK, March 14, 1864.

STAFF APPOINTMENTS.

To the Editor of the Army and Navy Journal:

SIR:—Your correspondent "Old Regulations," has with sense and ability called attention through your columns to the existing discrimination and anomalies in the Detail and Appointment of the Staff, and especially to the exceptional provision by which rank is temporarily given by assignment, instead of by appointment. As you tell me whether any action has been or is to your knowledge likely to be taken in this matter by the Congress now in session? Some of our politicians have proposed any legislation which appears to imply the continued existence of any army, and rather prefer the employment of the temporary volunteer officers during the duration of a speedy return to the corporal's guard of 17,000 men for the defence of the nation. A. A. G.

THE GROG RATION.

To the Editor of the Army and Navy Journal:

SIR:—When I first entered the service grog was issued twice a day; men that had been brought up from boyhood in the service, and before, drank grog just as much for their breakfast or dinner. As a consequence, when they came on shore, they spent their money freely, as every body knows, and sometimes in less than five hours of port got robbed of the greater part of it. This is the case at the present time with many of them; the evil cannot be cured in a day, but must be gradual. Poor Jack has not had his grog for nearly two years. Poor Jack has not been put in irons quite so often, has not been tried by court-martial so often, as the records of the Navy Department can tell; more men have been raised from the mate to be officers, and the service has become vastly improved. The sympathisers with poor Jack in losing his grog don't see this. It is true a single gill of whisky does not make a man drunk, but it is the foundation for his becoming a drunkard. Experience has taught me this lesson.

I have seen young men come on board ship who would not go near the grog for the first month or two, but seeing it twice a day, and hearing the unfortunate men talk of its pleasures to visitors enlogize it, they finally wrote in their turn its victims, and fancied that they could not get on board without it. The friends of seamen must protect them from the grog-shop keeper when out of their way on board ship

I thought that stopping the grog would have caused a great deal of trouble; but I am happy to say that it has saved a great deal. I was afraid at first to speak to a fellow officer on the subject, but now if it were put to a vote, I believe that nine out of ten would go against it. There is no fear of Uncle Sam being short of sailors when the Navy is reduced to a peace standing. Sailors know where they get the best usage; they are hard worked in a merchant ship and get poor usage, and often get hurried into a premature grave, while in the service they have good usage and are never killed with hard work.

It is true that at the present time their pay is not satisfactory

cient—clothing is 30 per cent. dearer than in peace time, and the depreciation in the currency is so great, that a sailor that has any one dependent on him has very hard times to make both ends meet. It is to be hoped his real friends will use every exertion to get either the price of clothing reduced and the quality improved, or to get the Hon. Secretary's proposition for raising the pay 25 per cent. carried out. Then all causes of complaint will cease to exist. Jack is as generous as he is brave, and is quite willing to bear a share in his country's burdens.

But whatever may be done, I am confident the time will come when the soldiers themselves will be glad of the privilege to recognise as their best friends such men as the brave departed Lyons, and to doubly honor them for their efforts to procure the abolition of the grog ration. R. S.

MILITARY AND NAVAL MATTERS IN CONGRESS.

SENATE.

An animated debate, extending over several days, took place on the Senate bill to promote enlistments. Mr. WILSON's amendment, providing for the wife, or the woman recognised as such, and the children of the slave recruit. The amendment is still under debate.

In compliance with a resolution of the Senate the Secretary of War has submitted a report, in which he says that no orders concerning elections were ever issued from the office. He enclosed a letter from Adjutant-General TOWNSEND, reporting that he has given no orders to provost marshals in Kentucky, Delaware, Maryland or Missouri relative to elections in those States. Also a letter of the same tenor from Provost-Marshal-General FRY, which, however, enquires if it is not the duty of Provost-Marshal-General Marshal JEFFRIES, at Baltimore, as follows:—"Direct your provost-marshals to give their aid in carrying out General SCHENCK's orders for preserving the purity of the elections at the polls in Maryland.

A resolution was adopted, on motion of Mr. WILSON, calling upon the Secretary of War for information as to how many nine months' men have been raised under the militia law of last Congress, how many of them were volunteers, and how many were drafted; whether the $25 bounty has been paid to the nine months' volunteers; and, if not, why it has been withheld from any of them, and whether any bounty has been paid to any of the drafted men?

The following joint resolutions were submitted by Mr. MCDOUGALL, of California, in reference to the occupation of Mexico by the French:

Resolved, That the occupation of Mexico, or any part thereof, by the Emperor of France, or by the person nominated by him as Emperor of Mexico, is a hostile act to the people of the Republic of the United States of America.

Resolved, That the movements of the Government of France and the threatened movements of an Emperor improvised by the Emperor of France, demand of this Government, action upon war.

A bill was introduced by Mr. HARRIS, of New York, providing for the increase of the Marine Corps of the United States. It also abolishes the Brigadier-General Commandant, five Captains, five Lieutenants, five Second Lieutenants, fifty sergeants, sixty corporals, ten drummers, ten fifers, and one thousand privates. Officers will be appointed first by promotion, then by selection. The bill was referred to the Committee on Naval Affairs.

Mr. WILSON has reported to Senate bill establishing a Bureau of Military Justice, with an amendment changing the head officer of the Bureau from Major to Colonel.

Mr. WILSON also called up on Wednesday the bill in relation to desertions. This bill disfranchises those who shall refuse to render to the service on the call of the President, in a proclamation to be issued immediately after the passage of this act. Those who counter the service at such place and time as he may designate may be tried by court martial, convict the forfeiture of pay and allowances due at the time of desertion and during their absence. Mr. WILSON thought that there were many deserters in Canada who would return to their duty if the proper inducements were held out.

HOUSE.

Mr. JULIAN, of Indiana, introduced a substitute for the bill heretofore reported by him from the Committee on Public Lands, authorizing the grant of the Homestead Law to persons in the naval and military service, on confederated and forfeited lands. It proposes, in support of this measure, that this was a war of subjugation, and that, as the rebels will resist to the death, we must employ against them every weapon at our command, and among all other lands to the use of the Union soldiers. Without taking action on this bill, the House proceeded to the discussion of the Senate bill to amend the several entries under the Homestead Law, enabling them to the oath before a military officer instead of those who had citizen.

Mr. DUNCAN, of Indiana, introduced a bill providing that all bonds, obligations and undertakings, whether sealed or unsealed, heretofore made, or to be made, to secure the loyalty or good behavior and fidelity to their oath of prisoners of war or guarded prisoners, in order to secure them release, be hereby declared valid and binding against the parties making the same and their securities, the penalties to be enforced in any circuit or district court having jurisdiction of the same. The bill was referred to the Judiciary Committee. A resolution was offered by Mr. ELDRIDGE, of Wisconsin, calling on the President or the Secretary of War, and the Secretary of State, to furnish the names of all persons arrested and held as prisoners in forts and other places of confinement for political or any other alleged offences against the Government, and who have not been tried or convicted in any civil court, and the causes of the arrest and imprisonment, and also whether any persons have been handed to the civil authorities to be tried without a trial. The consideration of the resolution was postponed.

The House has concurred in the Senate's amendment to the West Point Academy bill, increasing the pay of cadets to that of midshipmen, namely, $40 a month, and also in another amendment originating in the Committee of Ways and Means, providing that after one year from the 1st of July next, an additional cadet for each district shall be appointed, to be selected by law.

The Army Appropriation bill was warmly debated on the 21st. An amendment was offered by Mr. KERNAN, of New York, providing that no part of the money appropriated for army transportation shall be expended for the transportation of civilians employed in the departments of the Government to or from their homes at the public expense. After a sharp, personal debate the amendment was rejected, as was also one offered by Mr. COMINGO, of New York, providing that no part of the money appropriated by this bill shall be applied or used for the purpose of raising negro troops, or paying for the services of negroes. The bill was then passed nearly as it was reported.

A resolution was passed on the 23d authorizing the Secretary of War to authorize the removal to the murder of Capt. THEODORE REED, of Philadelphia, in Tangier Sound, Chesapeake Bay, by pirates.

IT having pleased the Almighty in his inscrutable Providence to remove from this life our late fellow countryman, GEORGE TICE, Consul for the United States of America at Madeira, we, the undersigned officers of the U. S. ship *St. Louis*, feel it our sad duty to express our sincere and heartfelt sympathy for his widow in her bereavement. This melancholy event has deprived us of a friend, whose generous hospitality we had so often enjoyed on this island, and whose estimable qualities endeared him the more to us as our acquaintance continued. The place he fills in our memory can never be effaced, and we offer his name this little public tribute of our respect, that our countrymen may long know how truly and remarkably he represented them in a position he adorned by his personal worth. Though not permitted to meet him again in life, we are grateful that an opportunn arrival enabled us to accompany his remains to their earthly home and pay him these last honors of his public position and social standing so eminently deserved.

Geo. Henry Preble, Commander; A. L. Gibon, Surgeon, W. F. Stewart, Lieutenant; W. J. Squires, Lt. U. S. M. corps; Lewis R. Morris, P. F. B. J. Myers, Act. Master's Asst. Surgeon; George Cubben, Acting Master; Joshua N. Miller, Engineer; Alfred Roxie, Acting Master; Hazard Marsh, Acting Ensign; Henry Cox, Pilot; Charles Clapp, Clerk.

U. S. SHIP "ST. LOUIS," FUNCHAL ROADS, MADEIRA, FEBRUARY 24, 1864.

SURGEON STEWART KENNEDY, of the United States Navy, who died on the 15th instant, was born at Easton, Pa., March 13, 1803; graduated at Jefferson Medical College in 1824, and the following Spring entered the service of the Navy. Not immediately assigned to duty, he joined a merchant vessel, but hearing of the ravages of yellow fever at Norfolk and Portsmouth, he volunteered for service there, and was promoted by the disease within a few weeks. On his recovery he joined the Navy, and served in the battle between the rebel navy under HOLLINS, and the blockading squadron at the mouth of the Mississippi. He then obtained permission to join the *Hartford*, and was present at the capture of New Orleans, being especially commended in the official report of his Captain. He was, during the winter of 1852, had charge of the Naval Hospital of New York. In the summer of last year he was again ordered to the Gulf, on board the *Ticonderoga*, and was with her until she returned to the Philadelphia Navy Yard, much damaged in a storm encountered off the coast of Africa. She captured vessel *Chesapeake*. He fell into ill health at this time, and died as above stated. He is mourned by a large number of friends, and is a loss to the service in which his skill and devotion were conspicuous and valued.

FROM evidence developed to the workmen and others engaged in removing the dead bodies on the battle-field of Gettysburgh, the number of rebel killed is shown to have been heavier than was supposed. In one space of three acres were found three hundred and twenty-five Confederate slain; and elsewhere, in a single bunch, two hundred and fifty more. A considerable portion of the battle-ground is likely to be ploughed up this spring and summer by farmers owning it, preparatory to planting corn and other crops. As a consequence the Confederate graves must be obliterated, and the trenches which now indicate their burial places. There is a strong desire with the people, in respect to humanity, to have these bodies, though of the enemy, respectfully and decently put away in some enclosure where they may not be disturbed—where they can sleep in quietude.

MAJOR-GENERAL HANCOCK has returned to the Army of the Potomac, and resumed active command of the Second Army Corps.

ON Wednesday, several contractors engaged in building iron-clad vessels, together with some of the citizens of New York, were to present to Commodore John Rodgers, as a testimonial for his gallant conduct and scientific ability in capturing the Rebel ram *Atlanta*, while in command of the monitor *Weehawken*, the following articles—viz.: One large salver, one punch-bowl and ladle, one small salver, one epergne and platean, one tea-set of splendid articles, consisting of five pieces; one pitcher and two goblets, two ice-pitchers and one cutter. The value of the articles is about $3,500. Commodore Rodgers will soon take command of the great ocean iron-clad *Dictator*.

THE following is a statement exhibiting the quotas of the several States under the President's call for 200,000 men, dated March 14th, 1864, with all credits deducted from, or deficiencies added thereto, excepting the enlistments of recean volunteers, up to March 1st, 1864:—

MAINE.—Quota under the call for 200,000 men, March 14th, 1864, 4,731; number to be credited, none; deficiencies to be charged, 1,195; balance to be furnished, 4,041.

NEW HAMPSHIRE.—Quota, 2,685; credits, 169; deficiency, none; balance, 2,438.

RHODE ISLAND.—Quota, 10,659; deficiencies, 915; balance, 29,393.

VERMONT.—Quota, 2,560; credit, 7,130; deficiency, none; balance, 170.

RHODE ISLAND.—Quota, 1,238; credit, 625; deficiency, none; balance, 883.

CONNECTICUT.—Quota, 5,964; credits, 4,694; deficiency, none; balance, 2,274.

NEW YORK.—Quota, 32,794; credit and deficiency, none (not yet completed); balance, 58,226.

NEW JERSEY.—Quota, 8,734; credit, none; deficiency, 1,020; balance, 14,324.

PENNSYLVANIA.—Quota, 26,302; credit and deficiency, none (not yet completed); balance, 74,427.

OHIO.—Quota, 23,272; credit, none; deficiency, 684; balance, 1,676.

MARYLAND.—Quota, 4,317; credit, none; deficiency, 17,411; balance, 21,728.

WEST VIRGINIA.—Quota, 2,651; credit, none; deficiency, 1,326; balance, 5,190.

DISTRICT OF COLUMBIA.—Quota, 1,702; credit, none; deficiency, 3,155; balance, 3,856.

MICHIGAN.—Quota, 13,086; credits, 9,969; deficiency, none; balance, 19,228.

INDIANA.—Quota, 13,086; credits, 9,969; deficiency, none; balance, 3,663.

ILLINOIS.—Quota, 18,253; credit, 30,893.

MICHIGAN.—Quota, 7,821; credit, 634; deficiency, none; balance, 7,187.

WISCONSIN.—Quota, 7,961; balance, 15,662.

MINNESOTA.—Quota, 2,337; credit, 1,417; deficiency, 1,417.

IOWA.—Quota, 6,437; credit, none; deficiency, 6,701; balance, 13,138.

MISSOURI.—Quota, 9,005; credit, none; deficiency, 4,962; balance, 8,867.

KANSAS.—Quota, 3,787; credit, none; deficiency, 9,463; balance, 15,472.

NEBRASKA.—Quota, 1,468; credit, none; deficiency, 1,318; balance, 2,057.

THE latest advices from Florida speak of our troops as still confined to Jacksonville, strengthening their position. The losses in the severe engagement at Olustee, so far as received, are recapitulated as follows:—

10th New York.—Killed, 6; wounded, 47; missing, 67; missing, 17; total, 251.

7th New Connecticut—Killed, 6; wounded, 38; missing, 27; total, 71.

40th New York—Killed, 17; wounded, 115; missing, 47; total, 29.

8th New York—Killed, 10; wounded, 101; missing, 86; total, 23.

Artillery—Killed, 16; wounded, 32; missing, 13; total, 60.

54th Massachusetts Cavalry—Killed, wounded, 6; total, 6.

55th Massachusetts (mounted Infantry)—Killed, wounded and missing, 5; total, 5.

8th U. S. Colored—Killed, 46; wounded, 180; missing, 64; total, 306.

54th Massachusetts (colored)—Killed, 8; wounded, 50; missing, 5; total, 63.

35th U. S. Colorins (colored)—Killed, 28; wounded, 143; missing, 70; total, 241.

Total killed, 232; total wounded, 1,162; total missing, 481. Grand total, 1,853.

A GENERAL court-martial was convened in Washington on Monday for the trial of such cases as may come before it. Its members consist of Brigadier-General James Barnes, U. S. Volunteers, President; Colonel George Gray, 6th Michigan cavalry; Colonel J. Egbert Farnum, 19th New York; Colonel J. H. Willetts, 12th New Jersey; Colonel Francis Price, 7th New Jersey; Lieutenant-Colonel C. D. Hilmore, 20th Maine; Captain E. T. Auchmuty, A. A. G. of Volunteers; Captain De Witt Clinton, A. D. C., Judge Advocate.

UNDER a new order, all men enlisting or re-enlisting into the Regular Army, from the different armies in the field, or from the district of Columbia, will be allowed to select the State, district, township and ward to which they prefer being credited. Enlistments or re-enlistments into the Regular Army made in the loyal States will be credited to localities where they are made.

THE military commission which was appointed to investigate the cases of the several prisoners confined in Fort Lafayette and Fort Warren have concluded their labors so far as New York is concerned, and have adjourned to meet in Boston next week Monday, at which place all the prisoners in Fort Warren will be duly examined.

LIEUTENANT-COLONEL J. N. MCELROY, formerly of the 20th Ohio Volunteers, has been appointed by Governor TODD Colonel of the 50th Ohio, which has been made up of re-enlisted men.

CAPTAIN WM. W. H. BURGER, Assistant Adjutant-General to Major-General Gillmore, came North on the last trip of the *Arago*. Captain Burger takes a short leave to recruit his health.

WE learn that Major H. L. Burnett, Judge-Advocate of the Northern and Ohio Military Departments, is about resigning his post, and resuming the practice of law in Cincinnati.

LIST OF PRIZES.

LIST OF PRIZES corrected by the U. S. Navy since the commencement of the Rebellion, adjudicated and sent to the Fourth Auditor's Office by the Navy Department, for appointment and distribution. Vessels or cargoes not material (*) are not ready for distribution, being in course of appraisement. The list is brought up to March 23d, 1864.

NAVY YARDS.

BROOKLYN NAVY YARD.

The *Niagara*, which had been lying off the Battery, went to sea on Saturday, the 19th inst. The schooner *Rachel Seaman* sailed on Sunday, the 20th, for the West Gulf Blockading Squadron, from which both vessels have been returned for repairs. The double-turreted iron-clad *Onondaga* was expected to sail yesterday. The supply steamer *Aroostook* is fitting, and nears her time. She left the navy yard March 5th, and is now undergoing repairs. The steam propeller *Proteus*, a boring gone into commission, is ready for sea and waiting for the crew. The steam propeller *Tacony*, which arrived March 4th from the coast of Texas, is now loading preparatory to sailing. The *Chenango*, *Miramichi*, *Magnolia* and *Brooklyn*, are undergoing repairs. The iron-clads *Dictator*, *Puritan*, *Passaconaway*, *Hydrangea*, *Tritonea*, *Helicbrae* and several others, together with the bark *Horace Beals*, and the steamer *B. R. Cuyler* and *Augusta* are ready for service. The steamer *Ino* is at the Navy Yard. The *Onoga* has just been received for fitting out.

Rear-Admirals Paulding and Gregory are engaged as the Wilkes' Court-Martial at Washington.

It is expected that Com. Radford will relinquish soon his present position at the Navy Yard to Commodore S. C. Woo, who reported for duty March 14th, and takes commands of the splendid iron-clad *Puritan*, now lying at Greenpoint. His absence from the Navy Yard will be much regretted by all, having, whose esteem, respect and confidence he has won through his gentlemanly deportment, benevolence, and attention to duty. We do not doubt but that his services will be as efficient and as much appreciated in his more active command as they have been at the Yard. Captain Case is a thorough officer, and well fitted to fill the responsible post which Commodore Radford vacates.

The gunboat *Pontoosuc* was dispatched last week on an errand of mercy—to look after the *Ida Delaware*, which was reported to be in very poor condition. The vessel was dispatched hurriedly last week in search of the Italian line-of-battle-ship *Re Galantuomo*, Captain Incio. Since her departure, we have received information which leads us to believe that our Italian friend is on her way, all right. The *Re Galantuomo* is at Havana, having been docked for the purpose of being caulked and repaired. On the night of the 7th of March, the Spanish rebels were to have destroyed her, but owing to the vigilance of the authorities, the plan was frustrated.

PHILADELPHIA NAVY YARD.

The steam sloop-of-war *Ticonderoga*, which has been undergoing repairs at the Navy Yard for a month past, left there on the 21st for Fortress Monroe, where she will order for her future destination will be given.

Screw steamer *Massachusetts*, 5, Acting Volunteer Lieutenant Wood commanding, arrived on the 18th. She made the run from Charleston Bar, by the way of Hampton Roads, in seventy-two hours. Her cruise, carrying mails and supplies to the blockaders, extended as far as St. John's River. On her way South, she captured the Rebel steer *Ferris*, loaded with cotton.

The launch of screw-steamer *Tuscola*, 5, on Saturday last, was successful in every respect. She was christened by Miss Mary E. Knowles. She now lies at the wharf south of the ship house. Her dimensions are as follows: Length, between perpendiculars, 100 feet; do., extreme, 103; breadth of beam, 24 feet 4 inches; do., at trans, 36 feet; depth of hold, 12 feet 3½ inches; tonnage measurement, 485.

The launch of the Yard will be light, and there is the same delay of vessels, owing to the scarcity of seamen.

BOSTON NAVY YARD.

The iron-clad *Monadnock* was launched at this Yard on Wednesday. She is heavy built, and is in no way connected with those vessels since under the supervision of Constructor Hunnewell. The *Monadnock* is one of the batch of four similar iron-clads ordered at the same time. The others are the *Canonicus* for Tennessee, as has the Philadelphia Yard; the *Mantonomah*, at the Brooklyn Yard; and the Agassiz-constructed vessel at the Monmouth Yard. The *Monadnock* lies with her stern looking for its sailing, much in live inches thick. There will be two large turrets also placed upon the vessel, which were manufactured at the Atlantic Works in East Boston, and are already in the Navy Yard. They are each nine feet high and twenty-one feet in diameter on the inside, and the thickness is eleven inches—being made of eight thicknesses of plating of one inch each. The deck of the vessel will be derived from two double engines, manufactured by I. P. Morris, Towne & Co., of Philadelphia. These are now on board. The armament will be fifteen guns. The depth of the cylinder is 32 inches, and the stroke 22 inches. The number of revolutions of the propellers will be between 30 and 40 per minute. The propeller of the gates is 20 inches feet, and the diameter is twelve feet four feet. The launch of the *Monadnock* was commemorated by a salute. The iron-clad *Canonicus* has had her new gun carriages removed, and is to be why will be ready for her gun carriages. It is to be remembered that during the last trial trip they worked very badly. She is now in the dry dock, and will soon resume classes. Side-wheel steamer *Santiago de Cuba*, 10, will soon be taken out of the dock, and will be ready for sea in six weeks. A large number of vessels are ready for sea, and will ship their crews.

PORTSMOUTH NAVY YARD.

Side-wheel steamer *Agawam*, 12, while on her passage from the Portsmouth Yard to the lower harbor, on the 19th, ran against the rocks off Dutton's Island, and shore, injuring her vessel considerably. Her port paddle boxes are badly store, and she leaks to some extent. On Sunday she returned for repairs.

Iron-clad steamer *Passaconaway*, is progressing slowly at the Yard, but will be ready to launch before long. Side-wheel steamer *Alabama*, 8, is at the wharf, completing her repairs. Sloop *Vandalia*, receiving ship, has had her crew on board at the present time. The other vessels at the Portsmouth Yard are, steam frigate *Franklin*, unfinished, and the *Passaconaway* and *Canonicus*, very lately begun.

VARIOUS NAVAL MATTERS.

Screw-sloop *Wyoming*, 9, was at Whampoa on January 29.

Screw-sloop *Iroquois*, 22, was at last accounts at Acapulco, and side-wheel steamer *Saginaw*, 5, at Mazatzlán.

There are 5,000 persons now employed at the Brooklyn Yard, and the monthly pay-roll amounts to $200,000.

Side-wheel steamer *Pembina*, 10, Commander Rowcenkendt, arrived at Boston, March 21, and will again go into the ship yard.

Iron-clad Pipestone, 2, is to be launched at Cincinnati next week. Steam is now ready for sea in two months.

The Navy Department has received information of the capture by the British steamer *Flamer* of the schooner of a schooner laden with one hundred and thirty-two bales of cotton and two barrels of turpentine. She was captured off the coast of Florida, on a line of Abaco, and acknowledges having run the blockade. She has no name.

Screw steamer *Wyandank*, 4, has been to the waters of Puget Sound, on account of representations from the headquarters of the Pacific Squadron as the expedition fitting out a relief expedition to supply those the commercial interests of the coast, and to destroy the Rebel vessels-of-war which have been fitted out in the ports and harbors of Chile in the vicinity of the Sound.

Iron-clads *Penobscot*, *Patapsco*, 3, and *Onondaga*, 4, building at Jersey City and Greenpoint, are expected to be ready for sea in about two weeks. The well-known steamer *Mercedita* is also undergoing repairs, and will be speedily pushed forward, and it is thought that the entire fleet will be ready for service before the 1st of May.

The contract for screw-steamer *Dandelion*, 14, a cause of copper and tin, weighing 30,000 lbs., was awarded to the Novelty Iron Works, New York. This propeller, Messrs. Delamater & Co., are the builders of the machinery for the vessel. The vessel is the heaviest ever cast in this country, and is to be forwarded to the propeller and her other machinery, and is so far forward that Mr. Wells expects to have her ready for sea in about three months.

Screw-steamer *Nipsic*, 4, which left Boston on the 31st of October last, with the Rear-Admiral Lardner Blockading Squadron, has been constantly employed since and severely tested. On her trial trip she was found to steam nine knots. The *Iroquois* is to go into commission at once. The orders have also been issued for the fitting out of the *Wyoming*, 9, and she is to be made ready for sea immediately.

Apparent Brooklyn ship-yards quite a number of vessels for the Government are in process of construction. A. J. Kenyon & Co. are building a steam tug, 150 feet length of keel, 26 feet beam, 12 feet depth, 23 feet, and the Odessa, 1,000 tons. H. Underhill is building the depth 16 feet, and the Commodore Stockton is also building. Mr. Iron-clad *Mendota*, to be in all respects a sister vessel of the *Osage*, 15, and the *Neosho*, 3, vessel of 2,000 tons, 200 feet long, 44 feet wide and 20 feet deep, is being built at the Navy Yard, and will be launched in less than time. She is built with an express view to speed, with great length, small capacity, and small tonnage to speed, with great length, small capacity, and small tonnage to speed, with great length, small capacity, and small tonnage to speed, with great length, small capacity, and small tonnage to speed, with great length, small capacity, and small tonnage to be made ready for sea immediately.

Lieutenant William B. Cushing, commanding screw steamer *Monticello*, has recently performed one of the most extraordinary feats of daring in the record of the war. He visited the town of Smithville, on North Wilmington, with two boats, landed, crept by a drowsy sentry on his hands and knees, captured two negroes and induced them to act as guides, went to a house used as headquarters by a rebel officer, entered the house, surprised the officer, captured him and men, captured, after a hand to hand fight, a rebel captain on the staff of Major-General Whiting, commanding of the district, and returned to his vessel with his prisoner before the rebels had become aware of the presence in their midst.

THE BRITISH NAVY.

On February 20th, a rhetorical bomb-shell was dropped into the House of Commons. The navy estimates then came up for discussion and consideration, and Sir J. Walsh, a member of the opposition, felt bound to criticise and find fault with them. He accordingly addressed himself to the task in a style exhibiting a singular combination of Anglo-Saxon sturdiness and recklessness. He could not approve of the estimates submitted, because they were totally inadequate to the emergencies of the present moment. They were only the stereotyped results of the policy of the last thirty years, which had been successful under totally different circumstances from the present. If there had been no war in America, no troubles in Denmark, there would have been the same amount. Everything was based upon the assumption that the exhausted conquest upon the wars of the Republic, which had helped maintain the peace for the last half century; Palmerston and Russell had deliberately disturbed the *entente cordiale* between Great Britain and France, by turning the cold shoulder upon the Emperor, and refusing to act in concert with him, either in the American, Mexican, or Danish questions, and yet the Admiralty was confiding along in the same old jog-trot that it had followed for years past—as if there were no naval armaments pending in Jutland or in the United States. It might be said that the government was creating a navy; so it was, but at the rate it progressed, it would take England "ten or fifteen years to become a very respectable naval power." The speaker declared himself as opposed to panic and panicky; but it would be to the eternal disgrace of England, if by a mere paltry regard to expenditure, "she suffered the trident of the ocean to slip from her grasp," and if the present estimates were doubled to-morrow, more would not be done than the requirements of the case called for. And in a like strain, Sir J. Walsh proceeded.

Had my member of the House of Commons known the meaning of the term, he might very appropriately have styled this "talk for Buncombe." But it had precisely the effect that might have been anticipated. It created laughter,

ARMY AND NAVY PERSONAL.

BRIGADIER-General Veatch arrived at Cairo last Saturday from Memphis.

BRIGADIER-General Averill is recovering from a dangerous illness.

BRIGADIER-General Brayman has taken command of the District of Cairo, vice General Reid, relieved.

GENERAL Bruce has been reinstated as Military Commander of Louisville, Ky.

COLONEL Wolford has been released from arrest, and ordered to report in person to Lieutenant-General Grant.

MAJOR-General Buell arrived in Washington last week Friday.

BRIGADIER-General S. A. Meredith has been ordered to report to General Rosecrans at St. Louis for duty.

BRIGADIER-General Custer, who was thrown from a carriage last week Tuesday, and very severely injured, is better.

COLONEL Durbin Ward of the Ohio Volunteers, has been relieved from service on Court-Martial, at his own request, and ordered to join his regiment.

MAJOR-General Gordon Granger is not sick in New York as has been reported in the newspapers. He is in command of the Fourth Army Corps, headquarters at London, Tennessee, and in excellent health.

THE statement in some of the newspapers that Colonel L. D. Baker had authority to raise a brigade is not correct. This denial is made by official request. No authority exists for him to raise troops.

CAPTAIN Samuel B. Lawrence, of the 10th infantry, hereafter on duty in the office of Provost-Marshal-General Fry, has accepted a position on the staff of Major-General Wallace, with the rank of Lieutenant-Colonel.

MAJOR-General John G. Foster is visiting his mother and friends in Nashua, N. H., where he quietly arrived on the 19th instant, with a report to hear of the continued infatuation of the General.

CAPTAIN W. Graves, Inspector of the Provost-Marshal General Department for Connecticut, has been ordered to report as Assistant to the Provost-Marshal of Rhode Island, relieving Capt. Wm. Silvey, who is ordered to Fort Independence.

MAJOR-General Lewis Wallace, who has been assigned to the command of the Middle Department, arrived in Baltimore last week Friday, and soon took up his quarters at the Eutaw House. The only staff officer who accompanied him was Lieutenant-Colonel John Woolley.

MAJOR-General Humphreys, chief of staff to Major-General Meade, arrived in Washington last week. He was escorted through both Houses and introduced to Senators and Representatives by Mr. Odell, Representative from New York.

THE President has issued an order assigning Major-General Milroy and Staff to Major-General Schenck's command. General Milroy has chief-of-staff, and Brigadier-General Averill chief-of-cavalry. Generals Milroy is to command a division.

MAJOR-General Hurlbut made a speech to the City Council of Memphis, on the 17th, giving them to understand if they did not clean the city and take measures to improve its sanitation, he would stop their collection of taxes, and do the work himself.

BRIGADIER-General Halleck has been assigned to the command of the Department of the East, with headquarters at Washington, N. C. In the order to relieving Colonel McChesney of his command of the sub-district, Major-General Peck pays a high compliment for the ability and efficiency exhibited in the management of affairs in that locality.

WE find in the newspapers a statement to the effect that Captain Sawyer, of the 21st New Jersey cavalry, who has just returned from Richmond, reports that he saw in the city, on Monday last, Lieutenant-Colonel Litchfield, Major Cole, Doctor Kinsman, and three other officers of a negro regiment, in one chamber of the sub-district. Major-General Peck pays an ice bill upon corn bread and water, and have a limited supply even of that.

LIEUTENANT-General Grant's staff is composed of the officers formerly with him in the military division of the Mississippi. Among them are Brigadier-General Rawlings, chief of staff; Brigadier-General Comstock, Colonel D. B. Iseff; Captain E. S. Parker, Assistant-Adjutant-General; Captain H. W. Jones, Assistant-Quartermaster-General; and Captain Orville E. Babcock, Lieutenant Duff, late Chief of Artillery, goes as Senior Aide-de-Camp.

IN the first New Hampshire Cavalry, now organized at Concord, Colonel Edward E. Cross, Lieutenant-Colonel Frederick Colonel; Captain B. F. Hutchins, of the Sixth U. S. Regular Cavalry, Lieutenant-Colonel; Captain Arnold Wyman, of the Second Cavalry, Major; Captain Frank S. Cummings, of Peterboro, late of Sixth New Hampshire Regiment, Adjutant. The regiment has already reached 600 men, with the most encouraging prospects for its early completion.

MAJOR-General Dana, commanding Federal forces in Texas, has issued an order from Galveston, January 30, for the granting of a sufficient number of copies of the Amnesty Proclamation to supply every demand, there may be for them, and requiring all officers and men to use every opportunity that may present itself to distribute them in the border of the State, in the expectation that numbers will desire to take the oath, that they may enjoy the full benefits of the proclamation.

LIEUT.-COL. Sanderson, recently returned from the Richmond prisons, and who was immediately afterwards placed under arrest on a charge of betraying a plot of his fellow-prisoners to escape, has been released. In a card published in New York he denies most emphatically that there was any just foundation for the charge against him, and says that "although a non-commissioned officer in the service of the military authorities, I am nevertheless proud to serve a Government which thus shows its determination to watch, with jealous eye, the conduct of its officers wherever they may be; and shall have every cause of complaint removed if I am afforded an early opportunity of explaining why my conduct as an officer and a gentleman whilst in the hands of the enemy."

BY a special order of the War Department the First Brigade of the Invalid Corps is composed as follows: 1st regiment, Major F. E. Trotter, commanding; 6th regiment, Lieutenant-Colonel F. S. Palmer; 17th regiment, Colonel George James; 19th regiment, Colonel Oscar V. Dayton; 22d regiment, Colonel George W. Woodward; 24th regiment, Lieutenant-Colonel Wm. A. Rich. Authority has been given to the Provost Marshal to select the brigade commander. The headquarters of the brigade is to be at Washington. Colonel George A. Rich, formerly Chief of the Invalid Bureau, has been appointed to the command of the brigade. By an order from the War Department the name of the "Invalid Corps" is changed to that of the Veteran Reserve Corps. The orders hitherto issued in regard to the corps are to remain in force.

THE DISPATCH THAT NEVER CAME.

A WRITER in *Blackwood's Magazine*, tells how the news of Solferino was awaited and received in Rome:

On the day of the battle of Solferino the Austrian Envoy at Rome dined with the Papal Minister. It was a very joyous little dinner, such as the highest spirits—satisfied with the present, and full of hope for the future. The telegram which arrived was said-hoc told that the troops were in motion, and that the artillery fire had already opened. No positive news of victory arrived in the first spirit, and all confident that before the sun should set the tide of victory would have turned, and the whole legions of the Danube be in full retreat on Verona. Next day, indeed, the Envoy came to dinner fortified with a mass of letters from men in high command, all of which assumed as a matter of fact that the Austrians had won the day. The Italians they never spoke at all. As the two friends sat over the dessert, they discussed with the coolness which should be going on over the battle-field. Was the conflict still continuing? Had the French Reserves been brought up? Had they, as was their wont, turned the position of the Austrians? was the fourth corps under the Prince NAPOLEON? They were forty thousand strong—could they have arrived in time from Milan? Such questions, and many others, did they talk over, but never once launching a doubt as to the issue, or ever dreaming that the day was not to renown all the past, and be the brightest in the annals of triumph in Milan. As they sat the perfect of police was announced and introduced. A message from one of the persons who were to be arrested and sent to prison—they were one hundred and eighteen, some of them among the first families of Rome—arrived at the Austrian Envoy's house, and was the game of reaction might be safe to begin. "No news yet, Signor PATTUTTI! come back at ten," said the Cardinal, as the messenger departed. The Envoy and the Cardinal and his friend were taking coffee, but less joyous, it seemed, than before. At least they looked more grave, and said another word. It was the street that might announce new-come tidings. "We have heard nothing since you were here," said the Envoy to the Minister. "Nothing, sir!" that, at a moment of immense exigency, they may not "have immediately bethought them of sending on a 'dispatch.'" "Well, I will not wait for it," said the Envoy, "when it comes" said the Envoy, "and I'd say make the "arrest at once." "I don't know; I'm not sure. I think I'd rather wait for the dispatch," said the Cardinal. "What if you were to come back at, let us say midnight." The perfect bowed assent. At midnight—it was the same story, only that the actors were more agitated; the Envoy, at least, worked up to a degree of impatience that showed that he was not quite so placid in denying that the result was certain, he continued to censure in very severe terms, the culpable carelessness of those charged with the transmission of the "dispatch." "But," "there is comes at last!" and a loud summons at the bell resounded through the house. "A telegram, Eminence," said the servant entering with the dispatch. The Envoy tore it open: there were but three words—"Beaten—*sanglante défaite*!" The Envoy, terror from the *sanglante défaite*!" The Envoy, terror from the hands of the overwhelmed and panic-struck Minister, and read it. He stood for a few seconds gazing on the words, as in a trance, then turning to the Envoy, he said, in slight emotion; then, turning to the Envoy, he said, "*Ben sire, allons dormir*;" and moved away with his usual quick little step, and retired.

THE following Commissions were issued by direction of Governor Answorth, of Massachusetts, during the week ending March 19th, 1864: 1st—12th Reg't, First Lieut. Charles C. Wehrun, to be Capt., Feb. 4. 16th Reg't, First Lieut. Richard F. Wilson, to be Capt., Jan. 30; 2d Lieut. Henry S. Nutting, to be Capt., Jan. 30; Second Lieut. Isaac H. Pinkham, to be First Lieut., Nov. 1, 1863; Sergt. Joseph Hall, to be First Lieut., Jan. 30, 1863; Sergt. James F. Mansfield, to be First Lieut., Feb. 14; Sergt. Frank McQuade, to be First Lieut., Feb. 14. 24th Reg't, First Lieut. Wm. N. Patridge, to be Capt., Feb. 6; Second Lieut. James M. Bogan, to be First Lieut., Feb. 6. 29th Reg't, Sergeant George King, (15th Reg't), to be Surgeon, March 18. 40th Reg't, First Lieut. Charles G. Hall, to be Capt., March 10; 2d Lieut. F. F. Howard, to be Capt., Feb. 26; First Lieut. Leonard G. Dennis, to be Capt., March 11. 73D Reg't (Second Veterans), Second Lieut. Edward Bacon, to be 1st Lieut., March 15; to be Capt. March 17. 59th Reg't (Third Veterans), Second Lieut. William H. Hazley, to be Capt., March 10; Second Lieut. Charles H. Morton, to be First Lieut., March 15; Corp. James N. Cox, to be 2d Lieut., March 15; Private Nahum Leonard, (40th Reg't), to be 2d Lieut., March 15. 1st Reg't of Heavy Artillery, George H. Larabee, to be Asstd. Surgeon, March 19. 2d Reg't of Cavalry, Maj. Caspar Crowninshield, to be Lieut.-Col., March 19; Capt. Wm. Sampson, to be Maj., March 1; First Lieut. Rufus W. Smith, to be Capt., March 1; Second Lieut. Hollis Rubin, to be First Lieut., March 1; Sergt's Samuel F. Tucker, to be Second Lieut., March 1. 5th Reg't of Cavalry, First Lieut. James L. Wheat, to be Capt., March 15; Second Lieut. Daniel H. Chamberlain, to be First Lieut., March 15. 8th Battery of Light Artillery, Joseph E. Spear, to be First Lieut., March 11; Sergt Harrison O. Simonds, to be Second Lieut., March 11. 7th Battery of Light Artillery, Second Lieut. James W. Bean, to be First Lieut., Jan. 10; Sergt's Charles S. Robinson, to be Second Lieut., Jan. 10. 10th Battery of Light Artillery, Second Lieut. Lewis V. Osgood, 3d Battery, to be First Lieut., March 15. 11th Unattached Co. of Heavy Artillery, Orderly Sergeant H. Few (Co. C, 23d Reg't), to be Second Lieut., March 12.

THE following is a list of resignation of officers of New Jersey regiments, reported since February 1, 1864:

5TH REGIMENT.—Second Lieut. George W. Dalley, of Co. D, Jan. 25.

7TH REGIMENT.—Capt. George W. Smith, of Co. C, Jan. 29.

9TH REGIMENT.—Second Lieut. Edward S. Moffat, of Co. K, Jan. 30.

10TH REGIMENT.—Capt. William Rennoyeon, of Co. F, Jan. 25; Second Lieut. William C. Fennimore, of Co. A, Feb. 22.

12TH REGIMENT.—Major John T. Hill, Feb. 24; Capt. Samuel D. Adley, of Co. D, Jan. 6; Second Lieut. Charles E. Troutman, of Co. G, Feb. 4.

13TH REGIMENT.—Surgeon John J. H. Love, Jan. 23; Second Lieut. James Kilroy, of Co. A, Jan. 24.

14TH REGIMENT.—Second Lieut. James O. Bedell, of Co. E, Feb. 10.

15TH REGIMENT.—Capt. Alfred S. Burt, of Co. B, Jan. 18; Second Lieut. James Bently, of Co. H, Feb. 1.

First Cavalry.—Capt. P. Penn Gaskell, of Co. F, Feb. 3.

3RD REGIMENT.—First Lieut and Quartermaster James B. Fagan, Jan. 26; First Lieut. George L. Beghie, of Co. F, Feb. 8.

Third Cavalry.—Capt. Frederick W. Rockefeller, of Co. L, Jan. 7.

3RD BATTERY OF ARTILLERY.—Second Lieut. Thompson H. Pollard, Feb. 4.

1ST REGIMENT OF ARTILLERY.—Second Lieut. James B. Goldsmith, Feb. 9.

The following is a list of promotions and appointments in the New Jersey Regiments, February 1, 1864:

2D REGIMENT.—Henry W. Baldwin, to be Second Lieut. of Co. I, Jan. 12.

3RD REGIMENT.—Sergeant-Major Joseph B. Wells, to be Second Lieut. of Co. D, Feb. 3.

9TH REGIMENT.—Second Lieut. James Loughlin, to be Second-Lieut. of Co. B, Dec. 8, 1863.

12TH REGIMENT.—First Lieut. Newton M. Brooke, of Co. F, to be Capt., Feb. 12; First Lieut. William E. Potter, of Co. K, to be Capt. of Co. G, Feb. 4; Second Lieut. James S. Stratton, of Co. F, to be First Lieut. of Co. K, Feb. 4.

30TH REGIMENT.—*Third Cavalry.*—First Lieut. Otto Stockmayer, of Co. K, to be Capt. of Co. L, Feb. 1; First Lieut. Oscar Krahmer, of Co. K, to be Capt. of Co. L, Feb. 18; Second Lieut. Oscar Krahmer, of Co. L, to be First Lieut. of Co. K, Feb. 1; Sergeant-Major August Bolley, of Co. K, to be First Lieut. of Co. K, Feb. 18; Sergeant Hubert Amhuter, to be Second Lieut. of Co. L, Feb. 1; Pvt. Emile de Bussiere, to be Second Lieut. of Co. K, Feb. 18.

THE Board assembled at Fort Monroe, Va., for the purpose of examining the officers of the 16th New York Artillery and Light Battery, report the following as having passed a satisfactory examination, and they will be retained in the service: Captain Wm. D. Carrell; First Lieuts. Horace H. Fowler, Horace H. Gray, F. F. Huntington, Second Lieuts. Amos Holmes, John W. Vermilye, James Second Lieuts. Amos Holmes, John W. Vermilye, James Second Lieuts. Amos Holmes, John W. Vermilye, James

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give an early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to national and other matters.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's, or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to specify their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the Journal is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, MARCH 26, 1864.

GENERAL GRANT AND THE ARMY OF THE POTOMAC.

GENERAL GRANT'S transfer of his headquarters to the Army of the Potomac will restore to that army the primacy which it long held, but was finally compelled to yield to the grand Army of the West, to which the Nation is indebted for the only victories of the war that have been fruitful in great practical *results*. The work which remains for the latter Army to do is still the foremost in the programme of operations looking to the complete crushing of the military power of the Rebellion; and no performance which we can think of as practicable in Virginia will begin to compare in importance with that which attaches to a campaign on the line of advance from Chattanooga, embracing the largest of the Gulf States and the severance of Rebel communications between the left and centre zones—a result which may be looked upon as involving the turning of the whole Atlantic slope, and its consequent abandonment by the Rebels.

But while it is unquestionably true that, regarded from a merely strategical point of view, the Western theatre of war presents elements of value that do not belong to the sphere of operations in Virginia, we are nevertheless at no loss to find reasons amply sufficient to justify General GRANT in choosing that latter as the scene of the opening campaign of the coming season of active operations. The Rebels have chosen to retain in that State the army which is acknowledged to be beyond all comparison their finest; and this army is commanded by the General who by universal accord is admitted to be beyond all comparison their very ablest military chieftain. This army, moreover, covers a point which, though originally of no marked military importance, has yet by force of circumstances, acquired the kind of value that belongs to a national capital. This army has lately been, and is now being strengthened; and there is good reason to believe that it has been the purpose of the Rebel leaders to make another invasion of the Loyal States and attempt once more the capture of Washington. For three years this force has succeeded in neutralizing the energies of the really grand Army of the Potomac, and has repeatedly been able to compel a retrograde movement on its part by a simple manœuvre menacing its communications. This condition of things does not befit the majesty and power of the Army and Nation. If it is bad in a military, it is still more damaging in a moral point of view. It has been suffered so long to continue, only because it has ceased to be unwisable, seeing that no General across capable of bringing victory out of the Army of the Potomac; and it has only been brooked at all because the series of brilliant successes achieved in the West covered up for the time the humiliation of our failures in Virginia. And hence we say that a campaign commencing in the defeat of the army of LEE and the capture of Richmond would be one contemplating very high and desirable objects; and we presume considerations analagous to those we have very briefly presented have determined the Administration and General GRANT to make Virginia the summer battle-ground.

There is no doubt that the significance of General GRANT's assumption of the direct command of the Army of the Potomac will be fully apprehended by the Rebel leaders, and that they will make the most energetic preparations to accept the great gage of battle which will be offered them. The first fruits of their appreciation of the magnitude of the coming contest are already seen in the fact of LONGSTREET's retreat into Virginia and in the rumor that troops are being brought up from North and South Carolina. It will be their policy to pile up LEE's battalions and confront the leader who has already dealt them such damaging blows, with all the available force of the Confederacy. It results, therefore, from the very nature of the situation that the impending struggle will be colossal in proportions and fierce in its nature; nor do we attempt to conceal that General GRANT has before him a task harder than any he has yet attempted, and one that will try his mastership to the utmost.

Fully appreciating this fact, we have, nevertheless, in the leadership of General GRANT a foundation on which to build well-grounded hopes of such a campaign in Virginia, as shall wipe away the shame of the many reverses which the National cause has there suffered. And first among our grounds of encouragement is to be counted the power and the prestige which General GRANT's presence will add to the Army of the Potomac. The fatal lack of the Army of the Potomac has not been any inherent defect in the body of the army—for in material, discipline, and military spirit, it is beyond a doubt the finest one we have in the field; its weakness has been in its Head. And by this we would not be understood as depreciating the eminent ability of the present as well as of previous commanders of that army; but the restrictions under which every General who has commanded the Army of the Potomac has worked, have been of a kind to prevent his being really its Head. All history proves how easily the noblest elements and the amplest resources can be neutralized and rendered nought by such defects. Indeed, it is hardly by a figure of speech that the commander is called the *Head* of the army; for it is by him alone that its parts and members are vitalized and controlled, and its inert mass made the instrument of his executive will. "The commander," says NAPOLEON in a passage which, though familiar to readers, might well seem extravagance, but which coming from him only serves to mark with trenchant emphasis the enormous importance attaching to this point, "the commander" is the *head*—he is everything to an army. It "was not the Roman army which conquered Gaul, "but Cæsar. It was not the Macedonian army "which made Rome tremble at her gates, but HAN-"NIBAL. It was not the Macedonian army which "marched to the Indus, but ALEXANDER. It was "not the Prussian army which defended Prussia for "seven years against the three most powerful States "of Europe, but FREDERICK." The Army of the Potomac will have in General GRANT a commander whose previous successes are a proof and warranty of his ability, and though we are fully impressed with the moral of our last week's article, in which we endeavored to guard against inordinate expectations of victory, we think we are also justified in accounting as a substantial ground of happy anticipation the fact that the Army of the Potomac will be under the headship of such tried military skill, energy and experience as are possessed by General GRANT, and that General GRANT's station is such as to give him free scope for all his talents.

We find a second ground of encouragement in the noble army which General GRANT will have with which to execute his plans and purposes. In numerical strength it will surpass what it has been at any previous period of its history, while the official authority now vested in General GRANT as commander of all the armies of the United States, will enable him to marshal in Virginia all the force he requires. To this end we may expect to see the policy of *concentration* promptly adopted by him. General GRANT has always shown a keen appreciation of that main element of success which consists in bringing to bear a preponderance of force at the actual point of contact—a fact which, by the way, certain inane critics have lately brought forward as detracting from General GRANT's claim to fame; but which even a slight knowledge of military history would have taught them to be one of the best proofs of good generalship. Furthermore it is understood that the Army of the Potomac will undergo such transformations in its organization as will greatly add to its efficiency, mobility and power. We have no desire to entrust official announcement in this regard; but we may say that the proposed changes will strike at the tap-root of one of the prime evils that have afflicted the Army of the Potomac—we mean, plainly, incapacity in certain of the commanders of corps. And, lastly, we may mention in this connection, another element of encouragement not less weighty than those already enumerated, but the full importance of which can only be known to those who have an intimate knowledge of the interior organization of American armies. It is this: the *grade* of General GRANT will put to rest forever all that spirit of jealousy, rivalry and ambition on the part of those in subordinate commands that has been the bane of the Army of the Potomac.

These who know the secret history of that army are aware how fatally powerful a part this thing has played; and it is not too much to say that to it may be traced the failure of more than one well-planned operation. Indeed, it is hardly in the nature of things that it should be otherwise. When subordinate generals are of the same grade as the general of the army, and may themselves hope by adroit management to come into supreme command, some of the strongest passions of our nature are forthwith enlisted in a service which cannot but prove enormously damaging to any army which has the misfortune to be a prey to such influences. It is fortunate that in the case of General GRANT there will be no opportunity for the action of these influences. Commanding the Army of the Potomac, and the Army of the United States, his rank as LIEUTENANT-GENERAL sets him up as a "bright particular star," and puts him on a pedestal which none can hope to reach save by deeds analogous to his own.

Such, we say, are some of the foremost elements of promise in the forecasting of the coming campaign in Virginia, and we think it much more profitable to dwell on them than to emulate the conduct of those who attempt to prescribe plans of operation to General GRANT, or indulge in prophecies of his intentions, which only serve to reveal their own impudence.

THE NAVY Department has given its endorsement to the publication of a new system of manœuvring fleets under steam, which, if generally adopted, promises to introduce into the movements of our armies afloat, the regularity and precision which characterizes tactical formation of troops upon land. Starting with the proposition "that the winds, waves, currents, and tides of the "ocean present no unusual obstacles to the "movements and manœuvres of a *steam*-fleet, that "the inequalities of the surface of the earth present "to the movements and manœuvres of an army," the author of this system, Commander FOXHALL PARKER, U. S. N., has bestowed much labor on the adaptation of military to naval tactics. The result of his labors he promises a work on "Fleet Tactics "under Steam," in which he purposes to discuss the whole subject of naval warfare at length. Preliminary to this he has published this "Squadron Tactics under steam," in which he demonstrates the practicability of manœuvring fleets under steam, as a application, with certain modifications, of the rules which govern the movements of bodies of troops on shore; a fleet being handled as an army, whose divisions, brigades, regiments and companies have each their appropriate representatives afloat. A squadron he forms of eight or more vessels, a division of four, and a half division of two. The vessels of the squadron are numbered in regular order from one to eight; the commodore being in number one, the senior captain in number eight, next in rank in number four, next in five, next in three, next in six, next in two, and next in seven. Instead of vessels, as on land, we have, as was to be supposed, but one line, the line abreast, vessels in any other order being designated as in column. These are the main principles of the formation in which it is sought to combine symplicity of formation with celerity of execution.

With the growing importance of our steam navy already developed to formidable proportions, there is need of some such system of naval tactics, in place of those formations which had their origin in the days of the cumbersome fleets of sailing vessels, manœuvred in accordance with geometrical problems worked out on shore, by men who knew more of mathematics than of seamanship. The time-honored works of

PAUL HOSTE and EKINS are of little value in these days of steam marine, when our young naval officer refers to his copy of DARBY EVERS, for no purpose but to see how ships were rigged and fitted in the days of NELSON and PERRY. Commander PARKER's adaptation of tactics military to tactics naval, is simple and ingenious. It deserves the attentive consideration of all interested in the subject of naval warfare.

OBJECTION is made to the position taken by this journal in favor of conscription without commutation. The Boston *Advertiser* thinks it would lead to a "wasteful system of the best material of society," although it at the same time acknowledges that it is not safe to trust to volunteering. Now, without discussing the question as to the possibility of "wasting" a man by making a soldier of him, but admitting, as we are very ready to do, that some men are of more service to the country in civil life than they could be in the field, we cannot see how this militates against the position we took. That position was that every drafted man should either go to the war or be represented there by a substitute; that the object of the draft was to recruit men and not greenbacks, which latter, experience had shown to be the main fruit of the old recruiting system by commutation or chase. The privilege of substitution would correct the evil of which our Boston contemporary complains, while it would at the same time satisfy the necessities of the Army. Instead of a money substitute, which we did *not* need, we asked a personal substitute, which we *did* need.

We acknowledge that compulsory military service is harsh; that it sunders the dearest ties; that it interrupts the smooth course of social life; that it savors of despotism. War is a despot and a cruel master; but war may be, as with us, the effort of society to save itself from anarchy, which is more cruel and despotic; and to save itself from the greater evil, society must submit to the less. It must bear sacrifice; it must endure bereavement of its noblest members; it must part with some of its choicest freedoms and most cherished rights to appease the monster who, cruel though he be, is to be its saviour and purificator.

The inequalities of laws are frequent and impossible to be avoided. The trial by jury, of which we boast so much, has its harsh side. But we do not propose to give up juries because their attendance is compulsory. Forced military service is a bitter thing, but if we are truly patriotic we will submit to it rather than to the consequences. The whole question turns on this, finally. Are we, or are we not, to depend on volunteering to recruit our armies? If we are, we want no conscription law; if we are not, then we need a law which shall be effective, and not leave us, like the old one, to the uncertain spasms of the volunteering spirit. Let us be either a productive conscription, or none at all. The sentiment that even an ineffective conscription tends to promote volunteering is worthless, for a more stringent law would have a stronger influence to encourage voluntary enlistments. In fact, we cannot see how the position can be turned.

An English Reviewer, in closing a long and able article on the Civil War in America, refers to the fact that, though we have not yet pushed our military successes to the point of final victory, the events of the past three years have wrought changes here which must henceforth place the United States in new relations to other states. "In the greatest silence," it says, "the Americans have become a nation, the States a state, the Congress a Parliament, the party chief a ruler, and train-bands a regular army. Here the world created something great, which will survive the war. The United States were, up to the present time, only the material for a great power, but now they are one. When the civil war is terminated, and if so, by a victory of the North, the Monroe doctrine—which for the Americans will mean a different form. It will claim respect southward as far as Terre del Puego, and northward to the whaling grounds of the Melville Straits. If slavery should be abolished in the South by force of arms, it will it be tolerated any longer in Cuba? With the evidently increasing liking for wars of conquest, will the Americans be able to endure foreign toll-bars at the north end of St. Lawrence Bridge at Montreal? And if by that time the French have not "evacuated Mexico, will they not be helped on their "homeward route?"

We leave it to time and events to answer these most pertinent inquiries. In view of a possible reply, after the manner suggested by this English progenosticator, it may be well for those most interested to consider now, while there is opportunity, whether they seriously propose to dispute with us the question of supremacy on the continent where we have so long been accustomed to dominate. If it were policy to maintain the *status quo* while the United States were but "the material for a great nation," it is wise to disturb it now that they are so fast convincing the most stubborn skeptic that they are a great nation, rich in resources, united and vigorous in action, trained and disciplined to war? If it was the part of wisdom to maintain friendly relations with a people devoted by tradition, policy and interest to peace, how much more now that we are armed and stripped for the fight. With the exception of some occasional elbowing of our British friends across the lakes, as on the Northeastern frontier and at Puget Sound, and the illstarred and unauthorized expeditions of Cuban and Central American filibusters, we have never been charged with disturbing existing relations with our continent. Nor should we do so; but the status once interfered with by any of the "high contracting parties," it becomes a question of the strongest, and, if it comes to this, we do not fear the issue.

THE suggestions of our correspondent "A. Q. M." whose letter on "Army Transportation in the Field," we publish in another place, are worthy of attentive consideration by all interested in the subject of relieving our marching columns of the cumbersome wagon trains that now drag with such dead weight in their rear, blocking up the roads, delaying operations and producing an infinite amount of vexation and profanity. It is evident that sufficient attention has not yet been given to this branch of logistics by those competent to detect deficiencies and introduce reform. We are glad, therefore, to publish any suggestions calculated to awaken attention to this subject, confident that it is within the capacity of American ingenuity to devise important improvements in the matter of Army transportation.

ALL of the five great powers of Europe have a trifle of work at present for their armies. Russia has a hard, heavy and tedious labor in Poland; Austria and Prussia are operating extensively against Denmark; and France has forty thousand men engaged in "pacificating" Mexico. England has the lightest military labor; she has only work for a few thousand red-coats in New Zealand. In few of the nations of Christendom could the gates of the temple of Janus now be closed—if that god had any temples.

DURING the siege of Suffolk, Virginia, by LONGSTREET's forces in 1863, Colonel DENISON, then in command of a New Jersey regiment, devised a new plan for throwing a bridge across the Nansemond, which was tried with such success as to call forth the special acknowledgments of General GREY for the service rendered. The principle upon which the bridge was built has since been subjected to an equally satisfactory test, we learn, in the case of a trestle bridge thrown across the Passaic River, below the Passaic Falls, in New Jersey. From the extreme simplicity and rapidity of its construction, this bridge would seem to have especial advantages for military use. It is built in sections of about sixteen feet, each resting at its ends on two strong posts, which are, by means of a simple machine on a carriage, set in position. The upper ends of these are made to pass through a cross-piece, by which they are to stop and rest at any distance above the water desirable. This arrangement is such that the greater the pressure from above the more firmly are the parts held together; while crossbeams are extended from post to pillar, materially strengthening the general fabric. These posts and the cross-beam being duly secured, a number of string-pieces are extended longitudinally, upon which the flooring of the bridge is laid down, when the section is complete and the carriage is moved forward to begin anew. It is claimed that, in active service, three men with two axes, one two-inch auger, and one 13-inch chisel, can construct a trestle in half an hour, or a man trained to it can do the same work with an axe in one hour; a section can be thrown in fifteen minutes. Though thus simple in construction and fragile in appearance, the bridge is said to be very strong. The largest field-artillery and siege-guns were hauled over the Nansemond bridge; and while was a still severer test, columns of infantry and cavalry were continually marched across, without doing it any sensible damage.

SAILORS who appreciate the importance of good ground tackle, will be interested in the facts developed in a recent debate in the English Parliament, on a bill requiring the testing of anchors and chain cables. Admiral ELPHIN STONE, in supporting the measure, mentioned the striking fact, that out of ten ships driven on shore upon Northumberland to the Dutch coast, all were lost with the exception of one, which, provided with good anchors and cables, rode for seventeen days till the weather mended.

Of merchant vessels thousand lives and some eleven million dollars worth of property, lost by the shipwreck of British vessels in 1862, a large proportion, he contended, might have been saved, had the captains of the lost vessels been provided with ground tackle in which they could place full confidence. The bill on which the debate arose, empowers private manufacturers and municipal bodies to erect testing machines for anchors and cables, and thus to make manufacturers responsible for their own work. The cost of one of these machines would not be more than £100, a trifling sum in comparison with the increase in the value of the cables thus tested. LLOYD's committee and the London Shipowners' Association, and all the great shipowners, as well as the anchor and cable manufacturers throughout England, have given their approval to this measure.

It is a matter worthy of consideration in this country as well as in England.

MAJOR FRANK S. BOND, A. D. C., by direction of Major-General Rosecrans, writes contradicting the charge which has been in several newspapers, to the effect that Lieutenant-Colonel Sanderson, of the 13th U. S., gave proof of cowardice at Chickamauga. General Rosecrans says he has no knowledge that such charge has ever been made against Colonel Sanderson, and that he is persuaded, if it has been made, that it is unfounded in truth. That so far as his personal observation went, Colonel Sanderson conducted himself in such a manner as to entitle him to special mention in his official report of the battle of Chickamauga. In his official report of the battle of Chickamauga, General Rosecrans says:—I must not omit Colonel J. P. Sanderson of the regular infantry, who having lately joined us, on those two days of battle, acted as aide-de-camp, and carried orders to the hotter portions of the field.

A WESTERN contemporary, noted for the elegance of its style and its taste in the choice of words, attacks the ARMY AND NAVY JOURNAL, for that "it goes down *keersolah* into the deepest of despond the moment it is reminded of the "approaching political campaign;" and further assails us as being "altilequent" and "pedagogistical." Of course it would be absurd in us to enter into combat with an opponent who flings at our columns verbal projectiles of such unmitigated and unmanly character as these. But we respectfully ask a withdrawal of the charge that we have ever been guilty of such an unmilitary manœuvre as "going "down *keersolah*."

COLONEL TAYLOR, Chief of Staff of the Headquarters of the Department of Washington, has addressed a letter to Corporal TRAYNOR, of the 1st Michigan Cavalry, saying: "The Major-General commanding this department desires me to thank you for the gallant and soldierly conduct by which you liberated yourself and comrade while disarmed and in the hands of armed guerrillas. The same manly spirit and action shown by you, if manifested by your comrades, would rid the department of the guerrilla bands calling themselves 'Confederate soldiers.'" This refers to an occurrence which took place last week. Traynor and a companion were captured near Munson's Hill by four guerrillas and taken into the woods. Watching their opportunity, they seized the guns of the two guards, shot both, and escaped. One of the slain was a rebel lieutenant.

THE members of the 124th Regiment, N. Y. State Militia, are making extensive preparations for a ball they purpose to give at the Academy of Music in this city, April 29th, in aid of the widows and orphans of deceased New York soldiers. The character of the entertainment and the excellent object in behalf of which it is given, should secure a large sale of tickets.

LIEUT.-GEN. GRANT arrived in Washington on the 23d. He was accompanied by his wife and son, and Colonel RAWLINS, Major-Generals MCPHERSON and RAWLEY and Captain BRIDEAU, of his staff. He was to leave immediately for the headquarters of the Army of the Potomac. The intended review of the army has been countermanded.

MAJOR-GENERAL MCPHERSON and staff left Cairo for Nashville on the 22d. Major-General SHERMAN arrive at Nashville on the 23d. The Senate on the 23d, in executive session, confirmed the nomination of Brigadier-General WILLIAM F. SMITH to be a Major-General of Volunteers to rank from March 9, 1864.

FOREIGN MILITARY AND NAVAL MATTERS.

A NEW school of naval architecture is to be established at Kensington, England.

A BRITISH soldier has been sentenced, at Montreal, to penal servitude for life, for striking a surgeon.

AN Austrian gunboat has captured a Danish merchantman in the Mediterranean, and has left the prize at the island of Cephalonia.

THE whole of the ARMSTRONG guns now in store are to be fitted with new sights before any further issue takes place, which will cause some considerable delay.

THE Prussians maintain that three-decked ships, which has been much decried of late, answers well in the field, and gives their men a vast superiority over the Danes.

THE demolition of the forts at Vido, in Corfu, commenced on the 19th of February. A large quantity of gun-cotton had been obtained from Austria to be used as an experiment on the occasion.

THE English Admiralty have appointed a committee to examine into the merits of certain terrible plans, by the application of which an enemy's ships may be whole fleet—with its guns, stores, and crew, might be blown out of the water in the twinkling of an eye.

THE Danish regular army, including all arms and the garrisons at home and abroad, consists of 72,000 men, 15,000 horses, and about 120 guns. Allowing for contingencies, the Danes might bring into the field an army of 70,000 soldiers, backed by a reserve of 50,000 militia, &c.

IN recognition of the satisfactory conduct of Vice-Admiral Sir ALEXANDER MILNE, Rear-Admirals ROUS KUPER in their respective commands, the Lords of the Admiralty have recommended and the QUEEN has been graciously pleased to confer the distinction of K. C. B., of the military order, on these officers.

A GENERAL order has been issued from the Horse Guards, announcing that in consequence of the numerous accidents that have occurred from the use of rifle in garrison fonts, the Field-Marshal Commanding-in-Chief, has directed that, as a general rule, in future rifle ball cartridge be not used in muzzle-loading rifles.

THE English Admiralty have ordered that all heavy Armstrong guns, including 7in. and upwards, are to be in future designated by their calibres, instead of by the weight of their projectiles, as the "40-pounders," "70-pounders," &c. will consequently cease to be recognized in the British service.

THE Prussian correspondent to the Danish navy writes that he does not think there can be any doubt as to the power the Germans have of driving the Danes utterly out of the field if they can only find sufficient force for that purpose, although the Danes themselves fondly believe that the subject admits of dispute.

TWO Japanese naval officers, who have been living in Holland for two years to superintend the construction of the ships of war for the Japanese Government, which are now being built at that Dutch port, have proceeded to the seat of war in Denmark, furnished with letters of introduction to Field-Marshal VON GABLENZ.

THE Emperor of Austria has declared that Gallicia is in a state of siege. In his decree he informs the Poles of Gallicia that they form an inseparable portion of his dominions, and that he must therefore by no chance of their attempting to realize the nationality principle by dealing with the district as one already in rebellion.

IT is reported from Italy that the Austrian government had ordered the men belonging to the 3d and 4th battalions of the Tyrolese regiment called the Jagers to rejoin their regiments before the 15th of March. Two more cavalry regiments are also said to have been ordered to Venetia. The force now in Venetia will number 160,000 men. All the batteries have been provided with rifled cannon.

THE English Government intended to arrest the progress of the civil war raging in America, in the Alps for the Danish Government, but their Minister in London having pledged himself that she should not leave Glasgow harbour, unobserved, the vessel was allowed to complete her for launching, to prevent the great inconvenience that would arise from her occupying the building of the next iron-clad.

THE French have a small war on hand in the Senegal country. A large party of men were cut off a short while ago whilst in their way to the interior, and only three mounted men escaped to tell the tale of the massacre. A strong force was instantly organized, and a native hunt commenced. After some days' hard marching the enemy was brought to bay, and ample revenge was taken for an unprovoked assault.

THE London *Army and Navy Gazette* intimates that the Horse Guards Office has abandoned the project for the defence of Canada, which the *Gazette* thinks ought to secure the support of those who think the loss of Canada would be the commencement of a retrograde movement which would eventually reduce Great Britain to the condition of Holland as a state, and satisfy the heart of Mr. GOLDWIN SMITH and his followers.

THE two rams building at Messrs. LAIRD'S, Birkenhead, were carefully inspected by persons connected with the English Admiralty, who are charged with a view to purchase. One of them, nearly finished, has two turrets on Captain COLES' principle, with two guns in each, well fitted in every respect. The iron plating is 4½ inches thick. It is supposed that the vessel will be sent afloat for trial some other Government.

THE English Admiralty have issued an order to the effect that next June twenty-eight lads will be admitted by competitive examination at the dockyards of Woolwich, Portsmouth, and Devonport, for the appointment of Naval Engineers. Candidates must be between the ages of fifteen and sixteen years. Those who pass the competitive examination will serve six years in the steam factory department before taking up the appointment.

THE suspicious steamers which have hailed so many vessels at the mouth of the English Channel, and which were supposed to be Confederate cruisers, turn out to be Hamburg steamers, sent out to warn homeward bound German merchantmen of the European war. Instructions have been telegraphed to be given, a large board is immediately exhibited over the steamer's side, on which is painted, "Denmark at war with Germany," and should the weather be favorable, further news is exchanged.

WE learn by a letter from Dresden that all the valuable contained in the "green vault" in that city, and also the Electoral treasury, have been conveyed for security to the Konigstein fortress. This is a measure which is really taken in times when danger threatens, and which cannot be taken as a barometer of the political atmosphere. Although this precaution proved superfluous in 1850, as the danger feared never reckoned itself, still it does not prove that the precaution just taken from making an impression on the public mind.

FIFTEEN hundred Polish insurgents having escaped the town of Opatow, in the government of Radom, were attacked on the 22d of February at daylight by a considerable Russian force. The engagement lasted the whole day. The Poles, who had barricaded themselves in the houses, inflicted a heavy loss upon the Russians. Their position was considered by military gents towards the evening, when the Poles retreated in good order under cover of the night to the forest of St. Croix. Forty houses in the town were reduced to ashes.

THE English target-ship *Asserion* recently sunk from the effect of a steel shot which glanced from the head of one of the guns, passed through the bottom both sides of the ship, making a free passage for the water. As the tide fell the shipwrights were able to stop these holes from within and Bigby, Henry's tug the hull of the ship is found to be so very much shaken that it was thought necessary to remove all the armor-plates on the starboard side before any attempt should be made by the dockyard lighters or steam-tugs to float her.

A RECENT trial of rifles in England terminated in favor of the Whitworth rifle, beating the Henry competitors. At five hundred yards the radial deviation of the best three was as follows—the figures representing the deviation in inches: Whitworth, 8; Henry, 17 with large bore and .69 with small bore, Storm .67, and Baker .87. At 1000 yards, however, the competition was confined to Whitworth and Bigby, Henry's rifles being disqualified for so long a range. The average radial deviation was as follows: Whitworth, 1.45; Bigby, 1.58.

A COUPLE of 300-pounder smooth-bore guns, with coiled tubes and solid ends, made in the Royal gun factories at Woolwich, England, were recently proved at the Fluessingen proof range. The gun proved was fired two rounds, with a charge of 50 lb. of powder and a 60 lb. cylinder shot, and two subsequent rounds of 25 lb. of powder and a 60 lb. cylinder shot. It was then ascertained that the shot could not be driven home. The fifth charge, partially loaded, was exploded, and on examination a few was discovered in the inner tube near the breech. The second gun withstood the test well, and will be sighted and prepared for cupola service.

THE Austrians have a considerable number of war vessels afloat to protect their commerce from the Danish cruisers. The screw-frigate *Schwartzenberg*, of 51 guns; the screw corvette *Dandolo*, 22 guns; the screw corvette *Novara*, 22 guns; the screw gun-vessel, and the screw schooner *Kerka*, 6 guns, are cruising in the Mediterranean. In the Adriatic are the screw steamers *Radetzky* and *Erzherzog Max*, each; and the paddle-wheel steamers *Velebit* and *Fiume* (now being armed for the purpose of cruising in the English Channel and the North Sea), 6 guns each; the screw liner *Kaiser*, 91 guns; the screw frigate *Radetzky*, 36 guns; the corvette *Archduke Frederic*, 22 guns; and the paddle-wheel steamer *Stadion*, 6 guns.

THE Danish Navy comprises two 84, one 72, one 60, four frigates, four corvettes, one gun brig, and three small craft—sailing vessels; one screw steam frigate of 60 guns, one of 40 guns, and two nearly ready for launching, three screw corvettes, six screw gunboats, with some smaller vessels; total screws, 67 vessels of 124 guns. Many of the ships are old, but may be made available for home defence. The Danes have a large number of excellent seamen, and many merchant vessels capable of mounting guns, but their Navy appears to have been neglected, and not kept in a state to meet an emergency that should have been anticipated. The squadron of Norway at the peace of 1815 was a severe blow to the naval power of Denmark.

THE Paris correspondent of the London *Army and Navy Gazette* says that the two Confederate vessels being built at Nantes are now approaching completion, and sea captains with commissions in their pockets, duly signed by the chief of a recognized belligerent power, are waiting in Paris to take command of them, provided the French government do not lay hands on them at the last moment. The works have not as yet been interfered with, but this may be out of consideration for the builders, who, like the builders of the *Pompero*, would be in an awkward fix if stopped midway. They have invested their entire capital with the Confederates the French builders will be safe, and if the ships are detained, the agents of Mr. DAVIS will be forced to sell and make the most of weapons rendered useless to Secessia.

THE damage which the Danish navy may inflict on Austrian commerce is very considerable. The annual exports and imports of Austria amount to 136 millions of Austrian florins (367,200,000fr.); 15,000 vessels annually arrive at or leave the Austrian ports. The Austrian mercantile marine is composed of 500 vessels, manned by 35,000 men. The Prussian merchant vessels amount to 1,800, manned by 12,000 men. Hamburg vessels frequently visit the Austrian ports and exports reach the value of 336,000 marks banco (621,600fr.), and 3,000 vessels arrive at or leave the place. Lubeck has 200 vessels; its trade amounts to (320,000,000 thalers (530,800,000fr.). Lubeck imports and exports to the value of 20,000,000 marks (37,000,000 l.); it has 60 vessels, and the crews amount to 1,500. The merchant vessels of Hanover, Oldenburg, and the two Mecklenburgs form a total of about 2,000.

THE Danish consul-general at Leipzic, recently visited the citadel at Magdeburg, where he was very civilly received by the governor, and assured that the Danish prisoners were well treated and not overworked. He treated like his (the governor's) own soldiers. The consul had an opportunity of satisfying himself that 3,000 per month is allowed for a person confined in the citadel, which he passed through, attended by the adjutant of the general. At the time there were 180 Danish prisoners. The Danish Schleswigers, who were quartered in large, light, and well-heated rooms, amply provided with beds. The allowance is the same as that of the Prussian soldiers consisting of four silver cents per day, and an additional penny in times of war, besides tobacco and rum. The officers receive about 3,000 per month, and are allowed to leave the city on parole, for which purpose the officers of the garrison have offered them plain clothes. At Magdeburg also regimental bands are formed for making collections for the prisoners, and the consul also proposed to raise a fund privately for ameliorating their position.

THE following statement of the strength of the Austrian and Prussian fleets has been published at Stettin:—The Austrian fleet, exclusive of vessels upon the inland waters of the Empire, consists of one screw 91 gun ship, two 84 gun ships, 6 gun frigates, together 1,800 horse-power, and 154 guns; two corvettes, 450 horse-power, and 44 guns; three screw-corvettes, 600 horse-power, and eighteen guns; seven iron-clad frigates, 4,250 horse-power, and 226 guns; ten gunboats, 1,850 horse-power, and 40 guns; ten paddle-wheel boats, 1,600 horse-power, and 36 guns; two steam yachts, 430 horse-power, and 4 guns; all 40 ships, carrying 656 guns. The Prussian fleet is stated as consisting of four corvettes, each carrying 23 guns; two ditto of 17 guns; two ditto of 12 large gunboats, with 3 guns each; fifteen smaller ditto with 2 guns each; one yacht, one paddle-wheel corvette guardship, carrying 2 guns; two screw-propeller boats, one carrying 2 the other 4 guns; and two steam tugs. An iron-clad is building for the Prussian Government at Hamburg. The entire Prussian fleet consists, at present, therefore, consists of 35 vessels, carrying 243 guns.

A DISPATCH from Copenhagen of February 29th, says that, a division of five steam transports had left that city for Frederica, where the board three companies of sappers, provisions, and war material. The Danish Government having decided on offering an obstinate resistance, is concentrating all its forces between Fredericia and Alsen, of the future, is placing it in a position to stand the siege. The garrison will be reinforced, without that of Duppel before the end of February. The pupils of the military school have suspended their studies to join the army, and have been sent to Frederica. They are to form a select company.

AT the close of the Patent Office Fair in Washington last week, President Lincoln, in answer to loud and continuous calls, made some remarks, commencing thus: "I have been to see the show frequently, on account of which we are engaged fills heavily upon all classes of people, but the most heavily upon the soldier. For it has been said, all that is necessary for the life of the nation, while all contribute of their substance, the soldier puts his life at stake, and often yields it up in his country's cause. The highest merit, then, is due to the soldier."

THE discipline in Magruder's army has become so lax that he has issued an order urging upon officers and men the imperative necessity of taking care of their bayonets, however inconvenient it may be for them to do so, and upon the officers the duty of punishing severely any neglect of such cowhides. He also says he holds the officers responsible for the conduct of their men, and calls upon them to use their weapons at all hazards against those who attempt to desert, and any who excite mutiny.

ARMY GAZETTE.

LIEUT.-GEN. GRANT ASSUMES COMMAND.

HEADQUARTERS OF THE ARMIES OF THE U. S.,
Nashville, Tennessee, March 17, 1864.

GENERAL ORDER No. 12.

In pursuance of the following order of the President:

"EXECUTIVE MANSION,
Washington, March 10, 1864.

"Under the authority of the act of Congress to appoint to the grade of Lieutenant-General in the army of February 29, 1864, Lieutenant-General Ulysses S. Grant, U. S. Army, is appointed to the command of the armies of the United States.

"ABRAHAM LINCOLN."

I assume command of the armies of the United States. I appointed to be with the field, and, until further orders will be with the Army of the Potomac. There will be an office headquarters in Washington, to which official communications will be sent, except those from the army where the headquarters are at the date of their address.

U. S. GRANT, Lieutenant-General.

APPOINTMENTS BY THE PRESIDENT,

BY AND WITH THE ADVICE AND CONSENT OF THE SENATE.

IN THE ARMY OF THE UNITED STATES.

FIRST REGIMENT OF CAVALRY.

First Lieutenant Isaac H. Duckelberger, to be captain, June 30, 1863, vice Hardcastle, dismissed.

First Lieutenant Robert Ransom, to be captain, September 28, 1863, vice Gamble, promoted to the 4th Cavalry.

Second Lieutenant Charles Ogilvie, to be first lieutenant, June 8, 1863, vice Ransom, promoted.

Second Lieutenant Wm. Wallace, to be first lieutenant, June 9, 1863, vice Ogilvie, the regimental commissary.

Second Lieutenant Wm. T. Overton, to be first lieutenant, September 13, 1863, vice Bigelow, retired.

Second Lieutenant Wm. T. Sumner, to be first lieutenant, September 28, 1863, vice Sumner, promoted.

First Sergeant Wm. Hall, of company D, to be second lieutenant of company I, April 1, 1863, to fill an original vacancy.

Sergeant Robert T. Reed, of the regimental service, to be second lieutenant, June 1, 1863, vice Ogilvie, the regimental commissary.

First Sergeant Wm. H. Wood, of company C, to be second lieutenant, October 31, 1863, vice Harrington, dismissed.

SECOND REGIMENT OF CAVALRY.

Major Innis M. Palmer, 6th the 5th Cavalry, to be lieutenant-colonel, September 23, 1863, vice Kenly, retired.

First Lieutenant David S. Gordon, to be captain, April 23, 1863, vice Starr, promoted.

First Lieutenant Robert S. Smith, to be captain, April 27, 1863, vice Hall, dismissed.

First Lieutenant Charles McK. Lesser, to be captain, June 9, 1863, vice Gerhardt, killed in battle.

Second Lieutenant Frederick W. Schaarte, to be first lieutenant, April 27, 1863, vice Smith, promoted.

Second Lieutenant Robert Lennox, to be first lieutenant, April 29, 1863, vice Potter, retired.

Second Lieutenant Edward J. Spaulding, to be first lieutenant, June 9, 1863, vice Lesser, promoted.

Second Lieutenant Michael Lawless, to be first lieutenant, June 10, 1863, vice Spaulding, promoted in the 2d Cavalry.

Private George D. W. Seldon, to be second lieutenant, April 8, 1863, vice Cowan, resigned.

Chief Charles H. Lester, to be second lieutenant, June 13, 1863, vice Barnham, promoted.

Sergeant Major James Cahill, to be second lieutenant, August 10, 1863, vice Schaarte, promoted.

First Sergeant Charles H. Mosher, of company I, 4th Cavalry, to be second lieutenant, August 10, 1863, vice Lennox, promoted.

Sergeant Frederick Hall, of company C, 2d Cavalry, to be second lieutenant, August 10, 1863, vice Renshaw, whose appointment has been cancelled.

First Sergeant Patrick W. Horrigan, of company B, to be second lieutenant, October 31, 1863, vice Cowley, promoted.

THIRD REGIMENT OF CAVALRY.

Captain Joseph H. McCauley, 4th Cavalry, to be major, September 23, 1863, vice Newby, retired. (Since retired.)

Captain Richard Comba, 2d Cavalry, to be major, November 2, 1863, vice McArthur, retired.

First Lieutenant Lee Kephart, 4th, to be captain, March 31, 1863, vice Morris, promoted to the 6th Cavalry. (Since dead.)

First Lieutenant and Adjutant Joseph B. Campbell, September 13, 1863, vice Elwell, deceased.

First Lieutenant Edward W. Turton, to be captain, October 27, 1863, vice Hirsh, promoted in the 4th Cavalry.

First Lieutenant John E. Phelps, to be first lieutenant, October 1, 1863, vice Sutton, promoted in the 4th Cavalry.

Second Lieutenant Frederick J. James, to be first lieutenant, October 28, 1863, vice Turton, promoted.

Sergeant Major Alexander Sabrina, to be second lieutenant, April 30, 1863, to fill an original vacancy.

Private William J. Cain, of the 2d Artillery, to be second lieutenant, April 30, 1863, to fill an original vacancy, appointment has been revoked.

Sergeant Major George Hartleben, to be second lieutenant, October 31, 1863, vice Waite, promoted.

FOURTH REGIMENT OF CAVALRY.

SECRETARY OF WAR.

ASSIGNMENT TO COMMAND.

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE, WASHINGTON, March 24, 1864.

General Orders, No. 113.

1. Major-General Lorenzo Thomas, U. S. Vols., is assigned to the command of the Middle Department, and of the middle military division, vice Major-General Schenck.

2. The command of Major-General Schenck will report direct to the War Department, and his post will not be considered as belonging to any geographical department.

By order of the

SECRETARY OF WAR.

E. D. TOWNSEND, A. A. G.

EXTORTION.

WAR DEPARTMENT, WASHINGTON, March 19, 1864.

WHEREAS, it has been represented to the President that John Pic, Colin & Washington, did, in the month of January, 1864, take from Lieutenant Colonel Watson, a discharged private soldier of the 69th Pennsylvania regiment, one hundred and sixty-five dollars, in the form of two notes of one hundred dollars each, and one of sixty-five dollars, for procuring the said Watson a back pay and bounty due the said Mullen from the United States Government;

Therefore, it is ordered that John P. Colins be and allowed to keep as a agent or attorney for the collection of any claim to be paid by any bureau of this department, one hundred dollars of the said sum thereof. The solicitor of the War Department is requested to cause the arrest of the said John P. Colins, and to prosecute him for the benefit of said Mullen, the amount of money wrongfully taken from him. By order of the

SECRETARY OF WAR.

E. D. TOWNSEND, Assistant Adjutant-General.

DISMISSALS

For the week ending March 19, 1864.

Major Frank Bischoff, 99 Missouri artillery, to date March 16, 1864, with loss of all pay and allowances, for advising and permitting soldiers to desert, making false musters and returns, conniving at corrupt practices in the service, and conduct prejudicial to good order and military discipline.

Surgeon E. L. Sanderson, 54th Missouri cavalry, to date March 12, 1864, for habitual drunkenness.

Captain Daniel B. Gumbes, 24 Pennsylvania Reserves, to date December 31, 1863, for drunkenness.

Captain John F. Coulter, Assistant-Quartermaster of volunteers, to date March 16, 1864, for drunkenness.

Captain John R. Dilcox, First Lieutenant Robert Stockdale, and Second Lieutenant Joseph H. Wilson, 1st Missouri cavalry, to date March 8, 1864, for drunkenness, desertion of their commands, and conduct highly prejudicial to good order and discipline. That Lieutenant John E. Dilcox, 33d Indiana volunteers, First Lieutenant Robert Stockdale, and Second Lieutenant Joseph H. Wilson, 1st Missouri cavalry, be dismissed.

Assistant and Quartermaster Robert C. Wilson, 4th Illinois cavalry, to date March 8, 1864, for non-rendition of his accounts.

First Lieutenant Charles Shields, 1st Missouri artillery, to date March 14, 1864, with loss of all pay and allowances, for making false and false to have certain enlisted men under his command mustered for the payment of bounties, and for drunkenness on duty.

Captain Lucien Hurd, A. B. Farnsworth, 11th United States infantry, to date February 9, 1864, for absence without proper authority, having been published incorrectly in General Orders No. 49, current series.

The following officers, to date February 24, 1864, for the causes mentioned, having been published officially, and failed to appear before the Commission:

Absence without proper authority.

Surgeon William P. McCurdy, 8th Pennsylvania volunteers; Surgeon Henry Gray, 1st Maryland cavalry; and

First Lieutenant Wm. G. Ashton, 106th Pennsylvania volunteers; First Lieutenant A. B. Hall, 1st U. S. colored troops; and

First Lieutenant G. S. Brown, 104th New York volunteers;

First Lieutenant Wm. H. Hall, 1st Delaware volunteers;

First Lieutenant Wm. Wright, 6th Ohio volunteers;

Second Lieutenant Wm. Vindal, 48th New York volunteers; and

Second Lieutenant A. W. McLellan, 1st Maryland volunteers.

Absence without leave.

Chaplain W. Gibson, 48th Pennsylvania volunteers; and

First Lieutenant R. W. Green, 39th Massachusetts volunteers.

Dismissal approved.

The order of dismissal heretofore issued in the following case has been approved by the President:

First Lieutenant James B. Brown, 1st Indiana artillery, to date January 28, 1864, for neglect of duty and absence without leave.

Restored to commission.

Captain R. M. Taylor, 12th New York cavalry, heretofore dismissed, is restored to his command, from which he was absent by reason of duty, provided the vacancy has not been filled by the appointment of his successor.

NOTICE TO DELINQUENTS.

The following officers having been reported at the headquarters of the army for the Department of Washington, they have hereby notified that they will stand dismissed the service of the United States, unless within fifteen days from the date of this notice they appear before the Military Commission now sitting in Washington, of which Brigadier-General Hoskins, U. S. V., is President, and show sufficient reason for their absence from their commands:

Forty dupliate discharges to enlisted men in violation of paragraph 165, Revised Army Regulations.

Lieutenant-Colonel Alfred Ely, 22d New York Vols.

Major Henry M. Alles, 8th New York Vols.

Second Lieutenant Andrew C. Reynolds, 1st New York cavalry.

Captain R. G. Prendergast, 1st New York engineers.

Absent without leave from Camp Parole since January 30, 1864.

Second Lieutenant Lewis Smith, 8th Ohio Vols.

For improperly enlisting a minor.

Captain James A. Harris, 4th Ohio cavalry.

Captain S. R. Clark, 11th Independent Battalion, Ohio cavalry.

Disobedience of orders.

Colonel William T. Lyon, 16th Illinois Vols.

Absence without leave.

Captain L. M. Sargent, 1st Massachusetts cavalry.

Captain J. F. Baker, 1st U. S. Sharpshooters.

EXEMPT FROM DISMISSAL.

The following officers, against whom charges and heretofore published, are exempt from being dismissed the service of the United States, the military commission appointed to try said officers No. 15, series of 1863, from the War Department, having reported that satisfactory explanations have been made in their respective cases:

Major J. S. Smith, 16th Illinois cavalry.

Captain A. G. Gilpin, 11th Illinois infantry.

Lieutenant G. A. Reese, 16th Illinois cavalry.

Captain W. P. Dyer, 1st U. S. colored troops.

Hospital Steward John W. McFadden, U. S. A., now at Jackson Hospital, Memphis, Tenn., has been declared honorably discharged.

NOTICE TO MARINERS.

The following notices have appeared during the past week:—

ATLANTIC COAST, CHARLESTON BAR—SAILING DIRECTIONS FOR CROSSING THE BAR.

A Light-ship is moored in six fathoms off Charleston Bar, She is painted red, and has the name Charleston Light-ship painted letters on each side. She shows no lights at present, but carries two black balls vertically at the foremast head.

From the Light-ship.

1. Lighthouse on Fort Sumter, W. by W. distant 10½ miles.
2. Army Signal Tower, S and of Folly Island, W.S.W., distant 9¼ miles.
3. Army Signal Tower, on the north end of Morris Island, W. by N. distant 5 miles.
4. Fort Sumter, NW¼N, distant 6¾ miles.
5. Outer Buoy, Bathimetric Shoal, NE¼E, distant 6 miles.

Vessels should not bring the Light-ship to the westward of, and on coming up with her will steer to west over the Bar, passing in succession the buoys on the Bar, which are painted in black and white in horizontal stripes.

The outer and inner Buoys are First Class Nun Buoys; the others are Second Class Buoys.

The distance from the Lightship to the outer Buoy is a little over 9 (9-5) miles; from the outer to the inner Buoy is nearly 3 (3-5) miles. The Buoys are moored to 30, 24, 18 and 12 feet at low water respectively.

The best sailing line is within 150 feet of the Buoys, on either side, where will be found 12½ feet at mean low water. Mean rise and fall on this 6 feet. Vessels drawing more than 20 feet of water will not cross over the Bar from 1 to 2 P. M.

Vessels should not be set across the sailing line over the Bar, and should be allowed to drift.

Vessels drawing 12 to 14 feet may cross at any time after half flood, but should not attempt to cross over the first or last Buoy on the ebb, as the tide sets most rapidly upon the Bar at the time.

Vessels drawing less than 12 feet should cross the Bar during the last quarter of the flood, and should not wait for high water.

The Buoys are moored to the following bearings, the anchorage of the first of Fort Wagner mid river N3W 2¾ miles, and anchor is 5 to 6 fathoms.

If unloading to anchor off Lighthouse Inlet, steer from inner Buoy NW by W. for the Lighthouse, distant 3 miles.

Good holding ground in five fathoms, at mean low water, with soft, muddy bottom, between the outer Bar Buoy.

All bearings are magnetic, and distances in nautical miles.

Buoys placed in January, 1864.

C. O. BUTTELLE, Assistant Coast Survey,
Acting Lighthouse Inspector.

Notice is hereby given that the Spindle placed in each of the inner Buoys, opposite to Sors, No., was carried away in the recent gale. A Spar Buoy will be placed in each Buoy as soon as possible.

The Spindle placed on the outer Buoy, on Monday, Nov. 9th, has the Lower Buoy placed on the outside of it, and will be replaced as soon as possible.

By order of the Lighthouse Board.

J. E. HAXLEY, Lighthouse Clerk, 1st dist.

Portland, March 17, 1864.

Notice is hereby given that the South Shoal Lightvessel, which parted her moorings on the 15th ult. has been replaced upon her station.

On the evening of April, or as soon thereafter as possible, the Nun and Can Buoys belonging to the Harbors, Bays and Sounds will be replaced, and the figure 2 now occupying their stations removed.

A Can Buoy will be placed in 4 fathoms water, on the Middle Ground, about a quarter of a mile, and in the track of vessels bound East or West.

A Third Class Nun Buoy, with red and black horizontal stripes, will be placed on the eastern edge of Cross Ledge.

By order of the Lighthouse Board.

JOHN MARSTON, Lighthouse Inspector.

Boston, March 19, 1864.

CHICKERING & SONS,

MANUFACTURERS

GRAND, SQUARE, AND UPRIGHT

PIANO-FORTES,

Warerooms, 652 Broadway, New York.

The superiority of these Instruments is amply demonstrated by the voluntary testimony of the first concert artists of the day, and by the favor and confidence of tone and workmanship hitherto unobtained by any other manufacturer. This fact is remarkably seen in the Chickering Pianos has scarcely tested their musical qualities, and yet they are rapidly winning the favor of the very listening enthusiasm in which they are heard.

MESSRS. C. & SONS have been awarded 56 PRIZE MEDALS at various Fairs, and by the verdict of their musical constituency, their claims resting upon the combined judgment of the people, are the highest of any house, and absolutely of home.

Have just published

PRACTICE IN THE EXECUTIVE DEPARTMENT OF THE GOVERNMENT,

Under the

PENSION, BOUNTY AND PRIZE LAWS of the UNITED STATES.

By JOSEPH SEWELL,

1 vol. 8vo. law sheep, $3 50.

From the U. S. Pension Office.

"A careful examination of so much of this book as relates to Pension Law and Practice has led me to the conclusion that it is the correct use of attorneys and claimants before this Office, to more valuable terms than can be stated. The manner of all obstacles or matters, and the attempt to meet all inquiries as to the details and principles of the only Pension Law which now has any great interest for claimants or others, may be regarded as of unusual merit. The clear style, the candid tone, in which you have treated the several topics embraced within your plan should also commend the work to general favor. I can cordially recommend it to the legal profession or persons interested in the various matters of which it treats."

Sent free by mail to any address on receipt of the price.

NAVY SUPPLIES.

NAVY DEPARTMENT,
BUREAU OF PROVISIONS AND CLOTHING,
March 19, 1864.

SEPARATE PROPOSALS, based upon and endorsed "Proposals for Navy Supplies," will be received at this Bureau, until noon, on Tuesday, the 19th day of April next, for furnishing and delivering (on receiving ship or vessel) at the United States Navy Yards at Charlestown, Massachusetts, Brooklyn, New York, and Philadelphia, Pennsylvania, the following quantities only and in such times as may be required by the orders of the Chief of this Bureau, or by the Commandants of the said Navy Yards, respectively, between the 1st day of May and the 31st day of December, 1864, the quantities of the different articles and of each class required at each Navy Yard:

	Charlestown.	Brooklyn.	Philada.
Bice, lbs.	20,000	40,000	
Dried Apples, lbs.	10,000	20,000	
Sugar, lbs.	215,000	250,000	
Tea, lbs.	2,000	3,000	1,000
Coffee, lbs.	30,000	200,000	15,000
Vinegar, gals.	10,000	20,000	15,000
Molasses, gals.	10,000	70,000	
Vinegar, gals.	12,000		

Separate offers must be made for each article at each Navy Yard, and if more than one class, or more than one article is contained in the offer, the Chief of this Bureau will have the right to accept or reject any of the articles contained in each offer, and reject the remainder.

For the description of articles in the above list bidders are referred to the printed list to be sold 20th June, and the advertisement of the Bureau dated June 15, 1863, and for articles as for the bags and hammocks (in pamphlet form) regarding contracts, to the office of the Navy Agent, Philadelphia, Navy Yards and Navy Agents.

Blank forms of proposals may be obtained on application to the Navy Agents at Portsmouth, New York, Brooklyn, New York, Philadelphia, Baltimore, and at this Bureau.

THE NATIONAL MILITARY JOURNAL.

THE UNITED STATES ARMY AND NAVY JOURNAL,

AND

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

Officers of the Army and Navy will find in this Journal the only paper in the United States exclusively devoted to Military and Naval affairs, and the only one in their interests which has ever secured sufficient circulation and influence in this country to enable it to maintain such a long felt, of an organ which should adequately represent them in the Press. Starting under the most favorable auspices, enjoying the encouragement and aid of the best professional talent in the country, receiving polities and partisanship of all kinds, and devoting with singleness of purpose to the impartial discussion of military questions, and to the dissemination of correct information, it has, in less than six months, established the position as the authoritative organ of military discussion and opinion in the United States. The rapidity with which it has secured a circulation, hardly excelled by that of any paper of its class in the world, and the eagerness with which it has been greeted in the Army and Navy, and by the more intelligent of civilians, on account of the merits of its articles, are the most gratifying evidence that the effort to establish a paper which should stand side by side in ability and completeness with the best of the military journals of England and France, has not been in vain. As a Gazette of Military and Naval matters, it is proving itself indispensable to every officer who wishes to keep himself informed in reference of the war it must be inevitable for its success that its columns should be filled with the publishing suggestions and discussions. Its articles are from the pens of the ablest military writers, and its special professional correspondence is unsurpassed in completeness than that of any periodical ever issued in this country.

Of the numerous notices of the newspaper press which have appeared, we give the following:

From Major-General GEORGE G. MEADE.

"I have always accord honorable mention of the ARMY AND NAVY JOURNAL in my correspondence with friends, and have recommended it to officers of the regular and volunteer service. It affords me sincere pleasure to add my contribution to the list of its friends."

From Major-General W. H. FRENCH.

"To say that the ARMY AND NAVY JOURNAL is conservative will what should be a reproachable of our present military organization, [illegible] and is generally fair."

From Major-General GEORGE STEVE.

"Your JOURNAL is a welcome visitor in this army. I constantly recommend it to the notice of the members of the staff, and have myself taken the opportunity to increase its circle the yearly subscription."

From Major-General J. C. LOUD, U. S. N.

"Your JOURNAL is not only the best, but also only paper we have in this fleet which has ever been published in the interest of the service."

From Major-General G. H. THOMAS.

"It will afford me much pleasure to recommend the ARMY AND NAVY JOURNAL to the officers of the Army, and I take this opportunity to express my gratification that it has been established."

From Prof. H. COPPEE, University of Pennsylvania.

"A good paper is always a welcome visitor in a family. Every literary editor within my knowledge has been a listener, and I have myself been a reader of the ARMY AND NAVY JOURNAL from its commencement. Its articles are always timely, judicious, scientific, new, and yet practical—indeed, one and all of the qualities which go to make up a first-class paper, and I speak unhesitatingly and your own military experience will bear me out in the assertion, that the ARMY AND NAVY JOURNAL is our service."

From the New York Times.

"The ARMY AND NAVY JOURNAL seems to have met with a success, both regular and volunteer. It received and merited the support of a large class of professional and military officers, who spoke from their knowledge of the want of such a publication, and who have since steadily kept it. It should be taken by every army officer in the field. Its articles are written by men who have studied the art of warfare with a view to practical application, and as well as the general public, who now take such a deep interest in the all absorbing topic, will find in its columns a fund of logical value and interest."

From the Boston Post.

The ARMY AND NAVY JOURNAL has proved a success from the start. Its editorial articles, which are timely, well edited, and liberally conducted, this paper leaves little to be desired. It is the only paper in the country which gives the last important news from the seat of war, the movements of thousands, and the genius has every prospect of rendering it a permanent success. Its articles are written by men who remember are many of our Military and Naval heroes of the present war, and who have studied the art of warfare with a view to practical application, as well as the general public, who now take such a deep interest in the all absorbing topic, will find in its columns a fund of logical value and interest."

Paterson (N. J.) Daily Press.

"It is now acknowledged that the publications of men and measures as were current in the daily paper before the outbreak would be inadequate to the present demand. It long always also, vigorous, independent, and get upon the right side of things. We wish it success, and we do it."

Springfield (Mass.) Republican.

"We can heartily commend the paper, it is all that which to keep themselves posted as to the war. It is honest and well conducted, and its military articles are timely and impartial. It is worth all the other papers put together for accurate information about the war."

From various Journals.

"The best military paper in the country."—*New York Times.*

"There is nothing spurious or garbled about it, and in every respect it is a model of what a military and naval weekly ought to be."—*Philadelphia Journal.*

"Its columns are filled with the attractive, shrewd criticisms of military achievements and events, and its correspondence is of the most reliable character."—*Philadelphia Evening Journal.*

"Its editorial articles are of the attractive, shrewd criticisms of military achievements and events, and its correspondence is of the most reliable character."—*Philadelphia Evening Journal.*

	Bed ticks	4,000	1,000
	Bed sacks	4,000	1,000

Bids may be made for one or more articles, at the option of the bidder, and in case more than one article is contained in the bid, the Chief of the Bureau will have the right to accept one or more of the articles mentioned in the bid, and reject the remainder, *or vice versa*, as he may deem most for the interest of the service; *and bidders must embrace all the articles or more articles above the number specified*, in the description of articles in the above list, that are referred to the samples at the said navy yard, and the bid must state the time of delivering each lot, and for information as to the laws and regulations in this Department, bidders are referred to the officers of the several commandants of navy yards and navy agents.

Blank forms of proposals may be obtained on application to the navy agents at Portsmouth, Charlestown, Boston, New York, Philadelphia, Baltimore, and at this bureau.

BALTIMORE AND OHIO RAILROAD

RE-OPENED!

The great National thoroughfare is again open for FREIGHT AND TRAVEL. The ease and mechanical strength and staying qualities of the road, under all recent improvements; and as the bridges and road are again in unbroken condition, the well-known reputation of this Road for SPEED, SECURITY AND COMFORT, will be fully maintained under the re-organization of its business. In addition to the original advantages of safety, speed and comfort recommended to this route, the recent troubles upon the latter have established for it a reputation for freedom from danger, which no other line can claim.

CONNECTIONS

Into Ohio first CONNECTIONS

Into Ohio, Indiana and Pittsburgh, Central Ohio, and Indiana and Cincinnati Railroads; at Grafton with the Northern Central Railway, and at Washington with the Southwest. At Washington Junction, with the Washington Branch of Washington City and Potomac Railroads. At Relay with four daily trains for FREDERICK CITY and TYE.

The editorial and business offices of the ARMY AND NAVY JOURNAL will be removed about the 10th of April to No. 39 Park Row, Times Building, directly opposite the City Hall Park.

THE official report of the capture of Fort De Russey, by the expedition up the Red River, which was briefly mentioned in our last number, shows it to have been a very brilliant exploit, reflecting equal credit upon the soldiers composing the expedition, and upon the General leader whose direction it was accomplished. The expedition, it will be remembered, embarked at Vicksburgh on the 10th of March, and proceeded down the Mississippi to the mouth of the Red River, which it ascended as far as the Old River, at which point it turned into the Atchafalaya, which flows southward into Lake Chetimaches. On the 14th a landing was effected at Simmsport, whence our forces marched to Bayou Glace, where a Rebel force, estimated at about 2,000, had been encamped in a strongly fortified position. On reaching this point it was found deserted by the enemy, who had set fire to the bridge leading across the river at that point. The earth-works, still incomplete, were laid out on an extensive plan, and indicated an intention on the part of the Rebels to use the Atchafalaya as their principal line of defence, depending on the shallowness of the river during most of the year to protect them against the attack of our gunboats. The unexpected appearance of our formidable fleet, consisting of three Monitors, seven iron-clads, three rams and four lighter gunboats, caused them to abandon the strong but unfinished works, and to hasten to the defence of Fort De Russey.

General SMITH immediately decided to march overland against the Fort, leaving the fleet to demolish the obstructions across the river and to follow as soon as was practicable. The march, about thirty-five miles, was accomplished in light marching order within twenty hours. Our forces were considerably annoyed during the march by the enemy's cavalry, which kept up a series of harrassing demonstrations on the front and rear during the entire route. General F. KNEF SMITH, commanding the rear division, was several times obliged to form in line of battle in order to repel their threatened attack. The head of the column approached Fort De Russey about three o'clock in the afternoon of the 14th, and after spending some time in making cautious advances towards the position, our lines were moved up to the edge of the heavy woods which surrounded the Fort. The enemy immediately opened upon our forces with a heavy fire of shell and shrapnel from four guns. On our side two batteries were brought into action, and a brisk cannonade commenced, which continued for two hours. General SMITH then ordered an advance of skirmishers, which movement was followed by a heavy fusillade. A charge was soon afterwards ordered, which was gallantly led by the Fifty-eighth Illinois and the Eighth Wisconsin, in the teeth of a galling fire, and within twenty-five minutes after the order to charge had been given, the garrison had surrendered, and our colors were planted on the captured works. Almost at the same instant the gunboat fleet, headed by the *Eastport*, made its appearance, only to learn from the cheering of our victorious soldiers that the work had been accomplished without its assistance. Though the honor of this brilliant achievement belongs chiefly to the land forces, the abandonment of Simmsport was probably due to the sudden appearance of a powerful naval force in a quarter where such a demonstration was probably as unexpected as it was decisive. Admiral PORTER, in his official report of the capture, bears testimony to the gallant behavior of the soldiers, and to the skill with which the movement was managed. The men, he says, made a splendid march and attack, and the officers in command of the gunboats and transports showed great zeal and industry in overcoming the obstructions which the Rebels deemed impregnable.

Fort De Russey was a formidable quadrangular work, with bastions and bomb-proofs, covered with railroad iron. Connected with the fort was a strong water-battery, the casemates of which appeared to be capable of resisting the heaviest shot and shell. The guns were admirably placed to command the river for a considerable distance up and down. Among the cannon captured with the fort were two guns belonging to the *Morning Light*, two rifled guns from the *Harriet Lane*, and one heavy gun from the *Indianola*, which was sunk last year in the Mississippi. In all ten guns were taken, a large number of small arms, two thousand barrels of fine powder, a stock of assorted ammunition, and a quantity of commissary stores. The garrison had been reduced recently from 1,000 men to 325, including 24 commissioned officers, all of whom were made prisoners. The casualties were trifling on both sides,—our own loss being seven killed and forty-one wounded—two mortally; that of the Rebels, five killed and four wounded.

General SMITH ordered the fortifications, on which months of labor had been expended by the enemy, to be immediately demolished; but we learn by a recent dispatch that the fort was accidentally blown up on the 17th, killing four and wounding six men.

Alexandria, which is about one hundred and fifty miles above Fort De Russey, surrendered to our fleet without resistance on the 16th, and was immediately occupied by the advance of General BANKS' cavalry, under General LEE. The remainder of the army was within two days' march, and it was the intention, as soon as it arrived, to push forward overland, with the combined forces, against Shreveport, where the Rebels, under command of General TAYLOR, were concentrating. Several Rebel gunboats, which had been stationed at Alexandria, had steamed up the river to assist in the defence of Shreveport.

A troublesome guerrilla band, which for several weeks had been harrassing the region of the Atchafalaya River, was recently dispersed by an expedition from Brashear City, consisting of two gunboats and a small detachment of the 131st New York Volunteers, under command of Lieutenant HINCHMAN. Their camp, about eighty miles above Brashear, was broken up and burned, without loss on our side: but, as we had no cavalry to pursue the flying guerrillas, they made good their escape without further punishement.

The cavalry raid by the Rebel General FORREST across Western Tennessee and Kentucky to the Ohio River, appears to have been a complete surprise. General FORREST, who was supposed to be quietly recruiting his forces in Mississippi, suddenly appeared about the 22d of March at Bolivar, Tenn., with a force probably over-estimated at about 7,000. He advanced rapidly against Union City, which was garrisoned by about 400 men, under command of Colonel HAWKINS. The enemy made several ineffectual charges against the slight earthworks which surrounded the town; but, finding it impossible to carry them by assault, General FORREST demanded the surrender of the garrison, threatening to bombard the town unless the demand was complied with. Colonel HAWKINS, it is said, against the wishes of the garrison, surrendered on the 24th, just in time to anticipate the arrival of a large Union force from Cairo, under command of General MASON BRAYMAN, who was marching to his relief.

From Union City, General FORREST marched northward across Kentucky, and on the afternoon of March 25th made an attack on Paducah, having first sent to demand the surrender of the fort. This was refused by Colonel HICKS, who was in command, and the attack was immediately commenced. Is lasted during the whole afternoon, the enemy making four assaults, in each of which they were repulsed with considerable loss. After the first assault had been foiled, General FORREST had the modesty to demand again the surrender of the fort, troops and public stores, promising that if the demand were complied with, the troops should be treated as prisoners of war, but if he were compelled to storm the fort they might expect no quarters. Colonel HICKS declined, and the battle continued. The steamers *Peosta* and *Paupano*, tin-clads, participated in the defence. A large portion of the city was destroyed, partly by the enemy, and partly by our own forces who were obliged to burn a number of houses to prevent their occupation by Rebel sharpshooters. While the fight was in progress parties of the enemy entered the town, plundered the stores and carried off a large number of horses. Early in the evening they retired from the town; but reappeared the next morning, when General FORREST sent in a request for an exchange of prisoners. This General HICKS declined, and the Rebels, without making any further demonstrations, retired in the direction of Columbus. Their loss is stated at 300 killed and 1,000 wounded. The latter were taken to Mayfield by rail, and the former were left unburied around the fort. The Rebel Brigadier-General A. P. THOMPSON was among the slain.

Our forces, which made such a gallant defence, consisted of the Fortieth Illinois Infantry, a battalion of negroes, numbering 220, who fought with great bravery, and a regiment the name of which has not yet been made public. Our loss was fourteen killed and forty-six wounded.

Reports conflict as to the course pursued by General FORREST after his repulse at Paducah. It is surmised by some that he will make another attack upon that place; another report, by way of Cairo, states that on the 29th, a part of his forces crossed the Cumberland at Eddyville. A gunboat has been sent up the river to ascertain the facts.

The military situation in eastern Tennessee remains essentially unchanged. A dispatch from Chattanooga says that the Rebels present a very strong front at Dalton, that JOHNSTON is receiving reinforcements from General POLK, and that a portion of General LONGSTREET'S cavalry has arrived at Marietta, Ga.

A dispatch from Fort Smith brings the important intelligence that the Army of the Frontier, under command of General J. M. THAYER, was set in motion on the 25th of March, its destination being Northern Texas.

THE STAFF.

JUDGE-ADVOCATE'S AND PROVOST-MARSHAL'S DEPARTMENTS.

We discussed last week the subject of reorganizing the Staff of the Army, with especial reference to the most efficient operation of the Quartermaster and Commissary Departments. Similar considerations to those then urged would suggest the systematic remodelling of the Judge-Advocate's Department and the Provost-Marshal's Department, two staff departments which already exist in our Army, in fact, if not in name.

Two years ago, it might have been well to study the propriety of organizing these departments; now, it is too late. They are already a part of the administrative system. Every general officer who is authorized by law to convene a general court-martial, either has an acting judge-advocate detailed upon his staff, or assigns to an adjutant or an aide the duties of that officer, in selecting officers to constitute military courts, reviewing for him and the proceedings of such courts, and kindred duties. Every such general officer has also his provost-marshal, a detailed officer; and many others, commanding brigades and posts, but who cannot convene courts, also find this officer necessary for the proper care and safe keeping of prisoners. There are thus in the Army hundreds of officers detailed into these departments, to discharge the important and responsible duties of which they are taken away from their little less important and responsible stations in the line. This practice is the result only of the necessities of the case. Officers are needed for the service, demanding these additional administrative departments, have been appointed for the time by the make-shift of details. The question arises, shall we not reorganize these heterogeneous departments, and create a systematic and well-regulated Judge-Advocate's Department and Provost-Marshal's Department?

An attempt at such organization has already been made in each case, but only such a one as exposes more clearly the necessity for more full and thorough action. On the one hand, we have a judge-advocate-general with the rank of colonel, at the head of a nominal department, and a judge-advocate for each army in the field, reporting to him and following his instructions. No provision is here made for the intermediate sub-divisions of the Army, where, as much as anywhere, are well-instructed judge-advocates necessary. But beyond this, we have a large number of *acting* judge-advocates, of diverse rank, appointed by different general officers as the exigencies of the service have dictated, reporting to no Judge-Advocate-General only, when they find necessity to require it, and following his instructions when convinced that a contrary course will make it necessary for him to over-rule their decisions. On the other hand, we have a Provost-Marshal-General with the rank of colonel, in Washington, whose subordinates are outside the Army and scattered over the country. Between these there does not exist; while other provost-marshals of subordinate rank, who should report to and be governed by a common head, are scattered all through the Army, by whom controlled and to whom reporting, no one knows. A sufficient number of officers are already on duty in these departments, so that no increase of numbers is necessary. Is it not, then, the part of wisdom and prudence to systematize that which is now so irregular and so faulty in construction, and to increase their efficiency, by transforming these departments into as well-regulated and systematic an organization as that of the Inspector-General's or the Quartermaster's Department?

Another improvement also is required in the Judge-Advocate's Department. But one term is now used, that of "judge-advocate," to designate an officer serving either as prosecutor before a military court, or as reviewing officer on the staff. The duties of these two positions are so dissimilar as to have but few essential features in common. The one is the legal representative of the Government before the court; the other examines the record officially, tests the legality of the proceedings, and acts as confidential adviser to the reviewing authority. The position of the one corresponds to that of prosecuting attorney; the other to that of junior member of the bench. The inconsistency of giving the same title to officers acting in these several capacities as well as the impropriety of allowing the functions of both to be discharged by the same officer must be apparent. The least change that would effect the purpose, or rather, that would partly help to do so, would be to require that the prosecutor before a military court shall always be styled "Special Judge-Advocate." But in each case, the duties of neither position are expressed appropriately by the title conferred. The *true* judge-advocate is the prosecutor: he is judge of the law for the court, advocate for the Government, and in some cases, counsel for the prisoner to a certain extent. A new title is required for the staff officer; one with some legal significance, as "Counsellor-General" or "Advocate-General." Such a distinctive appellation for the head of the department, to whom the subordinate officers shall be "Assistants," as in other staff departments, will serve to complete the organization of this department in a manner befitting so important a branch of the administrative service.

These are mere hints, roughly drawn, upon a subject of warm interest to every officer who has the good of the service at heart. May we not hope that some Military Committee of Congress, or Board for Revision of the Army Regulations, will give them matters their attention, and cause a systematic organization of these staff departments, among others?

RIFLED ORDNANCE.*

No. II.

UPWARDS of thirty witnesses were examined by the Parliamentary Committee on the Armstrong gun; military and naval officers, engineers and civilians were alike called upon to give evidence in reference to the questions at issue, and it shall be our aim carefully to collate the testimony and give it a tangible shape.

Colonel GARDNER, the Chief Inspector at Shoeburyness, testifies:

"That with considerable care it would be a useful gun; but that I have considerable doubts at present whether it is so formed as to stand the rough usage of service. * * * The vent-piece is defective in strength, to begin with, and the breech-screw is liable to injury, from the fact of the face of the breech-screw being indented by the vent-piece breaking. If the surfaces of the vent-piece and of the breech-screw are not true you have a concavity made on the screw, and you may go on breaking vent-pieces as often as you like. * * * I am with I have already stated, to think that that would always be a great defect in that description of gun. * * *

to ensure slower combustion; all agree that the smell is very unpleasable and the smoke more dense.

Captain F. B. SEYMOUR testifies against the gun, and gives several instances of serious accidents as resulting from the recoil-piece, and speaks in condemnatory terms of its want of accuracy; his impression was, that for something under 1,500 yards, the accuracy of the Armstrong gun is certainly not superior, and may be said to be in a slight degree inferior to that of the smooth-bored 9-pounder brass gun; about he decidedly objected to breech-loaders, whether rifled or smooth-bored."

CORRESPONDENCE.

LIFE-BOATS FOR VESSELS OF WAR.

To the Editor of the Army and Navy Journal:

SIR.—I have long thought that vessels of war should be provided with life-boats. I see the matter is by the *Life-Boat Journal* of Jan. 1, 1864, that the subject has at last attracted the attention and elicited the action of the British Admiralty, who proposes to supply all vessels of war with a life-boat in lieu of one of the boats usually carried, and requests any information that may be useful to it. Still no information might be able to give as to the most suitable description of life-boat for men-of-war.

Not only are steamers manned by men, who have never been drowned, will tell you that a good cutter, supplied with mast and sail, and water-breakers well secured to her bottom under the thwarts, is a good life-boat for them; and that a regular "life-boat" would be an encumbrance on the deck or at the cranes of a vessel of war. I shall state briefly my views of differ them.

In the first place, a cutter will heave many lives overboard sided to; her, even in a gale, if she are left empty; and this little will be in the wrong place; namely, too low down to be serviceable in righting a capsized boat. On the contrary, empty boats, if left to float, will ride so that a boat could do more harm than good in the event of her being swamped or stove; because, in that event, they would tend to capsize her, and, if capsized, would tend to keep her from righting.

On the other hand, if the breakers are kept full of water they have little or no buoyancy, but are good ballast, and would tend to keep a boat from capsizing, or, when capsized, would tend to right her. That, as they would be full of water, this could not easily be done. A ship's life-boat need not be the very cumbersome and expensive thing now used on the masts of Queen's ships. It is not necessary to have a *perfect self-righting life-boat* without making her too heavy, and in a measure, unfit to be lowered and taken up speedily in a rough sea. I propose a modification of the "Francis" on the way that is done by the old Francis Life-boat Company; and by Lord LYNEDOCH in the Tay. To this the objection will be raised, that the end-tanks shall be a separate and distinct institution, not built to the boats, and forming the part of the shell of the boat, but be made of wood and copper, and be furred off about an inch from the shell of the boat. The boat shall the forward tank and before the after one shall have a water-tight bulk-head, and be open to the air in the boat, with a hole to let off any water; and the tops of the tanks should have a water-tight man-hole, so that, for ordinary occasions, they could be used to stow away the paper, provisions, &c. Besides this flooting-power, these tanks could be filled with water, and, when the boat is capsized, water-tight metallic cylinders, secured to the side of the boats under the thwarts, and as high up as possible. A line supplied at each end, and secured to the stem and stern head of men and water, if fitted with suitable valves to expel the water when a sea is shipped, cannot be entirely disabled like a common wooden boat, and could generally be cleared of water entirely by the exercise of a little common sense.

If the men who control the matter of construction of boats for vessels of war prefer to have wooden boats, then let them be like Francis's, with water-tight bulk-heads fore and aft; and let these ends be fitted with metallic tanks and cylinders, calculated to do the same duty as in the metallic boat. If cylinders are used, the tanks should be tight; and the cylinders on the score of their liability to be perforated by fire and injured by corrosion (which objections are more or less made to the use of metallic tanks), should be used only when vessels are in commission (not in ordinary), or when not in time of peace), then let the same amount of buoyancy be obtained by cork rings or cork jackets, such as the well-painted canvas. That would be best for vessels of war, perhaps, though open to the objection of weighing more than the tanks, it would be safer in the event of fire.

A well-modelled life-boat, that is expected to right herself quickly when capsized, ought to have considerable sheer, so that the upper edge of the sides should be much above the sea, would make it almost impossible to keep her bottom dry.

But there are serious objections to a surf-boat with very high ends, as she will be found to be very readily stoved, and they hold more wind than is desirable when trying to wind up a ship's course under sail; and would be found in the proportion of self-righting to the more important one of high speed.

Almost all the life-boats proper now in use on the coast of England, and styled "self-righting boats," have more or less bold weight attached to their keels; which, while it serves a good purpose in righting the boat when capsized, is found to make, and large enough to carry twenty-five in addition to the crew, would not be found sufficient for a boat to be hoisted to cranes. Therefore, as we cannot have a perfect self-righting life-boat for ships, we must look for the best compromise. I, for my part, would prefer to have the common lap-streak, sharp-stern surf-boat, with cork floats, the FRANCIS boat, or last, not least, the RAYMOND boat. But, by all means, let it be distinctly understood, that the "penny-wise and pound-foolish" policy of making the cutter also a part of the boat, is, *ex nemine quærei, obtainted.* Neither FRANCIS nor RAYMOND boats, called life-boats, deserve the name in reality, unless the tanks are separate from the shell of the boat, and the cylinders are used. I would like to request any explanation to any web-footed men who goes to sea; but for the benefit of the *old seamen*, or the men who are not web-footed, I would explain, that the tank which makes a part and parcel of the shell of the boat may be punctured, and so rendered useless, or worse than useless, by a thousand accidents, while the low or stern of a boat punctured, while has the detached tank, can be got at, and the tank itself is much less likely to be punctured. It is not invulnerable, of course; but it is much better than the general plan of building where the tank is simply a water-tight end of the boat. A good-pulling surf-boat should be light, strong, having little dead-rise, a head and keel to the canter, extending only an inch or two outside the garboard seam, and tapering forward and aft, the best slightly rounded in the bow and stern; and, if possible, should be provided to pull double bank, with handy bread-shaded oars; and, by all means, should be steered by a rudder and tiller, and in the hands of a competent man, who knows when to go ahead, and when to go astern, and when to "lay her on;" to a sharp sea. Outer fenders of cork, or valuable ventilators; and cork life-belts for all the boats' crews, in which they should be so regularly drilled as at the guns. But we must not lose sight of the fact, that the principal life-boat supplies for a man-of-war boat going on an expedition are already so expensive, that the Government will not provide any useful means for saving the lives of her men in the very probable event of her being captured or perforated by shot.

I have never yet seen a proposition that was not having on board of every vessel of war the means, in the form of boats,—life-belts, small rafts, &c., *to float every soul on board.* I have known many officers, in the British navy, who are in reality so entirely taken up with guns and their material appliances and stowage, with sweeping, boats, and anchors, that it requires but a little more weight when she first goes to sea to make her *entirely useless* for battle and for escape from battle, in a heavy gale, or in a heavy sea. If this is true, then, I say, leave out some of the *killing gear*, and add to that for *saving life*. Every boat, at the least, should have a life-belt under the thwarts, at all times, by account of wounds or other disabilities, but whose names were still borne on their company rolls—a mere waste to the army service. It would be necessary of War to form into a separate organization such of these men as were unfit for active service, but who still had sufficient health, were able to perform garrison, provost, and other duties of the lighter character that would not subject the soldier to immoderate fatigue, and so relieve many able-bodied troops, was very evidently a wise measure.

It is aimed at introducing system and economy into what was before burdensome and at loose ends. Grave apprehensions have been expressed by many officers as to the practicability of such a measure. But not a few who ten months ago looked upon the proposed organization as a wild theoretical scheme, are now practically, now find themselves serving in the corps, and have come to think that they at least have earned a better title than they were ever entitled to before the war, to the name of veterans in misfortunes with themselves.

For efficiency, commissaries of instruction and discipline especially where an organization into regiments has been effectually carried out, it must be admitted that this corps of invalids has proved itself a great success in the Army, and the amount of duty it now performs is heavy, even for the ablest men. A higher organization than that of regiments is considered to exist in the corps now in process of form, is hardly required.

Such was the beginning, and such has been the progress of this corps. It has grown to embrace a much larger force than the old Regular Army before the present war.

But, what is its future?

Whether it shall be a permanent or a transient organization, or what is likely to grow out of it, is not our design to discuss. But that the invalid corps ought to maintain to the rest of the Army is an important question now.

Are invalids to be constantly transferred into the corps and none to be returned to the Army from it?

This was not understood to be the design at the out-set, and is not a common-sense view of the question now. There must be some discoverable ratio, though variable as conditions of service may change, which the men may be fully assigned to duty with the Invalid Corps and the able-bodied troops of the Army. This ratio, as nearly as it may be determined, forms the natural basis for such a corps. A certain per centage of the men thus classed die or are discharged monthly on account of total disability, or by the expiration of their term of service. Another per centage require prolet health and become fit for active service in the field. This proportion, whether large or small, if our principle be correct, should be retransferred to serve again in the field, after rigid examinations made quarterly, or perhaps tri-annually, at least at fixed periods. Transfers into the corps from hospitals and convalescent camps are required more frequently, probably as often as monthly, but ought to be after stated examinations.

The only practicable and safe way to invalids alone will be abundantly large, certainly if the war continues long enough to require some considerable army service, in the muster rolls, and accounts of pay and clothing, need not necessarily follow such a system. The partial change in the uniform interposes some difficulty, but is not insurmountable. More labor as well as care would be required at the hands of the officers; but they are supposed to be able to furnish these requisites.

One thing, however, in such a connection is all important—that these men are worthy, and not unworthy officers as have fully earned a position in the Invalid Corps by their conduct in the field, and are entitled to it by reason of disability incurred by wounds or disease not resulting from the incidents of the service, and strictly in the line of their duty, and whose habits and moral character are unquestionable; and no invalid is now the non-enrolled to be admitted into the corps.

In this way the Invalid Corps would always be in fact what it is now, and would become a grand organization *intermediate* between the hospital, the convalescent camp and the field, a large and constantly-serviceable army, and a valuable number of men would be saved to the field better instructed and better disciplined than when they left their regiments and entered this corps.

J. C.

CONGRESS AND GENERAL HOWARD.

To the Editor of the Army and Navy Journal:

SIR:—When I wrote my article of February 20th on a pamphlet entitled "Chancellorsville," I was under the impression that the public alone were deceived as to the true facts concerning the battle of Gettysburgh. I did not imagine that my statements would be vigorously denied by any one then belonging to the Army of the Potomac, and least of all by one occupying so near a position to Major-General HOWARD as the "Who Knows" evidently does.

Since I am so far mistaken, it is evident little can be gained by a continuance of the discussion. I have made my assertions, and "One Who Knows" has made his counter-statements, and the authoritative settlement of the points in dispute must be left to higher means.

I therefore propose to reply very briefly to some of the points raised by this writer, and then to leave the subject to other pens.

It is alleged that I misrepresent, by inference, the time when General HOWARD arrived on the field. I believe I have stated in every statement of the time when General HOWARD's corps arrived, and I stated in the very paragraph referred to by "One Who Knows" the source of misapprehension, that General HOWARD preceded his corps.

For the reasons given above, I beg to be excused from discussing the point as to how nearly the 11th corps was overpowered when the 11th came up, and the comparative severity of the fighting of these two corps on the 1st of July.

"One Who Knows" says the 1st corps did not commence its retrograde movement until 3:45, and that General HANCOCK did not arrive on the field till 4:15 P. M. I repeat my belief, founded on excellent authority, that before the hour from which General HANCOCK had assumed command, and the 1st and 11th corps were then forming on Cemetery Hill, the cavalry alone being in position in front of the new line of battle. HANCOCK left EMMITSBURG an after 1 o'clock, and rode very fast. Two hours is full as much as he occupied in riding the thirteen miles, from EMMITSBURG to the field of battle. The other can add his own testimony to having seen General HANCOCK on the field before 3 P. M., as General HOWARD says.

"One Who Knows" ventures the remarkable statement that General HANCOCK "made no assumption of command." Whatever he may have said, he knows what my informant from official reports or from General HOWARD, that general cannot possibly be authority for this assertion; for three hours too much time elapsed between the time when General HANCOCK rode up to General HOWARD and told him that he had come to assume command of the troops assembled at Gettysburgh, and had the order in his pocket.

It is, no doubt, true that General HANCOCK did this with a great deal of delicacy; but the latter could not have relieved absolutely, and the command afterward exercised by General HANCOCK in the most vigorous manner. The reference to the 62d regiment is also contradicted in the letter:—No doubt General MEADE had the highest authority for his repeated neglect of this regiment; but General HOWARD says he only saw General HOWARD superseded, but on other occasions GENERALS NEWTON, GIBBON, and HAYS were assigned to the command of important parts of the General MEADE's opinion the crisis demanded it.

As to the subsequent apology tendered to General HOWARD, with the accompanying statement that General MEADE supposed General HANCOCK to be senior to General HOWARD, I can only say the facts are otherwise. When the order was given to General HANCOCK to proceed to Gettysburgh, the commanding general well knew, and acted with full knowledge that General HANCOCK was the junior in rank, but decided that he could not stand on such a point at such a time. His remarks to General HOWARD may have been misunderstood, or the pressure of mighty events may have effaced from his recollection the occurrence. Certainly no one who knows General MEADE's solidarity frankness and straight-forward honesty will fail to give full credence to what he states as his recollection of the matter. I write on this point with reluctance, and only so far as may be necessary to show that General HOWARD was not relieved by accident.

"One Who Knows" states that General HOWARD turned over the command to General SICKLES about 7 P. M. *If he*

means the command of that portion of the 11th corps assigned by the Provost Guard of the 12th corps in rear of the field, the assertion is correct, but hardly so in any other sense; for General HOWARD had no other command than his own corps. About the hour mentioned the writer of this article was near General SICKLES on the Baltimore Turnpike, when General HANCOCK rode up and transferred the command to him.

I must address to my account of the night attack on Cemetery Hill as substantially correct.

General GIBBON, at the suggestion and direction of General HANCOCK, who was alarmed at the firing in General HOWARD'S front, sent CARROLL'S brigade and two other regiments to report to General HOWARD. General HOWARD acknowledged the services of this brigade verbally to General HANCOCK, and by note to General CARROLL, stating that the "unexpected reinforcement" arrived in the nick of time. It is highly generous now to ascribe the impression that the 11th corps was not in need of assistance, but that it "vigorously repulsed the enemy from its own front." Pray what was there to repulse? Gen. HANCOCK'S letter to one of these commanders can tell "One Who Knows" where their batteries would have been in all probability if they had been left to the 11th corps to hold. If General HOWARD would permit what he has said to various people on the subject of the services of CARROLL'S brigade to be made public, there would be no more dispute on this point.

The "inconsistency" which "One Who Knows" discovers in my statement that General HANCOCK sent this brigade, while I had previously stated that he had been sent to the 3d corps, exists only in his imagination. General HANCOCK, as we usually understood, sent Gen. SCHURZ word, General SICKLES was wounded hours before the attack on Cemetery Hill.

The object of my first article was to show that General HANCOCK was in command at Gettysburgh July 1st, from about 3 P. M., according to the testimony of all who were in position, to retreat to Pike Creek, or to take up any intermediate position; that he established the lines of battle, assuming the line already selected for a defensive position by General HOWARD, and prolonged it to the right and left; that on these conditions he brought the army of the Potomac to Gettysburgh; that he sent word to General MEADE that he should hold the ground, and ordered the trains to the rear (particularly General HUNT'S artillery reserve), and that only after July his services were still greater; and that, finally, the Army gave to him the credit which Congress had given to General HOOKER. The main points of my letter cannot be successfully denied. TRUTH.

Another correspondent writes thus with reference to the first letter of Gen. HANCOCK:

Unless the heading of "Congress and General HOWARD," there appeared in your paper of February 20th, a communication over the signature of "Truth." The author in his desire to add to the well earned fame of General HANCOCK, detracts from that of Major-General HOWARD, in stating that the former was ordered to and General HANCOCK assumed command of the Third corps. This was not true, as Major-General BIRNEY immediately assumed command of the Third corps, and of two thirds of the Second corps sent to its support. These were the brigades of GIBBS and MITCHELL. General MEADE'S official report states this explicitly. He says that Major-General "under Major-General BIRNEY (Major-General SICKLES having been severely injured in the previous day's action and wounded, and is satisfied with its show of glory, and rejoices that its "misapprehension of orders" carried it into the fight instead of out.

THE RE-ORGANIZATION OF THE ARMY.

To the Editor of the Army and Navy Journal:

SIR,—If it is much mooted point among the officers of this Army, the arguments have not been of that kind that are to be continued in the service. We suppose it is only to apply to those officers who are to receive new organizations.

But whether we are to be entirely re-organized, and the officers recommissioned, is a matter we but indefinitely understand. Will some one who is "posted" in these matters be kind enough to inform us on this point.

For my own part, I am persuaded that now is the propitious moment for Congress to establish the Army upon the proper basis, by making it exactly as it was at the close of the Mexican War. The most vital element for the sustenance of an efficient army is that of officers who have served in the several States of the Union. I refer to the appointment and promotion of officers in the volunteer service. Who ever heard of such a thing existing? and yet such is the case to-day.

Under the present *regime* our Army is no better than an irregular militia force, and the War Department has no control whatever over the organization. Therefore the best chance for promotion nothing impaired by negligence to duty, is in the line, where alone merit can be judged with eligibility to promotion, does not control that. Hence the indifference to duty in the volunteer service.

The volunteer service, as a whole, made a part of the United States Army,—of course, in a department separate from the regulars; and, if it is thought best, the troops of the different States may be distinct. But, for my own part, though I love my native State with true devotion, and rejoice in the bright laurels which cluster round the emblem of our commonwealth, gleaned from every important battlefield of the present war, yet I feel that we battle for our whole country; and look to our whole country, but to the United States, for the acknowledgment and reward of meritorious service.

The evil of the present system is daily becoming more apparent in the Army. Some of the governors adopt the system of promoting by seniority in *companies*; so that, if there are no vacancies in a company (of three officers) a deserving man may serve for years without any cheering promotion. He may see others, without anything to recommend them, inferior to himself when they entered the service together, but fortunate in having vacancies opened for them, suddenly placed over his head. This is the bane of rank. Seniority of rank becomes a disadvantage when it only subjects its holder to important and irksome duties, which, however well performed, never bring with them a substantial reward. Among these, as the most exquisite, might be mentioned, where the senior first lieutenant is placed in command of a company until the first sergeant of said company is commissioned *captain*.

It is to be hoped that Congress will do something, before the close of the session, for the re-organization of the Army. This, I am convinced, is the first step in the right direction.

Let all officers be promoted to the proper level of the Army—the President. Before the expiration of the original term (of the veterans), let all officers be examined as to their qualifications for the promotion of the term, let them found unfit be discharged.

I believe I am entitled in this by the mass of the Army; and I write this in hopes that it may meet the eye of those who will be able to act upon it. J. L. M.

PENNOCK, N. G., March 16, 1864.

THE MUSTERING NUISANCE.

To the Editor of the Army and Navy Journal:

SIR,—Permit me to call your attention to the following extract from the Boston *Commonwealth* of March 2nd, 1864, in the hope that it may meet the eye of the officials who are responsible for the trouble to which these unfortunates, who are prosecuting the claim, are made to endure, as reported:

Officers in this Department who have been promoted since they came out here are having a special little trouble of their own just now. The Secretary of War has ordered that they shall be mustered in for their several appointments, without waiting for their commissions to arrive. The object of this is to prevent the accumulation of pay which would otherwise be due to officers from the time they may be stopped. It is a pretty hard ruling. Take the case of a Major of Cavalry, who has been promoted from the ranks, or promoted from the ranks for meritorious conduct in action, and happens to be absent from his command on detached service, and in addition that a commission would be slow in due time. Seven months ago such a Major was ordered to be mustered, and he applied for pay as a first lieutenant while his pay as captain was stopped. He was mustered as a captain, and has not been paid all he over five months of service in the field. It seems to me that he ought to be paid as a Major, and that the order to stop his pay is unjust. The same is supposed to apply to officers promoted in camps where they have been stationed. They are perfectly helpless in the matter, and should not be made the victims of any blunders in the mustering department.

These complaints are just, and call for prompt action on the part of the Paymaster General. It appears to me to have been guided by no sense of justice or utility in the adoption of the present absurd "mustering regulations" and orders on the subject.

At best, officers in the Department of the Gulf cannot be mustered into service in less than 21 days after the date of their appointment, and in the case mentioned, how I know of officers who were over a year in getting mustered at all; and in several of the instances where I have declared illegal at Washington, after several months more delay; and this, too, through no fault of the officers, but owing to the ignorance of the mustering officer, who was put to the trouble to do more than obey to the best of his ability orders which were as conflicting as to be wholly unintelligible.

In the Army of the Potomac there can be no misunderstanding of orders, for a few hours only need pass, and a reference to Washington settles the matter. But not so in the more distant departments, where "one month is" good "time" for an official paper to make in going to Washington and return.

I cannot believe that the decision in this case will be adhered to, and thereby compel so many good men to leave a position in which they are doing good work, practically in a department where everything costs twenty-five to fifty per cent more than in New York. A. A. G.

NEW YORK, March 21st, 1864.

THE UNITED STATES MARINE CORPS.

To the Editor of the Army and Navy Journal:

SIR,—I would call the attention of your correspondent under the above caption, to the considerable error of fact in a case which he cites in relating one of his grievances, that "a marine officer serving a marine guard" "boy in 1861, will say, is made a lieutenant in 1863," "when he ranks a captain of marines; *one perhaps of thirty* "*years standing.*"

Now, this supposition abot is wonderfully wide of the mark, as the junior captain in the marine corps entered the service in 1861, as a second lieutenant, while the senior lieutenant in the navy list of the same date of commission will be found to have entered the service as midshipman in 1846, and was promoted to the rank in 1852, reaching his grade after 12 years service.

The writer of this is by no means favorable to the rapid advancement of officers to the grade of the line of the navy in either the Navy or marine corps, as it has pushed forward many in either branch, to positions where both experience and judgment are required without their having had time to acquire either.

I am also very sorry to see that after the testimony of the 2d officer in favor of the utility of the marines, when it was lately proposed in Congress to transfer them to the Army, any marine officer should be found willing to talk about a marine officer being necessary to "protect his men." The universal testimony of the Navy officer consulted, from admiral to lieutenant-commander, was that the marines are a most valuable adjunct and part of the military force of a ship of war; and, is it to be supposed that with these views, any "impositions" would be put upon them, or any duties or sacrifices required of them not properly due?

The demoralization, incident to a long peace, has developed in the Navy (I speak of it as a whole, line and staff) a selfishness and habit of provoking disappointment to the efficiency of the service, which it is to be hoped the war will cure. The real body of the Navy is the sea fighting element; the other corps are merely auxiliary. Yet these auxiliary corps are struggling to make themselves independent and antagonistic.

In the days of BLAKE, a colonel of cavalry commanded and fought a fleet, employing a body of trained seamen to manœuvre the vessels. In the present day a body of engineers is employed in that speciality. As in former times the artillerist was proud to acquire the seaman's art; so in the present day the engineer aspires to acquire that of the gunner, a matter of very much less difficulty than was the former.

Another correspondent writes:

According to his own argument, "marines are strictly in" fantry soldiers, who are trained to serve afloat; and they "discipline, equipments, spirit, character, and *esprit de corps*, "are altogether those of the army." Is an army officer of a marine corps rank the same as officers of the same grade rank in the Army. Why, then, should they be entitled to more consequence, because shore duty on board ships of war than in the field? Why should a captain of a squad of soldiers on board of ship be entitled to a *higher* rank than an officer of the same grade in the Army, in command of a company in the field? Or why should he feel more aggrieved because a change has taken place, than officers of the same grade in the Army? Many of our flag-ships are now commanded by commanders; a few by captains; and you correspondent would have no propriety in calling a marine officer of flag ships, a rank equal, or superior, to the commanding officer of the vessel, and equal to the colonel of infantry. The Army and Navy Register gives to the latter but 200 men, "artillerists (!) infantrists and police," under his command.

The necessity of a well-organized police force on board ships of war, is patent to all, but wherein exists the utility of adding to the "chief of police" a rank superior to that of his grade?

OUR SYSTEM OF RECRUITING.

The United States and England are the only two great Powers which entrust their standing voluntary enlistment, stimulated by bounties to France, Prussia, Austria and Russia, a system of conscription is regularly organized and enforced. Undoubtedly such a system is not applicable, permanently, to this country. The exemptions which would be granted to the industrial economy of the people, and by the devotion of a large proportion to intellectual pursuits, would create too many gaps in the system to permit it to work uniformly and equally. In countries where there is a marked distinction of classes, the overpressure can be made to fall upon the poorer classes. Conscription falls naturally on those who can be best spared from the occupations of life, and who can set up no pretensions of belonging to the professional orders. But in this country nothing except a great crisis in the national life, such as we are now experiencing, will make conscription in the last degree tolerable.

If, as is generally anticipated, our standing Army shall be largely increased, the question arises how shall it be maintained to its full effective strength, in the most economical manner. It is not a very difficult, though a very important enlargement, to keep it fully recruited. The system of high bounties is obviously as objectionable as that of conscription. The cost, if it should be continued, would be enormous, and it is open to other objections—the principal of which is that in the Army would be composed of men seeking to live, not as a useful and honorable occupation, but simply to obtain the bounties.

The duty of every citizen to assist in the defence of the country is indubitable; it is equally clear that all cannot become soldiers. The problem how would be solvable which should be adapted to the characteristics of the American people, and at the same time conform to the military obligations incumbent upon all citizens. Would it not be advisable that Congress should pass a law, obliging every voter within certain limits and with certain reductions, to enter either into the standing Army or the militia forces for a period of three or five years, or in default of this, to pay a small "army tax," which should be used for making to equalize pay of volunteers equal to the regular bounties now and in workships, and for equipping the military organizations? The old militia systems of the States had some similar features—the exemption taxes, however, going into the State treasuries; but the system has long since ceased to be operative, and the present militia organizations of uniformed militia have done so at their own expense. If the militia of the States should be put, for certain purposes, directly under the care of the General Government, it would soon become an effective organization—in fact a vast reserve army, from which recruits could be drawn in time of war without difficulty.

That this country would ever be engaged in a great war has hitherto been considered an absurd improbability. Yet we are now fighting in one of the most tremendous conflicts the world has ever witnessed. Future wars, with nations

possessing vast military organizations, are events not beyond reasonable anticipation. It will not be wise to relapse into our former inertness and negligence. An Army must never become an established institution among us. All matters which relate to its organization and maintenance must be thoroughly considered and decided upon. It must not be hereafter regarded as a partially useless incident to our political life, occasionally necessary to protect the frontiers and man the forts; but the Nation must cherish and honour it as an important element in its character. The Army must not be a separate class, for whom the people entertain jealousy and distrust, but among them there must be representatives of all branches of our population. His soldiers must not be foreigners, entering the ranks merely as a means of support, when there is no demand for religion and moneyless, but they must be composed of intelligent young men, choosing a soldier's life as they would that of the farmer or mechanic, and seeing in it a path to honor and advancement, equally as favorable as any other. Our Army must be truly National-ready American. How to render it so is a matter well worthy the consideration of our ablest officers and our wisest statesmen.

FRANKLIN BACHE, M. D., the oldest great grand-son of BENJAMIN FRANKLIN, and a distinguished member of the medical profession, died at his residence in Philadelphia, on Saturday afternoon, March 26th. Dr. BACHE was born in Philadelphia, on the 25th of October, 1792. In 1814 he graduated in the Medical department of the University of Pennsylvania. The year previous he entered the Army as Surgeon's Mate, and the following year was promoted a full Surgeon, a position he occupied for two years, when he resigned, and commenced a private practice in Philadelphia. From 1824 to 1836 he was physician to the Walnut-street Prison: from 1826 to 1832 a Professor of Chemistry in the Franklin Institute; from 1829 to 1839 physician to the Eastern Penitentiary; from 1831 to 1841 Professor of Chemistry in the Philadelphia College of Pharmacy; and in 1841 he was appointed Professor of Chemistry in the Jefferson Medical College, the duties of which office he discharged faithfully and well, in every way that was taken with the disease which resulted in his death. During his long career he made numerous valuable additions to the literature of medicine, the principal of which were the Dispensatory of the United States, published by Dr. GEORGE B. WOOD, and itself the first edition of which was issued in 1833. Professor BACHE was a brother of Colonel HARTMAN BACHE, of the Engineer Corps, and a first cousin of Professor A. DALLAS BACHE, of the Coast Survey. He leaves one daughter and four sons, three of whom are in the Government service.

LETTERS have been received by Brigadier-General SIBLEY from Father ANDRE at St. Joseph. He encloses communications from some of the Sioux Chiefs, who profess friendly orders for peace, and say they have had a general consultation with the other bands on the Missouri, decline to commit themselves fully. Father ANDRE states that the expedition of General SIBLEY last summer entirely changed the views of the upper bands of Sioux with regard to their ability to fight the whites, and that ever since they boast-ed that one of their warriors was worth ten Americans, and with his hatchet could easily beat out their brains. Then they were impudent and defiant, but since, for the first time, they have met our troops in battle, they have learned new powerless they are against well-disciplined forces in the field, and they very much deprecate another visitation of a like nature. In an earnest appeal to the Chiefs of the Sioux bands Father ANDRE has advised them, if they wish to save themselves from speedy destruction, to throw upon the Government at once the fact that they will have upon the wild Indians to whom it is addressed can only be conjectured.

MAJOR JAMES A. HARDIE, A. A. G., has been appointed Inspector-General in the Regular Army, *vice* VAN RENSSELAER, deceased. Captain ELISHA H. LUDLOCTON, 17th U. S. Infantry, has been appointed Assistant Inspector-General U. S. Army, *vice* BUCHAN, deceased. Captain LOUIS H. SANDAL, 15th U. S. Infantry, has been appointed Assistant Adjutant-General U. S. Army, *vice* HARDIE, promoted. Lieutenant WM. H. CHESEBROUGH, 11th U. S. Infantry, has been relieved from duty as Assistant Adjutant-General 9th Army Corps, and ordered to his regiment. Second Lieutenant JOHN C. WOOD, 1st U. S. Infantry, has resigned. Major F. T. DENT, 6th U. S. Infantry, has been appointed Lieutenant-Colonel on the staff of Lieutenant-General GRANT.

OFFICERS who have visited the Western armies report many cases of scurvy. A vast number of patients in the U. S. General Hospitals are suffering from the effects of bad and badly-prepared rations. In many cases this is the fault of company officers, who do not give proper attention to the cooking. But by far the greatest amount of the disease arises from *want of vegetables*. The demand with medical officers is, give the soldier less fat pork and more vegetables. It matters not what kind of vegetable food, but some kind is absolutely necessary. The Quartermaster's and Commissary Department say that in many cases it is impossible to supply the ration of potatoes. This may be so for a month or two; but it is well known that even at points which can easily be reached a supply is not on hand.

The present is a proper time to contract for potatoes, onions, and other vegetables, that farmers may be sure of a market. If the ration of pork were reduced two ounces, and flour four, and the value added to the potato ration, the services of many thousands would be saved to the Army. The part of the ration should not be commuted, but issued in kind; if it cannot be issued in one month, a double quantity should be issued the next.

THE celebrated Mexican ex-President exile, SANTA ANNA, recently took advantage of the French conquest of MEXICO, to return to his native land after eight years of banishment. On landing at Vera Cruz he was required to sign a paper declaring his allegiance to the French interests, recognizing as the only legitimate government the monarchy proclaimed by the assembly of notables, with Prince MAXIMILIAN as Emperor, and pledging himself to abstain from any political demonstration, either by speech or writing, and to conduct himself wholly as a private citizen. The Mexican politician and intriguer, however, could not resist the temptation to issue a pronunciamento in the usual Mexican style. Although its tenor was favorable to French pretensions, the act gave great offence to General BAZAINE, the French commander, and Santa Anna's days were very peremptorily ordered to quit the country, in terms by no means polite. SANTA ANNA was highly indignant and declared his intention to appeal to LOUIS NAPOLEON. He is now at HAVANA.

THE most important facts elicited this week, by the WILKES Court-Martial are proved in some thirty letters given in evidence. They are from Commodore WILKES to the Navy Department, and were produced by the defence to show that the accused had discharged his duties to the best of his ability, and that there had been no encouragement on the part of the Department. In these letters the Admiral complains of the insufficient means placed at his disposal, and the difficulties that beset him in consequence, only five ships, and those inferior ones, being furnished him, when it required a squadron to watch the whole of the long twelve in order to make cruising effective. He repeatedly urged upon the Department the necessity of systematisation of effort, and deprecated the policy of independent cruising, saying that a ship cruising by itself would have but a slight chance of capturing any of the rebel vessels, but two ships cruise together, the probabilities of their success would be quadrupled, and if the Department would provide the twelve guard vessels he had asked for he could so post them as to make it next to an impossibility for the rebel vessels to escape.

The prosecution offered a letter of Admiral FARRAGUT's to the Navy Department, complaining of the detention of the *Oneida* by Admiral WILKES. He states that he dispatched the *Oneida* in pursuit of the *Florida*, to look at Key West on the 3d day of May, and she fell into the hands of the accused, who kept her in his squadron. He supposed Admiral WILKES would keep the *Oneida* till he had made up his mind to let her go; that Admiral DUPONT had taken his money and Admiral WILKES had seized his ships. The prosecution then read two letters from the accused to the Secretary of the NAVY, to the effect that the *Sea Jackets* had broken down, and the force under his command was entirely inadequate to the service required, and that in consequence he had retained the *R. R. Cuyler, Oneida* and *Vanderbilt* in his squadron.

WE learn from Washington that the House Naval Committee are preparing a bill, in connection with the recommendations of the Secretary of the Navy, for the building of four ocean iron-clad cruisers, the cost of which, it is estimated, will be from five to seven million dollars each. The Ways and Means Committee struck out the appropriation for them on the ground that it would take two years to complete them, and, further, that the naval service does not require this class of vessels. A majority of the Naval Committee are opposed to this measure, but will allow it to be reported to the House for its action.

THE bold movements of the Copperheads in Illinois are opening an unexpected prospect for action to General HEINTZELMAN in his quiet command at the West. His department, at last accounts, was disturbed by an outbreak at Charleston, Coles Co., Illinois, where, on the 28th of March a gang of disloyal persons drew a party of soldiers into an affray, which resulted in a general fight between the Union men and the Copperheads, who were headed by the County Sheriff, one JOHN S. O'HAIR.

During the fight a large number of citizens and several of the soldiers were severely wounded. The arrival of 250 of the Fifty-fourth Illinois in the afternoon, terminated the fight for a time; but the insurgents, said to be 300 strong, headed by the Sheriff, intrenched themselves at Gilliland's Mills, about ten miles from Charleston. Other troops have been hurried forward, and the disturbance, the accounts of which are no doubt exaggerated, will be promptly quelled. The administration of justice to these fellows should be short, sharp, and decisive.

A COURT of inquiry has been held at the Gosport Navy Yard to investigate the circumstances of the loss of the *Peterhoff*, on the 6th of March, by collision with the *Monticello*, and sent a report to Admiral LEE, and through him the Navy Department. As far as is known, neither acting Lieutenant PICKERING, of the *Peterhoff*, nor Lieutenant WILLIAM E. EVANS, of the *Monticello*, comes in for any share of the blame, as the mishap is supposed to have been purely accidental.

IT is reported in the daily papers that Major-General PHILIP H. SHERIDAN, for a long time in command of a division of infantry in the Army of the Cumberland, has been appointed to the command of the cavalry corps of the Army of the Potomac, to succeed Major-General PLEASONTON.

NAVY YARDS.

BROOKLYN NAVY YARD.

The Yard is very quiet this week, as regards the movements of vessels, there being only the ship-of-the-line *Vermont* and the sloop *Dale* in all other respects the general work is as brisk as five thousand men can well make it. The twin steam frigates *Susquehanna* and *Mahaseuset* are being rapidly completed. Their form and general appearance indicate both immense power and great speed. The frigate-sloop *Kalamazoo* is progressing finely; also the *Minnetonka*, which is now receiving her planking, and will probably be completed by the first of May. The *Onondaga* and *Penawata* are still here, but are expected to sail shortly; the former, together with the *Iroquois*, rendered famous in the Capture of New Orleans, will be ordered under the command of Admiral Farragut in the Gulf Squadron. The vessels which are the *Tuscarora, Pulaski, Kansas, Ashuelot, Agamenticus* and several others are still undergoing repairs. The *Chenango* is officered, ready, and awaiting her crew. The *Mercury, Hendrick* and *Penguin* are also in readiness for use.

Some very interesting ceremonies took place at the Yard on Monday, on the occasion of the raising of a flag-staff to commemorate the finishing of the last gun-boat. On the about centre of the ground formerly known as the "swamp," for the purpose of a parade and pleasure ground for the men on board receiving ship *North Carolina*. The work, which was performed by Commodore *Kennedy*, of the *North Carolina*, was commenced about eighteen months ago and was finished last week. Commander Meade erected the fine battery, shooting gallery, and other accommodations, which express to all Govern't ment. The improvement, which includes the introduction of the Ridgewood water on board the *North Carolina*, is a most desirable service to the inmates of all those who are sent on board the receiving ship.

BOSTON NAVY YARD.

The U. S. steamer *Rhode Island*, Commander S. D. Trenchard, from Cape Hayitien March 19, arrived March 28. Side-wheel steamer *Merrimac*, from Port Royal 25, at 4 this P. M. Side-wheel steamer *Saugus de Cuba*, 20, was taken out of the dry-dock the same day. Side-wheel steamers *Mercedita*, *Cornubia*, *Cherokee* and *Iosco*, 8, are still undergoing repairs in the dry-dock, by want of crews.

The new steamer *Ansfort*, recently purchased by the Department of the last builders, Messrs. McKay & Aldus, made a trial trip last week. She is a harbor of Boston. In all her qualities she is a most excellent vessel, gave unqualified satisfaction, and is now ready for the public service.

WASHINGTON NAVY YARD.

The steamer *Harvest Moon*, Volunteer Lieutenant J. D. Warren, which has been under repair in and spring a leak in the Chesapeake while on the way up from Fortress Monroe, after repairing on the voyage, was launched on the 26th inst. and hauled into the Yard. Her shaft and propeller has been hoisted on the *Harvest Moon*, which left the Yard on the 29th of March for Fortress Monroe. Admiral Dahlgren and Commodore Smith, of the Bureau of Yards and Docks. The steamers arrived on the 28th with two sloops and thirteen boats, which were captured as prizes. The *Baltimore* left on the same day for the lower Potomac, with Admiral Dahlgren. The *Pawnee* is under shore-to hoist machinery, in order to undergo repairing. The screw steamer *Resolute*, 1, arrived at the Yard on Monday with 200 men.

The Commodore Commandant Master Smith, left the Yard on the 27th ult. for her station in the river.

On the same day the President, accompanied by Lieutenant-General Grant, Major-General Halleck, and Secretary of War Stanton, paid a short visit to the Yard.

On Monday last, the delegation of Indians from the Northwest paid a visit to the Yard, and after they had been introduced to Commodore Montgomery the various objects of interest about the Yard were visited by them.

The new coal depot which is being built in the stream, is rapidly approaching completion, and in about four weeks it will be finished. The depot or wharf is built in the shape of a U, and is 500 feet long by 60 feet, wide, calculated for between three and four thousand tons of coal. The flooring has about nine inches of earth put on it, and thereby much strengthened. When this is completed the unsightly mountains of coal now between the offices and wharf will be removed, and the appearance of the Yard will be greatly improved thereby.

PHILADELPHIA NAVY YARD.

The appearances of things in general at this Yard indicates a rapid advancement on all kinds of work. At present the few vessels undergoing repairs, or being constructed there, is wonderful, when we take into consideration the large number which have been on hand daily since the war began. A goodly number of men are employed on the new vessel now being built in the upper ship house. The work of removing the double-turreted monitor *Passaconda* to the sectional docks has been completed. Two or three other war vessels are expected at the wharf, undergoing repairs. The supply steamer *Massachusetts* left for the South Atlantic Blockading Squadron on Saturday last.

THE ROLF KRAKE.

THE Danes, as our readers know, recently sent out a turreted iron-clad to destroy the bridge which the allied forces had constructed at Egernsund, to facilitate communication between Broagerland and the position at Duppel. So much curiosity is felt to know more about the *Rolf Krake*, the Monitor in question, that we have taken the pains to gather the following particulars concerning her from reliable sources. She was built at Glasgow by the Messrs. NAPIER, after plans furnished by Captain COLES. She is 120 feet in length, 34 feet beam, is driven by an engine of 250 horse power nominally, but capable of having a far greater pressure of steam, and is provided with two cupolas, each armed with two 68-pounders. By a peculiar contrivance, the idea of which seems to be based upon the plans of Mr. STEVENS, as developed in the *Naugatuck*, the *Rolf Krake* is lowered when in action, so that but little of her hull is exposed to the enemy's fire. She can make nine knots per hour in smooth water, but her officers seem to have little confidence in her capability to withstand the heavy weather so proverbially prevalent in the Baltic or the German Ocean. Apertures at the top of the towers, containing the guns, furnish the ventilation necessary.

The *Rolf Krake* attacked the Prussian batteries at Egernsund, on Feb. 18, and was under fire about an hour and a half. During that time, according to the statement of an officer on board, she was hulled 66 times. The towers were hit several times; sixteen shots went through the funnel, one through the steam pipe, three through the foremast, one through the mainmast, two through the awnings, and from 60 to 70 through the bulwarks, small boats, sails and rigging. Her deck was torn up in several places, the tackle was much injured, the three boats were penetrated; in fact every vulnerable point was hit. In all 160 shots struck her, and it was estimated that 5,000 lbs. of iron were thrown at her during the action by the Prussian batteries. The accounts regarding the damage done the vessel vary, but there is no doubt that the injuries she received compelled her withdrawal from the action. The indents on the armor plate only reached a maximum extreme depth of one and a quarter inches; but the important fact is to be noted that no gun heavier than a 24-pounder was used against her. Captain ERICSSON would doubtless be willing to allow the Prussians to pelt his Monitors all day with balls of this size, without any fear of the result. There are even wounded upon board the *Rolf Krake* during the action—no one of them fatally, however. One of the officers was put *hors de combat* in consequence of being struck by the fragment of a shell which burst directly over the aperture in one of the towers. The concussion from the impact of the shell upon the iron side of the turret was quite severe occasionally, throwing down the cabin, bulkheads, &c., but doing no serious damage. No authentic accounts have yet been received regarding the amount of damage done the enemy's batteries by the *Rolf Krake*.

We must wait the fuller data regarding the results of this action, as well as for a more detailed description of the Monitor engaged, before we draw any inferences from it. In no respect was the test so severe a one as that to which our iron-clads were subjected at Charleston.

THE ROYAL SOVEREIGN.

The *Royal Sovereign* turret ship, upon which Captain COLES has been so long laboring, was floated out of her dock at Portsmouth, on March 8th. Several of the English journals state without reservation that her transformation to her present form is to be attributed to the famous action between the *Monitor* and *Merrimac*, and Lord C. PAGET, Secretary to the Admiralty, officially acknowledged the fact in a speech which he made in the House of Commons on February 26th. Whatever advantages Captain COLES may claim for cupolas or domes over turrets, he is not likely to reap much credit from the performances of the *Royal Sovereign*, as she is equipped with the latter. The modifications of Captain COLES's method of fitting the turret to the vessel may prove an advantage, but practical experiments, such as those to which our Monitors have been subjected, can alone discover the weak points which it is certain the *Royal Sovereign* must possess. The vessel is 240 feet in length, 62 feet in breadth, with her topsides—*i. e.*, the outside level of her upper deck, 10ft. above the water-line amidships, 12ft. 6in. at the stem, and 8ft. 6in. at the stern, space enough apparently for the 15-inch gun with which our Monitors are armed to test their smashing powers upon, if the opportunity should ever present. Her actual draft it is estimated will be 23ft. 6 inches, and there are hopes expressed that she may attain nearly the speed she possessed previous to her alteration—a trifle over 12 knots per hour.

The turrets, of which there are four in number, are sunk into the upper deck of the ship, and are made to revolve on the same principle as a railway turntable, the motive power being within the turret, so that the gun may be moved in a lateral direction to any point of a circle. In each turret there is a narrow oval portholo for the muzzle of the gun to be run out, and this is but a short distance (perhaps a foot or two) above the surface of the deck, which falls from the centre to the side. The top of the turret is protected by parallel bars of iron, in which there are three circular holes, through any one of which the officer of the gun may insert his head to take sight of the object to be fired at, and at the same time to direct the movements of the men inside. The bulwarks of the ship will be attached at the lower part by hinges, and will fall back when down over the broadside when the guns are fired. The turrets being thus sunk, so that the basement rests on the main deck, do not form a conspicuous mark for the enemy. They are heavily cased with iron, and are of such strength that each weighs no less than 138 tons. The deck, also, is not badly armed, consisting only of plates of iron one inch thick and covered with the usual planks of wood, so that if a heavy shot were to fall vertically it is not impossible it would find its way out of the bottom of the ship. The experience of our Monitor at Charleston, proved that this part of the iron-clads demanded greater protection, and Captain COLES may discover that this is a fatal weakness in the vessel he has labored so long to make impregnable. In the interior the cabins are lofty, but, as a matter of course, not well lighted. A very important invention has, however, been introduced to improve the ventilation. It is a plan designed by Dr. EDMONSTON, staff-surgeon of her Majesty's ship *Victory*, and consists of air channels running the whole length of the ship, and communicating with the deck through small air excrescences, and is carried off through these tubes into the funnel, instead of permeating the decks to the injury of the health of the crew. It is believed that it will answer perfectly, inasmuch as, even when the fires are not lighted to procure the draft, the funnel becomes heated to a considerable current of air upwards through the tubes which communicate with the funnel. The ship under water is coated with Muntz metal, and to prevent galvanic action, a band of vitreous sheathing has been attached for some distance below and above the water line. This sheathing consists of small plates of iron covered with a preparation of glass, and is intended to be an anti-fouling as well as a protective agent. Contrary to the expectation of many persons, the displacement caused by the *Royal Sovereign* when she floated out proved to be rather less than was anticipated, and she now draws, without her stores, rigging, or guns, 18 feet forward and 24 feet aft.

The guns with which the turrets are to be provided cannot come in competition with those upon our Monitors. Although they are of 12 tons weight each they are not rifled, and consequently their projectiles cannot exceed 150lb. in weight, 7 in. cast iron, and about 160lb. if of the best steel. Upon this point the London *Times* remarks with its customary superciliousness that "in this respect the ship's offensive powers seem to have been too lightly dealt with, although it may be that instead of the limited 9-inch charges, which are now in use, thrown with 50lb. charges, may settle at once any "iron-clad now afloat or building." In the same vein it also says:—"It is useless to attempt any comparison between "the efficiency of her turrets, either as regards their defensive powers or their weight of fire, with the American "Monitors. The armor of the latter is composed of layers "of inch plates bolted together, while those of the *Royal Sovereign* are solid masses of metal. With respect to their working, the American turrets rest with their base on the "upperdecks of the vessels, and their whole weight—their "length to the enemy's shot, and are further capped by a "pilot-house, the whole structure being in all some 15 feet "above the level of the deck. The *Royal Sovereign*'s turrets, on the contrary, rest their base on the lower deck below "the side armor plates, and project only some four feet "six inches exposed above the level of the upper deck. The "pilot-house in her is also a separate structure altogether, "situated between the foremost turret and the funnel, and "therefore does not cap the turret, as in the American Monitors, where indeed it was a necessity from the vessels' form of construction and their draught of water."

As we have previously remarked, such comparisons as these may be made with better grace when the vessel in question has passed through the ordeal which our iron-clads have sustained. Of one thing we are very sure, the *Royal Sovereign* would never live to tell the tale of a fight with one of our Monitors armed with the 15-inch gun, firing a projectile propelled by fifty pounds of powder.

RECENT FOREIGN MILITARY PUBLICATIONS.

An octavo pamphlet of 34 pages, entitled *Reflections on the Admirable Strength of the Institution, &c.*, has recently appeared in Berlin, Prussia. It emanates from the pen of a Prussian officer of rank, who frankly admits the deficiencies and defects of the Prussian military regulations, and attempts to point out the best method for their correction. He considers as unwisely the present location of 1,000 men, and recommends that it be divided into two. We are unable as yet to see that the author, contrary to the usage of Prussian military writers, admits the inferiority of the "needle gun." It has always been asserted that while the Minié rifle could be discharged only twice in a minute, five and even nine rounds could be fired from the needle gun in the same time, "so that 300 needle guns are at least equal to 900 Minié rifles." But the author of this pamphlet says:—"As to "rapidity of fire, we are not a step in advance of the infantry "of FREDERICK THE GREAT; in a technical point of view we "are perhaps alike—although this is still a question to be "proved—by means of the admirable needle gun to lead a "little faster."

Venetia and the Quadrangle, a military geographical sketch, by M. BITTANI, First Lieutenant in the 2d Wurtemburg Infantry, is published at Darmstadt, by EDWARD ZERNIN. It gives an interesting description of the peaceful fortifications of upper Italy, and contains eight fine wood engravings, comprising plans of Verona, Mantua and Peschiera, and ground plans of a tower at Verona, of a bastion of the *enceinte* and profile of the wall of that city. The pamphlet, which was written from personal observation, is divided into seven parts: I. Boundaries and Institution; II. The remains of Lombardy and Venetia; III. Hydrographic Relations; IV. Culture and its Influence on Military Operations; V. Communications; VI. Fortifications; VII. Critical Survey of the Theatre of War.

Journal des Armes Spéciales: et le Lieut.-Major. Contents of the number for January: Panoply, or the weapons of all ages and of all nations with plates; Offensive Weapons; Art. 1st, Offensive Weapons; Hydraulic Lime Mortar, based on the report of Mr. G. S. ROBERTSON, to the London Society of Civil Engineers; Organization, Composition and Strength of the Armed Forces of Great Britain; On the Profession of Arms; Military Intelligence—the Federal Army, Member Plates. Contents of the number for February: *Des Canons Cerclés*, by F. B. ROONSTYA, Lieutenant of Artillery; Panoply, Art. 2d, Offensive Weapons; The Army of Great Britain; On the Profession of Arms; Rifled Arms for Infantry (translation of the German work above mentioned); A New Bleaching Powder; The Rotating Power of Cannon; Military Intelligence—The Iron-clads of the United States —Artillery Experiments in England—Gun-Cotton in Austria—The Spanish Navy—The Sunken Ships at Schatopol.

There has appeared in Paris the third volume of Colonel AUGOYAT'S *Aperçu Historique, sur les Mouvements des Armées, les Fortifications, sur les Ingénieurs, et sur le Corps du Génie en France*. This volume, of 624 pages, illustrated with two plates, one of Alexandria in Egypt, the other of the siege of Saint-Jean d'Acre, embraces the period between 1790 and 1804, and includes the history of the first decade of the century, the laws, decrees and decisions relating to fortified places; to the engineer corps and the general objects connected therewith; the second to the campaigns, sieges and treaties of peace; the third, to works and objects of art. In the second chapter of the first division of the 624 pages, of which forms the most important part of the work, Colonel AUGOYAT gives a resumé of the campaigns of the Armies of the Republic, in which the author devotes special attention to sieges and the passage of rivers. During this period the Engineer Corps played an important part in the several passages of the Rhine by the French Armies. Several memorable sieges were also conducted in the different countries which formed the theatre of war; and the narratives of these operations have been reproduced in the *Aperçus Historiques*, with the addition of many new details. Chapter third confirms the rapid progress which was made in the art of fortification between 1790 and 1804, and ascites the wish that the author might be able, at some time, to give us an account of the grand works which were executed under that Empire. His great age seems to have compelled him to relinquish a task for which he is so eminently fitted, as he announces that this volume forms the conclusion of his work, which already includes the period extending from 1716 to 1804.

The Camp at Châlons, with lithographic plans of the Camp and Manœuvre ground. By a Hanoverian officer. Darmstadt: EDWARD ZERNIN. This pamphlet has already received the rare permission to serve a year as a temporary officer in the French army, and in this position, both in Algeria and at Châlons, was able to acquaint himself with the details of the French military system.

Etudes sur la Ventilation, by General MORIN; 2 vols, 8vo., 1676 p., 16 plates; is published at Paris by LACROIX.

The History of the British Navy, from the earliest period to the present time; by C. D. YONGE; 2 vol., 8vo.; is published at London by BENTLEY.

Bücher, His Life and Times. By Dr. JOHANNES SCHERR, Professor in the Polytechnic at Zurich. Three vols., Svo. Leipsic: OTTO WIGAND.

The 24 volume of an interesting work, entitled *Recent Studies in Applied Arts for Artists*, by Captain WILHELM VON PRÖNNIES, has been published by EDWARD ZERNIN, at Darmstadt and Leipsic.

A new work on Tactics, entitled *Introduction to the*

Study of Tactics, for Cadets of each Arm of the Service, by Major HUGO DIEDI, of the Bavarian Army, has been published by Reises, at Munich.

Diplomatic History of the Crimean War, its origin and its causes. By M. X. TAXE. Strings: BERGER-LEVRAULT et Cie.

Campagne of the Emperor Napoleon III. in Italy; complied from official papers (2d edition in press). Paris: DUMAINE.

TRIAL OF THE ARMSTRONG 600-POUNDER.

THE 600-pounder, wrought-iron, gun-grooved, shunt, called Armstrong gun has had another trial at Shoeburyness. The experiments were especially intended to test the effect of a 600-pounder projectile, hollow, steel, solid, spherical shot, weighing 3444 lbs., with a charge of 90 lbs. of powder, at a range of 200 yards.

The target was a plate, nearly 4 feet by 3 feet 6 inches, but it was 11 inches in thickness. It was reared in front of one of Mr. FAIRBAIRN'S old targets, and behind the centre of the plate there was a space of 3 feet 6 inches in height and two feet in width.

This afforded an opportunity to test the soundness of the armor, that a rigid backing is essential to the successful resistance of iron plates. The plate had been carefully manufactured and rolled by Messrs. JOHN BROWN & Co., of the Atlas Works, Sheffield. It was supported by two upright oak posts, twelve inches square, to which it was secured by strong bolts and strengthened by wrought-iron and sunk some inches in the earth. A large lump of old armor plate was then set on the ground immediately before the plate, and two wooden wedges were driven in between it and the railway bars, so as to tighten the latter, the upper ends of which were bolted to the back of the plate, and fastened to the supports by two 11-inch bolts.

At this target the gun was fired at a distance of 200 yards. The shot struck the plate about 2 feet 6 inches from the centre of the plate as possible, and divided it into halves; but so capital was the fibre of the metal, and so well had it been manufactured, that the plate broke back, and lay at a distance of 14 feet 6 inches, right facing the target, and attempted to destroy. The shot did not undergone a curious change. When fired it was solid, but afterwards, on being measured, it was found to be 12 by 10 inches. It had been compressed into the form of a fruit-cake shot, and one which had done its best and its worst against the plate. The indentation was 9 inches. The oaken posts were dislodged by the concussion into splinters. The initial velocity of the shot was ascertained to be—At the muzzle, 1760 feet per second; at the 11-inch plate, 1687 feet per second; at the 9-inch plate, 1615 feet per second; at the end of 2200 yards. As a matter of comparison between the Armstrong 600-pounder gun fired with the service charge of 16 lbs. is 1580 feet per second, while the initial velocity of a 100-pound Armstrong shot fired with the reduced charge of 10 lbs. is 1005 feet per second.

When the 600-pounder was fired at the former trial it had to contend against a charge of 100 lbs. of powder, and the projectile a steel shell weighing 610 lbs., containing a bursting charge of 24 lbs. The range also differed, being 1000 yards, while the target was 12 inches in lieu of thicknesses of 9-inch teak faced with 44-inch armor-plates.

GENERAL BURNSIDE ON GENERAL GRANT.

In a recent speech at Chicago, Major-General BURNSIDE said with reference to Lieutenant-General GRANT:

I have known him for a great number of years. If there is any quality that I possess, it is that I am particularly characterized, it is that of magnanimity. He is one of the most magnanimous men I ever knew. He is entirely unambitious and unselfish. He is a capital judge of men, and possessed of a remarkable degree of common sense. Those qualities, I think, have made him the successful general he is. He is also one who has good generals to deal with, because if he has magnanimity he will give credit to the general for what he has done. I think that is another thing we value him for. He denies any other person who may seem to be in his way. He has good common sense and judgment to weigh and measure by, and he is very with good judgment. So that the general who combines all these qualifications has every hope to succeed. Grant has succeeded, and has succeeded well and really, I believe the chances are that he will succeed in future. He is to leave the West for the present, and take temporary command of the Army of the Potomac. I don't say anything of the generals who have heretofore commanded the Eastern Army, I think he will inform into that army a degree of confidence that it has not had for a long time, because success always carries with it confidence, and that is what you want. I think he will be successful, particularly in this whole assemblage that does not desire success, be sought, and, inasmuch as he has been successful heretofore, he will have the confidence of the country, and have the qualifications, which I think he has and which I have said to you, he has, it seems to me, we can all go home to-night, believing that success is going to attend General GRANT in the command of all the armies of the United States, during the campaign. I, for one, am willing to go home to-night and sincerely and honestly pray to God to help me to strengthened in the work he has to do, and that he will be making him the instrument in putting down this infernal rebellion, which has threatened so long to ruin and disrupt the government which we all love so much.

CONSCRIPTION.—In connection with this subject, which was widely debated before the passage of our own conscription bill now a law, a decision of the French Minister of War, just published in the *Moniteur*, possesses unusual interest. He has determined that to obtain release from military service in 1864 the young men comprised in the current year's call will have to pay a ransom of 2,300fr.: 1,000fr. paid immediately, and the remainder at the expiration of the term, and also the pay for re-enlistment of 10 centimes a day. Re-enlistment for less than seven years will give a right, up to 14 years' service, to a sum of 250fr. for each year; 140fr. to be paid immediately, and 150fr. at the end of the term, and to the high pay of 10 centimes a day. After 14 years' service, those who re-enlist will only have a right to the daily pay of 20 centimes. Substitutes provided by the substitution, and for a period of seven years, will have a right to a sum of 2,300fr.; 1,000fr. payable immediately, and the remainder at the expiration of the term. Those less than seven years they will receive 320fr. for each year; 140fr. immediately, and 180fr. at the period of liberation.

ARMY AND NAVY PERSONAL.

The arrival of Brigadier-General Weitzel in New Orleans is announced.

We are told that Major-General Blair is about to resign his seat in Congress and return to the Army of the Southwest in command of the 17th Army Corps.

Colonel Frank Wolford has been dishonorably dismissed by the President from the United States service for vitiation of the fifth article of war.

The First Iowa Cavalry have presented to Brigadier-General J. W. Davidson a beautiful sabre, valued at $1,500.

Major William P. Morris, paymaster in the army and a citizen of Philadelphia, died at Memphis on the 22d of March.

Colonel Cassola, 4th New York Cavalry, was specially exchanged for the rebel Colonel Hall, the 59th Georgia Regiment. The latter is already in the field.

Major-General Washburne has been ordered to the temporary command of the troops of the 9th corps, now assembling at Annapolis.

Captain Wm. B. Roe, 16th Michigan volunteers, acting signal officer, is announced as Chief Signal Officer of the Department of the Ohio.

Surgeon A. Major, U. S. Vols., has been relieved from duty in the district of Florida, and Surgeon S. W. Gross, U. S. Vols., appointed Medical Director of the district.

Captain W. H. Demis, U. S. Coast Survey, has been attached to the staff of Brigadier-General Seymour, as Topographical Engineer.

The reorganization of the Army of the Potomac places Gen. James S. Wadsworth in command of the 4th division, 5th corps.

Dr. A. M. Wilder, late Acting Medical Director of the 9th Army Corps, is assigned to duty as Medical Director of the 23d Army Corps, Major-General J. M. Schofield. He has absent on leave, has returned to the Department.

Captain Wm. H. Pegg, commanding the escort to General Sykes, 5th corps, has been assigned to Division, Fifth Corps, with his cavalry, to act as escort to Brigadier-General Bartlett.

Brigadier-General Ewing has been assigned to the command of the District of St. Louis in the place of Brigadier-General Fisk, transferred to the command of the District of North Missouri.

Major Frank S. Bond, A. D. C. to Major-General Rosecrans, was ordered under arrest in Washington this week by the Secretary of War, for visiting Washington without proper authority.

A large number of naval officers, including Rear Admiral Paulding, Commodore Goldsborough, visited the White House on the 29th of March, and were introduced to the President by Secretary Welles.

Lieutenant Cyrus Scott, 13th Ohio, Lieutenant Albert H. Reiley, 51st Pennsylvania, and Lieutenant Eugene Sullivan, 5th New York volunteers, have been dismissed the service of the United States.

Captain James E. Montgomery, Assistant-Adjutant-General upon the staff of General Meritindale, has been relieved and ordered to report to Colonel H. M. Bush, commander of the 1st brigade Veteran Reserve Corps.

First Lieutenant and Adjutant Charles Rubburg has received the appointment of Captain from the Governor of Maryland, and Captain H. Barney, on staff duty here, has been appointed Adjutant, vice Rubburg, promoted.

Brigadier-General Lockwood has been assigned by Major-General Schenck to the command of the 3d Separate Brigade, and his headquarters will be on the Eastern Shore of Maryland. Captains Kent and Gallagher will be attached to his staff.

Captain S. J. Simmonds, 1st Kentucky battery, has been dishonorably dismissed the service, by order of General Hooker. The charges were drunkenness, carrying arms, and "embezzling Government property," "stuttering" and "associating with the passengers" on board the latter ship, Dec. 12, 1863.

Second Lieutenant Frank Reynolds, 1st Artillery, U. S. S., Commissary of Musters and Subsistence of the South, tried by Court-Martial for drunkenness on duty, and sentenced to be cashiered, has been dismissed the service by order of Major-General Gilmore.

A private letter received from Columbia, South Carolina, states that Ensigns Williams and Porter, of the Navy, who were captured with the officers from Fort Sumter, have been released from irons and placed on the same footing as other prisoners.

Captain Talbot, of the Signal corps, who recently escaped from Richmond, is about to reenter the field as chief signal officer of the Army of the Potomac, with the rank of major. Captain Norton, now acting in that capacity, will join the Army of the Cumberland.

Huntsville, Alabama, is at present the headquarters of the department of the Tennessee, Major-General Sherman commanding. The Fifteenth Army Corps, Major-General John A. Logan, has its headquarters there, and guards the railroad to Stevenson, sixty miles east, on the Memphis and Charleston Railroad.

By order of Brigadier-General Seymour, the redoubts and batteries in the vicinity of Jacksonville, Florida, have been named as follows—the Battery Hamilton, Redoubt Reed, Redoubt Morse, Redoubt McKee, Redoubt Finley, Battery Hyrick, Redoubt Sammons. These designations are given in honor of officers who fell at Olustee.

The finding of the Court of Inquiry at Fortress Monroe, which declared Colonel John A. Nelson, Tenth United States Colored Troops, deficient in capacity, and negligent in discharging the responsible duties of rescuing his officers, has been approved by General Butler, and he has been mustered out of the service.

The staff of Major-General Low, Wallace will retain the old departmental staff with but two changes, viz: Lieutenant Colonel S. B. Lawrence, A. A. G., in the place of Lieutenant-Colonel William H. Chesebrough; and Colonel John Wesley, Provost Marshal, in the place of Major Henry Z. Ryder.

The following promotions have recently been make in the 100th New York Volunteers: 2d Lieutenant Wayne Vaggles to be 1st Lieutenant and A. D. C.; Captain Gouverneur, 2d Lieutenant Frederick Sendrack, to be 1st Lieutenant, vice J. A. Newell, promoted; Private William C. Barbarin, to be 2d Lieutenant, vice F. Sendrack, promoted.

Among the naval appointments recently confirmed by the United State Senate, appears the name of Asaph Hall, Master, to be Lieutenant and Commander in the Navy. Professor Hall is a gentleman of fine mathematical attainments, and was for some years a student and assistant at the Harvard College Observatory. His planetary calculations have made him widely known among astronomers.

Brigadier-General John Gibbon, who for some time has been in command of the 2d division, 2d corps, Army of the Potomac, having recovered from his wound received at Gettysburgh, has returned to the Army of the Potomac to resume command of his division. Brigadier-General Alexander Hays, and Colonel A. Leech, of the Ninetieth Regiment Pennsylvania Volunteers (Corcoran Legion), relieves him as a commander of the barracks for drafted men.

A New York correspondent of a Philadelphia paper having stated, a few days ago, that Major-General Meade's health required that he should be relieved from his command, and that Major-General Hancock had indicated his relinquishment of the command of the Army of the Potomac, Major-General Meade, who commands the Brooklyn Navy Yard, has written a letter contradicting the statement and denying the receipt of any such letter from his brother.

The following officers have been appointed on the staff of Colonel Richard A. Rush, commander of the 1st brigade Veteran Reserve Corps: Captain James A. Montgomery, A. D. C. and staff and assistant-adjutant-general; Captain William W. Rogers, 16th regiment Veteran Reserve Corps, acting assistant-adjutant-general; Second Lieutenant Wesley Sprague, 1st regiment Veteran Reserve Corps, acting assistant quartermaster and acting aide-de-camp; Second Lieutenant Wesley Hardwood, 24th regiment Veteran Reserve Corps, acting aide-de-camp.

Brigadier-General George Cook, commanding division at Charlestown, Western Virginia, announces the following officers as his staff—Lieutenant-Colonel John B. Mc Skimmi, 9th Virginia Volunteers Acting Assistant Inspector-General; Captain James L. Botsford, Assistant-Adjutant-General; Captain Charles H. Smith, Commissary of Subsistence; Captain John J. R. McCann, Assistant-Quartermaster; Captain James Allen, 2d Va. Cavalry, Provost-Marshal; 1st Lieutenant B. Smith, 2d Va. Cavalry, A. D. C.; 1st Lieutenant J. Kelly, 36th O. V. I., Aide-de-Camp; 1st Lieutenant Frank Slade, 12th Va. Cavalry, Aide-de-Camp; 2d Lieutenant C. S. Roberts, 156th N. Y. Vols., Assistant-Commissary of Musters; Surgeon Geo. M. Kellogg, Medical Director.

The following officers constitute the staff of Brigadier-General Gordon Granger, commanding districts of Florida:

Capt. F. R. Chadwick, A. A. G.; 1st Lieut. R. M. Hall, 2d N. Y. Vols., A. A. I. G.; Maj. Eddy, 4th U. S. and 8th N. Y. Vols., A. A. I. G.; Capt. G. S. Dana, U. S. Signal Corps, Signal Officer; Capt. A. T. Dunton, A. Q. M., Chief Quartermaster; Capt. C. Chenfelder, A. C. S., Chief Commissary; Surg. A. Major, U. S. V., Medical Director; 1st Lieut. P. S. Michie, U. S. Engs., Chief Engineer; Capt. Wm. H. Chesebrough, A. A. G., Assistant Adjutant General; Capt. J. Hamilton, 2d U. S. Art'y, Chief of Artillery; Capt. Wm. Ledlie, 1st Mass. Cav., A. D. C. and Provost Marshal; 1st Lieut. C. N. Jackson, 10th regt. F. R. V. C., A. D. C.; 2d Lieut. W. H. Bradshaw, 90th regt. N. Y. Vols., A. D. C.

The New York Chamber of Commerce has recommended the President to order an exploration of the river Colnoco, in conjunction with the government of Venezuela, which proposes to locate the larger part of the coffee plantations. The proposition has been referred to Secretary Welles, and it is understood that, if the interests of the naval service will admit, he shall send the Coast Survey steamer Corwin, a deep draught steamer for the purpose, the Secretary will detach a vessel of that description from the fleet.

On Tuesday, March 15th, a new iron-clad war steamer was launched successfully at Charleston. She is called the *Atalaya*. This increases the iron-clad fleet in Charleston harbor to seven vessels. She is described as a formidable vessel, with many improvements on former efforts of the rebels in naval architecture.

The numerous courts-martial now in session at Washington have been removed apparently from the War Department to hurry up business by sitting without regard to hours.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels, of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to technical and other matters.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made to United States Treasurers, Postmasters, Paymasters, or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers will fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 102 BROADWAY, CORNER OF JOHN STREET

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, APRIL 2, 1864.

THE MILITARY OPERATIONS OF THE YEAR.

THUS far time has been less action in our armies than the first quarter of any of the foregoing years of the war. This may be partially owing to the fact, that the field of activity is now more limited than formerly, that the forces of both belligerents are better concentrated, and above all, to the fact that the voluelessness of small, desultory and indecisive actions is better understood now than ever before. The two main armies of the Union and the two main armies of the Rebellion are, each of them, composed of stupendous masses of men; and the principal of our minor armies act as coöperating forces with the main bodies, instead of independent expeditionary columns as formerly. A large number of our battles and fights in other times were the result simply of the enterprise of one or other of the numerous commanders of separate departments and armies, and had little bearing upon the fundamental operations or the grand issue of the war. General BANKS might fight in the Valley, General FREMONT in the mountains, General BURNSIDE near the seaboard, and half a dozen other generals in side-water Virginia, without any direct bearing upon the work of the Army of the Potomac, and without any coöperation or unity of purpose. So there were battles in Missouri, Arkansas, Kentucky and Tennessee, which apparently had no other aim, and certainly had no other effect, than to show that our soldiers would fight with heroic spirit wherever there was a foe to confront them. Latterly circumstances have made such affairs of rare occurrence, and now it is almost impossible that they should ever again take place. We have now a single military head of all our forces, who, it is understood, freely controls one and holds all our great armies, together with all detached military bodies, and who will so operate the whole as to unify their purpose and produce a comprehensive harmony of action. Now, for the first time, is the greatest effort of the Nation's Army possible, and now fortunately we have both of our great armies placed in positions where a victory for either of them, worthy of the name, must be largely decisive of the fate of the Southern Confederacy. We have a superb position at Chattanooga; and a victory over JOE. JOHNSTON—though as yet we are hardly prepared to take full advantage of it—a victory such as some of General GRANT's previous triumphs, and achieved at the proper moment, would carry our Western army up to Atlanta, if not indeed to Augusta, and would make valueless all further Rebel struggles west of the line of the Savannah River. So, again, a victory over LEE's army now would be a much more disastrous matter to the Confederacy than it would have been at any previous time; and that mainly because the productive capacity of the South, as regards men, is now exhausted. Were the Lieutenant-General to break LEE's army as he broke BRAGG's army at Chattanooga, it would never be itself again. It might reform once more, it is true, on the south bank of the James, or on the Roanoke. And, indeed, it probably would. For it would be an extraordinary circumstance were an army of such solidity and spirit to be totally demolished by one blow, however great. But its thinned and reeling columns could nevermore stand full and strong as now, and with the loss of their capital, their spirit would be more than mortal if it did not begin to fall. We take it that it is conclusively proved that the whole able-bodied population of the South is now in their army, as this appears not only by the assertions of persons from that section, but is shown by the debates in the Rebel Congress, and by the astounding conscription measures adopted in that body, and everywhere rigidly enforced.

It is now nine months since the Army of the Potomac fought a general battle, and that was on the soil of Pennsylvania. It is seven months since the Western army marched into Chattanooga, and the last battle for the possession of that stronghold was fought in November. Both armies have done some work since then, but it has been fruitless. Both of them are now stronger than at the time of their last trial and triumph; and we judge that one of the two Rebel armies,—that under LEE—is stronger than it has been at any time since its last encounter. The season when the year's campaign must necessarily open is rapidly approaching, and there is all likelihood that it will be a very decisive one for the enemy. It is well that the energies of our Army for the lives of our men have not been wasted of late in small desultory and unpro ductive efforts.

THE FALL OF VICKSBURGH.

THE surrender of Vicksburgh by the Rebel General PEMBERTON, in July last, has given rise to an unfortunate difference of opinion between that gentleman and his superior officer, General J. E. JOHNSTON, as to who is responsible for this signal disaster to the Rebel arms. PEMBERTON, in his report, which had the advantage of first reaching the Southern public, charges it upon JOHNSTON, and is borne out in this in ant-General of the United States Army. These reports furnish interesting testimony to the vigor and ability of that series of movements on his part, by which the Rebels were surprised, divided, and beaten in detail. Up to the 14th of April, as General JOHNSTON informs us, there were no complaints received as to the purpose and direction of GRANT's movements that General PEMBERTON's reports all indicated that the efforts of the enemy would be against General BRAGG, rather than himself, and looked to the abandonment of his attempts on Vicksburgh. In one of April 15th, he says:—"I am satisfied ROSECRANS will be reinforced from GRANT's army. Shall "I order troops from Tullahoma?"

By the 29th of the month he discovered, however, that the enemy's movement indicated a purpose to attack Grand Gulf; and on the 1st of May, he was telegraphing frantically for "large reinforcements," to enable him to frustrate a movement threatening Jackson, and, if successful, cutting off Vicksburgh and Port Hudson.

But the Rebel armies were not in condition to furnish these reinforcements, without drawing so heavily upon the force in Tennessee as to compel the abandonment of that State. Finding themselves outgeneralled, a difference of opinion arose between the Rebel commanders, as to the best line of action. General PEMBERTON, regarding Vicksburgh as his base, wished to stake his fortunes upon the defence of that position; while General JOHNSTON, finding himself too weak to raise the seige of the city, urged the abandonment, in order to concentrate his forces to make what head was possible against the victorious enemy. His orders to this effect, he complains, were disobeyed by PEMBERTON; who, instead of manœuvring to prevent a siege, fell back, when beaten by GRANT at Big Black River, to Vicksburgh, and called upon General JOHNSTON to march to his relief. To this he later replied, that their joint forces—some 42,000 men—were not sufficient to raise the seige, and that all that could be done was to endeavor to extricate the garrison by attacking the enemy simultaneously at the same point of his line. By the 3d of July, JOHNSTON had matured his plans, and on that day informed PEMBERTON that he hoped to attack the enemy about the 7th, to create a diversion, and enable him to cut his way out. But too late; for with the 5th came the news of the fall of Vicksburgh.

General JOHNSTON was now sufficiently occupied with taking care of himself; for on the morning of the ninth, less than three days after the surrender of the town from Vicksburgh, General SHERMAN reached Jackson, to which JOHNSTON had fallen back behind the works thrown up for the defence of the place. The scarcity of water about Jackson induced the belief that General SHERMAN would be compelled to make an immediate assault; but, to the disappointment of the Rebels, he commenced entrenching and constructing batteries. Had he pursued the opposite course General JOHNSTON is confident that, "with the advantage given by the entrenchments, "weak as they were," an assault would have resulted in his discomfiture. Finding on the 16th of July that a force had left Vicksburgh to turn him on the north, and that SHERMAN was preparing to concentrate upon him "the fire of near two hundred guns," JOHNSTON withdrew his forces; all the public property and the wounded, in a condition to be moved, having previously been carried to the rear. General JOHNSTON says:—Our loss during the siege was estimated at "seventy-one killed, five hundred and four wounded "and about twenty-five missing. The army retired by "easy marches to Horton, distant about thirty-five "miles from Jackson. Deserters during the siege "and on the march were, I regret to say, frequent. "The time to strike the enemy," he adds in conclusion, "was the best hour of saving Vicksburgh, was "when he was landing near Brownsburgh. To do "this with any prospect of success, a rapid concentration of all the forces should have been made." Fairly to pursue this course nothing remained, in his judgment, but to abandon Vicksburgh, with the view of at least saving its garrison, and if possible concentrating to prevent the further advance of the part of GRANT. Of General PEMBERTON, he says:—

"His disasters were due not merely to his entangling himself with the advancing columns of a superior and unbeaten enemy, but to his indecision in proceeding to be besieged in Vicksburgh, instead of manœuvring to prevent a siege. Convinced of the impossibility of collecting a sufficient force to break the investment of Vicksburgh, should it be completed—appreciating the difficulty of extricating the garrison, and convinced that Vicksburgh and Port Hudson had lost most of their value by the repeated passage of armed vessels and transports, I ordered the evacuation of both places. Accompanied as I could not recruit his ranks before the investment of Port Hudson, if at all. General PEMBERTON set aside this order, under the advice of a council of war. Subsequently, he left Vicksburgh with the second fresh troops, not demoralized by defeat, decided that it was impracticable to withdraw the army from that position, with such *morale* and material as to be of further service to the Confederacy; but 'to hold Vicksburgh as long as possible with the means that the Government could spare, and to be able to assist me in keeping this obstruction to the enemy's free navigation of the Mississippi River.' Vicksburgh was nearly captured while I was away with troops from Tullahoma, to concentrate, were neglected. It was lost when my orders of the 12th and 15th of May were disobeyed. At that less was added the labor, privations, and certain capture of a gallant army, when my orders for its evacuation were set aside."

A CLEVER writer in the April number of the *Atlantic Monthly* gathers together, with a degree of ease and vigor which will please very many, a large array of facts and examples to disprove the popular theory that youth is an essential quality in a great general. This theory with our people has run along side of that other favorite one, more argued at the beginning of the war than now, that any great civilian may, with the putting on of the uniform, assume all qualities and win the distinction of a great military commander. But the opening of the fourth year of the war approaches, to find both sides of the contest, almost without exception, relying upon their professional soldiers for the responsible positions of general officers. Such facts, so near and so convincing, can but completely overthrow the delusion. But with HANNIBAL and NAPOLEON to back their theory, the arguers of the necessity of youth to generalship may make a stouter resistance. And yet after all, these great historical captains are only exceptions to the law that governs as well in the profession of arms as in other callings—experience. After all, up to the period of the limit of the vigor of manly power, the increased experience which added years give, is the school in which the most adept must learn their trade. NAPOLEON and HANNIBAL were men of that rare genius which is to the law what a miracle is to the course of nature. And yet even of them we may say with truth, that if early manhood proved them great, and had not left them until they had

won their title to fame, maturer years served only to vindicate and approve the promise of their youth.

But there is no argument in favor of the younger men, and it is this: The science of war is like others, an advancing one, and, especially in the last quarter of a century, new ideas have presented claims to consideration; the danger with the old men of the profession is that they will refuse to get out of their old routine to accept and use the new conditions and circumstances. But it may be the vice of the younger ones that they will too readily adopt what is as yet but experimental.

Does not the whole question at length settle down to this, that the time of life when a man's faculties are in their greatest vigor, his mind and body both most firmly knit and compacted, is the time when he can best accomplish whatever he may undertake, whether it be to fight a battle or write a book? That time of life experience shows to lie between the ages of forty and fifty; while in the case of many men it extends ten and even fifteen years later.

The facts gathered by the writer of the article to which we have referred, uniformly sustain this view. We have no space to quote the very many examples he collates from history, but will take only some of these of our own generals. WASHINGTON assumed command of the Revolutionary armies at forty-four, which is about the age of General ROSECRANS; while General GRANT is forty-two, and two younger. General MEADE is forty-eight. General MCCLELLAN was in his thirty-fifth year on assuming command in 1861. General JACKSON fought the battle of New Orleans in his forty-eighth year. General SCOTT, however, had reached his sixty-first year when he went to Mexico, and General HALLOR von Buona Vista in his sixty-second year. STONEWALL JACKSON died at thirty-seven—a man of genius. General THOMAS is about midway between forty and fifty, and there is little difference between his age and that of General W. T. SHERMAN. General JOE JOHNSTON is over fifty; and A. S. JOHNSTON was killed at Shiloh at forty-nine. General HALLECK is forty-eight; General LONGSTREET, forty; General JOHN BUFORD, our best cavalry officer, died at about thirty-six; General MCDOWELL is fifty-six; General HANCOCK about forty; General SEDGWICK towards fifty; General WARREN about thirty-five or six; and General GILLMORE about forty. We take some of these facts and figures from the writer in the *Atlantic*, and suppose they are correct; others of them are from memory, and may not be exactly accurate; but they are not far from the truth, and serve the purposes of the argument.

THE turreted iron-clad *Tecumseh* made her final trial trip up the Hudson on Monday last, and was that evening delivered over to the Admiral PAULDING for equipment. The performance of the vessel was very satisfactory, the propeller driving her through the water at the rate of eight, nine and nine and one-half knots, though at no time working to its utmost capacity. The contract calls for ten knots. No accident occurred beyond the breaking of a tiller rope. Arriving opposite the Palisades, three rounds were fired from each of the 15-inch guns comprising the armament of the vessel. Solid shot were fired with charges of 35, 40 and 50 pounds. The old Ericsson compressor, highly modified, was used to work the anniahilator. Among the few invited guests on board were two Norwegian officers, who watched the experiments with the utmost curiosity and interest. Previous to the departure of the ship some officers of her Britannic Majesty's navy applied for permission to go on the trial, stating that the Russian Admiral received a similar privilege some time ago. They were not allowed, however, to accompany the vessel, for reasons which are conflictingly explained.

Besides the improvement in placing the turret so far forward as too balance the ship and get rid of the cumbersome overhang in front, the *Tecumseh* has a great advantage over the original Monitor in other respects, not the least important of which is the thorough system of ventilation introduced by Mr. STIMERS, Inspector of Iron-clads. From the ventilators in the floor of the berth deck and ward-room a current of air sweeps up with power sufficient to carry a heavy hat nearly to the ceiling. The value of such a free circulation of air will be appreciated by those who are to make their home in the iron-clad during the coming summer months.

The *Tecumseh* is expected to be ready for sea in a week or ten days. She is under the command of Lieutenant-Commander T. AUGUSTUS CRAVEN, an active, energetic and capable officer, in whose hands she will be sure to give a good account of herself. Her destination is not yet announced, though shrewdly suspected.

WE extract the following from a Washington letter published in a daily paper of New York:

"General GRANT has begun his work in the Army by establishing his headquarters eight or ten miles nearer the enemy than General MEADE ever has done. He will soon be back here again—certainly by Sunday. He will be at the War Department as often as once every week till he leads the Army into battle."

It is probably too late to remonstrate any longer with editors of well-conducted papers on the impropriety of publishing correspondence reflecting on the conduct of officers in responsible positions. So long as there are correspondents deficient in gentlemanly dignity and nice sense of honor, paragraphs expressive of prejudice or malignity will get published. Mere ignorance would be occasionally excusable. It is to be hoped that the author of the above extract has at least this to plead in his justification. His statements are in the first place *untrue*, and in the next place, if General GRANT has established himself at Culpepper, instead of Brandy Station, there are reasons outweighing pecuniary ones why MEADE should remain at the latter place—which, instead of eight or ten, is four miles, in rear of the former. As Lieutenant-General, it is not necessary that General GRANT should be in direct contact with the Army. He can select any position the most eligible for his own convenience. For the active command of an army corps, however, fix his headquarters at the most central and accessible point—just as General MEADE has done. Had he gone to Culpepper, most of the corps headquarters would have been from five to ten miles distant from him, instead of two, three and four, as is now the case.

As the battle of Gettysburgh, General MEADE's headquarters were directly under the fire of the enemy. The house where he was stationed was pierced, perhaps a dozen times, by balls, and men and horses were killed in the vicinity. General MEADE himself was constantly exposed, and particularly at one time when occupying a tree which commanded a view of the battle-field, and from which the Rebel sharpshooters were constantly picking off those who showed themselves.

A commander of an army *has no right* uselessly to expose himself and his staff. As individuals, they cannot accomplish anything by going into fire; to their official position the preservation of their lives is valuable. It is due to those they command that, except in great emergencies, generals should keep themselves as far from danger as is consistent with the proper discharge of their duties. Many a defeat has resulted from the loss of a general, in whose mind alone were the strategetical and tactical combinations that might have ensured success. An inferior general, assuming command on the death of the commander of an army during battle, cannot know the state of the entire field and decide upon the movements to be made—movements required, perhaps, instantaneously, in order to prevent disaster and defeat. Newspaper writers seem to consider a battle-field as similar to a chess board, on which everything can be seen at a glance. Could they really participate in a battle, and know that it occupies a line of from five to ten miles long, with, perhaps, flanks of from ten to twenty miles to be saved for, they would, perhaps, appreciate the childish fatuity of their apparent desire to see the commander of the vast movement dash down into the lines with his sword drawn, his eyes flashing, and his voice hoarse with shouting and cheering. Such writers have drawn their inspiration and their military knowledge from CHARLEY O'MALLEY if they seem to think the conduct proper for a bold Irish dragoon, burning to gain his captaincy, fit for a general entrusted with the lives of a hundred thousand men. Because NAPOLEON at the Bridge of Lodi plunged into the *melee*, the popular idea is that he always raged about, willing, like the man who went into the "free fight," to take a hand in any hot work that might be going forward. NAPOLEON knew better than to expose himself, except in some instances of critical and concentrated action. All our generals in the field get nodes fire frequently enough; the newspaper writers need not be fearful on that score. At Yorktown, General MCCLELLAN's headquarters were within shelling range of the enemy's works, and balls occasionally howled over them; at Harrison's Landing they were under direct fire during the night attack of the Rebels from the opposite bank of the river. The afternoon before the battle of Fredericksburgh, General BURNSIDE rode along the lines with his staff and escort in full view of the enemy, who chose to be economical of their ammunition. At Chancellorsville, a ball shattered a pillar scarcely which General HOOKER was leaning. General MEADE's position at Gettysburgh we have already stated. Corps, division and brigade commanders are obliged to go within musket range, and they generally expose themselves, in their anxiety for success, with too great zeal and daring. So different is the army standard from that of the newspapers, in relation to "getting under fire,"—which so excites the enthusiasm of home correspondents—that unnecessary exposure, so far from being considered as any sign of bravery, is regarded as showing a lack of good sense—as much as would be shown by a citizen who should attempt to pass through a street where a riot was in progress, instead of going around the block.

THE order for the reorganization of the corps composing the Army of the Potomac, was so long foreshadowed in all its essential particulars, that its promulgation could hardly have disturbed the equanimity of any officer which has learned to be accustomed to changes and to accept the decrees of military necessity. And though there was reason to pause before the consummation of so radical a measure, we believe there will be few in that Army to doubt its ultimate advantages, while there will be none to offer opposition or to suggest such unworthy motives for its origination as position pressers at home are ungenerously insinuating. The extinction of the separate existence of corps, whose badges had been worn with honor, and whose history was identified with the bloody records of the Army, was a sad necessity, but the order of General MEADE deals gently with those hurt sensibilities, and saves the *esprit de corps* of the gallant men of the First and Third corps from all unnecessary suffering. Although we have before expressed our conviction of the propriety of the reorganization, we would not be the one to join in any attempt to cast unmerited censure upon the eminent corps commanders whose separate fields of labor, whose services, good and ill, they have shared from the first. Generals SYKES, FRENCH and NEWTON, will always be followed wherever they may go, by the best wishes of their former associates, and they may always have pride and gratification in pointing to their achievements with the Army of the Potomac. They are officers who have won by hard service in the field the honors they wear—honors no where so readily acknowledged as in the Army with which they fought their way up to the responsible positions they now resign in obedience to official orders.

WE find among the Washington telegrams to the daily newspapers in various parts of the country frequent allusions to the views, doings, and intentions of General GRANT. Though we fancy the public has learned to put their true valuation upon such telegraphic tales, it may be well to say that they are, as a rule, not only mere guesses at what is in the mind of the Lieutenant-General, but very poor ones at that. We do not pretend to know any more about the intentions of General GRANT than any one else, but we have good reason to deny the truth of the stories that he is urging General MCCLELLAN's restoration to the command of the Army of the Potomac; that he has either personally, or through any one else, been in consultation with that General about the coming campaign in Virginia; that he will follow out that General's plan of operations; or that he is taking any part in the unfortunate controversy about General MCCLELLAN. The Lieutenant-Generalis not the man to waste time or thought on such matters. We may also say that General W. F. SMITH is not only not urging the restoration of General MCCLELLAN to his old command, but is among those who are most inclined to criticize the operations of his former commanding officer. We say these things because we believe them due not only to Generals GRANT and SMITH, but also to General MCCLELLAN as well.

FOREIGN MILITARY AND NAVAL MATTERS.

THE first instalment of General TODTLEBEN'S long expected history of the siege of Sebastopol is now out. The work, when completed, will be of great magnitude.

MR. JAMES MACKAY, an Englishman, has invented a naval gun and projectile which are said to promise valuable additions to the means of warfare. The first experiments exceeded the expectations of the inventor.

A FOREIGN legion, to consist of 6,000 men, is now organizing in France to be placed at the service of the Archduke MAXIMILIAN for a period of eight or ten years. It is expected that the French army in Mexico will embark for home on the arrival of this new force.

THE Viceroy of India has appointed a Sanitary Commission to consider and to report upon the assistance in all matters relating to the health of the army, and to supervise the gradual introduction of sanitary improvements that may, from time to time, seem to be as well as to towns in proximity to military stations, in the Bengal Presidency.

WARNING has been given at Copenhagen that if Danish officers of rank, dissatisfied with General DE MEZA's removal from the command, tendered their resignations, the mildest treatment they might expect would be dismissal without pension. The *Dagbladet* announces that the KING at first declined to consent to DE MEZA's removal, and only yielded in the face of a threatened ministerial crisis.

ACCORDING to the *Patrie* the camp at Chalons this year is to consist of two divisions of infantry, one division of cavalry, and the whole proportion of artillery and the administrative services. Marshal MACMAHON is to command in chief, Generals D'AUTEMARRE and DE CISSEY those of the 1st and 2d. FAIRE MOSKOWA the cavalry. If required, the troops at the camp might be ordered off at two hours' notice.

THE importance of gun cotton as an explosive agent has been fully recognized among some of the continental military powers, and is now attracting the attention of the British Government, and a committee has been appointed to sit at Hythe, Southampton, with General SABINE as its chairman, to inquire into its merits. General SABINE is assisted in his labors by some very experienced officers, both naval and military.

MR. J. SCOTT RUSSELL, in a note to the *London Times*, states that if the Navy and the ordinary mechanical power in working guns on ship board a ship-of-the-line can be constructed to carry a double tier of 600-pounders, breadside for broadside, covering the length of the *Warrior*, and without sacrificing speed or any of the qualities of a good seagoing ship; and, relatively to armament, with much greater economy.

A SERIOUS fight took place in the Forum on the evening of March 18, between Pontifical and French soldiers. The former were reinforced by 2 sides. General DE MONTFELLO gave orders to surround the neighboring Pontifical barrack. The French and Roman authorities respectively organized patrols, and took other measures for keeping order. One account says that during the conflict both parties were welcomed by the Roman populace.

In order to provide against the inconvenience to be anticipated from the expiration next year of the term of service of more than 4,000 soldiers in the British army obtained under the Foreign Enlistment Act, the standard for recruits has been lowered from 5 ft. 6 in. to 5 ft. 5 in. for those between 17 and 25 years of age. The standard for the Royal Marines is to remain at their 5 ft. 5½ in. for lads from 18 to 20, and 5 ft. 7 in. for those above 20 years of age.

AN English military journal says:—Enlistments of German soldiers for the Federal service appear to have been proceeding rapidly of late. One hundred and thirty-six Germans, many of whom have seen service, have arrived in Liverpool, to embark for Boston to join the United States Army. They seem to expect rough service, but are all anxious to receive their bounty money, $100, before leaving England; and some refuse to embark without it.

THE Geneva International Congress, established to urge Powers to make certain regulations with regard to the neutrality of hospitals, surgeons, and wounded men, is making progress. France immediately promised her aid, and Hanover and Switzerland. Prussia has now established a central committee of her own, comprised of the most influential men in the State; and Denmark has also notified to the official letter to Geneva her adhesion to M. DUNANT's propositions. With these two Powers at war, the system will soon be put to a test.

GREAT indignation has been caused at Hamburg by the news that the Russians had seized 3,000 uniforms which were intended for the troops of Prince FREDERICK of Augustenburg. On the other hand, satisfaction is felt at the news that the Dannewerke is being rapidly demolished. It is by the way a remarkable occurrence that, just at the present crisis, when the chances of a general European war are increasing each day, two strong fortresses, erected at a great expense are being demolished—the Dannewerke in Denmark, and the fortifications in Corfu.

AN order in Council has just been promulgated approving amended regulations for the appointment of officers in the British Royal Naval Reserve. The number is limited to 700, to consist of four classes of lieutenants, sub-lieutenants, engineers, and first-class assistant engineers. In addition to the officers on the active list, there is to be a class of honorary officers, not exceeding in all 100 in number. Regulations are set forth, applicable to the mode of appointment, qualification, promotion, retirement, uniform, drill, messing, service afloat, pay, allowances, and pension to widows.

THE *Royal Sovereign*, cupola ship, of 3,963 tons, and 800 horse power nominal, was floated out of her dock at Portsmouth, on March 5th. Everything respecting weight, draught of water, &c., proved to be satisfactory. She only remained under steam for a short time, but when she was converted was found to be upwards of twelve knots. It is intended to arm the ship with four 12 ton guns, four loading 150 pounders, weighing 12 tons, on RODIE's carriages. She will be fitted for sea with all dispatch, under command of Captain COWPER COLES, the inventor of the cupola system.

THE word "mess" has lately been introduced into the French army, and some officers' messes created. This designation was formerly in use in English corps, but a writer in the *Moniteur de l' Armée* points out that DU CANGE gives in his glossary *"prendre mets"* to take to eat. The letter writer says that he has back as 1443 is quoted in proof of this. It seems that during harvest the reapers used to dine in company, and that "mets" was applied to their meal. *"Mets"* was derived from the late Latin word *"mensirum"* or *"mensurium,"* which in its turn came from *mensa*.

THE *Gazetta di Bologna* publishes the following table, showing the number of men under arms in the Italian Army:

Infantry (5-7ths of the whole contingent)		275,000 men
Bersaglieri (1-13th	do	do 50,000 "
Cavalry (1-12th	do	do 24,000 "
Artillery (1-18th	do	do 30,000 "
Engineers and military train (1-17th	do	do 23,000 "
		382,000 "
Royal Carbineers		22,000 "
Total		404,000 "

THE making of the target ship *Ameeter* at Portsmouth demonstrated the superior penetrative power of steel over ordinary iron shots. The *Ameeter* received, in two days' firing, 76 heavy shocks against her sides from heavy iron shots. She was none the worse, but floated quietly at her moorings. Not so after one steel shot was brought to bear against her. This penetrated the armor plate, which vainly strove to keep the subtle and destructive missile outside; and gradually, but surely, the water wrought havoc to fill with water, and settle down on the mud. The *Ameeter* soon after her sinking was raised and put into dock to be examined and prepared for further use as a target ship.

COLONEL SHAW's new system of gun-carriage, now complete, was lately inspected by the Ordnance Select Committee of which Admiral MILNE is chief, appointed for service without truncions, and intended for a course of experiments, was manœuvred in the presence of the Committee by the full complement of regimental officers belonging to the Royal Artillery. The gun is pointed at the port hole or embrasure by raising and depressing the breech end, the muzzle resting immovably on a pinion. The improvement insures greater safety to those engaged in action, as the aperatures for working the guns need not be more than sufficiently roomy in dimension. The gun and carriages are now ordered to be transported to Shoeburyness to be subjected to a course of experiments.

A PROJECT of a novel and important character, says the *Western Morning News*, has been for some months past under discussion; and we are informed that a company is now in course of formation, with a view to place the proposal in a practical shape. It is intended to station, 50 miles west of Scilly, a ship bearing a floating dock, capable of receiving vessels and connected by an electric cable with the shore. It is considered that thus early news may be conveyed, homeward ships may receive orders without fear, and much suffering, privation, and loss of life be prevented. The work is to be carried out by MOORE's patent for an improved method of anchoring ships, and attaching electric cables. The idea is seriously entertained, and, if carried out, might prove of much consequence to the shipping of the port of Plymouth.

A PAPER was recently read at the United Service Institute, London, by Mr. S. BARRASS on the "Stability of Iron-plated Ships in a Sea-way, considered in Relation to the Danneweke Fortresses and the "Laws of Motion." Mr. BARRASS described the present geometrical method of considering the stability of ships, the inaccuracy of which in the behavior of vessels in a seaway, the orbits of the centre of buoyancy of the rising-floor ship (full-sized) and the flat-floor ship, the relative advantage of the position of the centre of buoyancy, and showed that there was a falling of the centre of buoyancy in the rolling of the rising-floor ship, and a rise of the centre of buoyancy in the rolling of the flat-floor ship. The conclusion he arrived at was that, for easy motion and seaway, the flat-floor was preferable to either the round or the rising-floor.

ACCOUNTS from Malta speak of serious insubordination on the British steamship *Resistance*, 16. It appears that the brooding of an unsavory 110-pounder gun was found out, and subsequently the inch-pin of a field-piece was missing. The latter being made, all the petty officers and non-commissioned officers declared that they knew of no causes of discontent existing among the men. But on the following night another breech was cut, and a leathern tube-box and some other things were missing, believed to have been thrown overboard. Captain CHAMBERLAIN had the whole crew mustered on deck, and called upon those who had complaints to make to step forward. Seven did so, and on these or two stated that they had several causes of discontent to complain of, and that the whole ship's company were discontented. The seven were thereupon put under arrest, pending the inquiry which was subsequently instituted, but of which the result has not yet transpired.

THE *Scotsman* of March 9th says that the Danish cruisers were off Dunbar, keeping a sharp look out for prizes, and a report, a very clear one, was distinctly heard from the town. A large foreign vessel was observed to the eastward, hugging the shore as if to keep within neutral limits. In a short time a long, low, rakish looking craft shot from behind an island and stood directly across the track of the vessel. The stranger was the *Scotsman*, "clapped on all sail, and the black smoke belched out over and aft from the funnel showed that they were no less intent on getting up all the steam they could command. The large vessel was soon up to the northward under the heavy press of sail, with "a wet sheet and a flowing sea.

THE DANISH WAR.

THE Danes are making good use of the lessons taught them by our war. They are experimenting with the electric light, which they propose to use in defending the island of Alsen.

The correspondent of the London *Times*, who is stationed at the Prussian headquarters, defends the allied army from the insulting attacks made upon it. He says that the behavior of the troops is good, and that the discipline is rigid.

The Hanoverian pioneers, having completed their work of restoring the defences of Rendsburg, have now proceeded to Glucksburg with orders to erect batteries along the coast in the mouth of the Flensburg Fiord. Danish ships of war from going up the river unmolested.

A letter from Hadersleben in the *Hamburg News* mentions, as an instance of the audacity of the Danish spies, that among the effects of the 27th March were found in the blue Holstein flag planted on the church tower. On the following morning the population were astonished at seeing the Danish colors floating in the place of the others. It was at first thought the Danes had retaken the town.

Marshal WRANGEL is troubled very much, as are our generals in the field, by the officious efforts of persons to obtain intelligence of military operations. To hinder them doing this, he not only bars all newspaper correspondents from the Danish front, but has just published an order of the day recommending his soldiers to prevent the letters which they write to their relatives or friends from being published in the journals.

A second bridge has been thrown across the stream at Rekersand by the Austro-Prussians to expedite the procedure of the troops. The construction of the bridge, and consists of twenty-two pontoons, which are placed so near to each other as to indicate that the bridge is to be used for the transportation of heavy artillery. Sappers have been ordered to begin making fascines and gabions, and as the order twigs are not yet pliable enough to be serviceable for the purpose, they are to be used dried.

The *Altona Mercury* announces that the demolition of the Danneweerke is progressing regularly, not less than 700 persons being at work on it. The inhabitants of the surrounding country assist in great numbers with pickaxes and shovels, and many citizens, students, and even women and children, are to be seen among the laboring crowds. We have the Schleswig-Holstein colors hoisted on them, and the people proceed to their occupation, headed by flags and bands of music. The guns captured in the Danish works have been sent to Berlin and Vienna, where it is said they will be cast into bells. The military authorities have calculated that the demolition of the whole line of the Danneweerke, including the twenty-seven detached forts, will take 45,000 men a month, and that the expense will amount to as many Prussian dollars.

There is a marked contrast between the Austrian and Prussian armies, as regards the familiarity of intercourse allowed between officers and men in the two services. In the Austrian service great freedom is permitted, but in the Prussian there is a rigid severity. An officer belonging to five of this fact recently transpired at a public house in Apenrade, the drinking-room of which was thronged with Austrian officers, non-commissioned officers, and men, all drinking and smoking together. Presently a Prussian officer of the guard entered, and struck with astonishment at such a scene, went and seated himself in a distant part of the room, in order to avoid taking even an indirect part in such a violation of propriety. An Austrian officer, seeing him thus isolated, approached and cordially invited him to come and sit with the rest. The Prussian rose, still more stupified at this familiarity, and making a military salute,

observed, "I beg your pardon—but you are speaking to the Count of ARNESAETER!" "Ah! that is the way you receive me!" replied the Austrian; "then I must withdraw." "Well, you are speaking to Prince WINDISCHGRATZ!" And the prince turning on his heel immediately went and rejoined his comrades.

MILITARY AND NAVAL MATTERS IN CONGRESS.

SENATE.

The bill to prevent military interference in elections, an abstract of which appeared in the JOURNAL of March 19, is still under discussion in the Senate. Mr. HOWARD, of Michigan, in an able speech, defended the action of the Administration in sending back there the men from the States of military power, either in Maryland, Kentucky or Delaware, and that where wrongs had been perpetrated they had been promptly and properly redressed. The Senator reviewed at length the question of neutrality in Kentucky at the commencement of the present struggle, and argued that but for the precipitate action of the Governor of Kentucky that State, in all probability, would have been forced into a rebellious attitude. He defended the orders of General BURNSIDE in reference to elections as being similar to those issued by General MCCLELLAN in Maryland, in 1861, under which Governor BRADFORD had been elected. Even now, he said, there was no law in Maryland to prevent traitors from voting; and it was proper that the military power should preserve the freedom and purity of the ballot-box to loyal men. Mr. SAULSBURY, of Delaware, replied at length to Mr. HOWARD, arguing that the civil rights of the people had been interfered with, restricted, and, during the PRESIDENT with the design of perpetuating his administration through the instrumentality of an unlimited use of military power. On motion of Mr. JOHNSON, of Maryland, a resolution was adopted requesting the Secretary of War to furnish the Senate with the original, or a copy of a telegraphic dispatch or order, on the files of the Department, of Major-General DIX to Provost-Marshal DODGE, dated the 4th of May, 1861, which was read in the Senate, and laid in Maryland on the following day.

The report of the Committee of Conference on the amendments to the Military Academy Bill has been concurred in by both Houses of Congress. In explanation of the provisions contained in the two amendments it was stated that the Senate proposition authorized the PRESIDENT to appoint cadets from districts not now represented in Congress. The House amendment to this proposition was to the provision that for one year from the 1st of July next an additional cadet shall be appointed for each district, as now provided by law. The Senate struck out the whole of the Military Academy, and if that amendment should prevail, instead of the number of cadets being 576, it would authorize an addition of about 190, making the whole number nearly 800. But as there are not accommodations for more than 600 the law as it now stands would require the rendered inadmissible. So it was agreed by the Committee of Conference to strike out the amendment of the two Houses and to fix the law as it now stands, with only the additional cadets.

Another West Point Bill was introduced on the 28th by Mr. WILSON, of Mass., which authorizes the appointment by the PRESIDENT of two additional cadets for each State represented in the House of Representatives, to be appointed upon the recommendation of the Governor of each State respectively, having served honorably two years in the Army, not less than seventeen nor more than twenty years old, and selected upon the basis of competitive merit.

A bill was introduced on the 29th, and referred to the Committee on Naval Affairs, to establish a naval depot and navy yard on the Delaware River, at a point to be made the selection of the location by a commission of seven scientific men, none of whom shall be residents of any State bordering on the Delaware River, the decision of a majority of whom, when approved by the Secretary of the Navy and the PRESIDENT, shall be final. The bill appropriates a ship canal from Lake Michigan to the Mississippi, for the passage of armed naval vessels, was also referred to the same Committee. Recruiting officers will be entitled to the sum of \$2 for the passage of a bill, introduced by Mr. FESSEN, of Conn., securing to them an additional bounty of \$100 each. The Military Committee have reported a bill to increase the remounted feed for horses and mules in the Army. A resolution has been introduced to inquire into the cause why Navy how ordinary seamen have been transferred from the Army to the naval service. A bill has been reported relative to the appointment of paymaster's agents. It allows them for clerk hire and office rent \$500 for the disbursement of \$50,000 annually, and \$250 additional for every additional \$50,000. A bill has been introduced, and referred to the Committee on Claims, Mr. LANE, of Indiana, from the Judiciary Committee, reported favorably on the bill to increase the rank, pay and emoluments of the Provost-Marshal-General, proposing to give that officer the rank and emoluments of a Brigadier-General.

HOUSE.

The following bills relating to the Army were introduced by Mr. RICE, from the Committee on Naval Affairs, and passed by the House:—

A bill providing that persons between 20 and 30 years of age may be appointed Assistant Paymasters, provided that the number of Navy inspectors shall not exceed the proportions of students for admission into the Naval Academy shall take place when they are between 14 and 18 years of age. A bill to increase and change the rank of officers, and the method of making promotions in the Navy. Heretofore, said Mr. RICE, promotions have been made according to seniority, but this bill provided for promotion according to official capacity and physical fitness, to be determined by a Board of Examination, appointed by the PRESIDENT. Officers not recommended for promotion are to have an opportunity to be heard through a reviewy board. One of the sections provides for the appointment of Engineers-in-Chief and engineers of the fleet. A bill for the classification of Paymaster's Clerks in the Navy, making four classes, with the following salaries:—\$1,200, \$1,000, \$800, and \$700 per annum; and also a bill fixing the date of the loss of the brig *Bainbridge* at the 31st of August, 1863, in order to fix the pensions of the deceased officers and seamen. A joint resolution was also reported and passed, authorizing the Secretary of the Navy to sell at public auction lot No. 13, in the village of Sackett's Harbor, it not being required for the navy yard.

Mr. FESS, of Maine, from the Naval Committee, reported a bill, which was passed, authorizing the Secretary of the Navy to appoint Acting Lieutenant-Commanders and Commanders, to adjust the compensation allowed to naval officers of similar grade. The bill provides that the provisions of the act of 1862 to establish and equalize the grade of line officers of the Navy shall not be construed to debar any person who shall have received or shall hereafter receive a temporary appointment as Acting Volunteer Lieutenant, or Acting Master in the Navy, from civil life, authorized by act of July 24, 1861, may be confirmed in said appointment, and placed in the line of promotion from date of confirmation. If upon the recommendation of officers it receives the thanks of Congress for highly meritorious conduct in the line of his profession, or for conspicuous and distinguishing themselves in battle, or by extraordinary heroism in the line of their profession may be promoted to forward grades of officers or acting masters's mates upon the recommendation of their commanding officer, approved by the Flag Officer and the Department, and upon such promotion shall receive full pay and rations of the grade.

Mr. FESS also reported the Senate bill regulating counties, cities and towns exempt from taxation for the first section which provides that volunteer appointments in the Navy shall be subject to the action of the Senate, as is the case with regular appointments. The resolution was adopted on motion of Mr. GARFIELD, of Ohio, calling upon the Secretary of War to furnish the House with any information in his possession relative to the claim of the Erie and Kalamazoo Railroad Company for damages during the present war, stating the amount of service and amount of the claims.

The bill providing for the relief of civil contractors and engineers at the Naval Academy, was reported back from the Naval Committee, and ordered to be printed and recommitted. The claim of W. W. HUDNELL for compensation, not to exceed \$100,000, for Government use of his thunderbolt, was referred to the Committee of Claims.

The Military Committee was instructed to inquire into the practicability of constructing a military railroad from the military highway the railroad between Henderson, Ky., and Nashville, Tenn., and report by bill or otherwise.

ARMY GAZETTE.

THE AMNESTY PROCLAMATION.

ITS OBJECTS DEFINED.

BY THE PRESIDENT OF THE UNITED STATES.

A PROCLAMATION.

WASHINGTON, March 26.

Whereas it has become necessary to define the cases in which insurgent rebels are excluded by the benefits of the Proclamation of the President of the United States, which was made on the 8th day of December, 1863, and the manner in which those persons may apply for and obtain the benefits of those benefits; and whereas the objects of that Proclamation were to suppress the insurrection and to restore the authority of the United States; and whereas the amnesty therein offered was conditioned upon the support of the Union during the residue

Now, therefore, I, Abraham Lincoln, President of the United States, do hereby declare and proclaim that the Proclamation aforesaid is not intended to include the cases of persons who, at the time when they seek the benefits thereof by taking the oaths thereby prescribed, are in military, naval or civil confinement or custody, or are held as prisoners of war, or are under the sentence of any court, military or civil, or are in military or naval confinement awaiting trial or sentence, under the charge of having violated the laws of the United States, nor to those persons who, being abroad, shall not have returned to the country, nor duress, shall voluntarily come forward and take the said oath with the purpose of entering into the said service of the United States.

Prisoners excluded from the amnesty offered in the Proclamation aforesaid, and persons who have been convicted of offences, and for their application will receive due consideration.

In order that the persons excluded from such presented in the aforesaid Proclamation of the 8th of December, 1863, may be taken into consideration for pardon, it is necessary that they shall, before any naval, in the service of the United States, or any civil or military officer of the United States, apply to and receive from the latter a writing or may be qualified for administering oaths.

The officers to whom such application is hereby authorized to give such certificates thereon to the persons respectively by whom the same shall be made, and to forward the same, together with the original records of such oaths, at or as early as practicable, to the City of Washington, to be finally acted upon. Such oaths will keep in archives of the Government, and may be used in evidence of the executive clemency. Such application, in proper cases, may be made to commissioners in the commissioned rebel service, with certificates of such records in the custody of such commissioners.

A copy of the oath will have persons act my hand and caused the seal of the United States to be affixed. Done at the City of Washington, this 26th day of March, in the year of our Lord 1864, and of the Independence of the United States the 88th.

ABRAHAM LINCOLN.

By the President.

W. H. SEWARD, Secretary of State.

RE-ORGANIZATION OF THE ARMY OF THE POTOMAC.

HEADQUARTERS ARMY OF THE POTOMAC, }
Thursday, March 26, 1864. }

General Orders No. 10.

The following order has been received from the War Department:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, March 23, 1864. }

General Order No. 415.

First—By direction of the President of the United States, the number of Army Corps now existing in the field will hereafter be reduced to three, viz.: The Second, Fifth and Sixth corps. The troops of the present Ninth corps, the First and Third corps, will be kept separately recognized and distributed among the Second, Fifth and Sixth corps. The existing organization of the Cavalry corps and the existing organization will retain their corps badges and other distinctive marks. The Artillery reserve will remain as now organized, but when broken up will be restored to the several corps to which they belong.

Second—Major-General G. W. Warren is assigned by the President to the command of the Fifth corps.

Third—The following general officers are detached from the Army of the Potomac, and will report for orders to the Adjutant of the Army of the Potomac: Major-General SYKES, U. S. Vols., Major-General W. H. FRENCH, U. S. Vols., Major-General JOHN NEWTON, U. S. Vols., Brigadier-General J. H. HOBART WARD, Brigadier-General F. SPINOLA, U. S. Vols., Brigadier-General Solomon Meredith, U. S. Vols., Brigadier-General HENRY BAXTER, Brigadier-General E. D. TOWNSEND, A. A. G.

Fourth—The following arrangements are made to carry out the provisions of the foregoing order:—The Second, Fifth and Sixth army corps will be consolidated into two divisions. The first and second divisions of the Ninth corps will become the Second corps, preserving their badges and distinctive marks. The third division of the Ninth corps is transferred, permanently to the Sixth corps. The three divisions now forming the First corps, are transferred to the Fifth corps, preserving their badges and distinctive marks, and forming the fifth corps they will be consolidated into two divisions. The Artillery reserve will be under the command of Brigadier-General H. J. Hunt, reporting to the commanding officer of the Second corps for instructions. Brigadier-General Romeyn B. Ayres, Major-General Gouverneur K. Warren commanding the Fifth corps, Brigadier-General H. Prince to Major-General Sedgwick, commanding the Sixth corps, Brigadier-General Francis C. Barlow to Major-General Hancock, commanding the Second, Fifth and Sixth corps; these batteries to be taken from those now with the corps, and with the first regard to the rank. The batteries with the several corps, in excess of the above allowance, will join the artillery reserve. The commanders of corps will assign each to his order, will be made by the corps commanders concerned, who will determine the assignment of brigades to their respective commands in such manner as they may think best for the service. The commanders of corps will report to the Adjutant-General of the army the reorganization of the army, and be made upon the modifications of the details of the foregoing order as it may become necessary. Instructions will be given hereafter with respect to staff officers of the two corps broken up by this order.

Fifth—The Major-General commanding avails himself of the occasion to express to the officers and soldiers of the Army of the Potomac his appreciation of their conduct during the campaign of the winter, and the fortitude with which they have endured the hardships and privations incident to the service. The Major-General commanding has confidence that the Army of the Potomac, under the leadership of its present commanders, will add new lustre to its past history.

By command of Major-General MEADE.

(Signed) S. WILLIAMS, A. A. G.

RE-ORGANIZATION OF CORPS.

The following is a summary of the reorganization of the corps:—

FIFTH ARMY CORPS.

Major-General GOUVERNEUR K. WARREN, commanding.

The consolidation of divisions and arrangement of brigades is made as follows: The first and second divisions will form the first division of the fifth corps, to be designated as the First division, and will be commanded by Brigadier-General Romeyn B. Ayres. The First and Second brigades, First division, Fifth army corps, will remain as now organized. The Second brigade of the First division will be transferred to the Third division, First army corps, and will be designated as the Third brigade, Third division, Fifth army corps. The Third division will hereafter be designated as the Second division, Fifth army corps. The First brigade, Second division, Fifth army corps, will remain as now organized. The Second brigade, Second division, Fifth army corps, will be transferred to the First division, First army corps, and this division will hereafter be designated as the Third division, Fifth army corps. The Third brigade, Second division, Fifth army corps, will remain as now organized. The designating flags of the old Third brigade, First division, Fifth army corps; of the old First brigade, Second division, Fifth army corps; of the Second brigade, Second division, Fifth army corps, and of Third division, First army corps, will be changed to the blue of the Second army corps.

The following is the assignment of general officers to commands in the consolidated corps:—

1. Brigadier-General J. S. Wadsworth, commanding Fourth division.

2. Brigadier-General S. W. Crawford, commanding Third division.

3. Brigadier-General J. C. Robinson, commanding Second division.

4. Brigadier-General Charles Griffin, commanding First division.

5. Brigadier-General Romeyn B. Ayres, commanding Second brigade, First division.

6. Brigadier-General L. Cutler, commanding First brigade, Fourth division.

7. Brigadier-General Henry Baxter, commanding Second brigade, Second division.

8. Brigadier-General J. J. Bartlett, commanding Second brigade, First division.

9. Brigadier-General James Barnes, commanding First brigade, First division.

10. Brigadier-General J. C. Rice, commanding Second brigade, Second division.

The following is a portion of the corps staff:

Lieutenant-Colonel H. C. Bankhead, Inspector-General.

Lieutenant-Colonel C. H. Morgan, Assistant Adjutant-General.

Captain D. L. Smith, Acting Chief Commissary of Subsistence.

Captain W. H. Paine, Acting Assistant Quartermaster.

The other officers of the staff have not yet been assigned.

SIXTH ARMY CORPS.

Major-General Horatio G. Wright, commanding.

The original regiments of the Sixth corps have been consolidated into two divisions, with a new assignment of brigades and brigade commanders.

The consolidation of forming the First division of the Third corps, commanded by Major-General Birney, has been designated as the Second division of the Second corps, and will hereafter be known as the Fourth division of the Second corps. Each of those divisions will retain its original flag. The organization of the staff of the Second corps has not yet been completed.

The following is the assignment of divisions and assignment of commanders :—

FIRST DIVISION.

Brigadier-General T. C. Barlow.

First Brigade—Brigadier-General Gershom Mott, New York.

Second Brigade—Colonel T. A. Smyth, 1st Delaware Vols.

Third Brigade—Colonel Robert McAllister, 11th New York.

Fourth Brigade—Colonel J. R. Brooke, 53th Pennsylvania.

SECOND DIVISION.

Brigadier-General John Gibbon.

First Brigade—Brigadier-General Alexander S. Webb.

Second Brigade—Brigadier-General Joshua T. Owen.

Third Brigade—Brigadier-General Samuel S. Carroll, 8th Ohio.

Artillery—Major Henry J. Hunt.

Fourth Brigade—Brigadier-General Alexander Hays.

Second Brigade—Brigadier-General A. Hayes.

Third Brigade—Brigadier-General Joseph H. Hobart Ward.

Fourth Brigade—Brigadier-General G. W. Getty.

Artillery—Major John A. Tompkins.

Third Division—Brigadier-General Frank Wheaton.

First Brigade—Brigadier-General Lewis A. Grant, "Vermont" brigade.

Second Brigade—Brigadier-General T. H. Neill.

Fourth Brigade—Brigadier-General A. L. Eustis.

THIRD BRIGADE.

Brigadier-General H. Prince.

First Brigade—Brigadier-General W. H. Morris.

Second Brigade—Brigadier-General D. A. Russell.

Colonel C. H. Tompkins, Chief of Artillery, commanding artillery.

SIXTH CORPS STAFF.

Lieutenant-Colonel M. T. McMahon, Assistant Adjutant-General of Staff and Assistant Adjutant-General.

Lieutenant-Colonel J. Ford Kent, Assistant Adjutant-General.

Lieutenant-Colonel C. W. Tolles, Chief Quartermaster.

Captain J. E. Scofield, *acting Chief Commissary of Subsistence.*
Major Geo. Gibbs, *Chief of Ordnance.*
Captain Arthur McCollin, *Aide-de-Camp.*
Captain J. H. Hobart, *Aide-de-Camp.*
Captain E. B. Beaumont, *Aide-de-Camp.*
Lieutenant H. W. Fyvat, *Additional Aide-de-Camp.*
Lieutenant-Colonel Hoyt, 9th Maine, *Provost-Marshal.*
Surgeon S. A. Kimball, *Medical Director.*
Captain W. S. Franklin, 12th U. S. Infantry, *Commissary of Musters.*
Captain J. H. Platt, Jr., 4th Vermont, *Acting Assistant Quartermaster.*
Captain E. G. Pierce, *Signal Officer.*
Captain B. W. Alvord, *Ambulance Officer.*

FAREWELL ORDERS.

FROM MAJOR-GENERAL STEEL.

HEADQUARTERS, 3D DIVISION, 19TH CORPS, MARCH 24, 1864.

General Order No. 8.

Soldiers of the Nineteenth Army Corps!—By direction of the War Department, I am relieved from duty with the Army of the Potomac. In obeying an order of such unwelcome import, I console myself with the profoundest regret. We have been associated since your organization on a corps. We have shared all the campaigns of the glorious Army; and for nine months it has been my pride and distinction to be your chief. The history of your organization will constitute a part of the history of your country, and in the great battle of the war as the 19th of July, 1863, your heroism and valor contributed to avert the fate of the day.

Apart from you, feeling assured that your steady virtues, courage and patriotism will make you the pride of the campaign here, I cannot but feel that the brilliant fame upon your flags and worn upon your breast will in the future, as it has always been in the past, be the pride of your country's love. (Signed)

Major-General Commanding.

FROM MAJOR-GENERAL FRENCH.

HEADQUARTERS THIRD ARMY CORPS, }
CAMP NEAR BRISTOE, MARCH 24, 1864. }

General Order No. 26.

Having been ordered from the Army of the Potomac in consequence of its reorganization into three corps, I desire to express the personal feelings of regret with which I am about to be severed. The consolidation of the corps gives the Army greater strength. The General is entitled to the warm commendation for that judicious sagacity. Only known in the department where bullets whistle, there is a strong attachment between officers and men, which can only subsist when which I have been so long associated with pride and distinction.

WM. H. FRENCH, *Major-General Volunteers.*

FROM MAJOR-GENERAL WRIGHT.

HEADQUARTERS FIRST CORPS, MARCH 25, 1864.

In relinquishing command, I can only express the pride and pleasure I have experienced with you, and my profound regret at any separation. Attended by the services and the gratitude of this war, the First Corps gave at Gettysburg a crowning proof of valor and endurance which will be a lasting monument to the position upon which the battle was fought. The record of the First Corps is the unbroken devotion to the country. Corps in the field of the same name are now in the most active campaign. Though the title of the corps may be changed, the magnificent deeds of its service, whether it will be either upon the same or other fields of service.

Major-General Commanding.

FROM MAJOR-GENERAL PEARSON.

HEADQUARTERS CAVALRY CORPS, }
ARMY OF THE POTOMAC, MARCH 26, 1864. }

General Orders No. 14.

Having been relieved from duty with the Army of the Potomac, the corps of sharpshooters from the Army of the Potomac will be established in the Cavalry Corps because more impressed with the conviction that, more than any other corps, it should be established throughout one of the most cavalry periods in the history of the war. The men could not be more attached to the members of their commander. Your gallant conduct in the Valley of Virginia entitles you to the Cavalry Regiment Volunteer Reserve Corps.

All recruits and substitutes from the 1st Brigade Volunteer Reserve Corps will be forwarded direct to these headquarters.

By command of Major-General Pearson.

J. H. TAYLOR, Chief of Staff and A. A. G.

Official: H. L. HIGGINSON, A. A. G.

FINDING AND OPINION IN MAJOR-GENERAL McCOOK'S CASE.

(Official.)

It appears from the investigation that Major-General McCook commanded the 20th army corps, composed of Sheridan's, Johnson's and Davis' divisions.

He continued on the 19th September, 1863 the first day of the battle of Chickamauga, consisting of Johnson's and Davis' divisions, east of Reedy's compromising, and occupied the right of the line, Johnson's division on Davis' left, Sheridan's in reserve.

The evidence shows that General McCook did his whole duty during the first day's engagement, and remained on the field.

Brigadier-General Davis, of Johnson's division, was ordered to command the divisions of Sheridan and Davis the latter only 1200 to 1,400 strong, and "the senior officer present with the corps will thereupon take orders from him," though attested to their own batteries.

The position of General McCook on the night of the 19th was unfortunate, while he person directed several charges between 5 and 10 A. M. During these movements, leaving the command of the right to the left, the enemy made a fierce attack, taking advantage of a break in the line caused by the withdrawal of Sheridan's division. The brunt of his division by Brigadier-General Wood—passing through the interval, and uniting the right of Davis' with the left of Johnson's position.

The court deem it unnecessary to express an opinion as to the relative merit of the position taken by General McCook, and that subsequently occupied by his left wing, the circumstances which will be apparent from the testimony that General McCook was not responsible for the delay in forming the new line that occupied.

It further appears that General McCook not only had impressed on him the vital importance of holding Rossville, and that he was maintaining a constant centre, but he was also ordered to hold the line to the left of Rossville connecting with Granger's corps, and by the evidence of Major-General Rosecrans, he had done all in his power to secure the left of the line, and it was not his fault that it was broken.

The court does not consider the conduct of General McCook on the retreat to Rossville, and the additional one that the small force at General McCook's disposal was not sufficient to withstand the whole superior numbers, the long line hastily taken under instructions received General McCook entirely from responsibility for the events which ensued.

It is fully established that General McCook did everything he could to rally and hold his troops, after the line was broken, giving the necessary orders, &c., to his subordinates.

The court are of opinion, however, that in leaving the field so to Chattanooga, General McCook committed a grave error of judgment, resulting in the engagement testifies the idea that he was influenced by personal motives of a personal nature, and that after the commanding general had previously gone to Chattanooga, it was natural for General McCook to infer that all the discomforts troops were expected to rally there, as well as to presume that a conference with the commanding general on that important subject was both desirable and necessary. The court regard this error of judgment as blameworthy, but not grave or of judgment.

DAVID STOCKTON, Major-General, President.
E. SCHRIVER, Inspector-General, Recorder.

APPOINTMENTS BY THE PRESIDENT,

BY AND WITH THE ADVICE AND CONSENT OF THE SENATE.

Brigadier-General Daniel E. Sickles, of the 3d Illinois cavalry, for the superior service, May 2, 1863.

James A. Hardie, Colonel Assistant Adjutant-General, to be Inspector-general, with the rank of colonel, in the Army of the United States, vice Van Rensselaer, deceased.

TO BE COMMISSARIES OF SUBSISTENCE, WITH THE RANK OF CAPTAIN.

Nathaniel A. Richardson, of Massachusetts.
Nathaniel B. Richie, of New Hampshire.
Lockwood N. Todd, of Illinois.

TO BE AIDES-DE-CAMP, UNDER THE ACT APPROVED OF JULY 17, 1862, WITH THE RANK OF CAPTAIN.

Second Lieutenant Benjamin F. Jacob, 2d Illinois cavalry, for Major-General McClernand.

First Lieutenant Charles C. Rohnet, of the 1st U. S. Infantry, for Major-General McClernand.

DECISIONS IN MILITARY JURISPRUDENCE.

HEADQUARTERS SIXTEENTH ARMY CORPS, }
CAMP NEAR VICKSBURG, MISS., March 19, 1864. }

Circular No. 5. Judge-Advocate's Department.

The following decisions in military jurisprudence, published in general orders from the Adjutant-General's office, series of 1863, are collected and republished for reference, for the information of officers of the Judge-Advocate's department:

1. Court must be convened by competent authority. (G. O. 324, 340, 350).

2. Record must show that Court was organized as the law requires. (G. O. 292, 307).

3. Record must show that Court was sworn. (G. O. 61, 93, 97, 101, 102, 104, 232, 307, 324, 340, 350).

4. Record must show that Judge-Advocate was sworn. (G. O. 57, 61, 93, 97, 101, 102, 104, 232, 307, 324, 340, 350).

5. Prisoner must be allowed the right of challenge. G. O. 22, 255, 324).

6. New members cannot be added during trial. (G. O. 48).

7. Members cannot be absent during trial. (G. O. 48).

8. A military officer, under the articles of war, must be charged in the usual terms with "Art. —." (G. O. 329, 339).

9. Specification must show place of commission of offence. (G. O. 252, 307).

10. A finding of "Not Guilty" as to the sole specification under a charge, requires a finding of "Not Guilty" as to the charge. (G. O. 307).

11. Two thirds of the Court must concur in a sentence of death. (G. O. 102, 234, 238, 253, 291).

12. An honorable conviction for cowardice or fraud must be published in newspapers. (G. O. 129).

13. Sentence of dismissal must be reduced to the ranks. (G. O. 326).

14. A sentence imposed for an offence by the articles of war, must be strictly followed. (Commutation of sentence. G. O. 329, 339).

15. Findings of Court must be duly certified. (G. O. 252).

16. Case must be reviewed by reviewing officer. (G. O. 61, 180, 307).

17. Action of reviewing officer must be regular and consistent. (G. O. 154, 361).

18. Court must be apposed by reviewing officer, if forwarded by him. (G. O. 161, 168, 180, 234, 307).

19. Disapproval of sentence by officer terminates proceedings. (G. O. 209, 241).

20. Reviewing officer cannot commute sentence of dismissal or cashiering. (G. O. 47, 301, 147, 198).

21. Proceedings of reviewing officer, when tried by military court, under section 38, of act of Congress approved March 3, 1863, see G. O. 207, 1863, War Department. (G. O. 47, 1864, War Department).

For precedents of charges for offences under the common law of war, see G. O. 306, 382.

JAMES C. PARKER,
Major and A. A. G. Vols.,
Acting Judge-Advocate 16th Army Corps.

NOTICE TO DELINQUENTS.

The following offences have been reported at the headquarters of the Army for the officers hereinafter specified, are hereby notified that they will be dismissed from the service of the United States, unless within fifteen (15) days from March 28, 1864, they appear before the Military Commission, convened by Special Order No. 85, Headquarters, General Ricketts, U. S. V., is President, and make satisfactory defence to the charges against them:

For giving duplicate discharges to enlisted men in violation of paragraph 165, *Revised Army Regulations.*

Captain John E. Barrett, 1st West Virginia.

For being in the City of Washington without authority.

Captain Daniel Gillett, 120th New York Volunteers.

Absence without leave.

Second Lieutenant Alexander H. Patten, 119th Indiana Vols.
Surgeon A. Wiedenbach, 37th Ohio Vols.

For unofficer and ungentlemanly conduct in grades in which they had not been mustered, in violation of General Orders No. 48, *series of* 1863, *from the War Department.*

Captain John H. Rutherford, 1st West Virginia.
First Lieutenant John M. Jordon, 10th West Virginia Vols.
Major Ernest Schmidt, 68th N. Y. Vols.

EXEMPT FROM DISMISSAL.

Captain A. S. Nesmith, Assistant Quartermaster of Volunteers, having been reported by the Military Commission for failing to report at headquarters military district of Washington, as ordered, when arrested by the provost-marshal, is hereby notified that he is exempt from dismissal from the service of the United States, he having made satisfactory defence to the charges against him before the military commission convened by special orders No. 85, February 2, 1864, Major-General Ricketts, U. S. V., president, in Washington.

Captain A. H. Hewitt, 23 Kentucky battery, charged with an offence and heretofore published, having been found guilty of the charges and specifications, the military commission instituted by special orders No. 85, series of 1863, from the War Department, having reported that satisfactory defence has been made by his counsel,

NAVY GAZETTE.

NAVAL OFFICERS FUNISHED.

NAVY DEPARTMENT, WASHINGTON, March 22, 1864.

General Order No. 51.

Commodores Foxhall A. Parker and H. J. Hicks having been reported to the department for going below during their watch without being regularly relieved, and for other offences, are hereby dismissed the service. Commodores T. T. Craven commanding, and Lieutenant-Commander Edward Terry, are hereby dismissed the service, with loss of grade of ten numbers each, and are hereby nominated to the Senate for dismissal and confirmed, have been suspended.

For the same offences, Lieutenant-Commander Thomas Eastgate W. S. Dana, E. T. Harrington, Wm. H. Hoff and C. Rathbone, have been revoked, and they have been ordered to return to their stations at the Naval Academy at Newport, R. I., as midshipmen.

Acting Ensign E. C. Irwin, who was attached to the *Niagara*, and was guilty of the offence of overstaying his time, has been ordered to the Naval Academy at Newport, R. I., with directions that he shall not, for six months, be permitted to go out of that vessel.

The department has also ordered that the following named list of cases on board the vessels of the Naval Academy, on the portsmouth station, be dismissed the service, with loss of grade as stated in the list, the sentence to be acted upon forthwith. If they had no other source of information, they should have learned from the fact of the letter

government of the Navy," with which all persons in the service must be supplied. It is unnecessary for the families of the cadets to be "instructed" in an offence that subjects the person guilty of it to the punishment of death.

The letter indicated no obvious to the most ordinary intelligence, that if an officer ceased to be trusted in his words he lost his power to the simplest parental duties or his profession, and is unfitted for a station where the lives of others, as well as his own, and the honor of his country depend on his vigilance and fidelity.

The treason comes within the department has adopted in this case has been induced by the consideration that although the severe punishment which a court-martial would inflict upon the offenders is merited as warning, yet the young officers in fault may, with some reason, plead in extenuation of their offence that they were led astray and punished by those whose duty it was to impress them with a proper sense of their responsibilities and more mature and experienced years of the misconduct. It is not probable that an example of them would have been more salutary on board the Niagara than elsewhere.

GIDEON WELLES, Secretary of the Navy.

THE FLORIDA'S ESCAPE.

UNITED STATES STEAMER WAR STEAMER ST. LOUIS, }
FEDERAL ROADS, MADEIRA, }
Saturday, February 27, 1864. }

SIR.—*The Florida* has succeeded in getting to sea. I shall follow in search of her, and continue anything in my power. I regret the want of frigates in his squadron would be found impressed on his heart. I am sure the absence of steam will be felt severely by me. Had the *St. Louis* been a steamer, I would have ordered suspected of an intention to escape from Funchal, the officer in charge of the boat would have escaped her. The Governor, true to his declared intention, would only allow her to remain twenty-four hours for coal—sufficient to take her to the nearest port. Her commander, like so many more, had no coal to spare, and the Governor was forced to instruct his vessel. The Governor told him, as the sanctuaries at Oporto, that he came to her without it, and he thought he could go without it; but if refusal was needed, there was plenty of steam on board the *St. Louis* to tow her out.

As it was supposed that she would get to sea during the night, and that the *Florida* would be under the protection of the neutral flag, she might pass by a trouble. I chatted and cast loose my guns, and had my crew at quarters on the main deck. The Governor's instructions all over the ship and in the boats, and the officers were ordered to keep a sharp look-out. I also directed that my orders were executed. The ship's company were under the highland, with all her lights covered, and steamed out of the harbor. The moon was shining brightly, and I followed her outward, and her departure was not disguised. She came to sea without a flag, and when I boarded her, off Porto Santo, which arrived in the afternoon, reports the *Florida* to have left Funchal at 4 o'clock on the previous morning. Her cargo is known, and that they were going to Cadiz to coal; but I think not, for they have not the money. Captain Morris, of the *Florida*, has put the *Sacramento* on her track.

I hope the Governor will not permit me to get out to Cadiz from Madeira in season to do her any injury, even if I thought that possible. (Signed)

The authorities here have done all they could to hasten her departure, except that now she has gone to sea, the Governor of Madeira will be troubled by the presence of Rebel vessels of war very unexpectedly. I am sorry that I was not here in time for the *Florida* to stop me to complete her crew. He assured me that it should not be done. Captain Morris, of the *Florida*, informed me that he was ready to help. I have reason to believe that we made no addition to her crew, and that she sailed with about 120 men. Her officers are not those she brought with her deserted. Her crew is described as very fine looking men, and not an American. Her first lieutenant is a Portuguese. Her security is under the flag of a neutral. (Signed)

I notice no change in the appearance of the *Florida* since I last saw her, except that now she has a Parrott gun for a shield surrounded by none, and she had changed her foremast for one of the Rebel States. My opinion is that she is a ship of 1,000 tons, and that if the guns

Acting Assistant Paymaster H. P. Tuttle, from the *Macedonian* and waiting orders.

Acting Assistant Paymaster Tracy Cobb, from the *Valparaiso* and ordered North.

Acting Assistant Surgeon Francis H. Atkins, from the *Ohio* and ordered to the *Penguin*.

Acting Assistant Surgeon Jacob J. Smith, from the *Princeton* and ordered to the *Quinnebaug*.

Acting Assistant Surgeon Wm. Gale, from the *Adela* and ordered North.

Acting Assistant Paymaster J. H. Watkins, from the *Cayuga* and Navy Yard, Boston.

Acting Third Assistant Engineer Thomas W. Silliman, from the *U. S. Sanger* and ordered to the *Cayuga*.

Acting Assistant Surgeon George E. McPherson, from the *New-London* and ordered North.

Acting Assistant Surgeon Nathaniel Mattson, from the *Ohio* and ordered to the *Sanger*.

Acting Assistant Surgeon George A. Bright, from the *South Carolina* and ordered to the *Ohio*.

Acting Assistant Surgeon Benjamin Marshall, from the *Stars and Stripes* and ordered to the *Ohio*.

Acting Assistant Surgeon Hiram C. Vaughan, from the *Ohio* and ordered to the *Stars and Stripes*.

Acting Assistant Paymaster Francis H. Swan, from the *Potomska* and waiting orders.

Acting Ensign James McGaffery, from the *Kensington* and ordered to the *Penguin*.

Acting Assistant Surgeon Howard M. Randlett, from the receiving ship and ordered to the *Canandaigua*.

Acting Assistant Surgeon Thomas J. Reed, from the Washington Navy Yard and ordered to the *James and Sturgis*.

APPOINTED.

Surgeon Sumned G. Lane, 4th Pennsylvania Reserves, he having been appointed Surgeon to the board of enrollment, 14th district of Pennsylvania.

Surgeon Charles H. Ward, 5th C. A., 17th Illinois Vols., Edward E. Aubery, Co. C, 7th Ohio Vols., George T. Brown, Co. D, 1st Ocean cavalry, F. W. Field, Co. D, 16th Michigan Vols., and Hospital Steward Abel Rice, 2d Ohio Vols., at their own request.

RESIGNED.

Surgeon John J. Reese, U. S. Vols.

HYDROGRAPHIC NOTICES.

From the *Nautical Magazine*, of London, we republish the following list of Lights recently established. We propose to continue the list from time to time as received, and to add such notes as to pilotage other "notices to mariners," enabling naval officers from this department to supply the deficiencies in their sailing directions.

Rock-a-Dun, S. E. coast of Ireland, 56° 46' 0" N., 6° 6' W., fixed; 56 feet high; seen 15 miles; established 1863; a white light flashing red once every minute.

Dix Bisher—Six Mermers, 48° 42' 2" N., south side of Isenil, 28° 10' W., fixed; 45 feet high; seen 9 miles; established 10th December, 1863; green light.

Les Hanois, 48° 39' 30" N. Mermers, 48° 35' 0" N., north side of Isenil, 29° 50' 2" E. Read; 33 feet high; seen 6 miles; established 15th December, 1863; red light.

Carquine Point—Bay of Cumaret, 46° 20' 2" N., 4° 54' 5" W. Read; 30 feet high; seen 7 miles; established 15th December, 1863; seen from seaward through an arc of 15° eastward E. by S. S. and E. by S.

Les Tour—River l'Abbe, 48° 49' 0" N., 4° 0' 4" W., fixed; 36 feet high; seen 12 miles; established 15th December, 1863.

Cassidy Island—Cape Breton Island, 46° 57' 0" N., 59° 59' 0" W., fixed; 100 feet high; seen 12 miles; established 20th November, 1863; a red and white light.

Tancarville River—France, north coast, 49° 31' 0" N., 0° 8' W., fixed; 50 feet high; seen 7 miles; established 15th March, 1864; one light.

Tancarville River—France, north coast, 49° 31' 0" N., 0° 3' W., fixed; 50 feet high; seen 7 miles; established 5th December, 1863; one in line with the above, bearing S. E. by S. to Quarter.

Genoa—Mole (e).

Genoa—Mole, south coast, 26° 21' N., 40° 54' 3" W., fixed; 55 feet high; seen 12 miles; established 15th March, 1864 (e).

Cape Ann—Thacher's Island, 42° 37' 0" N., 70° 31' 0" W., fixed; 41 feet high; seen 11 miles; established 15th March, 1864.

Cape Ann—Thacher's Island, 42° 37' 0" N., 70° 31' 0" W., flashing; 94 feet high; seen 25 miles; established 15th March, 1864.

Cape Ann—Thacher's Island, 42° 37' 0" N., on the coast of Spain, 8° 29' 0" W., fixed; 220 feet high; seen 15 miles; established 15th March, 1864.

Tina Mazon—Point San Eustaqui, 45° 52' 2" N., north coast of Spain, 5° 4' 0" W., fixed; 150 feet high; seen 15 miles; established 15th March, 1864.

Gothenburg—West—Sweden, 56° 8' 8" N., 12° 50' 2" E., flashing; 117 feet high; seen 17 miles; established 15th March, 1864.

Rocas Alijos—Pacific Ocean, Gallapagos, Rapid Isle, South America, 15° 55' 0" N., 116° 58' 0" W., flashing; 100 feet high; seen 12 miles; established 15th March, 1864.

Leopard Reef—Bermuda, N. W., from Cavern, French American Channel, 32° 22' 0" N., 64° 50' 0" W., fixed and flashing.

Black Rock—Block Bird Bay, 54° 4' 2" N., 10° 19' 2" W., flashing; 120 feet high; seen 15 miles; established 1863.

Ratelin O'Rance—Fixed; altered from flashing.

The Admiralty have under consideration the question for extending the outer or western mole at Genoa, vessels approaching the port from the westward, at present, are compelled to keep so close to it to pass clear of the end of the mole, at about forty yards from that part of the pierhead where the lighthouse stands, that the vessels should keep at least three-quarters of a cable eastward of the light on the pierhead, and not bring it to bear more than two points on the bow. The light is at present 100 yards from its extremity.

The light on the Mole at Genoa is now shown by a red flash every three minutes. It is placed at an elevation of 94 feet above the level of the sea, and is visible in clear weather from a distance of 12 miles.

NOTICES TO MARINERS.

Notice is hereby given that the Spindle Buoy will be discontinued after a few days at Nyanza for repairs, during which time her station will be occupied by a spar buoy, painted red.

The Relief is a bronze signal, with a red ball at each masthead, but will not be exhibited during the absence of the Spindle Buoy.

She will show every night, from sunset to sunrise, one kind light of the usual character.

When the repairs on the Pollock Rip Lightvessel are completed she will be replaced on her station and the Relief removed to her moorings at Woods Hole, of which due notice will be given.

By order of the Lighthouse Board.

John Marston, Lighthouse Inspector.

Boston, March 29, 1864.

Notice is hereby given that the Spindle was carried away from Hardy's Rock, in Saco Harbor Channel, during the gale on the 2d inst. She will be replaced on her station as soon as practicable. Hardy's Rock is dry at half tide.

The Spindle is a frame work of prominent objects from the Rock, painted white.

Nelson's Island Buoy, E.N.

Hewitt's Rock Buoy, E. by W.

Little Haste Buoy, W.N.W.

North end of Nelson's Island, W.S.W.

By order of the Lighthouse Board.

John Marston, Lighthouse Inspector.

Boston, March 26, 1864.

NOTICE TO THE MARINER.

Thirty Hoofs, Head, Penobscot Bay, Maine.

Notice is hereby given that a Nun Buoy, painted Green, marked "Thirty," and moored in Portland harbor, will be removed on the 1st of April, or as soon thereafter as possible, and their places supplied by buoys of the same description as heretofore.

By order of the Lighthouse Board.

E. H. Perkins, Lighthouse Clerk, 1st dist.

Portland, March 22, 1864.

Notice is hereby given that the Handkerchief Shoal Lightvessel has parted her moorings, and has anchored a day at anchor off Edgartown harbor.

She will be replaced upon her station in a day or two, of which due notice will be given.

By order of the Lighthouse Board.

John Marston, Lighthouse Inspector.

Boston, March 24, 1864.

The Pollock Rip Lightship has parted from her station, and now lies about 3 miles S.W. from her proper station.

Lighthouse Office, Fifth District, Baltimore, March 26, 1864.

A Lightvessel exhibiting a single light, has been placed on the east side of the Channel in Elizabeth River, near Norfolk, Virginia, to mark the obstruction.

By order of the Lighthouse Board.

H. Y. Pentagon, Lighthouse Inspector.

VARIOUS NAVAL MATTERS

Screw-sloop *Kearsarge*, 7, arrived at Dead, England, on March 13.

Side-wheel steamer *Tennessee*, 7, was spoken on the 12th March, lat. 35 45, lon. 51 30, eastward bound.

Screw-steamer *Aroostook*, 7, Acting Ensign W. Harcourt commanding, is attached to the Mississippi Squadron, Admiral Porter. Upon docks in ewoods to examine her, as she is the only full-rigged steamer vessel of war attached to the Western fleet.

The *San Jacinto* has expanded another prize, the schooner *Lealtad*, with 132 bales of cotton on board, on the coast of Florida. She immediately started for Key West, a favorable reason, which was supposed to have sold the cotton on board.

In accordance with an order of the department, an examining board, consisting of Dr. Wheeler, Chief of Bureau of Medicine and Surgery, Surgeon Foltz, and Dr. Harris, assembled in Brooklyn on the 23d instant to examine the navy yard hospital, and selected a site for a hospital. It is understood that the Board has made a favorable report.

It is now stated that when the recent accident occurred to side-wheel steamer *Pocahontas*, by which the smoke stack was torn to shreds, the most essential point of that part, and that the stove is completely, for any subsequent service. A report to the navy department will accompany her plot about the strength and duration of the bite that day, and the effects of the turmoil on the body principal during those violent winds may have been attributed to them.

It is understood that side-wheel steamer *De Soto*, 6, dated at Havana, states that she had just come out of the dry dock at that place, having had her bottom coated and repaired. She would wait for other services in ten days from the 8th of March. On the night of the 8th of March, the dock master took on board the steamer by the Spanish accountants, but owing to the vigilance of the authorities, the fraud was discovered.

A letter from on board screw-steamer *Pembroke*, 6, states that she went ashore on the night of the 22d instant on the Rip Raps, and got off on the following day. She was towed to Hampton Roads, where she went to Fortress Monroe, and, while there of the most valuable character, some more fine blockade runners have been added to the number destroyed by the vigilance of the *Pembroke*.

The Secretary of the Navy has directed that paymaster's clerks are ordered to recruit for the naval service and marine corps. Any person who shall recruit a paymaster's clerk will be entitled to a bounty. A bill or offering amount enlisted in the naval service receive three months' extra pay. Clerks are to be enlisted for four years. Recruits enlisted for the marine corps must be between the ages of 18 and 35 years, and must be able to read and write. They will receive the same pay and allowances as soldiers of the same grade of army. They do not receive advance pay or bounty from the United States. Up to March 1st, 1864, 1,000 men in the Northern States for marine corps are credited on the *quotas for draft* the same as men for the army.

ADVERTISED LETTERS.

The following letters remained in the Navy and Navy are advertised as lying uncalled for in the New York Post-Office, March 26:—Midshipmen—Edward Y. Young, Jr., Edward Y. Young, Jr., Edward Q M., Major General Silas Casey Lieut James Davison, Lieut M. S. Bassett, Lieut Commander J. C. Beaumont, Lieut Commander W. H. A Hamilton, 8th U S Navy battery, Lieut-Col Geo F Hopper, 7th Connecticut Vols, Capt Wm. Jones, Capt James Lee, 1st U S cavalry, Lieut Johnson, A D C, Lieut J S J Hartsuff, 35th N Y Vols, Adjt 4th West Virginia cavalry, Lieut Commander Alexander and Adjt Philip A Livingston, Capt A Stewart Marshall, Wm L Hopkins, 12th Inf, Wm Hall, Co K, 2d N Y Mounted Rifles, Lieut Col Mead M D Sherrerson, U S V A, Lieut H McGonegal, Surgeon John Mc-Gonegal, U S V, Lieut Col Wm Hoffman, Asst Adjt Gen, Capt Guy Wm Henfill, Co K, 30th N Y Infantry, Capt S Rowdley, Co D, 5th N Y Vols, Capt Charles Scudder, Co K, 7th N Y Vols, Capt J Rooney Sicone, Lieut John Stewart, 3d A, 11th Inf Regts, Lieut Col Wm Hoffman, A A G, Lieut Col Wm Hoffman, A A G, Paymaster U S A, Lieut R Butterfield, U S A, Lieut Col Wm Hoffman, A A G, Lieut Col Wm Hoffman, Lieut Wm J Vaughn, Co K, 11th N Y Vol Vols, Capt Geo W Van Arsdale, 1st Regt Engineers, Lieut Col Wm Hoffman, A A G, Capt John T Wood, Capt John T Wood, 28th regt O V I.

LIST.

Capt J S Boggs, Simon G Clapp, U S Marshal on prize steamer Rosalie, Commander Henry K Thatcher, Lieut A B Bleby, gunboat Pocahontas, Edward A Bowers, Lieut Commander Alexander Murray, U S steamer Quaker City, Lieut Commander Louis Sands, Asst Surgeon Edward H Ned, Third Asst Engineer Thomas E S Hill, Acting First Assistant Engineer Samuel M Van Cliff, U S steamer Western World, acting Master's Mate Otto Von Kapff, Lieut Col Wm H Bradford, 1st Engineers, First Asst Engineer Samuel Babcock, U S transport Liley, Capt Henry A Brown, Lieut Col Wm Hoffman, A A G, Samuel L Brown, John W Bain, A A Paymaster E W Burns, U S steamer Hospital, Commander Stephen C Rowan, Lieut Commander Alfred Wyman, U S steamer Octorara, Capt Geo Rodman, gunboat West End, U S Chamberlain, Lieut Commander U S steamer Pocahontas, Commander A N Glassman, Capt D C Constable, Capt John Collins, U S steamer Sybil, Lieut Col Wm Hoffman, Asst Adjt Gen, Lieut Col U S steamer Thunderbolt, Third Asst Engineer Dunkley, U S steamer Wyandank, Lieut Col Paymaster F Hoffman.

The following are advertised in the St. Louis papers as remaining in the Post-Office, March 26:—

Capt J Arnold, A D C, Major J E Barrett, Major W A Bell, Geo Bell, Lieut Col Wm Bell, Capt Wm Bell, Lieut Col Wm Bell, Capt C M Brown, Lieut N M Brown, Capt A D Buck, Lieut Col Wm Bell, Lieut Col Wm Bell, Capt J Bullock, Capt W T Bunting, Capt C F H Carter, Surg Chas Perry, Capt Geo W Folsom, Capt G W Gordon, Lieut Col Wm Bell.

Governor Vance, of North Carolina, in a recent public address, boasted that only a small proportion of the blockade runners which attempted to get into Wilmington were captured by our fleet. Admiral Lee in a letter, dated January 19th, to the Navy Department presents satisfactory substantiating evidence. He says: "I would call the attention of the Department to the statement made by the captain of the captured blockade runner *Lou*, that he had sailed nine times from Nassau and had always escaped except on the present four times; and that for forty-eight hours previous to his capture he had encountered *so many* blockaders that he had been obliged to run in a zigzag course, turning about twice on the 24 instant by a large three-masted blockader, the *Iroquois*. I transmit some extracts from letters taken from prisoners on the *Lou*, which go to show the difficulties experienced in attempting to violate the blockade of Wilmington. One letter states that 'not one out of ten escapes.' Another expects 'no more letters—no money from home—no clothes—no anything but the misery of the blockaders about.' These evidences from the mouths of the efficiency of the blockade are very gratifying. The original letters were sent to the District Judge in Boston."

A correspondent on board the U. S. steamer *Michigan* at Erie, Pa., writes under date of March 29th:—"I have tried to inform you of the death of Leonard Wyach this day. He was in the Marine corps over thirty years, and I should while living that in that time he never were a citizen's dress. He was a native of Baltimore, Md., and died of rheumatism."

Seamen in the Army who desire to be transferred to the Navy should make application by letter to the Navy Department.

MARRIED.

[Announcements of marriages should be paid for at the rate of fifty cents each.]

KEIM—McCAUSEY.—At Greencastle, Franklin Co., Pa., on Thursday, March 24th, by Rev. Thomas McCauley, of Philadelphia, assisted by Rev. J. Wightman, Wm. Howard Keim, M. D., of Philadelphia, Surgeon of the Twenty-first Regiment Pennsylvania Volunteers, to Miss Sarah, youngest daughter of Hon. James McCausey, of Greencastle, Pa.

Send for a Catalogue of Patent Articles for Army and Hospital use only.

THE NATIONAL MILITARY JOURNAL.

THE UNITED STATES
ARMY AND NAVY JOURNAL
AND
GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

Officers of the Army and Navy will find in this Journal the only paper in the United States exclusively devoted to Military and Naval affairs, and the only one in their interests entirely independent of Party Connection and influence in the country to enable it to state its real views fully, of an organ which should accurately represent them in the Press. Starting under the most favorable auspices, enjoying the encouragement and active support of the leading officers of the service, every politics and partisanship of all kinds, and devoting our whole singleness of purpose to the impartial discussion of professional questions, and the dissemination of correct information, it has, in less than six months, established a position as the authoritative organ of military discussion and criticism in the United States. The rapidity with which it has secured a circulation, hardly exceeded by that of any paper of the time in any land, and the eagerness with which it has been greeted in the Army and Navy, met by the more intelligent of civilians, we feel to be necessary for such a Journal, and afford ample guarantee that the effort to establish a paper that should stand side by side in ability and completeness with the best of the military journals of England and France, has not been in vain. As to Gazette of Military and Naval matters, it has every need indispensable to every soldier and sailor; while to every intelligent observer of the war it must be invaluable for its accuracy, history of military movements, and its able and suggestions and discussions. Its articles are from the pens of the ablest military writers, and its special particulars of movements and operations are more full and reliable than that of any periodical ever issued in this country.

Of the numerous notices of the newspaper press we have room for but one only for the present:

From Major-General BROOK G. MAGIR.

"I have received several numbers of the National and Navy Journal, and have noted with much interest the manner in which it has entered upon its important field. It affords an eligible pleasure to add my contribution to its success."

From Major-General W. B. FRANKLIN.

"To say that the ARMY AND NAVY JOURNAL is a gentleman who what should be a representative of our press would be superfluous compliment."

From Major-General DANIEL SICKEL.

"Your JOURNAL is now only for sale at the Army. I constantly recommend it to the notice of the members of the Corps. I think it will be a valuable acquisition."

From Major-General J. C. LOUD, U.S.N.

"Your JOURNAL is not only the best, but the only paper in print that has ever been published that seems to the case."

TERMS.

The terms of the paper are FIVE DOLLARS A YEAR, OR ONE HALF-YEARLY.

CLOTHING AND CLOTHING MATERIALS.

NAVY DEPARTMENT,
BUREAU OF PROVISIONS AND CLOTHING,
March 19, 1864.

SEPARATE PROPOSALS, sealed and endorsed as such, for Navy Clothing and Clothing Materials, will be received at this office until 12 o'clock m., on the 12th day of April next, for furnishing and delivering the articles specified in the following schedules, at the navy yards at Charlestown, Massachusetts, Brooklyn, New York, in such numbers and quantities, and at such times as may be specified by the Chief of this bureau, or by the commandants of said navy yards, respectively, during the remainder of the fiscal year ending June 30, 1865, and at the prices and the numbers and quantities of the different articles set in the prices specified in the following schedules:

	BOSTON.	N. YORK.
Blue cloth trowsers, pairs	3,000	3,000
Blue satinet trowsers, pairs	6,000	10,000
Canvas duck trowsers, pairs	2,000	1,000
Flannel shooting frocks	2,000	2,000
Blue flannel overshirts	4,000	10,000
Blue satinet, yards	2,000	18,000
Blue cloth, yards	60,000	40,000
Mixed shooting, yards	10,000	15,000
Canvas duck, yards	2,000	10,000
Blue mackin, yards	5,000	7,000
Flannels (white), yards		20,000
Kersey shirting, yards		5,000
Mattresses (cotton)		1,000
Mattresses (curled hair)	200	1,000
Blankets	20,000	15,000
Bath silk handkerchiefs		5,000

Offers may be made for one or more articles, at the option of the bidder, each of the articles in one schedule mentioned in the offer, the Chief of the Bureau and the Navy Yard to accept one or more of the articles contained in each offer, and reject the remainder. Offers must be in writing, and offer and bond must be in every case more articles advertised at all the stations.

For the descriptions of articles in the above list, bidders are referred to the samples at the said navy yards and to the advertisement of the 1st of January, July 1, 1863, and for information as to the laws and regulations for the government of contracts, and for the guidance of the several commandants of navy yards and naval stations.

Said forms of proposals may be obtained at the navy yards and at Portsmouth, New Hampshire; Boston, New York, Philadelphia, Baltimore, and at Washington.

BALTIMORE AND OHIO RAIL ROAD
RE-OPENED!

The great National thoroughfare again to open for FREIGHT AND TRAVEL. The cars are now running regularly and being replaced by new running stock, and all necessary improvements; and as the Road and track are again in substantial condition, the well-earned reputation of this Road for SPEED, SECURITY and COMFORT, will be more than sustained under the management of its former officers. Through and unequaled attractions of national scenery heretofore peculiar to this route, and the unrivalled splendor of Scenery have associated numerous points on the Road, from the Ohio River to Harper's Ferry, with rapid but instructive interest.

Through Cars run from Washington
